To one unfamiliar with the resources and organization of a great detective system it is incomprehensible how continuous shadowing day after day and week after week, through thousands of miles of journeying, can be accomplished. The matter is made none the simpler when you know that there must be a change of shadows every day. However adroit the detective, his continued presence in a locality would soon arouse suspicion. The daily change of shadows is easy when the man under watch remains in one place; for then it is only necessary to send a new shadow from the central office early each morning to replace the one who "put the man to bed" the night before. But it is very different when the subject is constantly traveling about on boats or railways, and perhaps sleeping in a different town each night. Without a network of agencies, including large and small bureaus established all over the United States, the shadowing of a man in rapid flight would be impossible. As it is, nothing is easier. Schwartz, for instance, spent several days in Buffalo, where his actions were reported hour by hour until he bought his ticket for Philadelphia. As he took the train a fresh shadow took it, too, securing a section in the same sleeping car with him, and taking his meals at the same time Schwartz took his, either in the dining car or at stations. No sooner had the train left the station than the Pinkerton representative in Buffalo reported by cipher dispatch to the bureau in Philadelphia, whither Schwartz was going. The exact form of the dispatch, which well illustrates a system in constant use in the Pinkerton bureaus, was as follows:

"R. J. LINDEN,

"441 Chestnut street,

"Philadelphia, Pa.

"Anxious shoes sucker Brown marbles man other dropping eight arrives put grand fifty marbles articles along or derby coat ship very tan seer wearing these have and is ribbon ink dust central Tuesday for dust to rice hat and and paper vest yellow ink get must jewelry morning depot on.

"D. ROBERTSON."

In dispatches in this sort important information regarding criminals is constantly flushing over the wires, with no danger of any leak.

Thus, from one city to another, and through every part of the country, any criminal may be shadowed today as Schwartz was shadowed, one set of detectives relieving another every twenty-four hours, and the man's every word and action be carefully noted down and reported, without his having the faintest suspicion that he is under observation. The task of shadowing a person who is traversing city streets is intrusted to men especially skilled in the art (for art it is) of seeing without being seen. This is, indeed, one of the most difficult tasks a detective is called upon to perform, and the few who excel in it are given little else to do. Where a criminal like Schwartz, upon whose final capture much depends, is being followed, two, three, or even four shadows are employed simultaneously, one keeping in advance, one in the rear, and two on either side. The advantage of this is that one relieves the other by change of position, thus lessening the chance of discovery, while, of course, it is scarcely possible for several shadows to be thrown off the trail at once. An adroit criminal might outwit one shadow, but he could scarcely outwit four. A shadow, on coming into a new town with a subject, reveals himself to the shadow who is to relieve him by some prearranged signal, such as a handkerchief held in the left hand.

The result of the shadowing in Schwartz's case was conclusive. No sooner was the brakeman out of Chicago than he began spending money far in excess of his income. He bought fine furniture, expensive clothing, articles of jewelry, presents for his wife, and laid in an elaborate supply of rifles, shotguns, revolvers, and all sorts of ammunition, including a quantity of cartridges. The shadows found that in almost every case he paid for his purchases with fifty or one-hundred-dollar bills. As far as possible these bills were secured by the detectives from the persons to whom they had been paid, immediately after Schwartz's departure. It will be remembered that the money taken in the robbery consisted of fifty and one-hundred-dollar bills.

In addition to this, it was found, by the investigations of detectives at Philadelphia, that Schwartz was the son of a wealthy retired butcher there, a most respectable man, and that he had a wife and child in Philadelphia, whom he had entirely deserted. This gave an opportunity to take him into custody and still conceal from him that he was suspected of committing a higher crime. The Philadelphia wife and child were taken on to Chicago, and Schwartz was placed under arrest, charged with bigamy.

Mr. Pinkerton went to the jail at once, and, wishing to keep Schwartz's confidence as far as possible, assured him that this arrest was not his work at all, but that of Detectives Smith and Murray, who were, as Schwartz knew, working in the interests of the railroad people and of the Chicago newspaper. Mr. Pinkerton told Schwartz that he still believed, as he had done all along, that Watt was the guilty man, and promised to do whatever he could to befriend Schwartz. The latter did not appear to be very much alarmed, and said that a Philadelphia lawyer was coming on to defend him. The lawyer did come a few days later, when a bond for two thousand dollars was furnished for Schwartz's reappearance, and he was set at liberty. Matters had gone so far, however, that it was not considered safe to leave Schwartz out of jail, and he was immediately arrested on the charge of murder.

Whether because of long preparation for this ordeal or because he was a man of strong character, Schwartz received this blow without the slightest show of emotion, and went back into the jail as coolly as he had come out. He merely requested that he might have an interview with his wife as soon as possible.

Mr. Pinkerton had evidence enough against Schwartz to furnish a strong presumption of guilt; but it was all circumstantial, and, besides, it did not involve Newton Watt, whose complicity was more than suspected. From the first Mr. Pinkerton had been carefully conciliatory of the later Mrs. Schwartz. At just the right moment, and by adroit management, he got her under his direction, and by taking a train with her to Morris, and then on the next morning taking another train back to Chicago, he succeeded in preventing her from getting the advice of her husband's lawyer, who was meantime making the same double journey on pursuing trains with the design of cautioning her against speaking to Mr. Pinkerton. She had come to regard Mr. Pinkerton more as a protector than as an enemy, and he, during the hours they were together, used every device to draw from her some damaging admission. He told her that the evidence against her husband, although serious in its character, was not, in his opinion, sufficient to establish his guilt. He told her of the bills found in Schwartz's possession, of the torn piece of the draft taken from the valise, of the marks on his hands and the lies he had told. All this, he said, proved that Schwartz had some connection with the robbery, but not that he had committed the murder, or done more than assist Watt, whom Mr. Pinkerton professed to regard as the chief criminal. The only hope of saving her husband now, he impressed upon her, was for her to make a plain statement of the truth, and trust that he would use this in her husband's interest.

After listening to all that he said, and trying in many ways to evade the main question, Mrs. Schwartz at last admitted to Mr. Pinkerton that her husband had found a package containing five thousand dollars of the stolen money under one of the seats on Conductor Danforth's train, on the night of his return to Chicago. He had kept this money and used it for his own purposes, but had been guilty of no other offense in the matter. Mrs. Schwartz stuck resolutely to this statement, and would admit nothing further.

Believing that he had drawn from her as much as he could, Mr. Pinkerton now accompanied Mrs. Schwartz to the jail, where she was to see her husband. The first words she said, on entering the room where he was, were: "Harry, I have told Mr. Pinkerton the whole truth. I thought that was the best way, for he is your friend. I told him about your finding the five thousand dollars under the seat of the car, and that was all you had to do with the business."

For the first time Schwartz's emotions nearly betrayed him. However, he braced himself, and only admitted in a general way that there was some truth in what his wife had said. He refused positively to go into details, seemed very nervous, and almost immediately asked to be left alone with his wife. Mr. Pinkerton had been expecting this, and was prepared for it. He realized the shock that would be caused in Schwartz's mind by his wife's unexpected confession, and counted on this to lead to further admissions. It was, therefore, of the highest importance that credible witnesses should overhear all that transpired in the interview between Schwartz and his wife. With this end in view, the room where the interview was to take place had been arranged so that a number of witnesses could see and hear without their presence being suspected; and the sheriff of the county, a leading merchant, and a leading banker of the town, were waiting there in readiness.

As soon as the door had closed and the husband and wife were left alone, Schwartz exclaimed:

"You fool, you have put a rope around Watt's and my neck!"

"Why, Harry, I had to tell him something, he knew so much. You can trust him."

"You ought to know better than to trust anybody."

The man walked back and forth, a prey to the most violent emotions, his wife trying vainly to quiet him. At each affectionate touch he would brush her off roughly, with a curse, and go on pacing back and forth fiercely. Suddenly he burst out:

"What did you do with that coat—the one you cut the mask out of?"

"Oh, that's all right; it's in the woodshed, under the whole woodpile."

They continued to talk for over an hour, referring to the murder and robbery repeatedly, and furnishing evidence enough to establish beyond any question the guilt of both Schwartz and Watt.

Meantime Watt had been arrested in Chicago, also charged with murder, and in several examinations had shown signs of breaking down and confessing, but in each instance had recovered himself and said nothing. The evidence of Schwartz himself, however, in the interview at the jail, taken with the mass of other evidence that had accumulated, was sufficient to secure the conviction of both men, who were condemned at the trial to life imprisonment in the Joliet penitentiary. They would undoubtedly have been hanged but for the conscientious scruples of one juryman, who did not believe in capital punishment.

About a year after the trial Schwartz's Chicago wife died of consumption. On her deathbed she made a full confession. She said that her husband's mind had been inflamed by the constant reading of sensational literature of the dime-novel order; and that under this evil influence he had planned the robbery, believing that it would be easy to intimidate a weak little man like Nichols, and escape with the money without harming him. Nichols, however, had fought like a tiger up and down the car, and had finally forced them to kill him. In the fight he had torn off the mask that Mrs. Schwartz had made out of one of her husband's old coats. It was Watt who fired the pistol, while Schwartz used the poker. Schwartz had given Watt five thousand dollars of the stolen money, and had kept the rest himself. He had carried the money away in an old satchel bought for the purpose. A most unusual place of concealment had been chosen, and one where the money had escaped discovery, although on several occasions, in searching the house, the detectives had literally held it in their hands. Schwartz had taken a quantity of the cartridges he bought for his shotgun, and emptying them, had put in each shell one of the fifty or one-hundred-dollar bills, upon which he had then loaded in the powder and the shot in the usual way, so that the shells presented the ordinary appearance as they lay in the drawer. The detectives had even picked out some of the shot and powder in two or three of the shells; but, finding them so like other cartridges, had never thought of probing clear to the bottom of the shell for a crumpled-up bill.

Thus about thirteen thousand dollars lay for weeks in these ordinary-looking cartridges, and were finally removed in the following way: While Schwartz was in jail, a well-known lawyer of Philadelphia came to Mrs. Schwartz one day, with an order from her husband to deliver the money over to him. She understood this was to defray the expenses of the trial and to pay the other lawyers. Superintendent Robertson remembers well the dying woman's emotion as she made this solemn declaration, one calculated to compromise seriously a man of some standing and belonging to an honored profession. Her body was wasted with disease, and she knew that her end was near. There was a flush on her face, and her eyes were bright with hatred as she declared that not one dollar of that money was ever returned to her, or ever used in paying the costs of her husband's trial. Nor was one dollar of it ever returned to the railroad company, or to the bank officials, who were the real owners.

BOWSER & REED

SPENCERVILLE

Dr. C R Baumgartner is attending camp at Fort Snelling near St. Paul, Minn.

George Kimes and wife spent Sunday with Wesley Kimes and wife at Fort Wayne.

Wm. Allen and family were Sunday evening callers in the W. O. Lake home.

Samuel Roush and family of Ft. Wayne, were Sunday guests in the B. F. Markle home

Any work shirt at 85c. Coolidge, Spencerville. The place to buy.

Moses Oberholtzer and family of nea. Harlan, were Friday evening guests of B. F. Markle's.

R U Bowser and wife spent Sunday afternoon with the former's brother, Homer Bowser near Huntertown. Ralph Shoaf and wife of Fort Wayne were guests in the same home.

Bert Reasoner and wife and Frank Kale and family of Fort Wayne, Ray Reasoner and wife and Floyd Reasoner of St. Joe, were entertained for dinner Sunday in the Herman Reasoner home.

For good glasses see Griest at American Building Hicksville, Ohio.

Herman Reasoner and wife were Monday guests of Charles Davis and family at Auburn.

W. O. Lake, wife and children and Karl Hart and wife spent Sunday at Hamilton lake.

John Hobaugh, an aged soldier, who is confined to his bed most of the time, fell out of bed recently and fractured a rib.

Clifford Vanzile and wife and Chas. Henderson of California, arrived here last week for a visit with relatives and friends.

Raymond Randall and family, visited in the Wm. Allen home last week have returned to their home at Muncie, Indiana.

The Ladies Aid Societies of the Scipio and M. E. Churches, will be entertained today at the local parsonage. Potluck dinner. All ladies are invited.

John Zimmerman and wife, August Baltzli, wife and children, Mrs. Lucy Koffel and Miss Marcella Zimmerman all of Ft. Wayne spent Sunday with John Bachmann and wife.

Saturday evening during the electric storm a tree in the M. E. Church lawn was struck by lightning. A limb was blown thro a window of the church and several slate blown from the roof.

The following guests were entertained for dinner in the Gerry Wasson home Thursday: Mrs. Beatrice Miller of Fort Wayne, Rev. Brown and family, Mrs. Ethel Bowser, Mrs. Thorne, Mrs. Cleo Reed and Miss Florence Steward.

The C. C. Club was pleasantly entertained Friday at the home of Mrs. Zelpha Steward. One new member, Mrs. Cleo Reed was received into the club. One guest, Mrs. Ruth Vanzile was present to enjoy the occasion The next meeting will be held on July 24 at the home of Mrs. John Hosler.

Fifteen members of the young men's class of the Lutheran Sunday School of Auburn and their teacher, Mr. Grover, visited the Lutheran school here Sunday. They rendered several selections of orchestra music and sang their class song which was very much appreciated by all present.

Hurrah!
No More Lice!

"Now I can set in peace. Even the poultry house, barn and stable are free from lice since we used

DR. LEGEAR'S LICE POWDER"

Makes hens feel better and lay better when dusted into the open feathers of the fowl and around coops, roosts and other places where lice and vermin are likely to be found. Easily applied from sifter top can. Also good for repelling lice on horses, cattle and hogs.

HERE AND THERE

Wid Williams was home from Southern Inaisna a few days last week.

Chas. Bishop and family of Cleveland are spending their vacation here.

Clarence Moody and wife of Garrett, were Saturday evening guests of Sam Keesler and wife.

Olen Dermott returned to Milwaukee, Wis., Sunday, where he has employment, after spending the week here with his family.

L. S. Widney and wife of Chicago and Chas. Rousch a d wife of Aurora, Ill., stopped here last week enroute home from Philadelphia, for a visit among relatives.

Cash paid for false teeth, dental gold, platinum and discarded jewelry. Hoke Smelting & Refining Co., Otsego, Mich.

Champ Baily and J. P. Buckingham accompanied by their wives, called on All Hull at the county farm and found him some improved.

Mrs. Fred Hart and sons, Robert Dale and Glenn left last Friday for Hesperia, Michigan, where the former two will remain indefinitely with her parents, Chas. Coburn, the former being in very poor health.

The Wm. Randall home was struck by lightning Saturday morning, striking the tip of one of the lightning rods. No great damage was done beyond burning out the telephone and electric meter.

Buy Certified Milk from Koeppe Bros. Dairy. Night and Morning Delivery. 27tf

Mr. and Mrs. Laney Gee have received word from their daughter, Miss Mildred, that she and Mrs. Berniece Keir of Hicksville, had safely reached their destination, and had begun their studies at Columbia University.

Mr. and Mrs. W. W. Hollopeter, Mrs. Lou Eckels, Miss Jane Hollopeter and Billy Cooley all of Blytheville, Ark, spent Wednesday night and Thursday as guests of Laney Gee and wife enroute to their cottage at Lake James.

Clark Scholes, who has been employed as civil engineer in southern Indiana, has accepted a similar position at Pittsburgh, Pa, stopping here over Sunday to visit his parents, F. Scholes and wife.

Mr. and Mrs. Claire Hoyt of Los Angeles, Cal. and Myron Hoyt and son, Ralph, of Kalamazoo, spent several days here recently. They returned to Benton Harbor accompanied by Mr. and Mrs. Howard Northrup, where they will camp out for the summer. Mr. Northrup will take mineral baths there with the hope of being relieved from the rheumatism with which he is badly afflicted.

Club Work News

From Concord Boys and Girls

The following girls' clubs have been organized in Concord township and the members are progressing very nicely with their projects.

JOLLY MAIDS' SEWING CLUB

FIRST YEAR

Marguerite Wilson
Laura Keller
Goldie Draggoo
Grace Draggoo
June Ridgway.

SECOND YEAR

Della Huffman
Helen Storer
Hilda Morr
Marjorie Sherer
Ruth Shrader
Virginia Ginther
Margaret E Hamilton
Ruth Havens
Mable Inlow.

THIRD YEAR

Margaret Hamilton.

Since there are no funds in the county with which to offer prizes in club work as is being done in other counties, each club is endeavoring to earn enough to send the girl who does the best work to the Purdue Round Up next spring.

The members of the Girls' Clubs of Concord Twp. will hold an Ice Cream Social, Candy and Popcorn Sale on the Main Street of St. Joe on Saturday night, July 18. Everyone is urged to show their appreciation of club work, and help the girls to send a club member to Purdue, by attending the social.

The regular monthly club meeting was held at the school house Friday evening, with twenty-two members present.

After roll call and some business was transacted, the boys listened to a very interesting talk on Sheep club work by Merritt Sechler.

Reports were given by the pig club members on the gain of their pigs.

This month Kenneth Wasson has the record with a gain of 59 pounds in 30 days.

Harry Loucks 53 pounds.

The others range is fine and all are showing up well, which shows what good care will do. The pig club members are getting ready for the Pig Club Show which will be held at the Home Coming September 5, 1925 at St. Joe.

Corn and potato club members reported their crop coming fine and it looks like we would have a real corn and potato show.

FARMERS: Now is the time to be thinking about a short hay crop next year. Alfalfa can be sown this season and make a hay crop. Grimm seed is most satisfactory in the long run.

As to lime and inoculation information concerning them can be had from the County Agent or Vocational teachers. They are here. Use them.

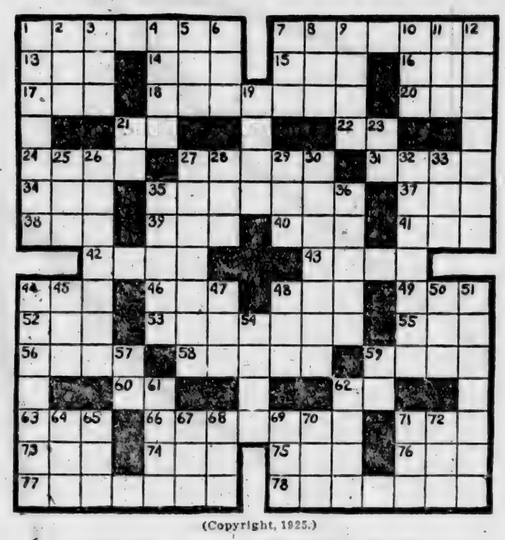
CROSS-WORD PUZZLE



(Copyright, 1925.)

Horizontal.

1—The sky
7—Crisp indented cakes
13—Disconnected
14—A negative
15—An Anglo-Saxon money of account
16—A clinging vine
17—A Siamese coin
18—A place for repairing ships
20—A numeral
21—Exists
22—A suffix denoting an agent
24—To mend holes in stockings
27—To affirm solemnly
31—An entertainment by one person
34—A female sheep
35—Marked by old wounds
37—To tap lightly
38—A lair
39—A plaything
40—To deface
41—A monkey
42—Always
43—Officer of an educational institution
44—A bench in a nave
46—An insect
48—A beverage
49—An illuminating mixture
52—Part of the verb "to be"
53—A jungle animal
55—A deer
56—Does away with
58—Entrances
59—To discern
60—Upon
62—A negative prefix
63—At the present
66—Publication directors
71—A mineral spring
73—Before
74—A small island
75—A cereal grain
76—That girl
77—Comes back
78—To indicate

Vertical.

1—Saved carefully
2—A lizard
3—Astern
4—Finishes
5—Neither
6—A pig pen
7—To court
8—Part of a circle
9—Something that deceives
10—Ignited
11—The night before a holiday
12—A combining of two voice parts
19—A ruminating mammal
21—Within
23—Rupees (abbr.)
25—To inspire with reverence
26—Began again
27—Rejected
28—A path of travel
29—A part of the body
30—Those who judge manuscripts
32—A fruit (pl.)
33—To drink with the tongue
35—To commit theft
36—To await with anxiety
44—A business associate
45—The silk from the Assam silkworm
47—Also
48—A thick black substance
50—Any of Swiss mountains
51—A bird
54—To purse the lips
57—In such a manner
59—Half the width of an em
61—Not far
62—Employs
64—Native metallic compound
65—Moistened
67—Noise
68—Belonging to it
69—A sphere
70—A gypsy gentleman
71—A girl
72—A nutritious seed served as vegetable

The solution will appear in next issue.

Solution of Last Week's Puzzle.

HOW TO SOLVE A CROSS-WORD PUZZLE

When the correct letters are placed in the white spaces this puzzle will spell words both vertically and horizontally. The first letter in each word is indicated by a number, which refers to the definition listed below the puzzle. Thus No. 1 under the column headed "horizontal" defines a word which will fill the white spaces up to the first black square to the right, and a number under "vertical" defines a word which will fill the white squares to the next black one below. No letters go in the black spaces. All words used are dictionary words, except proper names. Abbreviations, slang, initials, technical terms and obsolete forms are indicated in the definitions.

WOMAN WRITES OF ENGLISH CONCEIT

An American journalist asked me if I thought his people thought more of themselves than the British did. I said it was a nice point, and added:

"You do not think more of yourselves than we do, but you think more about yourselves. We live in an older and more interesting country than you do, but you won't hear an Englishman ask any foreigner what he thinks of England; nor, I am fraid—if an opinion either praising or adverse were volunteered—would he care a rap for the reply."

As a nation we are not touchy or vain, but we are conceited, Margot Asquith declares in the London Magazine. Vanity undermines self-confidence, conceit stimulates it; and if success is the object aimed at, I do not know a defect more likely to insure failure than vanity.

If you refute this by citing the famous men who have been vain, you find that their vanity did not cover the ground; it was redeemed by qualities of heart, head or judgment rare even in the humble.

Love Wavers at Religion

In India there is a Christian community that contains a large number of Hindu women who have been born into or professed the Christian religion. Great alarm is being felt just now because some of these Christianized women are marrying out of the Christian religion by choosing husbands who have not been converted. One of the reasons is that there are too few Christian men in the community. Another reason is purely economic in that the Christian young men are not able to support these girls in the manner offered by those who profess the so-called pagan religions of the country.

To Cut Down Housework

British women have organized to promote the use of electrical appliances in the homes of Great Britain. It is said that the reports of labor saved in American homes through electricity have been responsible for the movement.

A Stiff From Bowling

Ben—I'm a little stiff from bowling.
Bill—W[illegible] did you say you were from?

Manchuria Branches Out

A modern spinning mill has been completed at Liaoyang, the first Japanese plant of its kind in Manchuria. Ten thousand spindles out of 32,000 are being worked, but the entire installation is expected to be in operation by next spring. The number of hands, now 700, will be increased to about 2,500. Native cotton only is available and in limited quantities, but is of splendid quality.—Family Herald.

Best Coating for Iron

If entirely impervious, either tin or zinc coatings will protect iron. As, however, such coatings are almost invariably porous or are likely to be penetrated by abrasion, the zinc coatings furnish better protection because the exposed iron does not rust as long as zinc is present in close proximity. Tin coatings, on the other hand, accelerate the corrosion of any exposed iron.

The Procrastinator

I have noticed that every man who really amounts to a good deal is prompt; he makes few appointments, and keeps them. And when he works, he works. . . . But look out for the man who loafs half the time during his business hours, and is never on time.—E. W. Howe's Monthly.

Benzine 100 Years Old

The discovery of benzine was first announced by Michael Faraday 100 years ago the sixteenth of June.

INDIANA NEWS

Indianapolis.—The Indiana farm bureau, the Producers' Commission association and the Indiana manufacturers of dairy products will aid the Indiana state chamber of commerce in the Eastern class-rate case in which the Indiana shippers are attempting to gain a decrease in freight rates to the Eastern seaboard, and in which they allege that the rates to the eastern part of the country are excessive. The announcement that the organizations have entered the controversy was made by George H. Mosser, managing director of the chamber of commerce.

Indianapolis.—Announcement was made of the judges who will judge the five cattle classes at the National Dairy exposition, which will be held October 10-17 at the Indiana state fair ground. They are: Prof. H. H. Kildee, Ames, Iowa, judge of Ayrshires; R. S. Hulse, Chicago, judge of Brown Swiss; Prof. W. W. Yapp, Urbana, Ill., and E. G. Woodward, Taconic, Conn., judges of Guernseys; W. S. Monscrip, Lake Elmo, Minn., and C. L. Blackman, Davidson, Maine, judges of the Holsteins, and Prof. J. B. Fitch, Manhattan, Kan., judge of Jerseys.

Kokomo.—Everett Bridgewater, age twenty-three, confessed bank bandit, was brought into the Howard Circuit court and entered a plea of guilty to a charge of bank robbery in connection with the holdup of the South Kokomo bank on last March 27. Bridgewater was fined $100 and costs, sentenced to the Indiana reformatory for a term of ten to twenty-five years and disfranchised for ten years.

Bloomington.—The Indiana university reserve officers' training unit, for the fifth time in six years, won the government's rating of distinguished college, a message from the United States War department says. The designation, known also as the gold star award, is made each year to the 25 schools of the United States whose R. O. T. C. units are adjudged most efficient.

Fort Wayne.—Word was received of the appointment of Miss Anne M. Holtman, superintendent and principal of the Lutheran hospital and the Lutheran Hospital Training School for Nurses, to serve as a member of the Indiana state board of nurses' registration and examination. The appointment was made by Gov. Ed Jackson and is for a term of three years.

Noblesville.—D. C. Stephenson, Earl Klinck and Earl Gentry, charged with murder in connection with the death of Miss Madge Oberholtzer, lost their fight to obtain their freedom on bond. Judge Fred E. Hines, of the Hamilton County Circuit court, who has had the question under advisement, denied their petition to be admitted to bail pending the outcome of their trial.

Lagrange.—Bankers of Lagrange county, meeting here, posted a reward of $1,000 for the apprehension and conviction of any person "dead or alive" who robs or attempts to rob any of the 11 banks in the county. Several of the banks of the county have equipped their employees with rifles and revolvers.

Lafayette—Joseph Brown, age twenty, is in a serious condition in the Home hospital as a result of a fractured neck suffered while swimming in the Tippecanoe river, near Springboro. He dived from an 18-foot platform into shallow water.

Anderson.—Mrs. Jennie McCellan, age fifty-two, wife of Dr. Charles McCellan, of Chicago, died unexpectedly in a tourist camp at Athletic park. Death was due to natural causes. The McCellans formerly lived in Madison county.

Hartford City.—Word was received of the death of Frank Goodland, age fifty, a former resident of this city, at Pontiac, Mich. He was a pioneer in commercial flying and was killed while teaching a student the use of an airplane.

Muncie.—William A. Thompson, age eight-four, a former judge of the Delaware Circuit court from 1916 to 1922, widely known in the state as a lawyer and in the councils of the Methodist Episcopal church, died in the Delaware hotel.

Indianapolis.—The thirty-first annual state championship tournament of the Indiana State Trapshooters' association will be held at the Indianapolis Gun club over a period of three days, July 14, 15 and 16.

Elkhart.—The C. L. Monger Lumber company of Elkhart suffered a loss of $12,000, uninsured, when its saw and planing mill at Milford was destroyed by fire.

Salem.—John St. John, age twenty-two, the only son of Mr. and Mrs. Edward St. John, was drowned while bathing in the Allegheny river at Freeman, Pa.

Richmond.—A first degree murder indictment was returned by the Wayne county grand jury against Bruce Brown, forty-five years old, who, several years ago, is said to have shot and killed his wife. Brown has virtually recovered from a bullet wound, self-inflicted following the shooting.

Terre Haute.—Struck by lightning, Harold Glen Tryon, age eighteen, was instantly killed at the Terre Haute creosoting plant. The house was partly wrecked by the lightning bolt that crashed among the four men, killing one and stunning the other three.

BANK LOAN TO STATE CUT BY $500,000

Indianapolis.—The first step in the program of Gov. Ed Jackson to wipe out the existing state debt was taken when the state board of finance renewed only $2,000,000 of the $2,500,000 bank loan which has existed since last January. The Fletcher American National bank, with an offer of a 3.32 per cent rate and a premium of $11, was the low bidder to float the loan for the remaining six months of the year. This bank has held the loan of $2,500,000 during the first six months of 1925.

When the new fiscal year starts the state budget system will permit the wiping out of $400,000 which is owed to the auto theft fund, members of the finance board explained. They said that the present debt will be reduced an additional $500,000 at the beginning of 1926.

Indianapolis.—Three persons are dead and two little children are orphans as the result of a double murder and suicide at 326 East McCarty street. The dead are: William J. Carpenter, sixty-two years old; Mrs. Adelaide Carpenter, fifty-five years old, his wife; Mrs. Grace McDonough, thirty-four years old, Carpenter's stepdaughter. A little girl, Helen, ten years old, and her brother, Mark, eight years old, ran to the aid of Mrs. McDonough, their mother, when the shots were fired by Carpenter. Carpenter is said to have been suffering from an illness and is said to have demanded $200 from his wife, saying that he would leave home if she would give it to him.

Indianapolis.—Asserting that the Intercity Safety Coach company of Kokomo, in the 90-day period that preceded the taking effect of the new motor-bus law had not operated "lawfully" on its Indianapolis-to-Peru bus line for the reason that it had operated some of its buses at a rate of speed greater than that permitted by state speed laws, in effect at that time, the public service commission at Indianapolis denied that company's application for a certificate of convenience and necessity to run this line under the 90-day "grandfather" clause of the bus law.

Indianapolis.—Motorists will enjoy an unbroken pavement between Chicago and Michigan City, with the completion of Indianapolis boulevard by winter. The Indiana section is progressing rapidly, members of the Indiana highway committee said at Gary, and Illinois road officials have promised to start work soon. While a 30-foot roadway is being constructed on each side of the street car tracks, the other side will be kept open, as 26,000 automobiles, the bulk of the east and west traffic, use the boulevard every 24 hours.

Frankfort.—One man is dead and three persons injured, one seriously, as the result of an automobile accident at Sedalia. The automobile in which they were riding was struck by a freight train on the Pennsylvania railroad. Herbert Schwartz, age thirty, of Marion died after being taken to the Clinton County hospital; Irwin Schwartz suffered a fractured skull; Rose Schwartz, age twenty-one, wife of Herbert Schwartz, and Wayne, their nine-months-old baby were only slightly injured.

Indianapolis.—Mrs. Anna Tomko, who told the Gary police that her husband, Joseph, killed their seven-year-old son, Emory, while under the influence of moonshine, repudiated her story at the coroner's inquest. She told Coroner Marshall that she heard the shot which killed the boy, but that she thought her husband was shooting rats. After her attorney asserted the Gary police beat a confession out of Tomko, the coroner reserved a decision.

Michigan City.—A. J. Hickey, representative in the congress from the Thirteenth Indiana congressional district, in an address before the Indiana Grain Dealers' association, appealed for better grain marketing facilities as one step toward stabilizing unrest in rural communities and keeping the boys and girls on the farms. He advocated co-operative marketing and establishment of centralized bureaus to handle the produce.

Akron.—The honeymoon of Mr. and Mrs. Donald Ross of North Manchester was brought to a tragic end when their automobile was struck by an Erie train, instantly killing the bride and seriously injuring the groom.

Evansville.—Tom Morris, age sixty, was killed when he attempted to stop a runaway team driven by William Adcock.

Washington, D. C.—Postmaster General New has named Thomas Jensen to be acting postmaster at Litchfield.

Danville.—Henry Rodney was appointed sheriff by the Hendricks county commissioners.

Toledo, Ohio.—Six defendants in a tri-state liquor conspiracy in Ohio, Michigan and Indiana drew prison sentences and fines in Federal court after a jury returned a verdict of guilty in the cases of five who stood trial. Ray Worden, of Fort Wayne, alleged leader of the rum ring, was sentenced to one year and a day at Atlanta prison and fined $500. He pleaded guilty.

Warsaw.—Six or eight groups of 10 to 20 men each will be organized into vigilantes with a view of putting an end to bank robberies in this section of the state.

Sunday School Lesson

(By REV. P. B. FITZWATER, D.D., Dean of the Evening School, Moody Bible Institute of Chicago.)
(©, 1925, Western Newspaper Union.)

Lesson for July 12

THE GOSPEL IN ANTIOCH OF PISIDIA.

LESSON TEXT—Acts 13:13-52.
GOLDEN TEXT—"Behold, I have given him for a witness to the peoples, a leader and commander to the peoples."—Isa. 55:4.
PRIMARY TOPIC—Telling Strangers About Jesus.
JUNIOR TOPIC—Barnabas and Paul in Antioch, Pisidia.
INTERMEDIATE AND SENIOR TOPIC—Early Victories of Foreign Missions.
YOUNG PEOPLE AND ADULT TOPIC—Paul's Preaching and Its Effects.

I. In the Synagogue at Antioch in Pisidia (vv. 13-16).

From Paphos Paul and Barnabas, with their companion Mark, went northward to Perga. Here Mark, for some reason, perhaps because of hardships, went back. He was ready to go again when they started on their second journey, but Paul would not give his consent (Acts 15:38-39). Before Paul's death he testified in Mark's favor for he had found him profitable unto him for the ministry (II Tim. 4:11). From Perga they went to Antioch in Pisidia, and here they entered the synagogue on the Sabbath day. From this we see that though Paul was sent to the Gentiles, he did not depart from the order of beginning with the Jews.

II. Paul's First Recorded Sermon (vv. 17-41).

This sermon is worthy of careful study. In its analysis we find four parts:

1. Historical (vv. 17-23).

In this section we see how Paul, in a conciliatory way, led them gradually through a series of changes in which God had dealt graciously with them, finally giving them Jesus, His Son.

(1) God chose and exalted the people (v. 17).

(2) He delivered them from Egyptian bondage, and led them through the terrible wilderness (vv. 17-18).

(3) He destroyed the Canaanitish nations, giving their lands to the Israelites (v. 19).

(4) He gave them judges as their deliverers when distressed by surrounding nations (v. 20).

(5) After they had selfishly chosen a king, He rejected the dynasty of Saul, and chose David, a man after His own heart (vv. 21-22).

(6) Finally it was God who from David's seed raised up unto Israel a Savior, Jesus. This demanded proof, which is given in the next section.

2. Apologetical (vv. 24-37).

That this Jesus is the seed of David and therefore the promised Messiah, he proves by three lines of argument:

(1) The testimony of John the Baptist (vv. 24-25).

John disclaimed all power as their deliverer, and pointed to Jesus as such.

(2) The prophecies of Scripture were fulfilled in their rejection and crucifixion of Jesus (vv. 26-29).

(3) By His resurrection from the dead (vv. 30-37).

Having proved Jesus to be the seed of David, he proceeds to follow the doctrinal teachings growing out of such proof.

3. Doctrinal (vv. 38-39).

The great doctrine derived from this proof is justification by faith, the very marrow of the gospel.

(1) The ground of justification is by Jesus. He took our place as a sinner that we might have His place as sons (II Cor. 5:21).

(2) Who are justified? Those who believe in Him.

(3) From what is one justified? All sins. The one who believes in Jesus is freely forgiven. His sins are all blotted out. This is the missionary message for all times. May we strive to get our pupils to believe on Him.

(4) Practical (vv. 40-41).

The application of this sermon was a warning lest the judgment spoken of by Habakkuk should fall upon them.

III. The Effect of the Sermon (vv. 42-52).

1. Many of the Jews and proselytes asked to hear these words again (vv. 42-49).

Almost the whole city came to hear the Word of God the next Sabbath. This great crowd incited the jealousy of the Jews.

2. Open Opposition (vv. 50-52).

This jealousy could not long be restrained. It broke out in open opposition. The persecution became so violent that Paul and Barnabas were expelled from the city. This persecution was answered by Paul's rejection of the Jews and his turning to the Gentiles.

3. The disciples were filled with joy and the Holy Ghost (v. 52).

Jean Paul Richter Said:

"The life of Christ concerns Him, who being the holiest among the mighty, and the mightiest among the holy, lifted with His pierced hands empires off their hinges, and turned the stream of centuries out of its channel, and still governs the ages."

Horse Carries Tail Light

Camden, N. J., has a police horse that carries a tail light. The horse is used by a mounted patrolman, and has been bruised several times by being struck by machines whose drivers did not see the animal. Determined to protect himself and his mount, the patrolman attached a red reflector to the tail of his horse. The reflector flashes red when the lights from a motor strike it, and the driver instinctively steers clear of the danger signal.

Dog Saves Benefactor

Ernest Ingwersen of Denver, Colo., some years ago rescued a dog which had become caught by one leg in a wild game trap. By nursing the animal after severing one leg, he saved its life. Recently while traveling through a blizzard he became lost and was led to safety by the dog. Just prior to that the faithful animal also saved Ingwersen's three-year-old daughter, who had been attacked by an infuriated dog.

Simple Remedy

"Brother Johnson," solemnly began the presiding elder, desirous of impressing a valuable lesson of some sort on his parishioner, "if your sins were written on your forehead what would you do?"

"Wear my hat all the time," promptly replied Gap Johnson of Rumpus Ridge.—Kansas City Star.

SINNERS IN HEAVEN

BY CLIVE ARDEN

COPYRIGHT BY THE BOBBS-MERRILL COMPANY

PART FOUR—Continued.

—18—

V

Darbury seethed and bubbled, and consumed endless tea, over the broken engagement of Hugh and Barbara. It is always easier to criticize other people's actions with the aid of this soothing beverage. It seems to enhance one's own sense of respectability in a world of sin.

Nobody was surprised, of course! Nobody ever is on such occasions. Everybody knew that something would happen—which is always a safe conjecture.

But what everybody did not know concerning the latter thrill was the real reason. And herein lay the cause of the emptying tea caddies. Unfortunately, Miss Davies was in London attending Christmas meeting over "fallen girls," so the mystery remained unsolved. But the weed of suspicion grew into a lusty tree. Again, and in louder tones, the question arose: What happened on the island?

It was known that the Rochdales and Mrs. Stockley were deeply upset, the latter exceedingly wroth; but the two most affected kept their own counsel.

The only ray of comfort to Barbara in her wretchedness lay in her aunt's absence. The relations between her mother and herself were of the coldest. Mrs. Stockley never forgot her position as a beacon, nor her Honorable Grandmother's gracious act in establishing her own identity with the county. This marriage between her daughter and Darbury's future squire had been her dearest ambition. Now, for no tangible reason, this ambition—revived with the girl's return—was hurled to the ground. Not easily could Mrs. Stockley view the dashing of her hopes. The scene between them had been stormy. She had wept, cajoled and upbraided, exasperated by the other's irrevocable demeanor.

"You are throwing away what many would give their eyes to possess!" she cried at last. "What will people say? There has been enough talk already. You confess you still care for Hugh—"

"Oh, yes, yes!" interrupted Barbara impatiently. "But that's not sufficient. It's not a woman's love for a man; that's quite a different thing. I know."

"Don't talk like a novelette!" her mother broke in querulously. Then, suddenly, her eyes narrowed and her thin face sharpened. "How do you know?" she asked meaningly.

Barbara was momentarily off her guard, not realizing her slip. The other woman pursued the advantage.

"Answer me, Barbara! I have not hitherto pressed for the confidence that was my due—in spite of the gossip which has come to my knowledge. You owe it to us all, now, to give an account of your life upon that island. Did anything happen there to cause this step?"

The girl stood looking down into the fire, uncertain of her reply, for a few moments. Her mother gave a little click with her lips.

"Ah!" she said decisively, "we thought so!"

"Thought what?" cried Barbara, turning sharply.

"That there had been some nonsense between you and that man, unchaperoned as you were."

The girl's eyes smoldered ominously, and she set her teeth. Her mother, exasperated by this reticence, continued with increasing anger:

"I ought never to have given my consent. I always knew he was an unscrupulous type of man—I never trusted him! But you at least should have known better, after your very careful upbringing. If his ideas were loose—"

"Stop, mother!" Her quick anger mounted. "You don't know what you are saying. He was the soul of honor. And because of it I—yes, I grew to love him with all my heart. I couldn't help it. I shall love him until I die," she cried recklessly, throwing herself into a chair and burying her head.

"You mean to say," asked Mrs. Stockley sarcastically, "that it is 'the soul of honor' to take advantage of a girl's lonely position? To lure her from the man—"

"He did not!" She sprang angrily to her feet; then realized, too late, the wisdom of Hugh's warning.

Her mother laughed incredulously.

"Then you gave him your affection unasked? You behaved like a sentimental schoolgirl—threw yourself at his head, in fact?"

Anything was better than exposing Alan's name to the fate awaiting it if the truth oozed out. She caught at this straw, anxious to end the ordeal.

"If you like to think so. He certainly never—asked me to care for him. But I couldn't help it," she repented.

Thus it was whispered from one bosom friend to another throughout Darbury that, during her sojourn upon the island, Barbara became the victim of an unrequited passion. This added spice to the mystery, while whetting curiosity. Did her companion never guess? Could any man, in such circumstances, be so blind—or so platonic?

Curious glances followed her; voices were lowered when she appeared; a constraint became obvious in her presence. . . . Well aware of it all, she threw it off with a shrug, scorn adding to the misery of her heart as she dragged through the days. Occasionally her mother forced the subject open again.

"If Hugh ever wishes to renew the engagement," she said once, "I insist upon your doing so."

"I couldn't possibly, mother!"

"Why not? The other man is dead. . . . You can't ruin your life over an infatuation of that sort. . . ." The Rochdales are such old friends," she moaned, another time. "You don't consider how I miss them—how this all affects me!"

"But you can continue your friendship. Why not?" asked the girl, having grown unaccustomed to Darbury habits. This, however, was contrary to all custom; and a certain estrangement between the two families began, as a matter of course. . . .

Barbara tramped the common in all weathers, consumed with a restlessness that would not let her sleep, unable to find peace of mind in any occupation. Coming back from one of these tramps two days before Christmas, she noticed, in the gathering dusk of the short afternoon, a woman's figure standing near the lake, a small child in her arms. With a casual glance, the girl was entering the cottage gate, when she heard her name uttered low, like a faint exclamation. She turned quickly, peering with puzzled brow through the gloom; then recognition dawned in her face.

"Jenny? Jenny Grant!" She remembered she had not seen the girl since her return. "What are you doing, Jenny? Home for Christmas?" she asked kindly, presuming her to be now in service somewhere. There was no reply; and, aware of the shyness of such village maidens, she continued: "Where are you working now?"

"I—I ain't got no work, Miss Barbara."

The voice trembled on a sob. Barbara glanced at her quickly again, and realized the child's presence. A dim memory of one among the many choice morsels recently recounted for her own benefit returned to her mind. . . .

"Oh, Jenny!" she cried involuntarily; then stopped, as the girl, hiding her face on the sleeping child, burst into a passion of tears. Taking her

"How Do You Know?"

arm, she led her to a seat placed near the lake, saying nothing until the fit of weeping had subsided. There was no need of words. In Barbara's face and heartfelt exclamation Jenny had read the knowledge she had learned to dread awakening, mingled with a sympathy she had never yet encountered. Of her own accord, at last, she began a stumbling explanation.

"'E was a sailor, miss. . . . 'E was goin' to marry me, but was ordered sudden-loike back to 'is ship; an' then 'e—'e got the 'monia an' died. . . . But 'e would 'a' married me, all right! 'E would!" She spoke with a defiance which the listening girl understood well. "We was wrong, I know," she went on, "but we was young an'—an'—partin'. an' with sinking voice, "I luved 'im! Oh, miss! I did, indeed! . . ."

The hand on her arm tightened its grasp.

"Yes, Jenny. . . . I know . . ." Then for a few moments she fell silent, reflecting upon the varied and extraordinary results—the high resolves and sacrifices, the impetuous, hot-headed folly, the loss of all principles—achieved by that "terrific force." . . . "What has happened since—?" She glanced at the child. "My aunt sent you to a 'home,' I think?"

"Yes, miss. Afterward I got work; but the baby was delicate an' I couldn't 'ave 'im with me. An' it's bin the same all along. I've bin out of work now wi' 'im fur weeks, an' all me money well-nigh gone. So I cum 'ome to mother, an' she—she's turned me away." . . . The sobs broke out afresh. "I—dunno w'ere to go nor w'at to do . . . I wish I was dead! I was wonderin', there by the lake, if—"

"No, no, no! Don't say it, Jenny! We—we'll think of something." Perhaps it was more than natural aversion which forced such horror into her own face and voice. "Have you any friends, anywhere?"

"Only in Edinburgh," Jenny replied hopelessly. "I 'ave an aunt there wot would 'elp me over Christmas if I could afford to—" She broke off, swaying forward and nearly dropping the child. Barbara took him from her.

"Jenny," she asked, "have you had any food lately?"

"I ain't 'ad—none today—miss," came the whisper.

With all Alan's suddenness of purpose, Barbara rose, supporting the girl with one arm and the baby boy with the other.

"Come with me," she said.

Mrs. Stockley, making out a list of necessities for a systematically organized parish tea, presently listened aghast to her daughter's impetuous explanation and extraordinary request.

"That girl! Jenny Grant! To stay in my house? My dear Barbara, I won't hear of such a thing! Whatever would people say? A wicked little—where is she now?"

"Martha is giving her food. She was starving."

Her mother gasped. She rose uncertainly, as if on the point of frustrating this disposal of her goods; then something in the girl's expression caused her to resume her seat.

"Oh, well! She can have some food. But then she is to go, Barbara—"

"Where?"

Mrs. Stockley fidgeted with her writing paper.

"That's no concern of mine. Her mother must look after her. Your aunt will be back tonight. She will do something—"

Barbara waved this idea to a place unmentionable. "Will you lend her money to reach Edinburgh? I haven't got enough loose cash—"

"Certainly not! I might never see it again."

The girl abruptly left the room at this point, with another impulsive resolution.

Half an hour later, after extricating her charges from Martha's distinctly grim ministrations, she rang the bell at the "House of the Moor," and deposited them in the friendly arms of the housekeeper of that harbor where all were welcome. "Mrs. Field won't mind," she said. "I shall be back soon." She hurried away across the dark paths; then turned along the road leading to the vicarage.

"Surely the vicar will help," she muttered to herself. "If only I had the money handy myself—" Down the road, skirting the wall, a bicycle lamp came flashing. A dark form flew past the girl; then, with a scraping of brakes and rattle of springs, jumped off and hurried back.

"Ah! Miss Stockley! I have wanted to see you. . . ."

The vicar's voice sounded unusually subdued.

"I was just coming to see you, Mr Horne," Barbara replied.

"Really? Ah! I am very glad of that. I hoped you would."

"Why?" she inquired, in genuine surprise.

"Because—well, to be candid, I have felt much troubled about you."

"Indeed?" she said, as he paused. He wheeled his bicycle nearer and spoke somewhat hesitatingly. There was that about Barbara, nowadays, which seemed to check his bland platitudes.

"I have been genuinely pained," he continued in his pedantic manner, "at your continued refusal to take up your old work in the parish, and your absence from church. Both have been a real grief to me, as they have to your mother. I am overjoyed, therefore, if, at last—"

"No!" she interrupted. "You are mistaken. I—can't do—either."

He gave a deep sigh. "But—my dear Miss Stockley—when one's duty lies plain—"

"Mr. Horne!" she interrupted again, a note of suppressed passion in her voice, "if you met a blind man, would you send him us guide to a party of tourists?"

"Er—no," he said, bewildered.

She laid her hand on his bicycle, and the passion rose in her hurried words.

"Suppose your whole life—your thoughts, your motives, tastes, ideals, faith—had been taken and changed; then whirled around and dashed to the ground, so that—so that you were broken, crushed, blind—groping in the dark—could you teach children their creed? Or train young girls to be 'guides'? Or—or kneel in church and worship a God whom—if He exists at all—you hate?—yes, hate!"

"Miss Stockley—!"

Poor Mr. Horne was rendered speechless.

Barbara seized the opportunity of forwarding her original purpose.

"I wanted to see you, tonight, about Jenny Grant."

"Jenny Grant?" he echoed, still dazed.

In a few sentences she acquainted him with the facts. He looked at her, by the light of his bicycle lamp, in yet more astonishment; then, with an air of profound melancholy, shook his head and sighed again.

"They are chapel people, Miss Stockley. It is not my business to interfere."

"But surely—! Whatever difference does that make? It's only a loan of a few pounds—I will pay you back—"

"You don't understand these matters. If we begin lending money to those who are but suffering the rewards of their sins—if we encourage them to expect—"

Barbara turned away.

"If only Mrs. Field were here!" she muttered involuntarily.

"Mrs. Field? I saw her at the station—"

"Saw her? Then she has come back? . . . Good night, Mr. Horne!"

Before he could open his lips, he found himself alone, the sound of flying footsteps in his ears. Still feeling distinctly dazed, he took off his pince-nez and wiped the glass, before mounting his bicycle. . . . Yes, very wrong! Whatever the trouble, it was

"Oh! I Love Him So. . . ."

being taken in quite the wrong spirit. But one must be broadminded; one must not give up those in sin and darkness. He would send her that little book. . . .

VI

An anchor at last, in a merciless sea!

Thus did it seem to the girl stumbling hurriedly across the dark common. The windows of the house blazed forth a pathway of welcome long before its refuge was reached. Then a bright-faced maid opened the door; and that subtle sense of radiant warmth—which is only possessed by a house or person when the spirit of it is at the helm—stole out and enveloped her. . . . With a long-drawn sigh she entered the cheerful hall.

One swift searching glance at the sharpened white features of the girl hurrying up the stairs, and the woman in the fur traveling coat caught the extended hands and drew her close into her arms.

"Oh, Bab darling!" came the cry from her heart's depth.

A convulsive clinging of thin arms, no words were needed. . . . Her's was, at last, the blessed peace of Understanding. . . .

When the door of her den was closed behind them the elder woman raised the girl's face and looked long into the sunken eyes, with those deep gray ones which bore such resemblance to another's that Barbara caught her breath. She remembered once thinking his locked their wonderful tenderness. But she had seen it grow there—intensified. . . .

"Ah!" she cried, "how I wanted you!"

"I want to keep you here for Christmas," Mrs. Field said. "Will you stay? I am leaving afterward. Miss Davies traveled back with me, so your mother does not need you." She saw the flash of unutterable relief cross the girl's face, and turned to the door. Within a few minutes a letter had been dispatched to Mrs. Stockley, instructions given to the housekeeper, their outdoor clothes removed and they were back in the little sitting-room.

Mrs. Field knelt and poked the fire into a bright blaze, then looked up at the silent figure beside her. Her eyes followed those of the girl toward the writing table and the photograph upon it. . . . And she understood. She rose to her feet. And all the peculiar magnetism, which drew people of every class and creed to this woman, shone in her face, seemed to vibrate in the hand she held out. As the other caught at it, the sealed chamber of her tortured heart burst open in one agonized cry:

"I love him . . . Oh! I love him so, . . ."

"And—he, Barbara?"

"He—loved me."

Barbara abruptly held out her left hand.

(TO BE CONTINUED.)

Week-End Outfit in One Suitcase

The conquering heroine of the pre-sports era was an earnest believer in the strength of numbers and her week-end sallies into strange countries were never ventured without the accompaniment of a wardrobe that was as extensive as it was pretentious. Those were the days, writes a fashion correspondent in the New York Herald-Tribune, when quantity was the measure of smartness and when no occasion was too trivial to demand a change of costume. Starting with the morning frock, a summer's day which did not witness at least four distinct costumes was counted among the lost, and the enterprising demoiselle who could improve upon that number was at once the envy of her sisters and the glowing light of social gatherings. Manifestly, it was impossible to pack the necessary wardrobe within the limited confines of a single suitcase, and the pleasure-bent week-ender was compelled to travel, laden heavily with luggage or else run the risk of being occasionally out of the picture.

Those unscientific times are past, due partly to the comparative unconventionality of the summer mode, partly to a more enlightened attitude on the part of the gentle traveler, and partly to the general vogue of sportswear. Fashion no longer contents itself with seasonal changes—it is continually undergoing minute evolutions and the hallmark of haute chic demands small monthly wardrobe changes instead of the voluminous semi-annual acquisitions that characterized the past. The modern Parisienne does not burden herself with many clothes at a time—her annual number of frocks is, perhaps, greater than ever before, but they are added at diverse periods as the occasion demands, and as they are added, other costumes are either discarded or revamped to coincide with the smartest and latest dicta of the mode.

Wardrobe Should Fit Suitcase.

The result is a wardrobe which is always chic and never cumbersome and which is comfortably sufficient unto the three days of the sportive week-ender. Indeed, the greatest boon to the modern week-end habit has been the general simplification of fashion. You simply cannot pack frills and furbelows into a suitcase. If you appear with a wardrobe trunk or a plurality of suitcases your hostess immediately becomes apprehensive and you can hardly blame her. Obviously, then, the ideal week-end wardrobe must be modified to suit a single suitcase and the present status of the mode makes that task no longer a problem.

Apparently the dressmakers were thinking of the feminine week-ender when they evolved those delectable jumper suits that are the prop of every smart woman's existence nowadays. Whether it is made of kasha, crepe de chine or foulard, the jumper frock is the easiest garment to fold that has appeared on the modern horizon of the mode. Even its plaits can be coaxed to lie flat, and it is an excellent plan to pin them into place if the material of the dress is not too flimsy, always taking care to choose fine steel dressmaking pins and not the clumsy white wire variety.

Trim and Sportaman-Like Suit of Wearable Balbriggan.

For Golf, Tennis and Bridge.

The nature of the jumper frock will vary according to the type of place in which you are going to spend your week-end. If you expect to stay in an atmosphere of niblicks and mashies, naturally there should be a corresponding atmosphere of woolen and fine jersey cloth about the garments you take with you. If tennis is included in the program, a few one-piece white crepe de chine frocks will answer the requirements. These crease less readily than cotton and they shake out into charming folds as soon as they are hung up in a roomy cupboard.

After games the most usual occupation is bridge, and for this you will require a change. But let it be a change into a frock that, but for its color and material, might almost be worn for tennis or golf itself. The smartest clothes of the present season all have that sports allure. Even your dinner dress should have such a simple cut that if you put it on in the daytime nothing could be easier than an impromptu game, quite possible, in its straightline simplicity.

A charming idea for the bridge frock is the new jabot idea. It is an excellent suggestion, for there should be something reminiscent of the jabot in your week-end case—it is so typical of the present season's tendencies. It can be carried out in georgette crepe or chiffon and there is no need to adhere severely to plain material. The wild riots of flowers that are scattered over a beige or black ground are a charming feature of summer chiffons. They have this additional advantage—if your rubber is prolonged until the dinner gong sounds, you may appear dressed, fresh, ready for dinner and even the dance following without looking very much as if you had kept on your afternoon frock, for with chif-

Ensemble of Floral Print, Suitable for Week-End Wear.

fon it is difficult to say where the afternoon ends and the evening begins.

When you intend to include a really formal evening affair during your week-end visit, put in a straight-fringed frock.

You might include a little shawl to throw over the shoulders—it is a real boon on those delightful summer nights when one feels tempted to stroll in the garden between dances. Paris insists on some dainty accessory on these occasions—not from a practical point of view, but because it adds a balancing feminine triviality to the slender lines of the July evening frocks.

Easily Packed Incidentals.

It is advisable to reduce shoes and other accessories to a minimum when you are paying a week-end visit. Keep a small extra bag for your shoes, and you can also use it for last minute remembrances, for even the most methodical of us invariably leave out something of which we think frantically when straps are fastened and keys put into the handbag. Often enough it is just the pair of shoes that goes with the particular frock around which the week-end wardrobe is constructed. Fashion has been liberal in late years by sanctioning gold, silver or blond satin shoes to be worn with every kind of evening gown. Now the mode is changing and the slipper should match the frock. This is an additional complication, but it is essential in a surrounding which places a premium on smart clothes. In less formal places you may choose a pair of blond satin shoes and wear them with your bridge frock as well as in the evening.

Above all other things, remember that costumes worn in Rome should always be Roman. The habit of swimming upstream has no place in modern fashions and it is particularly inappropriate in the short-visiting week-ender. If you are going to visit at some mountain resort which prides itself on a certain lack of convention, leave that Patou robe du soir at home and forget that very Parisian chapeau by Lewis. And conversely, if your journey's end be at some watering place where fashion is the alpha and omega, don't attempt to convert the frivolous populace by wearing clothes that are plain and commonplace. The mode has places for its missionaries, but the week-end habitat is not one of them.

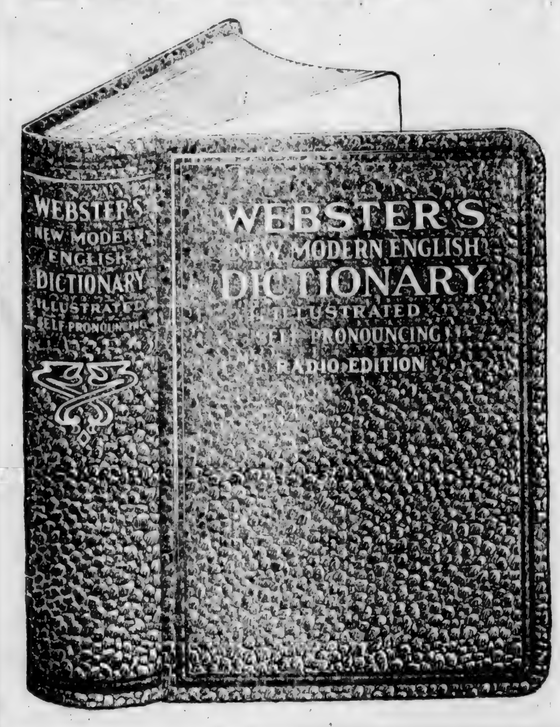
OUR EXCLUSIVE OFFER

WE HAVE made special arrangements with the publishers and have been given exclusive right for the distribution of the

WEBSTER'S New Modern English **DICTIONARY**

To the Readers of the

St. Joe News



A $4

Webster's New Modern English Dictionary for NOW ONLY

98c

and 3 Coupons

Radio, Wireless, Aviation and Automobile Terms Up-to-date.

A Remarkable Book

This dictionary is an abridgment from the Standard work on the English language by America's greatest lexicographer, Noah Webster, LL. D., revised and brought up-to-date so as to include practically all of the terms in the English vocabulary which are in ordinary use as well as many technical terms which would be required by the engineer, architect or the advanced student.

This is a remarkable book indeed and patrons of The News are fortunate in having this opportunity. Our first shipment of 64 books is expected this week and if you secure 3 coupons—the dictionary is yours. Clip the coupons. If to be mailed, postage additional.

Dictionary Coupon

Cut out 3 coupons and bring to office of the

ST. JOE NEWS, St. Joe, Ind.

which together with 98c will entitle bearer to one copy of the

Webster's New Modern Dictionary, Cross-Word Puzzle Edition. Postage additional to out of town readers-10c.

Obituary

Harriet Stafford, daughter of Amzi and Mercy Ann Seeley, was born at Orangeville, DeKalb County, Indiana January 29, 1850 and passed peacefully away at her home in Newville, Indiana, June 29, 1925 aged 75 years and 5 months.

She was the fourth in a family of four children, three sons and a daughter, the three brothers having preceded her in death. Her young life was spent at Newville and some of her playmates in child hood were her close neighbors in her declining days.

In June 1877 she was united in marriage to Samuel Stafford. To this union was born four daughters three having died in infancy.

When a young woman she united with the U. B Church at Newville and when her health would permit was in attendance. For the past two years her health has been failing but she was patient and uncomplaining and attended to her household duties as best she could. Her last illness was brief. She was taken ill on Monday morning and fell quietly asleep at two o'clock in the afternoon. There remains to cherish her memory her beloved companion, the only daughter, Mrs Pluma Berry, eight grandchildren and two great grandchildren, these with her nieces and nephews and many more distant relatives are left to cherish her memory.

The funeral service was conducted from the home last Wednesday morning at 10 o'clock by Rev Small. E. R. Kinsey, funeral director. Interment in Newville cemetery.

Joseph F. Zeis was born in Springfield township, Allen county, Indiana, November 24, 1866, and died at his home near Spencerville, Indiana, July 6, 1925 aged 58 years, 7 months and 10 days.

He was married to Clara E. Miller January 26, 1889 and to this union four children were born: Otis and Melvin are deceased, Mrs. Lois M. Zoler of Auburn and Hershal C. Zeis, one granddaughter, Evelyn Zoler, along with the wife and mother remain to mourn their loss. In 1894 he joined the Springfield Center Lutheran Church and later transferred his membership to the Lutheran Church at Spencerville of which he remained a consistent member until death. He was quiet and unassuming in his manner. He was a good father and husband and a good citizen. He was sick a long time and suffered much and finally died in peace and in the hope of everlasting life.

The funeral was held at the Lutheran Church at Spencerville on Wednesday at 2 P. M., conducted by Rev. S. D. Steffey. E R. Kinsey, funeral director. Burial at Scipio cemetery.

The death of Mrs. Melvina Nelson occurred at Auburn, July 4, at home of her sister, Miss Laura Kerann, following a months illness.

She was born in Butler township March 18, 1851, and was one of a family of 10 children, 5 boys and 5 girls. She taught school in DeKalb county for years and Oct. 21 1875, she married Lorenzo Nelson. Four sons were born, Arthur of Des-Moines, Iowa, Ray of New York, Frank and Stanley of Auburn.

She survived her husband but 11 months. Her age was 74 years, 3 months and 16 days. She was a member of Concord church.

Funeral was held Monday afternoon from the home. Rev's. Krider and Hubbard officiating. Interment in Woodlawn mausoleum.

LOCAL ITEMS.

Robert Ulm and family of Butler, Archie Erickson and family of Garrett and Clark Scholes, were Sunday guests of their parents, Mr. and Mrs. Frank Scholes.

Mr. and Mrs. Ella Wilmot and Clyde Mason and family attended services at the Auburn Church of Christ and were dinner guests of Ernest Jenkins and wife, Sunday.

Frank Milliman, wife and daughter, Miss Marguerite, with M. E. Gruber and wife and A. G. Hercules of Fort Wayne, spent the past week at Crooked lake.

A colored preacher in Alabama, had at one time served a short jail sentence and was fearful lest his congregation discover the fact, as in his later years he had been a model of rectitude.

One Sunday, rising to begin his sermon, his heart sank to see a former cellmate sitting in the front row.

Quick thinking was necessary. Fixing his eye on the unwelcome guest, the preacher announced solemnly:

"Ah takes mah text dis mo'nin' from de sixty-fo'th chaptah and fo'-hundredth verse of de Book of Job, which says: 'Dem as sees and knows me, and says nothin,' dem will Ah see later'."

Frank Meese of St Joe, was arrested Monday night, July 6, on complaint of Fred Jenkins, also residing at that place. He was charged with assault and battery and on Tuesday Meese retaliated by swearing to an affidavit charging Jenkins with the same offense.

In the court of T. C. Ford, Justice of the Peace in Auburn, Meese entered a plea of guilty and was fined $5 and costs totalling $14.55 which were paid.

In Justice Ford's court Tuesday Jenkins said he was not guilty as charged in the affidavit, but he wanted to pay his fine. The court entered a plea of guilty, however, and Jenkins was fined the same as Meese, $5 and costs, $14.55, which he paid.

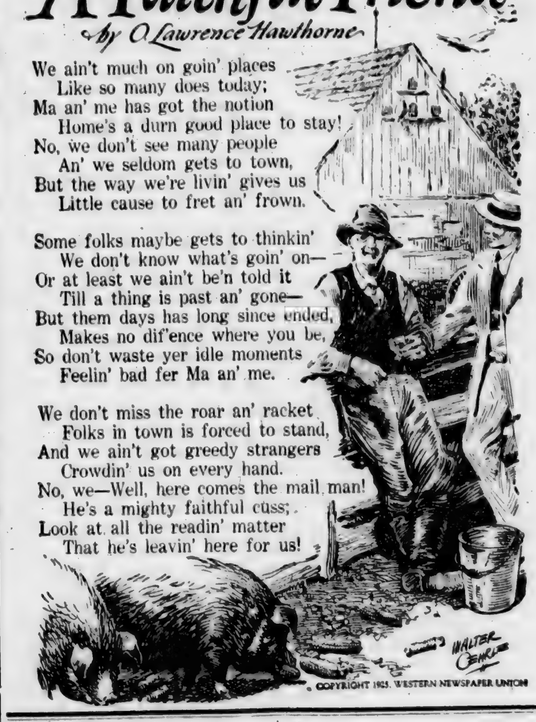
A Faithful Friend

by O Lawrence Hawthorne



We ain't much on goin' places
Like so many does today;
Ma an' me has got the notion
Home's a durn good place to stay!
No, we don't see many people
An' we seldom gets to town,
But the way we're livin' gives us
Little cause to fret an' frown.

Some folks maybe gets to thinkin'
We don't know what's goin' on—
Or at least we ain't be'n told it
Till a thing is past an' gone—
But them days has long since ended,
Makes no dif'ence where you be,
So don't waste yer idle moments
Feelin' bad fer Ma an' me.

We don't miss the roar an' racket
Folks in town is forced to stand,
And we ain't got greedy strangers
Crowdin' us on every hand.
No, we—Well, here comes the mail man!
He's a mighty faithful cuss;
Look at all the readin' matter
That he's leavin' here for us!

COPYRIGHT 1925, WESTERN NEWSPAPER UNION

Forty-Six Farmers In Indiana Legislature

Nearly one-third of all the members of the Indiana legislature are farmers.

Of the fifty senators in the state legislature. twelve are farmers, and thirty-four out of the one hundred members of the lower house list themselves as agriculturists. A few divide their time between farming and banking, farming and insurance, or some other profession or occupation in addition to their farm interests.

Iowa with a farm population of forty-six per cent has ninety-nine farmers in its legislature membership of 158. Pennsylvania with its eleven per cent farm population, has only fifteen farmers in its legislature out of a total of 258 members. Mrs. Mabel A. Gillespie of Gretna, a member of the Nebraska lower house, is the only farmer's wife on record holding a legislative job.

The ratio of representation of farmers in Congress is lower than the average found in the state legislatures. With a national farm population of thirty per cent, the sixty-ninth Congress finds only five farmers in the Senate and twenty-one in the House of Representatives.

Carload of Booze Discovered at Wayne

A car containing 200 barrels of beer (Evaporated Milk) was confiscated at Fort Wayne Saturday in Nickle Plate Yards, consigned to Morgan Bros., Chicago from Corning, N. Y. The car was heavily loaded and being rushed thru so fast that it had two hot boxes and was set off for repairs. While it was set off the seals were broken causing an investigation which led to the discovery. The cargo was worth $25,000. Federal authorities took charge of the cargo Monday.

Save trouble by using receipts. Get a book at News office.

Vernon Woodcox, wife and son, Billy, visited with Chas. Lawson and family at Auburn, Sunday.

Mrs. Howard Williams of Fort Wayne, Donald Davidson, Mrs. Hasel Monroe and W. E. Henley and family attended the Henley family reunion held Sunday at Toledo.

Notice of the Payment of Drainage Assessment

In the Matter of the proceedings for drainage by Fillmore Shull, Et Al.

State of Indiana,
County of DeKalb, ss:

Before the Board of Commissioners of the County of DeKalb, in the State of Indiana.

In the matter for the Proceedings for Drainage by Fillmore Shull, et al.

Notice is hereby given to the owner or owners of each tract or tracts of land, lot or lots, easement or easements, right of way and other property, and to any corporation or corporations affected by and assessed for benefits in the matter of the proceedings for drainage by Fillmore Shull, et al., before the Board of Commissioners of the County of DeKalb, in the State of Indiana, that the assessment sheet of the apportionment and assessments against the respective parcels of land affected and benefited by the construction of said work of drainage has been prepared and placed in the hands of the Treasurer of DeKalb County, Indiana, for collection and is now on file in the office of said Treasurer of DeKalb County, Indiana; that said assessments by an order of the Board of Commissioners of the County of DeKalb, in the State of Indiana, are required to be paid in five annual installments, maturing at regular annual intervals, the first of which installments will fall due and be payable on the first day of November, 1925, and the remaining four installments will fall due and be payable on the first day of November of each and every year thereafter until all of said installments shall have been paid, and that any and all persons who are affected and whose lands are affected and benefited by said drainage and assessed for benefits therefor in said proceedings desiring to pay their said assessments in full and discharge their said lands from all liability to and for such assessments, may do so by paying the same to the Treasurer of DeKalb County, Indiana, at the office of said Treasurer, in the city of Auburn, in DeKalb County, Indiana, on or before the 1st day of November, 1925.

Dated July 20, 1925.

Effort to Liberate McCray from Pen

Reports are current that a movement as yet not publicly defined is under way for the liberation of Warren T. McCray, formerly governor of Indiana, from the federal prison at Atlanta. Those said to be interested are moving quietly, and it is not known whether any satisfactory headway has been made, but there is every indication that the promoters intend to continue until they get a definite decision. McCray was sentenced to ten years in prison by Federal Judge A. B. Anderson a year ago last April.

Do You Know

That 21,000,000 letters went to the Dead Letter Office last year?

That 803,000 parcels did likewise?

That 1 0,000 letters go into the mail yearly in perfectly blank envel pes?

That $55,000 00 in cash is removed annually from misdirected envelopes?

That $12,000.00 in postage stamps is found in similar fashion?

That $3,000,000.00 in checks, drafts and money orders never reach intended owners?

That Uncle Sam collects $92,000.00 a year in postage for the return of mail sent to the Dead Letter Office?

That it costs Uncle Sam $1,740,000 yearly to look up addresses on misdirected mail?

That 200,000,000 letters are given this service, and—

That it costs in one city along $500.00 daily?

AND DO YOU KNOW

That this vast sum could be saved and the Dead Letter Office abolished if each piece of mail carried a return address, and if each parcel were wrapped in stout paper and tied with strong cord?

MORAL: Every man knows his own address if not that of his correspondent. Put it in the upper left hand corner.

The News can print your envelopes better and cheaper than you can afford to write it on.

Roy Maxwell and family moved to town last week into the Frank Hart residence.

Edgar W. Atkinson has been appointed administrator of the estates of L. D. Nelson and Melvina Nelson, his wife. Mr. Nelson left $4,000 in personal property and $9,500 in real estate to his wife and four sons. Mrs. Nelson leaves $4,000 in personal property and $6 000 in real estate. Her heirs are the four sons.

SINNERS *in* HEAVEN

By CLIVE ARDEN

Copyright by The Bobbs-Merrill Co.

PART FOUR—Continued.

—19—

"This was our wedding ring," she whispered.

The involuntary start which the other gave was quickly controlled. She met steadily, albeit with some apprehension, the girl's searching look—seeming to probe to her very soul, proving its faith.

"Yes," she encouraged. "You—married him? Tell me everything; will you?"

"You understand?" The searching look never relaxed. "You do understand?"

The appeal in that passionate regard and question brought quick response.

"Dear," she replied, pulling her down on the couch by the fire, "I understand. You loved each other and acted in accordance with—honorable convictions, in extraordinary circumstances. Is that enough? What more can I say?"

Barbara drew a breath of inexpressible relief. Holding fast to that sympathetic hand, she recounted with simple fervor the whole history. Nothing was omitted up to the present. When her voice ceased, there fell a long silence. From somewhere in the house came a merry laugh; an opening door let out a brief flood of dance music. . . . Then a piece of coal dropped into the fender, and Mrs. Field moved.

"Ah, my darling!" she cried. "It is bitter . . . I know . . . I know. . . ."

That was the first of many talks together during that Christmas season, which brought with it such acute memories. . . .

On the afternoon of Boxing day, as the girl sat alone, Hugh suddenly appeared—a grave-faced Hugh, with the bewildered "doggy" look still in his eye. She rose to meet him, with some embarrassment.

"Mrs. Field's with the old people. She said you were alone," he blundered, in explanation. "Bab—I've missed you, old thing!"

The simple directness touched her. She, too, had been conscious of a gap in the surface of her life, among the old haunts of their childhood, which had added to her wretchedness. Impulsively, she gave him her other hand.

"I have missed you, too, Hughie!"

Hugh clearly had something on his mind.

"I wanted to say," he blundered on, "—to tell you—I was a rotter—that day? I've been thinking the deuce of a lot lately, Bab. And I wanted you just to know—you can count on me any time to—buck you and Croft up, I mean." . . .

It was clumsily expressed; but she understood what the effort cost him, and the genuine feeling behind it all.

Hugh looked at her diffidently, then away through the window, speaking quickly and huskily. "And I wanted you to know that if—later on, perhaps—you felt you could marry me, after all—" he paused, glancing at her, "I shall always be there—just the same."

The eyes that met his were swimming in sudden tears. "My dear!" she cried. "But it can never be now—"

"You need not say anything, or bother about it," he said simply.

Impulsively she pressed his hands against her cheek; then he drew himself free. Hugh intensely disliked scenes. Having said what he wanted, he turned the subject. "Mrs. Field told me to have tea with you. She said there were loads of muffins! Let's sit on the hearth-rug and toast them, as we used to do."

So they sat together on the floor toasting muffins, the barrier breaking down between them. Thus Mrs. Field found them on her return; and a certain look of relief crossed her face.

* * * * * * *

It was one of those days when everything goes wrong. The village "help" did not come; and Martha therefore considered herself too much overworked to complete any one job. Lunch was late, the soup tepid, the potatoes were hard, coffee was lukewarm. The clogging of the well-oiled wheels of this small groove naturally resulted in "nerves" on the part of Mrs. Stockley. These, working up gradually, found relief in an explosion, when Barbara announced an afternoon's golf with Hugh. Surely there must be work of some sort for her to do in this tragedy of an unhelped household? This led to a heated argument, which took a sudden deflection down an unexpected channel.

"Of course, if you have renewed your engagement with Hugh—"

"I have not mother. I never can."

"And why can you never marry Hugh?" her mother asked testily. "Is it still because of that ridiculous infatuation? Barbara, I insist upon your forgetting such nonsense."

"You don't understand, mother. I can never forget."

"No," agreed Mrs. Stockley with some heat; "I do not understand; and I think it is time I did!"

She turned to her sister, as usual, for support, which was speedily forthcoming.

"Barbara," began that worldly woman, her curiosity at last given legitimate rein, "how far did this infatuation go? What can you never forget?"

The girl looked at her, startled, at a momentary loss. Her sensitive face, an enemy to subterfuge, flushed angrily.

"Ah!" exclaimed her aunt, meaningly, "I thought from the first there was something wrong."

"Wh-what do you mean, Aunt Mary? There was nothing—wrong."

"Then why maintain such mystery? Why are you afraid to talk of the matter—to tell the truth?"

A rush of loathing, contempt for all the suspicious minds about her, recklessness, which, in impulsive natures, has far-reaching effects, swept the girl away. After all, what did their feelings matter? What their opinions to the man whose memory she had tried in vain to shield from vulgar calumny? Barbara turned and faced the two women, tossing back the hair from her brow.

"You shall have the truth!" she cried, with suddenly blazing eyes. "This 'infatuation' you talk about went—to the end. He returned my love. We became husband and wife."

VII

The silence was awful. A dormant volcano could not have seemed more vibrant with foreboding. The two women sat, bereft of speech, gazing blankly at the girl, who faced them fearlessly from the hearthrug. From Mrs. Stockley's face every vestige of color had fled. She looked suddenly old; her features were haggard.

Then Barbara, as she had done twice before, held out her left hand.

"This," she said, breathing fast, "is my wedding ring. He was my husband."

The tension broke. Mrs. Stockley gasped, and her sister gave a snort of contemptuous laughter.

"'Husband'!" she mocked. "Pray—who was the priest? Where was the church? Or—had you a native registry office?"

The sarcasm was to the girl merely as the heat of an extra candle to one already enveloped in flames. She ignored the speaker, fixing her eyes upon her mother.

"Do you understand, mother?"

At that moment the sight of her mother's deathly face struck, like a blow, upon her heart. Her anger subsided as quickly as it had arisen; in its place a huge pity arose, making it suddenly imperative that the woman who had borne her should be saved the suffering of misconstruction.

Impulsively she moved forward, stretching out both hands.

"Mother?"

Mrs. Stockley rose slowly to her feet, ignoring the hands, still staring at her daughter as if she were some hideous snake seen in a corner of her comfortable room.

"You!" she muttered. "You—my daughter—you dare to face me with those—lies?"

The hands dropped and clenched at her sides. "They are not lies! It was impossible to get married according to English law. We therefore performed the ceremony for ourselves. We took the same vows—it was perfectly honorable."

Miss Davies broke in with another harsh laugh.

"Did he actually succeed in stuffing you with all that, to cloak your immorality?"

"Aunt Mary! How dare you—?"

"Oh! it's always the same! Haven't I dealt with hundreds of cases in my work which have been 'perfectly honorable'? Fools! Dupes! You weak women believe anything!"

"You—y-you—" Barbara choked, in her furious indignation.

"Immorality!" Mrs. Stockley caught at the word. "Immorality? In one of our family? My own daughter—?"

"You got off lightly," broke in her sister, watching the girl narrowly, through her lorgnette. "Without paying the price! Most girls are not so fortunate. But I suppose you took good care to prevent—"

"Yes!" cried her mother almost hysterically, "suppose there had been children?"

"There would have been," she replied with unnatural calm, her eyes burning in an ashen face. "That is why I was so ill at Singapore."

For a moment both women were again bereft of speech, Barbara turned to the fire and stood gazing into its depths.

"Ha!" gasped her aunt, at last. "I always thought there was something suspicious in that illness."

Then the girl flushed round, contempt ringing in her voice.

"Yes, Aunt Mary, you would! People like you would find something suspicious in—an archangel. Oh!" she cried passionately, "I know all the disgusting, vulgar gossip concerning Alan and myself! I knew it before I reached England. Now, I suppose, you will all purr in your self-righteousness, thinking how wise you were—"

"B-Barbara!" spluttered her dumfounded aunt.

"Oh, yes, you will! But"—turning blazing eyes upon Miss Davies' furious face—"you are all wrong! How can you tell what was right and what was not—out there? What do you all know of real, fundamental life? What experience have you had of—love, temptation—any problems—that you should dare—dare to judge? You all carry out your religious observances to the letter—but what about the spirit of it all?"

The two women were staggered by her furious flow of words.

"I understand," cried Mrs. Stockley, in weak impotent rage, "that you have disgraced our name! Sin cannot be excused. Whatever the man was—and thank heaven he is dead—you should have shown strength. You—you—are nothing but a—wanton!"

"Mother!" The girl recoiled, as if she had been struck, catching at a chair for support.

Her mother broke into a storm of hysterical weeping.

"Go!" she cried, between her sobs. "Leave the house! I—I refuse to own you! Go to your friends who—condone immorality—who encourage sin. . . . Join Jenny Grant—"

"Mother!" she cried again, with white lips, "you don't realize what you are saying—"

"I do! I do!—Go!" Weakly she stamped her foot, then sank into her chair, burying her face in her handkerchief.

A wild caricature of a laugh broke from Barbara's lips. She looked at her mother's shaking form, then at her aunt's rigid figure and hostile countenance.

"Very well," she said slowly, "I will go." . . . As if dazed, she put up her hand to her head, and gave one look round the familiar room. . . . Presently the drawing room door closed, with deliberate quietness, behind her.

* * * * * * *

Barbara's sudden appearance at the flat brought Mrs. Field little surprise. She had heard the rumblings of the storm approaching in Darbury, had seen the lowering clouds; but, with rare insight, she forebore to interfere. Some storms, being inevitable, are best left to themselves. "Forewarned and forearmed," one's work comes later with salvage and reconstruction. Not a whole regiment of engineers could pull down the wall encircling Mrs. Stockley's horizon; of that Mrs. Field was certain. In time, when the shock, and—above all—the talk, had subsided, a few bricks might, with infinite tact, be drawn away, allowing an occasional glimpse of wide uplands beyond. . . . But that would not be yet. . . .

"Very Well; I Will Go."

In the meantime it was the girl's quivering soul which needed infinite delicacy in handling; which wavered, struggled, sank gradually lower into the dark wilderness of morbidity, from which those who get lost therein take long to discover a way out; and, when they do, find the burrs and thorns still sticking to them, never to be quite shaken off.

Margaret Field had been through all this herself, years ago. No words, she knew, could help. She watched the girl closely, but made no attempt to force her. Putting back the clock of her own days, she entered the black pit with her, understanding her darkness.

Barbara went away. She gave no address. "I want to feel cut off from everything and everybody who knows me—for a time," she said, when her friend expostulated.

* * * * * * *

A remote Cornish village, trailing its whitewashed cottages down a precipitous narrow lane bordered by little cobbled ditches wherein ducks waddled and talked together—winding round a corner between fragrant gardens that merged into gray walls of houses and banks which, in summer, oozed ferns from every crevice, burst forth into fires of purple-red fuchsias and bulged out into great clumps of hydrangeas; pausing for breath, while the lane dropped to the old inn in the valley below, the white and gray cottages straggled along on either side the stream gurgling over its stony bed between rolling coombs in the valley behind, to the harbor which was its goal. . . . Such was the retreat in which Barbara found herself.

The chance memory of a friend's rapture had led her weary footsteps thither—to a small gray house near the river, kept by a bright young woman and her true-hearted husband.

Here, unknown and unnoticed, away from the stings of malicious tongues, the inquisitive world—not even seeing a newspaper—she wrestled with the questions and doubts and miseries of her heart.

"If the joy of your own personal love is withdrawn," Margaret Field had said, one day in London, "the seed is never lost. You may think it is for a time; but, later, it shoots up, nourished by experience, growing into a strong plant which will develop into a flowering tree of many branches." The truth of that, too, was dimly in her mind as she watched the stars come out above the harbor—in her heart the tired peace of one who, giving up fighting at windmills he can never conquer, lays his hand upon the plow which needs it. If solving the mystery of suffering could never be accomplished; if her own personal keynote to happiness were lost; then content she must be to hold out the hand of fellowship to those companions in bitter waters—to help find it for the world starving for love. . . . Perhaps—who knows?—that is the answer to the riddle.

As darkness fell, she turned down the path over the rocks; crossed the little bridge spanning the river; and made her way to the gray house, from which cheerful lights beckoned. . . .

She fumbled with the handle, turned it; opened the door; then stood for a moment blinking confusedly; for something big and dark had loomed up in the small passage, hiding the hanging lamp. . . .

A great cry burst suddenly from the girl's lips. . . . In the dark she turned ashy white; swayed; clutched vainly at the door-post; and would have fallen had she not been caught by arms that held her so strongly that they stopped her breath. . . .

Alan stood on the threshold.

VIII

It was only a small sitting room, with an oil lamp and a crackling fire. But all the worlds and all the heavens were enclosed within its walls to the two who clung together in their rapture.

Wonderingly, almost reverently, the girl passed her hands over the arms that clasped her—touching the dark hair and bronzed cheek half-fearfully, scarcely believing in their reality, looking upon him with bewildered, darkened eyes almost afraid to trust their own sight. The tall broad-shouldered figure had lost not an inch of its uprightness, nor had the head lost its old dominant poise. The few extra lines round the smiling lips and glowing eyes were swept up into the radiance which seemed to envelop him. Yet, in the dark clothes of civilization, he appeared subtly strange to the half-clad, barefooted overlord of savages of other days.

"Yes," he said at last, catching her hand lightly wandering over his arm, "it's all real. Solid flesh—no ghost!"

He raised her chin in the old possessive way, and looked long into the thin face and dark-ringed eyes, which told their own tale of suffering endured; then he pressed her head to his breast and held her close again in silence, as if defying any fate to separate them now. . . .

"But," she stammered faintly at last, "how is it—why—I don't understand—?"

"Why I'm not sleeping with my fathers, as you all surmised? Well—that is your fault."

"Mine?"

He nodded. "When Babooma was about to send me to my gods, you conveniently sent him, instead, to the shades of Valhalla—that last bullet, you know!"

Her eyes opened wide, and she caught her breath.

(TO BE CONTINUED.)

Get Loans From "Aunt"

In Paris and other big French cities the pawnbroker is called "my aunt." In France one needn't blush in doing business with the pawnbroker, for he is the state; that is, the government conducts the pawnbroking business. It does it very well, too, if I am to believe the testimony of some Americans who have "traded" with "My Aunt" while awaiting delayed remittances from home. "My Aunt" has had a good year's business. She does little business nowadays with the workingman, for he is always in work. The center of poverty has moved. It is the white-collar brigade which, unable to make both ends meet, resorts to "My Aunt." Oddly enough, "My Aunt's" shop in Paris is on "the Hill of Piety." Not a misprint for pity.—A. B. L., in World Traveler Magazine.

Lesson for July 26

THE COUNCIL AT JERUSALEM

LESSON TEXT—Acts 15:1-35.

GOLDEN TEXT—"We believe that through the grace of the Lord Jesus Christ we shall be saved, even as they." —Acts 15:11.

PRIMARY TOPIC—Jesus the Friend of Little Children.

JUNIOR TOPIC—A Great Gathering at Jerusalem.

INTERMEDIATE AND SENIOR TOPIC—The Council at Jerusalem.

YOUNG PEOPLE AND ADULT TOPIC—What Is Christian Liberty?

I. The Controversy in the Church at Antioch (vv. 1-5).

This difficulty was a most serious one for it threatened the disruption of the church into a Jewish and a Gentile division. It was not a question of the admission of the Gentiles into the church. That had been settled some years before when Peter received Cornelius and his household. The question now was, on what ground could they be received? Should Gentile converts be required to keep the Mosaic law as a condition of salvation? This issue was brought on by the coming of certain men from Jerusalem, who declared, "Except ye be circumcised after the manner of Moses, ye cannot be saved (v. 1)." The question was so difficult that Paul and Barnabas were unable to put the men to silence. These Jewish legalists had the letter of the Scripture on their side. They could point to the command in which this was enjoined upon believers (Gen. 17:14). Paul could not point to any Scripture where it had been abrogated. If Paul could plead that Abraham was justified before he was circumcised, his antagonists could answer, "Yes, but after justification the rite was divinely imposed." The brethren at Antioch decided to refer the matter to the mother church at Jerusalem. Accordingly, Paul and Barnabas and others were sent as a deputation to Jerusalem. At an informal reception by the church at Jerusalem they rehearsed the things which God had done for them.

II. The Deliberations of the Council (vv. 6-21).

1. Peter's Speech (vv. 6-11).

He argued that God had borne witness to His acceptance of the Gentiles by giving the Holy Spirit to them as unto the Jews (Acts 10:34-47). Since, therefore, God had not made a difference it would be folly for them to do so.

2. Paul and Barnabas Rehearsed Their Experience (v. 12).

They told how God had set his seal of approval on their preaching of salvation by grace through faith, apart from works, by the working of signs and wonders through them.

3. The Argument of James (vv. 14-21).

He took the declaration of Peter and showed how it harmonized with the prophecy of Amos (Amos 9:11-15). He showed that the reception of the Gentiles was not in conflict with God's plan, but in strict harmony therewith. As set forth by James, God's plan is as follows:

(1) To take out from among the Gentiles a people for His name (v. 14). This is what is now going on—the preaching of the gospel to the ends of the earth, and the calling out of the church.

(2) After the church is completed and removed, the Hebrew nation will be converted and restored to its own land and privileges by the Lord Himself at His return (vv. 16-17).

(3) Following this will be the conversion of the world through the agency of converted Israel (v. 17, cf. Rom. 11:15). He showed that there is no conflict when the Scriptures are rightly divided.

His judgment was that the Gentiles should not be troubled with things that are Jewish, but should be warned against the perils of heathenism, such as meat offered to idols, fornication and blood.

III. The Decision (vv. 22-29).

The Mother church came to unanimous agreement and accepted the resolution offered by James. The apostles and elders not only sent a letter stating the decision of the conference, but took the wise precaution to send influential men along with Paul and Barnabas to bear the same testimony by word of mouth. The letter denied the authority of the Judaising teachers (v. 24), and stated the method by which this decision had been reached (vv. 25-27). They put the Holy Spirit first.

IV. The Decision Delivered to the Church (vv. 30-35).

The church was called together to hear the report. Its reading brought rejoicing. They were now free to prosecute the great missionary work.

Spiritual Growth

HELPED THROUGH CHANGE OF LIFE

Took Lydia E. Pinkham's Vegetable Compound during This Critical Time—Benefited Greatly

Baltimore, Maryland.—"I took Lydia E. Pinkham's Vegetable Compound to help me through the Change of Life and for a broken-down system. I had been complaining a long time and dragging along had tried other medicines which did not help me much. I read in the newspapers of the Vegetable Compound and after taking a bottle I felt better. I did not stop with one bottle, but took it through the whole critical time and am now practically a well woman. I have two daughters whose health was very bad before they married and I was worried about them. I got the Vegetable Compound for them and it helped them, and after they married it also helped them in bearing their babies. This is a great and good medicine for all complaints of women, and I recommend it to all."—Mrs. L. GINGRICH, 1575 N. Gilmor St., Baltimore, Maryland.

The Vegetable Compound is a dependable medicine for women of middle age. Let it relieve you of nervousness, that feeling of strain and those annoying hot flashes so common at this time.

Practical Youth

It was at the senior prom and they were sitting out a dance in the moonlight. "I suppose," said she, "you're glad you are graduating from college soon?" He thought for some time before he made answer. "Oh, yes, I'm glad in a way, and in a way I'm sorry. But then, when all is said and done, I suppose it's time I put my golf to some practical use, don't you?"

GOOD MANNERS IN MOTORING

Connecticut Commissioner Stoeckel Sees Need of Code of Ethics.

That the present lack of good manners in motoring calls for a code of ethics to be observed by automobile drivers, is the belief of Robbins B. Stoeckel, commissioner of the Connecticut state department of motor vehicles, whose views on this subject are being sent to the country-wide membership of the National Safety council. Mr. Stoeckel's suggestions are intended to impress motorists with the importance of courtesy to fellow drivers and pedestrians alike. His advice should not only help to prevent accidents but should keep some motor operators out of trouble.

Importance of Courtesy.

"To be a good driver, in the terms of applied ethics, is to be a person of good manners, truly an altruist, ready to see and appreciate the problems of others, to make proper allowances for them and to exercise even a little more patience, care and consideration than is actually called for by the letter of the law," declares Commissioner Stoeckel's bulletin.

Pointing out that there are certain actions which are so obviously bad manners that it becomes a source of wonder how any person can bring himself to commit one of them, Mr. Stoeckel cites examples, such as:

Driving an automobile through water or mud so as to splash same upon pedestrians, a common pastime with some motorists who have peculiar ideas of what constitutes a joke.

Failing to give proper warning to a pedestrian or other user of a highway. Even animals should receive reasonable notice.

Neglecting to give proper attention to headlights, thus often causing inconvenience and danger to others.

Disobeying the instructions received from traffic officers and trying to steal a few feet of space, instead of remaining in the proper spot, a practice that not only annoys pedestrians and other motorists but which is dangerous.

Starting an argument with the traffic officer is not only bad etiquette but is courting trouble with the law.

The expert driver must tone down his skill by not swiftly weaving in and out of a moderately moving stream of traffic.

A common offense against road etiquette is committed when a motor car operator places his car at a crossing so as to obstruct pedestrian traffic, thus compelling pedestrians to walk around his machine.

Exercise of Kindness.

In conclusion, Commissioner Stoeckel says:

"The exercise of kindness to others, consideration and true courtesy will prevent any operator from getting a wrong attitude of mind for driving in traffic. Any operator who loses his temper, who becomes sulky, or is abnormal from any one of many different causes is unfit to drive because his automobile provides a medium of expression for his personality. If that personality is upset, he is bound to make trouble for himself or for others generally for both."

To Remove Carbon From Cylinder of Gas Engine

Auto owners who wish to remove carbon from the gas engine cylinder by means of an oxygen flame may do so without injuring the mechanism if the following precautions are taken:

The radiator must be filled with water in order to keep water around the cylinder walls and valves.

Both valves must be closed and the piston is placed at the top of the cylinder to confine the oxygen in the combustion chamber.

If compressed air is at hand after burning the carbon out, the engine is turned over until the exhaust valve is open, and a jet of air introduced into the cylinder to blow all loose particles of carbon which will prevent it from proper seating, and so impair the compression.

Motometer Tells Us of Cooling System

Do not be alarmed if the motometer seems to register a higher radiator temperature after you have filled up the cooling system with water.

It makes a difference in the reading whether the water or just the water vapor comes in contact with the stem of the thermometer. If actual contact of the water makes enough change in the reading of the motometer to lead you to assume that the motor is running hotter than usual, it is best to drain off a little water. Perhaps when the excess of water is drained off the motometer will still register higher than usual—an indication that the other causes apply.

Awarded Patent by U. S. on Balloon Tire Idea

Alden L. Putnam of Lansing, Mich. recently awarded a patent on the balloon tire by the United States patent office. Application for the patent was filed by Putnam in August,

Alden L. Putnam.

1920. While a member of the motor transport board during the war he built special tires to make riding easier. This was the development of the balloon tire idea.

Economy on the Part of the Car Owner Is Urged

Automobile owners must practice gasoline economy. Never before in the history of the motor vehicle has there been a more urgent need for conservation along this line.

This is the warning being broadcast to the nation's 17,000,000 motorists by Thomas P. Henry, president of the American Automobile association, who sees in economy the chief weapon in the motorist's hand to combat the soaring price of gasoline.

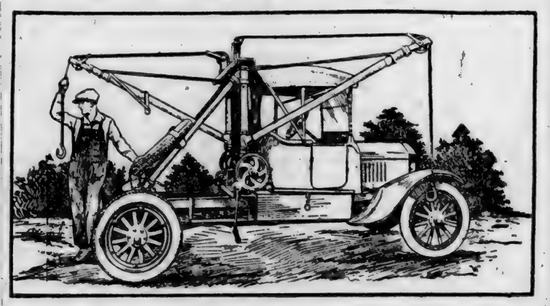
Whether the contention of oil interests that the natural oil supply is fast diminishing is founded on fact, or whether such information is merely a covering statement to justify higher prices, the car owner stands to lose in either case, according to Mr. Henry, unless he makes every gallon of gas give greater results.

"Economy on the part of the car owner," Mr. Henry states, "will solve the problem. If natural supplies are diminishing, economy will serve its obvious purpose. If scarcity is but a trade tactic, then conservation will help hold down the price to the consumer.

Balloon Problem Met

The main trouble experienced by owners who have installed balloon tires on their cars is that there has been entirely too much bobbing action. Many of the excellent spring control devices have been unable to check this successfully, even on some of the new cars which have not been especially designed for balloons. Though you will still need your spring control device, the excess bobbing can be done away with by taking a few leaves out of the springs. You will note on cars especially designed for balloons that there are fewer spring leaves, as a rule.

SWINGING BOOMS ON SERVICE CAR HELP



Service Car Equipped With Two Swinging Booms Made of Heavy Pipe Is Found Useful for Lifting Heavy Cars Up Embankments as Well as for Towing Purposes.

By mounting two swinging booms, made of heavy pipe and fittings, on the chassis of a light automobile made over into a service car, an Alabama dealer increased its usefulness considerably. The two booms are fastened together at the rear with two cross members of iron. Recently the car was sent out for a one-ton truck loaded with lumber, which had gone over a 20-foot embankment. The truck was pulled up without unloading it. This was done by swinging the two booms at right angles to the car, anchoring one to a tree on the side of the road opposite the wreck, while the other boom was used in pulling up the truck.—Archie Richardson, Decatur, Ga., in Popular Mechanics Magazine.

GOOD ROADS

TREES ADD GREATLY TO BEAUTY OF ROAD

Apparently the early custom of roadside tree planting in America has been forgotten. In the constant effort to keep pace with the ever-growing demands of the autoist for more and better roads, there has been little time or money for the planting and care of trees along the roads.

If trees were planted and maintained under ideal conditions and were not subject to injuries and disease, they would continue to thrive for years. But these conditions are not possible among a community of trees that are naturally subject to natural enemies, such as windstorms, insect pests, and fungous diseases. All these things must be overcome if the trees are to be saved. In saving the shade trees cement plays an important role.

Early in the present century the rapid diminution of the natural forests and the astounding mortality of the native fruit and shade trees prompted a study of preventive measures. In this work the late John Davey was the pioneer who, through long experiment work, evolved the basic principles of modern tree surgery. And although John Davey tried all sorts of material, he found nothing so effective as cement for filling cavities. Today it is still without an equal.

One of the most important principles in modern tree surgery is that bark and sapwood will eventually grow over filled cavities. The decay that has started to eat the heart out of many fine trees can be cut away by the skillful tree surgeon. The cavity can be properly treated and filled, and the life of the tree preserved.

Having learned this fact, however, many an ill-advised person has started the treatment without understanding that success can be obtained only by observing certain precautions. In the first place, the cavity must be properly prepared, just as a decayed tooth must be properly prepared before filling. Decaying wood or fungus growth left in the tree under the filling will cause decay to continue. Hence the cavity must be treated with a fungicide and a waterproof coat, preferably of a pine-tar base. If the cavity is large the filling must be so placed as to provide for the swaying of the trunk or branches.

When a cavity is properly filled it is easily made waterproof, and repeated investigations have proved that there is no reinfection behind a filling when it is properly made.

Billion Dollars Yearly on Highways Is Planned

Ten years ago the idea that the United States would spend a billion dollars annually on highways would have been regarded as preposterous, just as preposterous, perhaps, as the idea that the country some day would have one motor vehicle for about every six persons.

The United States bureau of roads estimates that this year the states will invest more than $400,000,000 in highways, and the counties an even larger amount, while about $135,000,000 will be spent by state departments in maintenance. The explanation of this condition is found largely in the fact that there are now more than 17,500,000 motor vehicles in the country. The motor car has helped to bring the roads and it is furnishing no small part in the cost of them, contributing for that purpose nearly $200,000,000 in license fees alone and still other millions in the form of gasoline taxes.

It is a day of big figures, big operations and big prospects in the motor vehicle and highway field. The benefit of this development is beyond calculation. It is another era of progress for America, comparable to the era of immense expansion by the railroads half a century ago, but without the excesses of that earlier period. Those who have believed that the days of great expansion in America ended with the opening up of the West and the building of railroads, telegraph and telephone lines should consider the transformation of the country being wrought today by the motor vehicle and the paved highway.

Good Roads Notes

States with a well-developed highway system provide the best farm-to-market roads.

• • •

The average cost throughout the United States of operating motor vehicles is something like $780 per annum per vehicle. This includes insurance, depreciation, garaging or storage, gasoline, lubricants, tires, repairs and replacements, and drivers' salaries.

• • •

No less an authority than Thomas H. McDonald, chief of the bureau of public roads, states that road tests have shown that the annual saving in gasoline alone on the more important roads, will pay the yearly cost of such roads.

• • •

A study made by Iowa state shows the difference in cost of maintaining earth and improved roads. The former require an annual cost of $25,000 a mile for each 500 cars, while the good roads cost $20,650 a mile for the same number of cars.

Courtship Among Lower Creatures

Methods of love-making are just as varied among animals, birds, and insects as the methods used by human beings. According to a well-known scientist, the male spider, a diminutive creature compared with the female, attracts the attention of his mate by vibrating one of the fibers of her web, thus transmitting a message of love along the "wires."

The chirp of the cricket, caused by the mate rubbing leg and wing together, appeals to his mate's sense of hearing, and was the first known example of instrumental music being applied to courtship. The frog also exploits the sense of hearing, the male emitting that very resonant sound so often apt to interfere with one's sleep. The croak of the frog was the first known instance of vocal music being applied to courtship.—Grit.

Like American Bungalows

American films have popularized the American bungalow, with its built-in furniture and many modern living conveniences, to the people of Brazil. Forty-five per cent of the new dwellings going up in Sao Paulo, Brazil, at the present time, are copied from the California product. The only difficulty encountered is the general absence of a servant's room; all middle-class Brazilians have servants, due to the cheapness of labor.

Cuticura Comforts Baby's Skin

When red, rough and itching, by hot baths of Cuticura Soap and touches of Cuticura Ointment. Also make use now and then of that exquisitely scented dusting powder, Cuticura Talcum, one of the indispensable Cuticura Toilet Trio.—Advertisement.

Egypt Buys U. S. Pine

The irrigation department of the Egyptian government recently rejected bids of central European pine and hereafter will require use of southern pine from America in important government works.

French Wireless Station

So powerful will be the wireless transmitting station in Mount Suleve, France, that it will be able to communicate with ships on both the Atlantic and Pacific oceans.

Children's handkerchiefs often look hopeless when they come to the laundry. Wash with good soap, rinse in water blued with Red Cross Ball Blue.—Advertisement.

Igloo Fisheries

Baffin Island Eskimos build their igloos on the lakes and cut holes through their parlor floors to fish for their winter dinners.—Science Service.

To Learn Trade

JULY

Richard Dix

This Handsome "movie" star was born July 18, 1895, in St. Paul, Minn. He was educated at the University of Minnesota. He is 6 feet tall, weighs about 180 pounds and has dark hair and dark eyes. His first theatrical experience was with a stock company.

Your Health

By ANDREW F. CURRIER, M. D.

ADENOIDS

IN ADDITION to the adenoids, we often see enlargement of the tonsils and of the uvula (the little cone-shaped body which hangs at the entrance to the throat), the entire opening to the throat being almost obliterated.

Such children are often stammerers, their voice is thick and lacks resonance, and their intellect suffers.

Their countenance is dull and expressionless, their complexion is bad, their upper lip is retracted, the septum of their nose deflected, and the glands in their neck enlarged.

They are often victims of croup, hiccough, St. Vitus dance, nose bleed, earache and headache, they suffer constantly from colds or deafness or weak eyes.

Not all children with adenoids have all these troubles; all have some of them, some have all of them, and most of them are benefited when tonsils and adenoids are removed.

Children may be born with adenoids, or they may have them soon after birth; and they are more likely to be in homes where the hygiene is faulty, the ventilation poor, the food unsuitable, and the conditions, in general, unsanitary.

The child is not responsible for all these bad conditions, hence the more important is it for those who brought him into the world to do all in their power to prevent the growth of adenoids or to have them properly and skilfully treated before his health is undermined.

No matter how poor parents may be, there is today no excuse for neglecting the health of their children.

There is hardly a town of any size, anywhere, which does not have a dispensary, or hospital in which proper treatment may be obtained if needed.

Of course the earlier it is given, the better for the child; and in the case of such children as have been here considered, the treatment will consist in removing the adenoids (and the tonsils, too, if necessary), the administration of suitable tonics, and the giving of properly prepared and easily digested food.

Removal of adenoids is rarely a dangerous operation. It is usually better to perform it under the influence of a general anesthetic, and, when it is properly done, recovery will be prompt and the beneficial effects soon apparent.

A LINE O' CHEER

By John Kendrick Bangs.

WORDS

THE written word hath potency sublime
If it be penned in prose or lilting rhyme
To lift the soul of man from depths of care
Up to the pinnacles of freedom where
He seems to touch the stars, and find the gain
That comes to him who triumphs over pain,
And in the simplest words of all we find
The richest blessings of our days combined,
For what is sweeter in these vales of strife
Than cheer, and hope, and love, and faith, and life?

(© by McClure Newspaper Syndicate.)

Espousal Rules

In the days when the espousal was in vogue the girl invariably received a ring if her lover had the money to buy it, and this band she wore on the right hand until at the wedding it was transferred to her left. If the future husband was too poor to buy or rent a ring he gave her a glass—so binding a token that the law allowed the woman, if jilted, to retain half of his presents.

OUR OWN

By DOUGLAS MALLOCH

WE ARE so careful of our speech
When strangers listen, lest we say
Some word unkind. Our lips we teach
To guard themselves by night and day,
For fear some careless, thoughtless word
May by the passing throng be heard.

But with our own!—wife, brother, friend,
Or husband, sister, mother, sire—
Words that old friendship may offend,
That burn the heart of love like fire,
We sow like thistles ev'rywhere,
And kill life's roses with the tare.

Yet how important words of ours
To those who love us!—ev'ry phrase
Makes life's hard highway bloom with flowers
Or drifts the snow across their ways;
We make their summer, make their spring,
Their winter, autumn—ev'rything!

The passing stranger may not hear,
Or stranger hearing may not heed,
But when your word cuts some one near
For endless days some heart may bleed—
How many know the torture of
The knife that stabs, in hands they love.

Love gives no license, friendship right,
To hurt because they love us so,
But greater duty, more delight,
To guard from wounds the ones we know—
Kind not to travelers alone,
But in our house, and to our own.

(© by McClure Newspaper Syndicate.)

YOUR Last Name

IS IT SEATON?

THE Seatons are of Scotch origin. It was Henry Seaton who came from Scotland in 1690 and settled in Gloucester county, Virginia, where he married Elizabeth Todd. There is little known of him but from the meager records we can see that he possessed the solid characteristics of thrift, foresight and godliness that usually distinguished his countrymen.

Although the Scotch were not so numerous in the South as in some of the Middle states, Henry found fellow countrymen among his neighbors and established a line of Seatons that may be regarded as one of the best of Scotch Southern families.

One of his many descendants was Augustine, who married Mary Winston. And their son, William Winston Seaton, born in 1785, in King William county, Virginia, was one of the first American journalists of distinction. He was a cousin of Patrick Henry, and though he was born too late to participate in the Revolution he showed himself to be possessed of the kind of patriotism out of which our Revolutionary heroes were made.

For many years he lived in Washington, from 1840 to 1850. He was founder of the Unitarian church in Washington, and when he was seventy-nine years of age he acted as a private in defense of Washington when it was attacked by the Southern forces.

The meaning of the name casts an interesting light on the early history of the family. It is said that in Scotland the name was given to men who lived in a sea town, or a town by the sea.

Mother's Cook Book

Flower in the crannied wall
I pluck you out of the crannies,
I hold you here, root and all in my hand,
Little flower—but if I could understand
What you are, root and all, and all in all,
I should know what God and man is.

—Tennyson.

LUSCIOUS PINEAPPLE

PINEAPPLES like other fruits are never better than when served and eaten fresh. But we are glad to have a few cans during the season when they are not in the market to help out in the menu-planning.

As a salad there is nothing more delicious than crisp hearts of lettuce with the juicy diced fruit sprinkled over it dressed with a good French or mayonnaise dressing.

Pineapple With Cheese.

Place a slice of pineapple in the center of head lettuce, put a ball of cream cheese in the cavity of the pineapple slice, sprinkle well with French dressing and riced egg yolk.

Pineapple Dessert.

Arrange on individual plates a slice of pineapple for each serving. In the center of each slice place a cone of ice cream and sprinkle with chopped nuts.

Ranger Couldn't See Skunk as Family Pet

United States Forest Ranger Lewis Hanson of the Two Medicine valley in Glacier National park fed flapjacks all winter to a mink, a weasel, a skunk and two gray squirrels. The mink, weasel and the squirrels got so tame they ate out of his hand, but he left the skunk to wait on itself "cafeteria fashion."

Veteran trappers of the Rocky mountains declare this is the first time they ever heard of a mink or a weasel getting tame enough to eat out of a man's hand.

The incident came to official notice when Ranger Hanson kept reporting a shortage in flour rations. The chief ranger, when he discovered what Ranger Hanson was doing with his flour, was first inclined to reprimand the subordinate, but on looking over the rules and regulations, he changed his mind and allowed the extra supply.

In Uncle Sam's manual, forest rangers are instructed to be kind to animals.

Ranger Hanson's amiability has extended to more species than any other ranger has yet made pets of in the wilds of the Rockies.

"Of course, in the tourist season it's different, but during the lonely months of the long winter a fellow has a friendly feeling for anything with life in it," Ranger Hanson volunteered.

"These animals evidently felt the same way about it, for they kept hanging around my cabin door all winter, and I sure couldn't regard 'em as anything but companions of the wilds.

"But that darned skunk! I just couldn't bring myself to fondle him, although the poor devil almost wagged his tail as friendly as a dog when he approached me begging for the flapjacks which he had seen me feed to the other animals. I had to laugh at myself at times when I was almost convinced that he was sincerely friendly in the wagging of that tail.

"Once I was on the verge of giving him the hand offerings, just to show that I had no partiality for the other animals. I guess if I had had two suits of clothes I might have done it."

Weak Defense

General William Mitchell said at a dinner in New York:

"Our air service is in a bad way, and its defenders put up as bad a defense as the tramp's.

"A very dirty tramp was charged with chasing a lunch-joint attendant all around the lunch-joint with a knife.

"'What time wuz it when I chased ye?' the tramp demanded of his accuser.

"'Eight o'clock in the morning,' said the lunch-joint man.

"'There, gents,' said the tramp, running his dirty hand through his disheveled crop of whiskers. 'That lets me out all right all right. That shows ye what a liar he is. At eight o'clock every mornin', winter and summer, I takes me bawth.'"

Mixed Metaphor

Sir Almeric Fitzroy, who was clerk to the English privy council from 1898 to 1923, is writing his "Memoirs" for the London Morning Post. In the first installment he quoted from his diary some incidents that came to his knowledge during an official visit to Queen Victoria at Balmoral in October, 1898. One of these was the prayer of the Scottish minister who officiated at Crathie church and "in the royal presence petitioned the Almighty that 'as the queen became an auld woman she might put on the new man, and in all righteous causes stand before her people like a he-goat upon the mountains.'"

No Record Available

Mr. G. G. Grey, who conducts a bookshop in Trinity street, Cambridge, England, has traced the line of occupants of his establishment back to the year 1581. The names of those doing business there prior to that date seem to be lost in oblivion. Mr. Grey is anxious to learn if any person knows of an older bookshop. It was in 1581 that Queen Elizabeth knighted Sir Francis Drake, who had discovered New Albion two years earlier; but there is no record of his having established a bookshop at Drake's bay, so Mr. Grey need expect no help in his researches from this quarter.

Got Off Cheap

The late Samuel Gompers, condemning the pardon of two notorious law breakers, said one day to a Washington correspondent.

"The short time these men have served, about a tenth of their actual sentences, reminds me of a story. It's a story about a bogus oil stock millionaire who motored a friend out to his new home on Long Island. The friend gazed in awe at the vast pile.

"'Holy smoke, George,' he said, 'what did this cost you?'

"'Three months is all,' answered the millionaire."

No Matter

"Mr. Johnson, the baby has poked beans into his left ear until I fear the hearing is permanently affected," said Doctor Slash.

"Aw, well," replied Gap Johnson of Ruinpus Ridge. "He's got another ear left, and there hain't nuth'n' of consequence to—p'tu!—listen to these days, no-how."—Kansas City Star.

Oceanic Conversation

Radio telephones installed on liners plying between San Francisco and Honolulu make possible conversations between passengers on different ships while at sea.

Health and Home

CARE OF CONVALESCENT IN SUMMER

For those who are just recovering from a serious illness the problem of food is a serious one. The patient, though well on the road to recovery, is usually weakened by the rigors of disease and the excessive heat is wont to sap his energy. Hence, the foods that are consumed during this period should be considered carefully as to digestibility, food value, ease of assimilation, purity and sterility. These are important in any food but especially so when the consumer is not strong and healthy.

In most cases, the one who is convalescing consumes milk in large quantities. This food contains all of the elements that are essential to the body. If milk is pure and germless, it is easily digested and assimilated.

Where the milk supply is uncertain or the quality not of the best, evaporated milk should be employed. It is sterile; it is just pure milk with about sixty per cent of the water removed. Its double richness may be modified, if desired, by the addition of water or it may be used just as it is, where rich, creamy dishes are desired.

Many people make the mistake of confusing evaporated milk with condensed milk. They are not at all similar in appearance, composition or taste. They cannot be used for the same purposes; condensed milk is a combination of sugar and milk; evaporated milk has no added sugar, being pure milk of double-rich quality and food value.

Following are recipes of easily prepared dishes and foods that are well suited for the invalid and the convalescent.

Loganberry Cream.

¾ cup evaporated milk	¼ cup loganberry juice
¼ cup water	2 tbsp. lemon juice
	Pinch salt

Put all ingredients in a Mason fruit jar and shake thoroughly. Chill and serve in glasses filled ¼ full of ice chips. Raspberry, blackberry, and cherry juice may be used instead of the loganberry.

Iced Cocoa.

3 tsp. cocoa	milk diluted with
3 tsp. sugar	
¼ cup water	⅛ cup water
Pinch salt	¼ tsp. vanilla
⅛ cup evaporated	

Mix cocoa and sugar thoroughly and add the ¼ cup water and boil over a low flame for 15 minutes. Scald the diluted milk and add cocoa syrup and salt. Continue cooking for 15 minutes in double boiler. Add vanilla. Chill and serve with chipped ice. Top with whipped cream.

Health and Home

FOOD FOR CHILDREN WHO TRAVEL

Many times, and especially during the summer months, mothers are forced to take their children on trips with them. During these trips, the parent is forced to contend with that ever-present and serious problem of food for the child.

As in almost every other case, the chief source of worry, during these periods, is the milk supply, its source, its purity and its food value. It is not always convenient to get market milk of dependable quality for, in many sections of the country, adequate facilities for its care are not provided. To meet the needs of mothers in these trying situations, science has provided a form of milk, conveniently carried and easily prepared. The cans are in two sizes, the one containing six ounces and the other sixteen.

Evaporated milk is just pure cows' milk with more than half of the water removed. None of its food value is lessened; in fact its digestibility is improved. It is easily mixed with water and is, undoubtedly, the most practical form of milk for use as a food for children. Some of the country's leading pediatricians recommend its use, employing the following formula:

From Sixth Week to Third Month.

Milk, evaporated	6 ounces
Lime water	3 ounces
Milk sugar	2 ounces
Boiled water	16 ounces

Seven feedings in twenty-four hours; 4 to 6 ounces at three-hour intervals during the day and four-hour intervals at night.

From Third Month to Fifth Month.

Milk, evaporated	7½ ounces
Lime water	3 ounces
Milk sugar	3 ounces
Boiled water	29½ ounces

Six feedings in twenty-four hours; 5 to 6 ounces at three-hour intervals during the day and a feeding at 10 p. m.

From Fifth to Seventh Month.

Milk evaporated	10 ounces
Lime water	3 ounces
Milk sugar	3 ounces
Boiled water	29 ounces

Five feedings in twenty-four hours; 6 to 7 ounces at four-hour intervals, the last feeding to be given at 10 p. m.

From Seventh to Ninth Month.

Milk, evaporated	11 ounces
Lime water	3 ounces
Milk sugar	3 ounces
Boiled water	35 ounces

7 to 9 ounces at four-hour intervals during the day. Last feeding at ten at night.

From Ninth to Twelfth Month.

Milk, evaporated	12 ounces
Lime water	3 ounces
Milk sugar	3 ounces
Barley water	24 ounces

8 to 9 ounces at four-hour intervals during day. Last feeding at ten at night.

POINTS OF DANGER IN THUNDER STORM

Shelter of Trees Especially to Be Avoided.

The danger of death by lightning is very small. It is almost negligible. But not quite. Men are killed by lightning. The season of thunder storms is at hand, and it is only the part of common sense to minimize the danger as far as possible.

Most of those who are killed by lightning are not in their homes. They are out somewhere in the open. Probably they are seeking shelter under trees. The worst possible thing to do in a thunder storm is to snuggle under a tree. Any tree is likely to be the lightning's target, and this is particularly true of trees like the elm, which have much sap. The beech, which is a dry tree, is much safer than the elm, but no tree is surely immune. Lightning which "strikes" finds a tree more frequently than it finds anything else. A man in the open is so small a mark that the bolts of Olympian wrath usually scorn to kill so insignificant a thing. A man under a tree which is struck by lightning may escape with only a severe shock, but he is likely to be killed by some electric prank.

It is to be remembered that water is a conductor of electricity. For this reason the sappy elm is struck oftener than the desiccated beech. For this reason, too, it is wise for the wanderer in a thunder storm to have his raiment as wet as possible. If one's clothes are dry the lightning is likely to course through the watery fluids of the human body, bringing sudden, complete and disputable death. But if the garments are saturated till they are wetter than the body the lightning may follow them to the earth, ripping and tearing them but not necessarily ripping and tearing the man within them. Of course the man whose clothing is struck by lightning must suffer a severe shock, but even this is better than the alternative of being surely electrocuted.

If you are caught in the woods in an electric storm the best strategy is to get out of the woods. The next best plan is to get as wet as possible. If there is a brook handy it is advisable to lie in the brook rather than to wait for the rain to do the wetting. Eschew the forest and seek wetness. Thus you will probably attain old age in spite of the lightning. Because the lightning has never yet killed you it is no safe assumption that it never will. The chances are a million to one in your favor. But there is no sense in ignoring the millionth chance.

Didn't Go Down

President George M. Verity of the American Rolling Mills company, who in 33 years of business life has never had a single labor trouble, said in New York the other day:

"I believe in frank dealing. Employers should be honest and open with their men. Deceit, hypocrisy and cant never go down.

"A millionaire was addressing the inmates of an almshouse.

"'Ah, dear friends,' he said, 'prosperity has wrecked and ruined countless lives.'

"'No doubt o' that,' spoke up an old pauper on a back bench. 'All the same, boss, I wish to goodness I'd a' been ruined by prosperity instead of adversity. I bet it'd been a darn sight pleasanter.'"

Says Earth Stands Still

An instrument which, the maker says, proves that the modern ideas of the solar system are wrong, has been invented by Chang Chung-shun, a Chinese astronomer. He says his instrument demonstrates that the earth does not move, but stands still, suspended in air like a soap bubble. He says, further, he can prove with it that the sun and other heavenly bodies revolve around the earth. With the aid of two colleagues he has written a book in support of this theory but it has not yet been translated into a foreign language.

Growth in Savings

The intensive educational thrift campaigns conducted in this country by the banks, schools, American Society for Thrift and other groups has shown splendid results.

Savings deposits increased from $8,425,000,000 to $20,875,000,000 in the period between 1912 and 1924 or at the rate of 150 per cent while the number of savings bank depositors increased 208 per cent in the same period.—Thrift Magazine.

Poet's Home in Danger

Longfellows early home at Portland, Maine, will be preserved and maintained permanently if sufficient money is raised by members of the International Longfellow society. The home stands at Fore and Hancock streets in Portland. It is in danger of being lost through foreclosure of mortgage, and Edwin Markham is active in raising the money to prevent the foreclosure.

Autos in United States

The number of motor vehicles owned in the United States, it is noted in Good Hardware, is still continuing to increase. In the year 1924 the total registration was 17,700,000. This is a gain of approximately 2,500,000 over 1923. There is, roughly, one car to every six people.

Dansig Mayor a Giant

Doctor Sahm, president of the free city of Dansig, is nearly 6 feet 8 inches in height.

Christian Church Notes

Bible School at 9:30, communion service immediately following.

Preaching service at 7:30.

The Loyal Sons and Daughters class will meet at the church Thursday evening.

The Martha Society will meet Thursday afternoon with Mrs. Eva Sheffer. A good attendance is desired as there will be work and important business.

Lutheran Notes

Sunday School 9:30.

The sermon next Sunday will be at 7:30.

Prayermeeting Thursday evening.

S. D. Steffey, Pastor.

NEWS OF THE TOWN

Margaret Hamilton was a recent over night guest of Helen Storer.

Saxe Hadsell and wife entertained relatives from near Hicksville, Sunday.

J. C. F. Abel and wife visited his mother at the Wallace Abel home Sunday afternoon.

Mr and Mrs. Abner Trostel and son, Dale, were Sunday guests of Mr. and Mrs Will Brown of near Butler.

Arthur Wilmot, Mrs Anna Bachtel and daughter, Josephine, were Sunday guests of Vernon Wilmot and wife at Spencerville.

Canada Stocked With Coal

Canada has sufficient coal in its mines to supply heat and power for 2,000 years.

Gingham Frocks Arrive, Telling Many Tales

Here's a little story-telling checked gingham frock, with knickers to match, that will please everybody. It is much like the little frocks of last year except that it is an illustrated edition. Sketches in colored floss, of things that children love, adorn it and and show that it is up to date in style.

It Will Charm You

The Vanishing Men

By Richard Washburn Child

A beautiful woman with whom men fall in love at sight; but the men who enter her life vanish mysteriously, one by one. The woman is absolutely innocent in the matter and her life is shadowed by the inexplicable horror. Finally there comes one more fearless and resourceful than the others. He too vanishes, but reappears, and with his return comes the explanation of the baffling enigma. A tale of rare and fascinating interest, beautifully told by one of America's most talented authors.

NEWVILLE

Mrs. Mag Griest of Hicksville, spent Sunday here.

Ira Menderhall and two children spent Thursday at Hicksville.

Ellsworth Traxler and wife were Hicksville visitors, Saturday.

The U. B. Sunday School will picnic at Hamilton Lake next Saturday.

Little Elsie Mendenhall went home with the Dewey Miller family Sunday evening to spend the week in Auburn.

C. O. Berry and family and Sam Stafford of Auburn, were Newville visitors Sunday and cooked their dinner at Mr. Stafford's.

Mrs. Mary Mitchel suffered a stroke of paralysis Friday morning and was taken to the home of her daughter, Mrs. Ruby Krabill near St. Joe to be cared for.

The sad news was received here last week that Lavona Peterson the daughter of Karl and Cassie Peterson was drowned. Miss Peterson was 21 years old. The family once resided at Newville. Mrs. Peterson was raised here and was well known by nearly everybody as she was organist at the U. B. Church. They have the sympathy of this community.

Hall's Catarrh Medicine

Those who are in a "run-down" condition will notice that Catarrh bothers them much more than when they are in good health. This fact proves that while Catarrh is a local disease, it is greatly influenced by constitutional conditions.

HALL'S CATARRH MEDICINE is a Combined Treatment, both local and internal, and has been successful in the treatment of Catarrh for over forty years. Sold by all druggists.

F. J. Cheney & Co., Toledo, Ohio.

HERE AND THERE

John Betz is having a severe time with his eyes.

Thrashing commenced Wednesday morning again.

Dr. Price and wife spent Monday at Fort Wayne.

Mrs. Anna Dilley is spending the week at Auburn.

Wm. Keeler is busily engaged in loading logs on cars at B. & O. tracks.

Mrs. Harriett Haifley and son, Milton, spent Sunday with relatives near Harlan.

Frank Sechler and wife and S. S. Widney spent the first of the week with Mrs Grace Dilley.

Buy Certified Milk from Koeppe Bros. Dairy. Night and Morning Delivery. 27tf

Charles Hellenger, wife and children of Fremont, Indiana, were Sunday guests of William Harman and wife.

The first car load of new wheat was shipped Tuesday morning by Nathan Grain Co. The price is soaring around $1.50.

F. M. Monroe and wife visited their son, Stanley and wife at West Unity, Sunday. Verne Monroe and family accompanied them.

John Wineland fell Wednesday morning as he went to jump on a hay rack and sprained his right wrist. It is a serious injury and at first he thought it was broken.

Mr. and Mrs. Harry Henderson of Walkerville, Mich., are here the guests of relatives. They have rented their farm for three years and are moving to Muskegon.

F. R. Bowman, wife and daughter, Miss Eloise and Miss Martha Miser, spent Sunday at Hamilton. The girls remaining for a week's visit with Mrs. Mary Bowman at Cold Springs.

Charles Freeburn and wife of Auburn, were Sunday guests of Glen Freeburn and wife. Virgil Freeburn and family of Fort Wayne and Clarence Dorsey and wife were afternoon guests.

Thursday evening supper guests of Mr. and Mrs. Wm. Randall were Mr. and Mrs. Frank Myrtle, of Chicago, while Mr. and Mrs. John Beard and daughter, Murial of Waterloo, were Sunday guests.

Luther Nelson of Peoria, Ill., Henry Nelson and sister, Miss Celia and Mrs. Rose Nelson of near Hicksville and I. E. Sherrick, wife and daughter, Waneta, of Auburn, were Sunday afternoon guests of Mrs. Vina Fish.

Joseph Koch, youngest son of Mr. and Mrs. Charlie Koch of this place and Miss LaVerne Rhodes, daughter of Mr. and Mrs. Raymond Rhodes of Spencerville, were quietly married Monday at the Auburn M. E. parsonage. They will reside at Spencerville, where the groom manages the Lincoln Oil business.

Mrs. Marie Waterbeck, of Garrett, eldest daughter of Mr. and Mrs. Roy Kinsey, submitted to an operation Monday morning at 8:30 at the Sacred Heart Hospital Mrs. Kinsey and daughter, Miss Ida, remained at Garrett, Mr. Kinsey returning home Monday evening. Mrs. Waterbeck is reported as doing very nicely.

John T. Scopes, of Dayton, Tenn., was found guilty of teaching evolution in the public schools, by a jury deliberating but three hours on Tuesday. The Judge gave him a fine of $100, a minimum under the law. Clarence Darrow, the great attorney for the defense sure made a "monkey" of himself when he denounced all the bible miracles and rejects the virgin birth of Christ. The decision of the jury meets with the approval of all the better thinking people as it co-oberates the bible statements in every reepect and while science is not exactly sure of her claims concerning the origin of man the bible goes two steps farther in saying where man came from and where he will end up.

The White Family Reunion will be held at Eckhart Park, Sunday, July 26.

Miss Kathryn Walker of South Bend is visiting relatives here this week.

Mrs. Bertha Dermott visited relatives at Fort Wayne from Friday until Monday.

Mr. and Mrs. M. J. Schell of Hicksville, were Thursday supper guests of Ye Editor and wife.

The Garrett school board has 50 applications for superintendent. A choice will be made this week.

Miss Latha Dermott was a guest of Miss Alberta Hart near Auburn a part of last week returning home Saturday.

A baby daughter was born Monday noon at the Bonnell M. Souder hospital, Auburn, to Mr. and Mrs. Virgil Perry.

Little Miss Mary Helen Refner of Auburn is spending the week here with her grandmother, Mrs. Ida Williams.

Mrs. Edith Hatch and two children of Fort Wayne, spent a couple of days last week with her mother, Mrs Ada Berry.

Francis Hickman and wife had Ralph Brown and wife of Auburn as Sunday dinner guests. They all spent the afternoon at Hamilton Lake.

Mrs. Flora Simanton entertained all day Sunday Mrs. Lilla Williamson, daughter Gladys and son Billy, Correll Simanton, wife and baby of Fort Wayne, John Ulm and wife and George Simanton and family.

Floyd Ridgway and wife and Mrs. Olive Frye drove to Lima, where they visited in the homes of Mr. and Mrs. Amos Gamble, John Schaester and wife and Willis Irvin and wife, Saturday and Sunday. Mrs. Frye accompanied by her mother, returned to her home at Hobart, Monday.

Mrs. Kate A. Leighty entertained the Culture Club Wednesday afternoon at their mid-summer meeting. Twenty-five members being present to enjoy the annual event. The interesting program and the games and contests together proved an enjoyable hour for those present. A potluck dinner closed the afternoon's pleasures.

Many from St. Joe attended the I. O. O. F. Picnic at Hamilton Lake, Sunday.

Mr. and Mrs. Jud Davis of Chicago, came Sunday to be guests in the H. M. Widney home.

Sousa and his famous band gave two performances at Winona Lake Saturday. Ye editor and wife attended.

J. M. Musselman of Paulding county, Ohio, purchased a new Chrysler Sedan of C. C. Woodcox this week.

Cash paid for false teeth, dental gold, platinum and discarded jewelry. Hoke Smelting & Refining Co, Otsego, Mich.

J. E. Sturgis and family of Cincinnatti, Ohio, are here the guests of Mr. and Mrs. F. Buchanan and other relatives for a short vacation.

Club Work News

From Concord Boys and Girls

The date of the social to be given by the Concord Township Sewing, Baking and Health Clubs has been changed to Friday night, July 24. Home-made Ice Cream, Cake, Candy and Popcorn will be sold. The Concord Township Demonstration Team will give their demonstration which won first place in the county last year. Proceeds of the social will be used toward sending the girl who does the best work in the club to the State Round-Up at Purdue University next spring. Everyone is urged to show their appreciation of what the girls are doing by attending the social.

The Girls' Clubs of Concord Township met at the school house Thursday afternoon. Every member was present. An hour was spent in sewing, after which a program consisting of the following was given:

Club Songs
Piano Solo - Marguerite Wilson
Reading - - - Ruth Schrader
Piano Solo - - - Laura Keller
The next club meeting will be held Thursday afternoon, July 30.

The Man with Money hides his Valuables in Our Safety Deposit Vaults where they are SAFE.
He has no FEAR of Fire or Burglars.

Safety

is the first sign of good business judgment

Farmers' & Merchants' State Bank

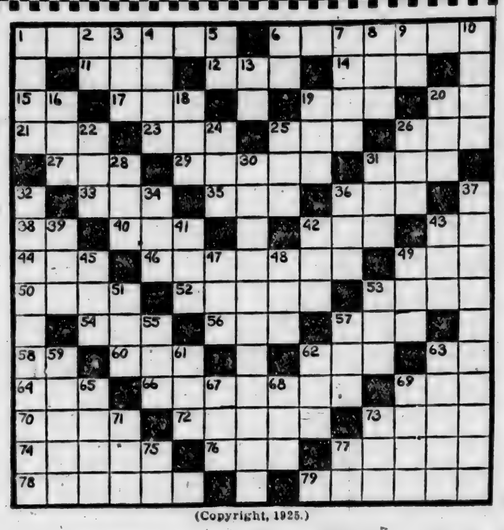
CROSS-WORD PUZZLE



(Copyright, 1925.)

Horizontal

1—A former president
6—Those who operate grist mills
11—A unit 12—To be indebted to
14—Atmosphere 15—Exists
17—To recognize 19—A body joint
20—A note of the diatonic scale
21—A title anciently given to the Pope
23—A set of tools 25—To deface
26—To study carefully 27—A bird
29—Automobile accessories
31—To keep out 33—A swift bath
35—A religious resting place
36—Objective form of "he"
38—A point of the compass
40—An illuminating mixture
42—A mire
43—Form of a well-used verb
44—A metal 46—Erased
48—To close in 50—A separate article
52—A tenth 53—Part of a book
54—To drag along
56—Any article of men's clothing
57—A thick preserve 58—Either
60—A picnic (slang)
62—An electrified particle
63—An academic degree
64—Father 65—To glut 69—Exist
70—To arrange for publication
72—Benefactions 73—To agitate
74—Ventilated 76—The finish
77—Another form of "they"
78—Those who annotate
79—Considered

Vertical

1—A household assistant
2—To perform 3—A writing fluid
4—To look for 5—A negative
6—Another form of "I" 7—A den
8—Part of the face
9—A suffix denoting an agent
10—The spread of an arch
13—You and I 16—Turf
18—Immature insect
19—Possesses 20—A preposition
22—Crazy 24—The end
25—The cry of a cat
28—A rotating or sliding piece in machinery
28—An artificial head covering
30—Reiterations 31—Of great size
32—Antipodal 34—A cushion
36—Receptacle for bricks
37—Recalled 39—Humor
41—Arrange 42—A useful insect
43—To supplicate 45—Meshed twine
47—Ignited 48—An indefinite article
49—A meat
51—A disorderly assemblage
53—To search for placer gold
55—Had been
57—An old black personage
59—A popular invention
61—An appendage
62—Belonging to it 63—To get up
65—Soil 67—Part of the foot
68—In addition
69—An indivisible particle
71—An artificial elevation used in a popular game 73—That girl
75—A medical authority
77—Tellurium (symbol)

Solution will appear in next issue.

HOW TO SOLVE A CROSS-WORD PUZZLE

When the correct letters are placed in the white spaces this puzzle will spell words both vertically and horizontally. The first letter in each word is indicated by a number, which refers to the definition listed below the puzzle. Thus No. 1 under the column headed "horizontal" defines a word which will fill the white spaces up to the first black square to the right, and a number under "vertical" defines a word which will fill the white squares to the next black one below. No letters go in the black spaces. All words used are dictionary words, except proper names. Abbreviations, slang, initials, technical terms and obsolete forms are indicated in the definitions.

GOLDEN ROSE MADE FOR SPANISH QUEEN

Fashioned of jewels and beaten gold a vase of roses in natural colors was recently made for the queen of Spain. To make the flowers and leaves the proper color various shades of red, yellow, lemon, green and white gold leaf were used. Working with a metal so malleable that more than one thousand three-inch squares can be beaten from one ounce, an exact model of blossoming roses and buds on the stem was created. Leaves were given a greenish tint by use of gold leaf about the 150,000th part of an inch in thickness. Alloys of silver and copper were mixed with gold to produce the desired colors and then the metal was melted in a crucible. After this it was cast in an ingot, flattened into long, narrow strips and beaten with a 17-pound hammer for 20 minutes. Then it was cut into sections and put between oxskins of a "shoder," where it was pounded again. Artists of a family that for generations has been skilled in this ancient craft spent months in perfecting the queen's gift.—Family Herald

Calf Had Picked Out Queer Foster Mother

A traveler in the far-flung fastnesses of the Ozarks met a ramshackle auto racketing along, while following behind it came a half-grown calf striving with might and main to keep up. Farther on the traveler met a resident of the region following a bellowing cow. Bringing the animal to a struggling halt by means of the rope around her neck the native saluted, "Howdy! I don't reckon you've seed a red-complected, bald-faced calf along this road anywhurs?"

"Yes," replied the traveler, "I saw such a calf quite a way back, following a flivver car. What is the matter with the animal?"

"He 'pears to have lost his mind. A week or so ago he stood out all night in a storm, and he must a-sucked in thunder, for ever since he hain't 'peared to have no sense. The durn fool don't even know his own folks."—Kansas City Star.

Polecat and Skunk

In this country "polecat" is merely another name for the skunk. The most peculiar thing about the polecat is its effective way of making people keep their distance.

Hopeless Task

How can you make a person perceive that he is a fool? Such a personage can no more see his own folly than he can see his own ears.—Thackeray

The Truth

Respect the truth. Be true. There is no conscience, there is no noble life, there is no capacity for sacrifice where there is not a religious, a rigid and a rigorous respect for truth. Strive then to fulfill this difficult duty. Untruth corrupts whoever makes use of it before it overcomes him against whom it is used.—Prezzonni.

Criticism

Two men in London were discussing a certain novelist. "She's a wonderful writer," said one. "Yes," replied the other; "the mystery to me is where she gets her marvelous lack of knowledge of life."—Boston Transcript.

Composition of Pulque

Pulque, popular Mexican drink, is made from the agava or maguey. The drink contains about 7 per cent alcohol and is intoxicating when drunk in large quantities. It possesses some medicinal qualities.

Excellent Suggestion

We ought to have a few more statues to the men who have made us merriest, besides those to warriors: There's Bill Nye, Artemus Ward and Bob Burdette.—Exchange.

POINTS ON KEEPING WELL

DR. FREDERICK R. GREEN
Editor of "HEALTH"

(©, 1925, Western Newspaper Union.)

WHAT KILLS BABIES?

THE United States government has compiled and issued many bulletins on wheat crops, corn crops, hay crops, and potato crops. Now it has gotten around to investigating the most valuable crop of all, the baby crop.

What kills babies? We know, from the latest reports of the census bureau, that 187,000 babies less than one year old die every year in this country. Over half of this appalling number, or 98,000, die in the first month.

It does no good to know this. It simply shocks us. To be of any value we must know what are the causes.

It is of course impossible to collect and tabulate the cause of death of each baby in this enormous total, two and one-half times as many lives every year as this country lost in the World war. But the children's bureau of the Department of Labor has just completed a study of 23,000 babies born in eight American cities. This survey may be taken as a basis, since the causes of death among so large a number may fairly be considered an average for the entire country.

From this report some interesting facts can be assumed.

The mortality for male babies is one-fourth higher than for female babies. The mortality is highest in the first month of life and steadily decreases each month. For the first month, the rate is 44.8; for the second 9.3; and for the third 4.5. So the longer a baby lives the better chance it has.

Nearly one-third of the deaths in the first year are due to conditions before and immediately after birth, such as premature birth, failure or defects of development and lack of strength.

The time in the year when a baby is born has much to do with its chances of living. Babies born in June have the poorest chance, those born in August the best. Maybe there's something, after all, in the old idea of the astrologers about being born under a lucky star.

First born children, contrary to the popular idea, have a higher mortality than the second born.

The death rate for premature babies is over six times as high as for babies born at the natural time.

The death rate among twins and triplets is much higher than for single babies.

The highest death rate of all is for babies born within a year of the last preceding baby, while the lowest death rate is for babies born after a period of at least four years.

Four times as many bottle-fed babies die as compared with breast-fed babies. Man has never produced anything as good as a healthy mother for a baby feeder.

GRANULATED EYELIDS

ONE of the most common eye troubles is what is popularly known as granulated lids. This trouble may be slight and of only a few days' duration or it may be severe, lasting for a long time and causing serious trouble, even blindness.

Like all popular names for diseases, such as "rheumatism," "indigestion," and "palpitation of the heart," this term really includes several distinct diseases.

A mild form of granulation of the eyelids, common among children, is what oculists call follicular conjunctivitis. This long name simply means an inflammation of the conjunctiva, the smooth velvety membrane lining the eyelids. In the healthy, normal eye, this membrane is perfectly smooth and slightly moist, so that the sensitive eyeball can turn easily and without any friction. The lubrication is just like that in the gear box of an automobile. When there is plenty of oil and no sand or dust in the oil, the gears turn smoothly and noiselessly. But if the gears are rough or broken or if any dirt gets into the oil, then the lubrication is bad, the gears pound and grind and get hot.

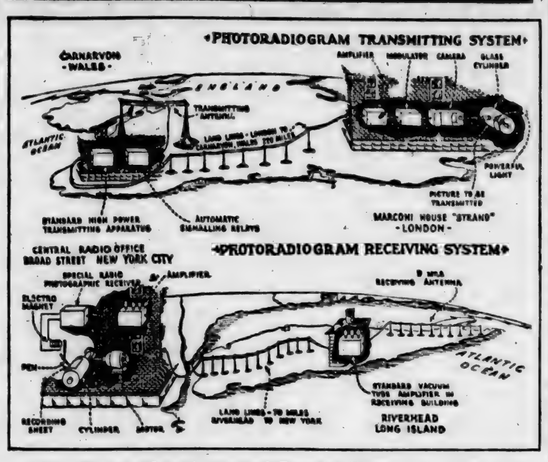
So in the eye, the conjunctiva, which should be smooth and moist, is dry and rough. The little blood vessels become congested, small, soft grains appear on the smooth surface, the eyes are irritated, red and sensitive to light and the child has pain when he tries to read or write. In many cases, the trouble is due to weak eyes or defects of vision, which should be relieved by properly fitting glasses.

Another form of granulated lids occurs in what is called "spring catarrh." This appears in the spring and early summer and often lasts until fall. It is probably due to the irritation caused by the so-called actinic rays of the sun. A somewhat similar condition is common among firemen, glass workers, workers in iron furnaces and steel mills, where the eyes are constantly exposed to strong light and heat. Colored glasses protect the eyes and help this condition.

Another form is what is popularly called "pink eye." This is common in some epidemics of influenza and is plainly due to some form of infection.

Lastly and most serious of all is trachoma, a very serious and painful infection, highly contagious and very common in some parts of the country. But this is important enough to deserve an article of its own.

RADIO



These Diagrams Show Layout and Essential Equipment at Both Transmitting and Receiving Stations in the Making of Photo-Radiograms.

For the actual operation of the transmitter, the picture, printed matter or whatever is to be sent, is first photographed on an ordinary camera film. This is developed and then placed on a glass cylinder, being held firmly in place by metal clips. The picture is now ready to be transmitted.

Inside this glass cylinder is an incandescent lamp, the light from which is focused in a minute beam onto the film as the cylinder is set in motion. As the light and dark portions of the picture are traversed by the light beam, the intensity of the ray is changed. This ever changing beam after having passed through the film, is again focused through another lens outside the cylinder onto the sensitive element of a photo-electric cell, a recent development which transforms the light waves into electrical impulses or waves, which can be transmitted by radio much the same as a regular dash and dot message.

This photo-electric cell is commonly spoken of in the laboratory as the "eye" of the transmitter. The electrical resistance of this cell changes in accordance with the amount of light which falls upon it, and in this way takes care of the shading of the picture in transmission.

The Photo-Electric Cell.

The photo-electric cell functions practically without any lost motion. That is, the instant the slightest change in the amount of light reaches the cell, a corresponding change in the output current of the cell takes place. In this way the "eye" of the transmitter is able to "see" even the tiniest light variations. In fact the "eye" sees and records electrically millions of different current impulses as the film sweeps by the light beam from inside the cylinder.

The photo-electric cell is, therefore, responsible for reproducing an infinite number of different electric current values which correspond with the light or dark areas of the picture being transmitted.

In order to cover all of the original film, the glass cylinder is rotated back and forth and in this way the entire surface is eventually exposed to the piercing light beam. The film rotates through an angle equal to the width of the picture one notch at a time. Thus, line upon line, the whole picture is covered.

After the signal impulses or electric waves from the photo-electric cell pass through a series of vacuum tube amplifiers, they are fed into a modulating device ready for transmission. The electrical interpretation of the picture is then transmitted over land wires from the London laboratory to the Carnavon (Wales) high-power transmitting station of the Marconi Wireless Telegraph Company, Ltd. Here the electric impulses on the land wire operate small relays which turn on and off the high value currents flowing from the 200-kilowatt generator to the antenna system. This high-power electrical energy leaving the antenna in interrupted impulses, similar to dots and dashes of the telegraph code, creates the ether waves which carry the photograph through space 3,000 miles to the receiving station on this side of the Atlantic, located at Riverhead, Long Island.

No Special Circuits Needed.

The development of the photo-radiogram transmitter has purposely been carried on in connection with the established radio transmitting stations, now engaged in sending radiograms daily between Europe and America. Thus the new device does not require the preparation of any special radio circuits for efficient operation.

At Riverhead, Long Island, in the Radio Corporation's central receiving station the operator tunes in to the Carnavon station. He receives the picture just the same as he would a radiogram but instead of dots and dashes which he can read he receives an undecipherable series of impulses. These pass through a bank of vacuum tube amplifiers and are then sent by land wire to the laboratory of the Radio Corporation located in the building in Broad street.

Here this unintelligible code, carrying the photograph, is translated back into black and white, recording the original picture much in the style of a stippled engraving.

This device in the RCA laboratory the final operation involved between transmitter and receiver) decodes or unscrambles the complex photo message, giving each individual electrical pulse of energy a definite task to perform in reassembling the picture.

The picture is reproduced in duplicate to the receiver, both on a paper record and on a photograph film. The paper on which the record is made is wrapped about a rotating cylinder which, in size and appearance, much resembles the early type wax phonograph record. A specially constructed fountain pen bears against this just as the needle of the phonograph does on a record. The pen is attached to an electrically controlled lever in such a way that every pulse of electrical current which passes through the magnet coils of the relay lever draws the pen to the surface of the paper, making a fine ink mark. A changing current fed through the magnet coils causes the pen to wiggle in step with the current impulses, thus giving the artistic stippling effect in the reproduced picture.

Absolute Synchronism.

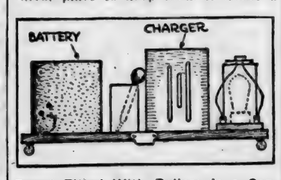
One of the outstanding requirements in sending pictures by radio or wire is absolute synchronism of the sending apparatus with the receiving device, otherwise distortion will occur. If the receiving apparatus should lag the slightest particle of time behind the transmitting set, the received picture would be blurred and unrecognizable.

This necessary synchronism is maintained by the use of special driving motors, one geared to the transmitting cylinder and the other geared to the receiving cylinder. These motors, although separated by 3,000 miles maintain the same speed. To check against any change which might occur, special controlling mechanism is attached to the receiver, based upon the constant pitch of the tuning fork.

The making of the ink record is visible in all its operations. The wiggling of the fountain pen can be watched as the cylinder rotates back and forth, gradually building up the picture. The photographic record is made on an ordinary camera film inside a specially constructed camera a beam of light playing upon the film in place of the pen upon the paper. This is developed as any film and as many prints can be made from it as desired.—Power Farming.

Place for Batteries, Chargers and Testers

To prevent the radio batteries, chargers and testers from having things stacked on top of them the safest place to keep them is under a shelf. A board fitted with rollers will be a wonderful help in handling these somewhat awkward radio necessities. Finish the board with acid-resisting paint.—Radio Digest.



Board Fitted With Rollers Is a Convenience.

Advantages Claimed for Loop Antennas

One of the good effects of the broadcasting craze has been to bring to attention the great interference problems which exist, naval experts say. The loop antenna has been brought into great prominence for receiving purposes, as a means available for avoiding interference. Practically unlimited receiving ranges are possible with the loop when sufficient radio frequency amplification is used. One frequently reads of the enormous distances obtained on loops, even as small as two feet in diameter. It is conceivable that all receiving may be done on loops in the near future. Some of the advantages claimed for the loop are: Sharp tuning, wide range of frequencies available in a single coil, one tuning adjustment, directive effect, easy portability and replacement, small space occupied, and little re-radiative effect when regeneration is used.

Good Selectivity in This Hook-Up

Set Has Satisfactory Volume on Loud Speaker Up to 1,000 Miles.

I am showing a wiring diagram of a particularly selective set, writes a Minneapolis correspondent in Radio Digest, that I have had very good luck with. The following facts are just as I found them. While WCCO and WAMD were transmitting and the latter station is just 100 yards away I received WHT, Chicago; WQJ, Chicago; WTAY, Oak Park; WDAF, Kansas City; WOAW, Omaha, and KYW on a loud speaker, using just three tubes. I had absolutely no interference from either of the local stations and I assure that they are notable when it comes to "stepping on the loud pedal." C_3 is the trap arrangement which cut out much local QRM.

The adjustment of L_3 is very critical. L_3 and C_3 log practically the same in picking up a sta-

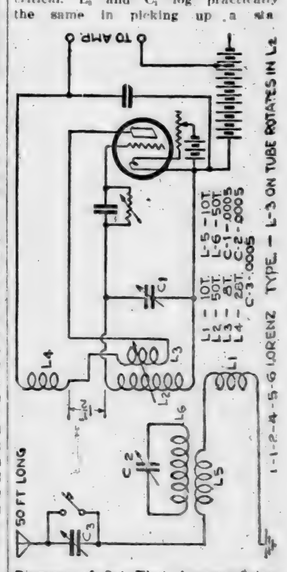


Diagram of Set That Assures Selectivity.

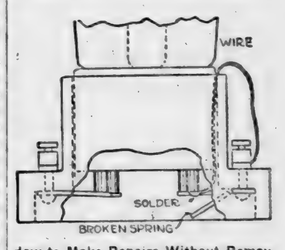
tion. If L_3 is advanced too far signals will be blocked. The constants are shown in the diagram. The set has real good volume on loud speaker up to 1,000 miles. I do not know what it will do on the phones as I never use them.

When Socket Spring Breaks in Your Set

When bending up springs of a socket while in the set a spring often breaks in some sets to remove the socket is very difficult, but a repair may be made without removal.



How to Make Repairs Without Removing Socket.

Determine which tip of the tube should make the contact and solder a small insulated wire to it, replace the tube and connect the other end of the wire to the correct binding post on the socket. This will make a permanent repair.—Radio Digest.

Finds New Substance to Replace Galena Crystal

Parisian radio fans are hopeful that a new substance to replace the galena crystal will prove to be the dreamed-of super-crystal, and not just another substitute. The substance was discovered by Felix Thuaud, a prominent French steel manufacturer. While studying the by-products of steel, Thuaud noticed a material that was somewhat like the crystal used in radio sets. He chipped off a few pieces and had radio fans try them. Their report was that concerts were heard over longer distances and with greater clearness than with galena points. Thuaud also found that it was not necessary to hunt for special points of contact, as the new material was adequately sensitive at any point.

The basis of the material is a combination of silicon and iron, with the former dominant. The product can be made in an electrical furnace or in an ordinary crucible. It can be sold at about one-fourth the price of substances now used.

RADIO WAVES

Simple, tight mechanical connections are better than poorly soldered ones.

Try a fixed condenser between the aerial and ground for the longer wave lengths.

A 22½-volt "B" battery should be discarded when it has dropped to 17 volts, and a 45-volt "B" battery after it has fallen below 34 volts.

JULY

Hoosier State Happenings

Winona Lake.—That the instability of youth is rapidly increasing was pointed out by Dr. Cleon A. Nafe, superintendent of the City hospital of Indianapolis, in an address made at the annual conference of the Indiana Parent-Teacher association at Winona Lake. "The nervous child used to be an exception found only in nervous families, but now in almost every family with four or five children there is at least one who manifests tendencies of irritability and emotional instability," she declared. It is the duty of the P. T. A. to recognize these facts because members must combat this tendency since they have the destiny of the youth of today in their hand. Many causes are assigned to this condition and probably the present change in social and moral restrictions have had much to do with it."

Indianapolis.—Gov. Ed Jackson and John A. Brown, secretary of the board of state charities, said there was no cause for alarm as a result of the escape of several prisoners from the Indiana reformatory in the last few days. They said these escapes often occur in warm weather and are limited to the "trusty" workers. Mr. Brown explained that "trusties" are carefully selected, limited to persons living in Indiana or having family connections in this state, which would tend to keep them from going far.

Indianapolis. — Detectives are attempting to clear up a number of robberies and holdups through questioning one of a group of three alleged bandits, captured after another alleged member of the bandit group was shot and killed by policemen. The dead man, Orville Wolford, was identified by three holdup victims as one of the group that had robbed them. The man under arrest and being questioned by detectives is Ray Ritchie.

South Bend.—George W. Beyers, twice a candidate for the mayoralty of South Bend and a widely-known attorney, was arrested on a charge of assault and battery with intent to kill. The arrest followed an attack said to have been made by Beyers on George Truman, following a dispute over a dog owned by Beyers. Truman is said to be confined to his bed, with one of his ears torn, and is suffering from internal injuries.

Valparaiso.—The corner stone of the new $300,000 Masonic home of Masons of Hobart, was laid with fitting ceremonies, attended by lodge members from many cities of northern Indiana. Lee Dinwiddie, past grand master, and William H. Swintz, grand secretary, and other grand officers were honor guests.

Anderson.—The body of Oscar L. Fullenwider, age forty-five, Big Four railroad freight conductor, 2719 North Side street, Indianapolis, injured fatally when he fell between cars of his train one mile east of Anderson, was taken to Indianapolis accompanied by the widow.

Huntington. — Arrangements have been made to erect a 6 by 8-foot signboard 300 feet south of the Whippoorwill crossing, three miles east of this city, with the warning, "Dangerous crossing ahead; six persons were killed at this junction last year."

Kendallville.—John . Rowan, nine years old, son of Mr. and Mrs. Vawter Rowan, Cleveland, Ohio., drowned at Oliver lake, near here. The lad was playing on a pier 400 feet out in the lake and fell into the water, becoming entangled in the chain of a boat.

Anderson.—Clyde McCrory, twenty-five years old, formerly of Anderson, is held at Erie, Pa., on a charge of first-degree murder, following the death of Ralph Merrick of Conneaut, Pa., from knife wounds alleged to have been inflicted by McCrory.

Indianapolis.—The state board of tax commissioners has denied the application of the Western Union Telegraph company for a reduction of the original appraisement of $6,780,788 for its Indiana property for taxation purposes.

Indianapolis.—George O. Dix of Terre Haute was elevated to the post of president of the Indiana State Bar association to succeed Lex J. Kirkpatrick at the closing session of the association at the Indianapolis Country club.

Valparaiso.—Roy, Jr., three-year-old son of Mr. and Mrs. Roy Shinabarger of this city, was seriously injured when a part of his jaw was torn away by a tornado which he attempted to bite.

Noblesville.—Verailn Lamb, age fifty, son of H. A. Lamb of this city, died at the throttle of his engine at Spaulding, Ill., a message received by his father said.

South Bend.—Federal Judge T. W. Slick at South Bend granted a permanent injunction to prevent cutting the Lincoln highway for a drainage ditch.

Hartford City.—Prosecutor Hugh Maddox has issued orders to magazine stands in the county to cease the sale of 46 different magazines, on the grounds that they are obscene.

South Bend.—Last November burglars visited the home of Margaret Zorniger and took her entire wardrobe valued at $1,000. Recently Mrs. Zorniger passed a woman wearing one of her stolen dresses. Police recovered part of Mrs. Zorniger's property when they raided the home of Owen Longfellow, twenty, a factory employee. Longfellow was arrested.

WARNS FARMERS OF MEXICAN BEETLE

Indianapolis.—Declaring that rapid spread of the Mexican bean beetle in southern Indiana in the last few weeks is menacing bean crops throughout the state, Frank N. Wallace, state entomologist, issued a warning at Indianapolis to farmers and truck gardeners to take immediate steps to prevent further spread of the pest.

Mr. Wallace's warning concerning the pest follows:

"The Mexican bean beetle has appeared this year in southern Indiana in great abundance and is doing very much damage to almost all varieties of beans.

"Last year a few beetles were found in southern Indiana but only did noticeable damage in a few instances.

"The great increase in numbers is characteristic of this pest. It is practically free of natural enemies and this accounts for its great increase in numbers.

"Its native home is in Mexico, and it was known in New Mexico in 1850. It appeared in northern Alabama in 1920, and in four years had extended its area to northern Ohio, although only a slight infestation was found in southeastern Indiana.

"Apparently all Indiana is going to suffer from this pest, as it has spread from 100 to 200 miles per year.

"Ordinary spraying has very little effect on the control of this pest as the larvae feed almost entirely on the under side of the leaves and this necessitates the poison being sprayed on the under sides of the leaves.

"The government entomologist found that magnesium arsenate, used one pound to fifty gallons of water, brought the best results."

Indianapolis.—Herbert R. Duckwall, 3818 North Delaware street, Indianapolis manufacturer and business man, has abandoned his fight to acquire possession of liquor valued at almost $18,000, seized in a raid by a deputy sheriff on Duckwall's home in October, 1923, and which has been held by the Marion county sheriff. Attorneys for Duckwall have filed a motion before the Indiana Supreme court to dismiss proceedings to forestall enforcement of an order of Judge James A. Collins of the Criminal court, directing that the liquor be destroyed.

Indianapolis.—John D. Williams, director of the state highway commission, announced the compission and officials of the Southern railway system had reached an agreement to build an overhead bridge in state road No. 16, where the railroad line intersects this highway a few hundred feet from the west entrance to the Nancy Hanks park, at Lincoln City. The new overhead will be 100 feet long, will have a 20-foot roadway and will cost approximately $20,000.

Indianapolis.—As the result of an agreement made between the state highway commission and the Pennsylvania railroad the present dilapidated old wooden overhead bridge in State Road 3 (the National road) across the Pennsylvania lines, just east of Brazil, soon will give way to a modern concrete structure. Work on the new structure will begin about the middle of August, John D. Williams, director of the state highway commission, announced.

Indianapolis.—A tentative program for the thirty-fourth annual session of the State Conference on Social Work, which is to be held October 3 to 6, at Vincennes, was adopted by officers of the conference at a meeting with John A. Brown, secretary of the Indiana board of state charities, at the statehouse. The general theme of the conference will be "The Conservation of Our Heritage." There will be four general sessions.

Gary.—Dr. Frank P. Hunter, analyst of the Purdue university laboratories at Lafayette, gave the first direct testimony against Mrs. Anna Cunningham, who is on trial at Crown Point for the murder of her son, Walter. Arsenic sufficient to kill was found in the vital organs of the boy, he testified.

Anderson.—A bronze tablet attached to a large boulder, erected by the local chapter of Daughters of the American Revolution to mark the site of the cabin of Chief Anderson, from whom this city derives its name, was unveiled by the D. A. R. on the lawn of the Pennsylvania railroad station.

Terre Haute.—Elmer Enright of Indianapolis is under sentence of one to two years in the state reformatory for violation of the liquor laws. The sentence was imposed on an offense committed more than two years ago.

Gary.—Expert safe robbers are believed by local police to have robbed a safe in the office of the Gary Motor corporation. The loot consisted of $4,000 in negotiable paper and bonds, while approximately $20,000 in negotiable bonds, secreted in another drawer of the safe, was overlooked.

Goshen.—Earl Bunta, age forty-eight, prominent civil engineer, ended his life at his home by shooting off his head with a shotgun. His act is said to have been prompted by the death of his father, Alonzo Bunta, a few days ago.

Bathing Costumes in Bright Shades

The voice of the censor has been silenced—the beach police are no longer the ultimate arbiters of surf fashions and milady may now pirouette on the summer sands in almost any costume she chooses, notes a fashion writer in the New York Herald-Tribune. As long as the one-piece or athletic swimming suit was banned, it was impossible to criticize it impartially—it was the symbol of rebellious youth, and on that score it attracted countless adherents who might otherwise have passed it by. The end of the sanctimonious tumult and shouting, however, finds the mode in a more even and balanced mood and it now is possible to evaluate the semi-masculine swimming costume from a purely fashion viewpoint.

Suitable for Swimming.

There is nothing particularly prudish about these colorful swimming suits—all of them will allow the necessary freedom of motion when actually in the surf and even the competitive swimmer should be able to navigate with unhampered speed when wearing one.

The gallant Parisian couturier is not the one to deny modesty its compensations and he has consequently introduced a group of dazzling colors into the feminine bathing suit, calculated to transform the summer surf into a sea of colors. Gayly printed silks and brilliantly hued solid colored silks are the outstanding fabrics for the 1925 beach costume. Among the favored prints are flowered designs, geometrical patterns, bold Scotch plaids, silks printed in leopard and tiger designs, and Roman striped taffetas with satin overstripes. The foregoing designs appear on silks, and they reach bizarre extremes in their variations. Besides these, Paris has placed an approving seal upon hand-blocked cretonnes, chintzes and brocades in vivid colors.

When the materials are plain the colors are even more vivid, leaning principally to bright reds and greens. The fabrics which serve as a background for the solid-colored suits are taffeta, satin, faille silk, crepe de chine, crepe romain, pongee, and in the cottons, gingham and English broadcloth. Jersey is again in evidence but the smart bather will prefer a costume in a less monotonous material.

The chief requisite of the bathing costume of 1925 is that it simulate the day or evening mode in dresses and wraps. There are almost as many different styles in bathing suits as there are in street and afternoon dresses and coats. The tailored bathing suit with its mannish collar and plain straight lines is as different from the one affecting circular godets and ruffles as the tailored suit or sports frock is from the robe du soir. The thing to remember in selecting your bathing suit is to choose one that incorporates the same style features as you would require in your latest frock. It should have a flare which is achieved by means of circular flounces, godets, or the skirt may be of circular cut and attached to a bodice at a low waistline. Again it may have an apron front. Or, like your sports costume, it may be a jumper-frock made with a boyish collar or even a shirt-bosom effect. Like the jumper type of dress, the bathing jumper may be either of the sports variety, or more formal like the afternoon dress. There is the severe jumper accompanied by straight knickers which coincides with the sports dress and there is the bathing jumper dress that is slashed at either side to reveal bloomers that are ruffled. The latter might be compared with the more dressy jumper-frock the one worn at the dansant or the club veranda.

The Only Mannish Note.

The boyish collar, sometimes with a tie, is practically the only mannish note on the fashionable bathing suit. There are many feminine touches, however, such as godets, circular flounces, scarf collars, bow effects, ruffles, the bateau neckline and other incidentals which, added to the brilliant colors and feminine materials, leave no doubt but that the purely feminine will reign supreme on the summer sands.

No section of the mode is complete this summer without the introduction of the ensemble note—and it is almost as essential in bathing costumes as it is in daytime frocks. The most typical sea ensembles consist of dresses of printed silk and plain rubberized capes, the latter having long scarf collars of the printed fabric.

Roman stripes are used in a striking ensemble comprising a cape, dress, knickers and cap. The dress is a straightline sleeveless affair with an inverted plait at either side of the skirt and the cape is cut on full circular lines. The stripes run horizontally in both instances—it is only on the crushed collar of the cape that they run vertically. The cap is of the skull-cap variety and also shows the stripes in a horizontal position while the dress is trimmed with silver buttons.

Black Satin for Matrons.

The vivid color note which persists throughout the entire bathing costume of this season will obviously not appeal to the more mature bathers—indeed there were many comparatively youthful matrons who, at the smart winter resorts, showed a definite preference for the more conservative colors. At Palm Beach many smart women wore suits of black satin discretely trimmed with some quiet color. It was noteworthy, however, that even among the strictest adherents of the conservative bathing suit the accompanying wrap was in a striking color or design. It is obvious, then, that the vivid color note is an integral part of the modish bathing costume, and it must be introduced in some manner even by the mature.

The Patou costumes are, indeed, picturesque and whether they are worn at Narragansett, Deauville, Biarritz or the Lido, their first raison de'etre is to enhance the beauty of the wearer. Patou reproduces a Chinese tunic in one of his costumes made of jade green crepe marocain embroidered in green and black around the hem and armholes. With culottes scarcely showing from underneath the tunic, the effect is not unlike that of the dancing frocks, the skirts of many of the smart Paris evening dresses being but little longer than the bathing suits.

Cape and Cap Showing Vogue for Polka Dots Has Entered Realm of the Bathers. Each Is Developed in Willow Green Rubberized Silk Dotted in Black and Plain Black Silk.

Deep Cultivation Harmful to Corn

Top Three Inches of Soil Contain Largest Amount of Plant Food.

(Prepared by the United States Department of Agriculture.)

The ka-lick, ka-lick, of the corn planter has ceased its musical tattoo for the season and has been bucked into the shed. If there were no weed seeds just under the surface of the soil lying in wait for favorable germinating conditions, the farmer's work in the cornfield would be done for the summer. If there were no weeds there would be no need to tune up the old cultivator or cut a forked stick. The crop would not again need his attention until corn-picking time in the fall. He could turn his attention to other work about the farm, or he could cut himself a pole and go fishin', which-ever was according to his individual bent—and his cornfield would still yield as many bushels of corn as it would have had he given it the traditional three times over with corn plow.

Cultivation Controls Weeds.

At least some such conclusion might be arrived at from a study of the results of various tests by corn culturists to determine the real reason for cultivating corn. Cultivation, they agree, is chiefly for the purpose of controlling the weeds. In fact, weed eradication may be the only beneficial result from cultivation after planting.

Nevertheless, there is that big little word "if" to reckon with. We do have weed seeds and we will have weeds. Soon the broad clean spaces between the rows of young corn will be covered with a mass of green weeds of every description. The cultivators will be unlimbered in feverish haste to attack the weeds and hold them in check while king corn gets the jump on them.

But that is where the similarity of the operation ceases. One farmer will set his shovels to plow as deeply as possible. He will hurry across the field so that he can start his plow on the cross rows—the main idea apparently being simply to get over the field three times before the corn is knee high and ready to lay by. He believes that the formation of a dust mulch to retain moisture is also a thing to accomplish.

Must Keep Weeds Down.

As long as there are weeds, some sort of method will have to be used to keep them down. Rotating crops, preventing weeds going to seed, and sowing seed that is free from weed seed, are some of the other principles that will help to keep down weeds. An understanding of the fact that cultivation is principally for the purpose of killing the weeds and not to stir the soil or provide a dust mulch, however, will modify methods of cultivation.

Thirty-six years ago the Illinois experiment station made some tests in which it was shown that if weeds were kept down by scraping with a hoe without any attempt at forming a dirt mulch, the yield was the same as with ordinary deep cultivation, and only slightly less than with ordinary shallow cultivation.

Twenty years ago the United States Department of Agriculture made similar tests at a number of stations over the country and obtained similar results.

Now the Illinois station has secured some more figures which further substantiate the former tests. As an average of 24 years of experiments at that station it was found that a field of corn in which the weeds were removed by scraping them off with a hoe gave a yield almost exactly the same as a field cultivated with a surface cultivator. Deep cultivation gave a yield of one to two bushels less on the average than either shallow cultivation or scraping with a hoe. Many deep cultivations, decreased the yield further.

Deep Cultivation Harmful.

These experiments indicate clearly that the deep cultivation is harmful. Cultivation should be as shallow as possible, although deep stirring is less injurious at the first cultivation than later. The feeder roots of the corn plant leave the stalk about two inches below the surface of the soil no matter how deep the grain has been planted. Plowing close to the stalk and deeper than these roots injures many of these roots and results in decreased yields.

It appears, says the United States Department of Agriculture, that the top three inches of soil contains more available plant food than that further down and that it is of more value as a feeding ground for corn roots than as a mulch.

Cultivation that mutilates this mass of roots in the top soil not only removes the connection of the corn plant with this rich source of plant food but destroys its natural water-gathering system.

From the great number of experimental studies that have been made it would seem that the cultivation problem in the corn belt is to kill weeds as economically and as easily as possible without plowing so deep as to do harm to the plant in any way and without making the surface soil unavailable to the roots for feeding purposes. Some of our present implements for cultivation are designed primarily to produce a mulch and stir the ground. There are many, however, that have been designed with special reference to weed control, such as the weeder, the spring-tooth harrow, and the surface cultivator. Local conditions will determine which of these can be used to the best advan-

Select Right Paint for Each Farm Job

Best Way to Preserve Buildings and Implements.

(Prepared by the United States Department of Agriculture.)

Painting improves appearance, but the chief purpose of painting on the farm is to preserve buildings, fences and implements from the effects of the weather. Interior painting is usually done to make the home more attractive, but it also serves a useful purpose in making walls and ceilings more sanitary and dark rooms lighter. Painting at regular intervals, says the United States Department of Agriculture, is the cheapest way to keep buildings and implements in good condition.

A knowledge of the different kinds of paint and their particular adaptability is a great advantage to the farmer who wishes to do his own work. The department has published Farmers' Bulletin 1452 for the express purpose of helping the farmer to select the right paint for the particular job at hand. It gives directions for mixing paint, for preparing surfaces, and for applying the paint. Full directions for making and applying several kinds of whitewash are included also.

Painting should not be put off too long. If wood has begun to rot or iron has begun to rust, the rotting and rusting will continue after the paint has been applied. Moreover, the longer painting is delayed, the more difficult and expensive it becomes.

A copy of the bulletin may be had free of charge, as long as the supply lasts, upon request to the United States Department of Agriculture, Washington, D. C.

Marketing Poultry and Eggs Is Important Job

"The time has come when serious thought is being given not only to the production of poultry and eggs, but also to the marketing of these products." So declares the poultry and egg marketing department of the Illinois Agricultural association, F. A. Gougler, director.

"The states of Iowa, Illinois, Indiana, Ohio, Missouri, Pennsylvania, Minnesota, Wisconsin, Michigan and Kansas together sell about 85,000,000 dozen eggs each year. This amounts to 28,000,000 cases or 70,000 carloads. And if we add to the value of the eggs sold from these states each year, the value of the poultry sold, we have no less than $295,970,472."

Marketing of this large quantity is as important a problem as producing it, says the association. "Both producers and distributors of eggs and poultry products are concerned with the best method of moving this produce from producer to consumer, so that the spread between producer and consumer is reduced to a minimum.

"It is estimated that the annual loss in the United States in marketing our egg crop ranges from $40,000,000 to $50,000,000 and those responsible for this loss are everyone who has anything to do with eggs from the farms to the consumers. The trouble is due largely to the fact that eggs are not bought on the basis of grade direct from the producers."

Most Opportune Time to Cut Soy Beans for Hay

"Soy beans may be cut for hay at any time between the full bloom stage, which usually comes between July 15 and August 15, and the stage when the leaves begin to turn yellow, some four to six weeks later," says C. J. Willard, of the Ohio experiment station.

"Yield, ease of curing and quality of hay will mainly determine the time to cut. The largest yield obtainable at one cutting is secured by cutting when about one-fourth of the leaves are yellow. In one typical test at the university, these were the results:

"When cut July 25, at full bloom, yield was 3,700 pounds an acre; cut August 8, with pods well formed, 5,700 pounds an acre; cut August 29, with beans half grown, 6,500 pounds an acre; cut September 12, with one-fourth of the leaves yellow, 7,400 pounds an acre."

FARM FACTS

Do you need any new castings for the binder?

• • •

Hot weather cuts the milk flow, but poor feed cuts it even more.

• • •

For fine leafy alfalfa, most farmers should cut when it is about one-tenth in bloom.

• • •

The hen is the most efficient of farm animals in producing food, states an Ohio university authority.

• • •

It has been said that there is no gain without a loss. In other words, gain alfalfa and lose despair.

• • •

A man who does not keep his live stock well supplied with water is not only a poor farmer; he is a mighty poor kind of man.

• • •

For the city man a home garden does more than produce some vegetables for the table; it produces a real appetite to help eat 'em.

• • •

Early cut hay is best for dairy cattle. Greater milk production and healthier cattle will result. Clover is best when cut at or just before the full bloom stage.

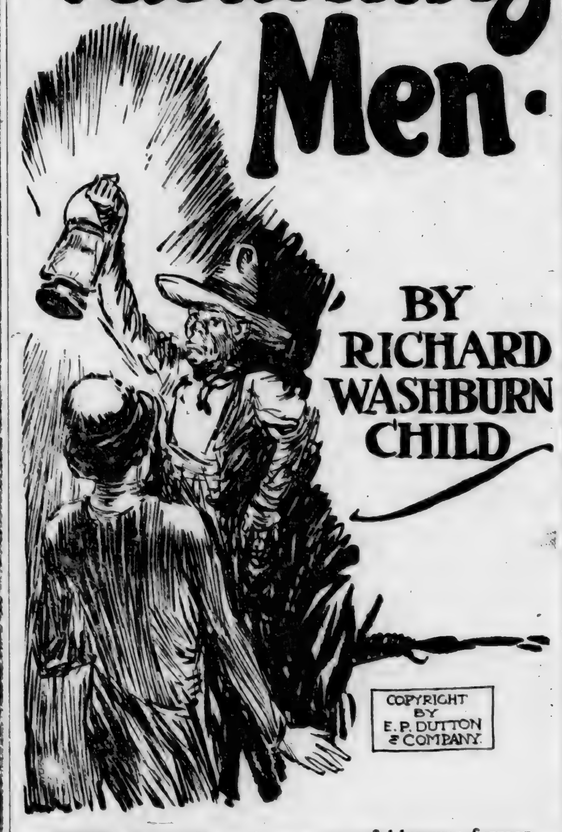
The DeKalb County Tuberculosis Society will hold a Free Clinic in the assembly room of the Court House Tuesday, July 28th, from 1 to 4 P. M.

The condition which was responsible for an outbreak of typhoid fever at Winona Lake has been eliminated, it was announced Saturday by Dr. W. F. King, state health commissioner, who has been in charge of the investigation. "Laboratory tests of water samples," Dr. King said, "show the Winona Lake water supply to be safe and satisfactory. There is now no danger of typhoid fever as far as the water supply is concerned."

The Vanishing Men



HARVARD graduate, successful lawyer, former editor of Collier's Weekly, our recent ambassador to Italy, founder of Council on Foreign Relations, chief representative of the United States at Conference of Genoa and at Conference of Lausanne in 1922, Richard Washburn Child is also one of the best novelists in America. Especially does he excel in mystery stories. In "The Vanishing Men," you will find a strange and fascinatingly interesting tale of strange people and strange things, strangely told, which will refresh you if you are in search of something different from the conventional mystery story.

You Will Have an Opportunity to Read It as a Serial

ARKANSAS MUSINGS

Let us dream we are in trouble and we'll realize our dreams.

The man who is always trying not to make a mistake never makes a stake.

If time would only wait for us we would never get to the other end of the furrow.

A Hot Springs man has outlived three wives. That's going some in this land of widows.

There is no hiring a substitute in the battle of life. Every man must fight the enemy himself.

The idea that what you don't know won't hurt you is frequently a mistake; it may cost you your job.

Courtesy is the quality that keeps a woman smiling when a departing guest stands at the open screen and lets flies in.

A Hot Springs woman says her husband is a deceitful wretch, because he pretended to believe her when he knew she was lying.

People are always wondering why some spins, who are particularly nice, are spins, and why some married women, who are particularly uncomely and mean-mannered, are married.—Arkansas Thomas Cat.

ADVERTISING IS—

Advertising is telling others things you would like them to know.

Making your business safe for success.

Saving time by multiplying your sales appeal.

Speaking to the multitude instead of to the few.

Telling the world why you are proud of your goods.

A little folly is desirable in him that will not be guilty of stupidity.

No worthy enterprise can be done by us without continual plodding and wearisomeness to our faint and sensitive abilities.

Language is an art, and a glorious one, whose influence extends over all others, and in which all science whatever must center.

Encourage such innocent amusements, as may disembitter the minds of men and make them mutually rejoice in the same agreeable satisfactions.

Three means to fortify belief are experience, reason, and authority; of these the more potent is authority, for belief upon reason, or experience, will stagger.

Many excellent things are in nature which by reason of their remoteness from us, and our unaccessibiliness to them are not within any of our faculties to apprehend.

WE WISH

That prices would drop like the fall leaves do.

That we could see a centipede with skates on.

That a chicken was made up of all white meat.

That they would put down some pavements that didn't have to be taken up every month.

That we were President so that we would be sure of a good seat at the next world's series.

That a burglar would steal the pie our bride made, so we wouldn't have to finish it up tomorrow.

TO JUDGE AN AUTO!

Ask the salesman.

Light a cigar.

M. P. Church Notes

The following officers have been elected at the M. P. Church to serve for the coming year:

Supt.—H. G Hursh
Asst.—Donald Kinsey
Secretary—R. W. Brodbeck
Asst —Dorothy Ginther
Treasurer—Byron Widney
Pianist—Hilda Koch
Chorister—Juanita Kinsey
Asst —Howard Shilling
Educational Supt —Mrs. Rose Widney.
Adult—Mrs. Ida Herrick
Home Dept —Mrs. Loretta Hull
Children—Mrs. Mayola Kinsey.

The Friendly Bible Class of the Methodist Sunday School held its monthly meeting at the Roy Koch home, south of town, Sunday. Seventeen adults were present besides the children. A fine potluck dinne. was served followed with ice cream. Class officers were elected at the business session, as follows:

President—Roy Koch
Vice Pres.—Fred Leighty
Sec.-Treas.—Ethel Shilling
Teacher—Geo. Walter
Assistant—Sylvia Ginther.

The meeting next month will be held with Ora Wilmot and family, southeast of Spencerville.

On Sunday, September 6, the class reunion will be held.

Only Leaf Can Do Work

The heads of the teasel plant, which are cylindrical with oblong hook-pointed, rigid bracts between, are used for raising the nap of cloth. The heads are split and fixed on the circumference of a cylinder that revolves against the surface of the cloth. No mechanical device has yet been found to equal this natural contrivance.

The St. Joe Valley Bank, A STATE BANK

Death Brings End to Bryan's Activities--Burial Made Friday.

Dayton, Tenn., July 27.—William Jennings Bryan, the crusader—grim of feature in death as he was in life—rests today in the camp of his friends and followers here, the victim of his last great battle.

Today the great commoner, whose voice for thirty years has winged to the far reaches of the earth the doctrines he has espoused, lies on an undertaker's cot in the home of his friend, Richard Rogers.

Tomorrow, again, the body will lie "in state" in the parlor of the Rogers home, where all who but a few days ago trudged in from far and near to see him fight in the Scopes trial, may pay him final homage in death.

Wednesday his widow will take him to Washington for burial on the green slopes of Arlington cemetery, last resting place of many American heroes.

The Southern railway offered to furnish a special train for the trip to Washington but Mrs. Bryan declined.

"It would be too much show," she said simply. So the body will be taken in her care on a special car only.

A special guard of the American Legion will accompany it.

The funeral service in Washington probably will be held Friday.

In Thick of Fight

Dayton, Tenn., July 27.—In the thick of the most spectacular, if not the most important battle of his strenuous career, William Jennings Bryan has passed away suddenly down here in the Tennessee hills here, of late, he has moved as the great apostle of fundamentalism.

Death came only a few hours after the commoner had won half a score of ovations from thousands of natives whom he had addressed from the rear platform of his train—cheers and applause, of which, through his long career, he probably received more than any living man.

A world figure, the most renowned orator of recent decades, known, because of his activities political and religious, from one end of the earth to the other, his passing occurred amongst people of the simple and lasting faith that was his and in the homely surroundings he most loved.

Three times a candidate for president of the United States and for thirty years a dominant figure in the political deliberations of the democratic party, Bryan, when he died, was centering his whole thought on a nation-wide campaign to balk the teaching of evolution in the public schools. From free silver and a single moral standard for men and women to world peace and the word of God supreme, Bryan created and pursued issues relentlessly throughout his long career.

Elated with the reception that had been accorded him at Winchester, Tenn., where he delivered a stirring speech before a record crowd, Bryan yesterday returned to the home of Richard Rodgers, his headquarters during the recent Scopes trial.

"I never felt better in my life," he said again and again in response to inquiries of friends who feared his activity in speech-making over the week-end might prove too great a strain.

So he ate a hearty meal. He then decided to take a nap and went to his room, connecting with the front porch.

Mrs. Bryan seated herself on the porch to reach the newspaper. A few minutes later, Mrs. C. Stevens, Mrs. Bryan's housekeeper, passed through the commoner's room.

"I think I'm going to get a good sleep," Bryan told her cheerfully.

Heard Faint Groan

Some time later Mrs. Bryan heard a faint groan in her husband's room. About 4 o'clock she became nervous and asked William H. McCartney, the family chauffeur, to go to her husband and see if he was all right.

McCartney was unable to rouse Bryan. Realizing something was wrong, he called a neighbor, A. B. Andrews, who summoned Doctors A. C. Broyles and W. F. Thomison.

Bryan had been dead twenty minutes, the physicians said. Death occurred about 3:40 p. m. Apoplexy, accompanied by a cerebral hemorrhage, was the cause, according to Dr. Broyles.

Sue Hicks and McCartney were the last to converse with Bryan before he lapsed into unconsciousness.

"About 1:45 p. m. Mr. Bryan called me on the telephone and we talked for a few minutes," Hicks said. "He had prepared and was having printed in booklet form the speech he was to have presented to the Scopes jury had the necessity arisen.

"Bryan conversed freely about his speech and said he was having several copies sent me for distribution among friends. Toward the end of our conversation Bryan complained of feeling ill but passed it off lightly with the remark that he would be fit as a fiddle after a few hours' sleep.

"I offered to have a physician visit him but he laughed and said there was no need of any alarm. 'It's just a little bad feeling, Sue,' he told me. 'I'll be all right in a few minutes.

"We hung up and the next I heard he was dead."

It was a few minutes after four that McCartney entered Bryan's room and called him. The Commoner did not stir and McCartney shook him.

"He didn't awaken so I shook him again," the chauffeur told the United Press. "Then I placed my hand on his forehead to see if he was all right and he felt cold to my touch.

Suffers Stroke Of Paralysis

Sunday morning, Mrs. Frank Terman was stricken with paralysis, just as Mr. and Mrs. Terman were about to leave for Sherwood Ohio, to attend a reunion Mrs. Terman was in the kitchen and beginning to feel rather queer she called her husband and he soon discovered what was taking place. Neighbors were called and Mrs Price and Mrs Sechler responded and put her in bed and Dr. Minnick was called. Her left side was rendered perfectly helpless, but today as we go to press she is much improved. Dell Crawford and wife and brother, Asa, of Konkle, Ohio, came Monday and Mrs. Crawford will remain and care for her

Monday morning Mr. Terman was attacked with indigestion, which put him to bed for a couple of days. He is improving

Dr. Minnick Not To Move

St. Joe was to be minus one of her doctors Thursday, as Dr. Minnick, who has been here for the past three years, had arrangements all completed for moving to Albany, Indiana, but due to plans at Albany not going through he will remain at St. Joe and continue his practice. Persons who knew of his planning on leaving will do him a great favor if they will state to their friends the change in his plans.

Band Concert Well Attended

Last Saturday night a large crowd gathered in St. Joe to hear the band concert. The concerts are becoming very popular this season. The street was packed with people and cars, coming from far and near.

The merchants did a thriving business during the evening, an evidence that it pays to be progressive in the way of furnishing an incentive for the people to come to our town

The streets are well lighted and folks can enjoy themselves.

Cash paid for false teeth, dental gold, platinum and discarded jewelry. Hoke Smelting & Refining Co, Otsego, Mich.

DEATH REMOVES LEADERS

Death, during the last two years, has removed from American political life its six most picturesque leaders.

The first to go was President Warren G. Harding, leader of the conservative element in the republican party and slated through his expected re-election to guide the destinies of the government for at least five more years. Then former President Woodrow Wilson passed away, removing the one guiding spirit of the democratic party.

Only recently, Senator Robert M. LaFollette, apostle of independence and progressive thought within the republican party, died and leadership of the independent movement in politics ended with his death.

Now death has taken Bryan, the most picturesque figure in all the nation's political school.

Senator Henry Cabot Lodge and former Vice President Thomas R. Marshall, both of whom played a conspicuous part during the last 15 years in political life also have died, leaving President Coolidge the one outstanding political figure in the country.

HAMBURGER Special!

We can't compete with the large chain markets in the hamburger price because our business is not so big but for one day this week—SATURDAY—we are going to sell **Hamburger** at a Special Price per pound, only..... **15C.**

Our meats are not the kind that are hard to cut and still harder to digest. It is young, tender and wholesome.

Sinners in Heaven

By CLIVE ARDEN

Copyright by The Bobbs-Merrill Co.

PART FOUR—Continued

—20—

"I—killed him? I—killed Babooma a man—?"

Swiftly he closed her lips with his own, with quick perception of the effects which renewed civilization might have had upon the primitive instincts aroused on the island.

"I owe my very life to you, wife of my heart," he whispered.

But his reflections were misplaced.

"Thank God!" she cried unexpectedly. "I would still kill anybody—any day—who attempted to hurt you."

"'Nom de Dieu!'" he echoed the Frenchmen. "Our life will be a checkered career."

Then Barbara fully recognized once more the old Alan of flesh and blood, deep moods and light banter, poetic idealism and prompt action—deliciously human, warm with love and life. She suddenly laughed, the bewildered sense of shock falling from her—the first real spontaneous laugh of many weeks.

"Alan! Alan! Nothing matters but the fact that you are here—alive! But I can't understand it all. How was such a mistake made?"

"Very easily. Because De Borceau didn't, of course, know friend from foe! Things were going all right with us. But when one of the devils set fire to the hut and the friendly spear knocked me out, De Borceau naturally though all was up. Some of Babooma's lot tried to reach you, but Roowa frustrated them. Then De Borceau was staunch to his oath. He fought anybody who came near you, like a medieval knight, and carried you off to safety. Poor Roowa thought he had stolen you from me, and nearly went mad!" He laughed reminiscently.

"But you? What happened to you? The expedition searched the island. And what became of the De Borceaus when they returned—?"

He sank into the big armchair, still clasping her in his arms. "It's quite a fairy story. You remember the wood in the east—where, that first Christmas day—?"

"Every leaf!" she breathed.

He smiled into her eyes. . . .

"But not every moss-covered rock. In that wood was a very, cleverly concealed entrance to a subterranean passage leading to a kind of vault. This narrowed down into another outlet—quite impassable—on the shore, which allowed a little fresh air and glimmers of light. This cave was tabu. In happier days, when the tribe was sufficiently self-supporting to—provide its own meat, the condemned dinner was—well, we need not go into details! But that cave was supposed to be haunted with the spirits of past feasts. Nobody liked to speak of it, or go near it. When I was considered dead, our friends, very naturally, carried off my bleeding corpse—"

"Oh, don't!" cried the girl who had suffered so much from this well-meaning act. She buried her face on his shoulder. . . .

After a lucid interval he resumed his narrative.

"When they realized you had been 'stolen' and I was still alive, the fear arose that the 'bird of ill omen' would return and make off with me, too! So, to insure my safety—that was the irony of it all—they raised the tabu and hid me in the cave. Only Roowa was courageous enough to enter with food. I was knocked out for some time. When I recovered—Barbara! Can you possibly imagine my feelings upon discovering that the rescue party had come and gone? I was raving mad! The poor beggars had done it for the best and were bewildered. Nothing would convince them that the white men were my friends. I spent what seemed years of agony, doubtful if any further help would come. My only hope lay in you."

"In me?"

"I thought you would persuade De Borceau or somebody to try again, not rest content—"

"I wanted to come myself," she cried. "I implored and threatened and—Oh! everybody was so pig-headed. But what happened to De Borceau?"

"As soon as the plane's arrival was known the whole tribe raced pell-mell to the shore and burned it to cinders. I found the brothers hiding for their life in the forest." He gave an irrepressible bubble of laughter. "They—literally—fell from the trees upon my neck! We have been kissing each other's hands or faces ever since. So, again, nothing remained but to wait and hope. I thought at least a missionary party would turn up. That second expedition was infernally slow!"

He laid his cheek impulsively down upon hers. "But De Borceau could give me news of you. He told me everything—about Singapore—"

Her lips turned, trembling a little, to his.

"And," she whispered, "'It'!"

"And 'It.'" His arms tightened. "And—other things. I insisted. He acted loyally—for us both, Barbara. But—by heaven!—it made my gorge rise to know what you were facing—the inferences, the— And there I was, powerless as a stranded infant to help you!"

"It was—h—l!" she murmured briefly. "Have you heard—?"

"Madge told me everything. She got the news of our rescue almost directly after you left London! I came home like the very devil—by sea, air, and land—to find you had disappeared—gone to break your little heart alone, where I couldn't find you—"

"I had to come away, Alan. I was in a turmoil—"

"My Barbara, don't I understand!"

Suddenly his eyes blazed in their old way; and he dashed an arm upon the table, causing the flame of the lamp to jump.

"Those blighted Pharisees! Those d—d, gossiping—"

"Oh, my dear!" She laughed again at this familiar vehemence.

"I went to Darbury," he explained briefly.

Her laughter fled. "You went to Darbury, Alan?" She glanced apprehensively into his grim face. "What—what happened?"

He remained silent for a moment, then met her eyes with a smile.

"Well . . . No deaths occurred."

"Did—did mother—say—?"

"There was a very free, candid interchange of opinion! I honestly tried to reconcile your mother, but"—he gave one of his old careless shrugs—"she considers herself disgraced, and talks darkly of being obliged to leave Darbury. . . . I saw Rochdale, too—"

Barbara raised her head again. "Ah! Dear old Hugh! He has been—splendid, Alan. His friendship—his struggle to—to—believe—" Her voice quavered.

"I know. And he, of everybody concerned, might with justness have condemned—"

They fell silent awhile, each knowing, by their own joy, what it all meant to the friend who had lost. . . .

A realization of what this return would mean to Mrs. Field combined with her own overwhelming joy to draw from the very depths of her heart a voiceless prayer met thanksgiving. In the luminous, darkened

"Oh, Don't!" Cried the Girl.

eyes that met her own, she saw the same look of almost reverent awe. Never had he seemed so gloriously alive, so radiant in spirit. Again she raised her hands to feel the features she had never thought to see again; then drew the dear head, with passionate tenderness, down to her breast, and clasped it there. . . .

To both of them, beneath the superficial lightness of talk, this hour equaled in sacredness that of their marriage morning in the dawn. But this held in it, also, the half-fearful joy of a resurrection. The past darkness, with the struggle toward the light, had left ineffaceable marks upon each soul. . . .

"Can't we go back to the island?" she whispered at last.

"Some day." He raised his head and smiled. "We'll retire there, now and then, and live it all again! But our first jaunt is to Australia. I've been commissioned to rebuild the old bus. There's been an awful lot of interviewing and publicity since I got back ten days ago—"

"Only ten days! And you've been to Darbury—"

"That's not all."

He looked at her with eyes which held something of their old inscrutability.

"Your relations showed unflattering surprise at what they termed my 'constancy' now we are rescued. Oh, lord!"

"They would!" she cried, with indignation.

"The fear that we meant brazenly to defy the English law possessed them. They besought me to marry you 'properly, in a church.' Your aunt particularly insisted upon a Protestant church—not a registry office, or chapel."

"Just like Aunt Mary!" She laughed rather bitterly. "I couldn't feel—more married," she added, with the quick shy look he loved.

His gray eyes darkened; with a little catch of the breath his arms tightened.

"There's one thing, therefore, which bold bad barons must have in their pockets when they chase their victims to Darbury, to prove their good intent."

"What is that?"

"A special license. I know a parson near here. We haven't met for eight years; but I wired this morning to tell him we should arrive at his church to be married tomorrow—"

"My dear whirlwind!" she gasped.

He bent, with his old violent suddenness, and caught her up so close she could scarcely breathe. All the old passionate, dominating love, which had so often swept her away, poured forth and surrounded her; so that, panting and glorying, her individuality, after all its lonely travail, once more transfused, transformed into his own.

"So," he whispered, "we must have another wedding, my Beloved! But it cannot be more beautiful—more real—than the other in the dawn—"

"With a little sobbing, tremulous sigh, she clung close. . . . "If we had one every year, in every land and every tongue," she murmured whimsically, "they would all seem beautiful to me."

The landlady discreetly entered at last to lay the supper. She cast one comprehensive glance at the armchair, and her smiling face grew more radiant.

"We are to be married in the morning," Alan remarked.

Cornish people take life calmly. They do not lose their heads or forget their duties in any crisis.

"Yes, sir!" Mrs. Tregutheran agreed brightly. "I'm sure I du hope you will both be happy. And—will you have eggs tu breakfast, sir—or bacon?"

"Both—heaps!"

They smiled at each other when she left the room.

"Somebody must feed us," he observed, passing his fingers through her curly hair. "Every little note has its niche."

• • • • • • • • •

Hugh sat long over a lonely breakfast, a few days later. The "old people" were away. The London paper, with its list of marriages, lay upon the table before him; but he stared away absently, through the window, without turning the page. . . .

Presently, with gun and dogs, he stepped out into the raw February air, turning aimlessly down a lane. . . . An hour later, followed closely by six puzzled brown eyes, he walked slowly up the pathway in the little wood where—neons ago—he and Barbara had discussed their honeymoon. The gun still rested unused within his arm, the cartridges untouched within their bag. . . .

Underfoot, the fir needles lay soft and damp with here and there fronds of sodden dead bracken drooping upon them. The tall pines swayed a little, whispering their everlasting, murmurous song; dropping, sometimes, splashes from their wet leaves, like tears, upon the dreariness below. All the world appeared gloomy, dead, sorrowful. It seemed impossible that, soon, the sap would run in the tall trees, the young green shoot forth upon the hedges, spring—with its fresh myriad life—awake with the "singing of birds." . . .

The unloaded gun dropped unheeded to the ground. . . . The six brown eyes questioned one another wonderingly; then looked back at the tweed-clad figure lying face downward, with head buried in his arms. . . .

At last Shag, Hugh's favorite terrier, ever the most tender-hearted of friends, approached cautiously; sniffed; then gently licked what was visible of a much-loved cheek.

(THE END.)

Famous Old Church

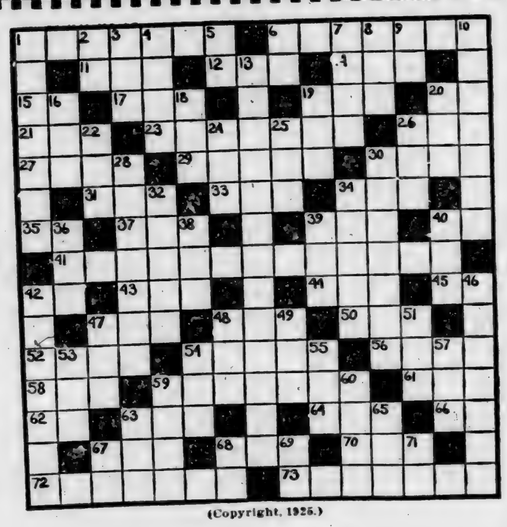
This year sees the three hundred and sixty-fourth anniversary of the demolition of the magnificent Church of St. John at Perth, the restoration of which is now contemplated.

This is without doubt one of the most interesting churches in Scotland, says the Weekly Edinburgh Scotsman. Tradition ascribes its foundation to the Picts, but, whoever founded it, it is one of the earliest stone churches built in the country; and, in the Twelfth and Thirteenth centuries, as evinced both by ancient documents and by the surviving remnants of the edifice of that time, it was magnificent and extensive. The monk of Dunfermline, to whom it was granted, allowed it to fall into disrepair—a state of affairs which Robert the Bruce set about remedying, but the restoration was stayed by his death.

Odd Quail in Borneo

The long, hairy, reddish crest gives the moderately sized, rich green plumaged greenwood quail a distinguished appearance, says Nature Magazine. In its native haunts, from Siam to Borneo and Java, it is a lover of the tropical forest up to an altitude of 4,000 feet, and seldom visits the open country.

CROSS-WORD PUZZLE



(Copyright, 1925.)

Horizontal.

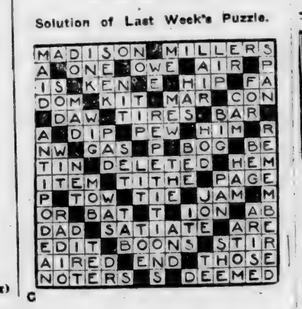
1—A city in Ontario
6—Composers
11—Before
12—An immature insect
14—A kind of tree
15—To move
17—Corrupt
19—To purchase
20—Either
21—To regret
22—An instructor
26—To be indebted to
27—God of love
29—Wide
30—Confined
31—To seize suddenly
35—Skill
36—To do wrong
37—A point of the compass
37—A heavy black liquid
39—Ask (obsolete)
40—An exclamation
41—Those who seek intercourse with departed spirits
42—That thing
43—Past
44—Mountains (abbr.)
45—That boy
47—Consumed
48—A Siamese pewter coin
50—A number of tennis games
52—A girl's name
54—Inspected closely
56—A slight depression
58—A boy
59—Machines for combing wool
61—Neither
62—Of neuter gender
63—Pulp or paste
64—Still
66—You and I
67—A sack
68—A vegetable
70—An organ of hearing
72—The core
73—A viper

Vertical.

1—A beast of the jungle
2—A note in the diatonic scale
3—A sphere
4—Tidy
5—Upon
6—A preposition
7—A trip
8—Mowed grass
9—All right
10—To extend
13—Inflexibly just
16—Belonging to us
18—A girl presented to society (slang)
19—An article of furniture
20—Possess
22—An immeasurable period of time
24—A southern constellation
25—A head covering
26—Over (contraction)
28—To surfeit
30—Ironed
32—A kind of boat
34—Means of going out
36—Establishment (abbr.)
38—Popular name for a South American city
39—A kind of tree
40—An oleaceous tree
42—A native of a southern European country
46—Implore
47—In addition
48—Part of the body
49—A driving spot in golf
51—A number
53—A Burman demon of the wood
54—To burst open
55—Without moisture
57—At this time
58—An enclosure
60—A prophet
63—A friend
65—To rap slightly
67—Before A. D.
68—An addition to a letter
69—While
71—A note of the diatonic scale

Solution will appear in next issue

Solution of Last Week's Puzzle.



HOW TO SOLVE A CROSS-WORD PUZZLE

When the correct letters are placed in the white spaces this puzzle will spell words both vertically and horizontally. The first letter in each word is indicated by a number, which refers to the definition listed below the puzzle. Thus No. 1 under the column headed "horizontal" defines a word which will fill the white spaces up to the first black square to the right, and a number under "vertical" defines a word which will fill the white squares to the next black one below. No letters go in the black spaces. All words used are dictionary words, except proper names. Abbreviations, slang, initials, technical terms and obsolete forms are indicated in the definitions.

VIENNESE PAY TO VIEW ROYAL TABLE

In Schoenbrun, the late Emperor Franz Joseph's summer castle near Vienna, there has been prepared a banquet table for 00 guests. It extends the entire length of the feast hall. Snowy linen covers the boards. The silver service has been carefully placed. Flower stands on the table are filled with lilacs from the late emperor's garden. Six crystal glasses are at each place, one for water, the other five for wine. Sixty chairs are about the table, one in the middle at the side of the long board being slightly higher than the others. That is the emperor's chair. The menu, printed in French, calls for many courses. It is the setting for the last banquet, held on February 9, 1912. Today Austrians are paying 3,000 crowns to enter the feast hall, walk around the table, admire the reflections in the wonderful mirrors, and walk out again through the castle grounds to the street. True, today 3,000 Austrian crowns are equivalent to less than five cents, but the difference between the nominal value and the exchange value has been paid in some way. The Austrians lost the war and they know they have paid the price.

People Living Longer

The average length of human life in the United States is about 56 years. The average span of life in this country has been lengthened approximately 15 years since 1870.—Hygeia.

Loss by Electrical Rust

Electrical current set up by a mixture of air and water cause rust which destroys $300,000,000 worth of metals every year, recent investigations indicate.—Science Service.

Tells His Secret

A Palmer avenue grocer handed up one of his early-season canteloupes to a critical customer and the customer pushed thoughtfully at the stem end with his thumb. "Not ripe," the customer announced, and proceeded with his thumb-pressing work until he finally selected a melon that suited. "I always get good canteloupes," the customer declared, "because I know the trick of telling the good ones. If the melon is ripe the scar left when it was pulled from the vine will give. If it is green, it won't. That's the secret."—Detroit News.

Not Nature's Plan

A man's ears are so placed that he may catch the things said to his face. It was never intended that he should hear the things that are said behind his back.

Odd French Custom

In many French homes the old custom of breaking an egg on a marriage day is still kept up. It is believed that a bride, in order to be happy, must step on a broken egg before she enters her home.

How It Started

Origin of a famous expression. First tourist to tour state is taken through forest reserve. He views acre after acre of hemlock. "Gosh all hemlocks!" he observes.—Harrisburg Patriot.

bake it *best* with DAVIS BAKING POWDER

Public Baths for Dogs

In Munich, Bavaria, public baths for dogs have been established and are being maintained by the local authorities out of public taxes. This was thought necessary, due to the great number of unclean canines that were noticeable on the streets since the war. The baths are open from 9:30 a. m. to 7 p. m. and they are widely used by pet owners.

But Soon

Young Bride—"He says I'm too beautiful for words." Friend—"Why, haven't you had any yet?"

If your eyes are sore, get Roman Eye Balsam. Apply it at night and you are healed by morning. 372 Pearl St., N. Y. Adv.

Virtue, born of necessity, answers very well.

WHY SHOULD ANYONE SUFFER WITH INDIGESTION OR ANY STOMACH MISERY?

If you want to fix up your dyspeptic, out of order stomach so that you can relish what you eat with not the least bit of after distress, do what tens of thousands of people have already done.

Getting rid of gas, bloating, belching, heaviness and that feeling of near suffocation isn't such a hard matter as you may think—You've been getting hold of the wrong medicine—that's all.

But better late than never—ask your druggist for a bottle of Dare's Mentha Pepsin—a real stomach medicine and a very pleasant one. For acute indigestion one or two doses is enough, but when the trouble is chronic, two or three bottles may be needed to put your disordered stomach in good healthy condition and make life worth living.

Making a start is the main thing, so why not get one bottle today with the distinct understanding that if it doesn't help you the purchase price will be returned.

MRS. FULLER MADE STRONG

Lydia E. Pinkham's Vegetable Compound Helped where Other Medicines Failed

Walpole, N. H.—"I have used Lydia E. Pinkham's Vegetable Compound and find it has improved my health wonderfully. For months and months I was not regular and had terrible pains. They used to affect my side so I could not work. I read of others being helped by the Vegetable Compound, so I thought it might help me. I am very much better now, strong enough to do my own housework, and have two dear babies to care for besides. I tried other medicines before taking the Vegetable Compound, but I was never treated for my troubles. I speak highly of the Vegetable Compound to my friends and recommend it to any woman for run-down and nervous condition."—Mrs. T. H. FULLER, Walpole, New Hampshire.

Over 200,000 women have so far replied to our question, "Have you received benefit from taking Lydia E. Pinkham's Vegetable Compound?"

98 out of every 100 of the replies say, "Yes" and because the Vegetable Compound has been helping other women it should help you. For sale by druggists everywhere.

Good Idea Spreading

That parent-teacher associations are valued by public-school officials becomes every year more apparent. An official inquiry conducted in Massachusetts showed that 112 superintendents consider parent-teacher associations a vital factor in promoting closer relations between the home and the school, and 82 superintendents rely upon these associations for support of programs for educational improvement.

Red Cross Ball Blue is the finest product of its kind in the world. Every woman who has used it knows this statement to be true.—Advertisement.

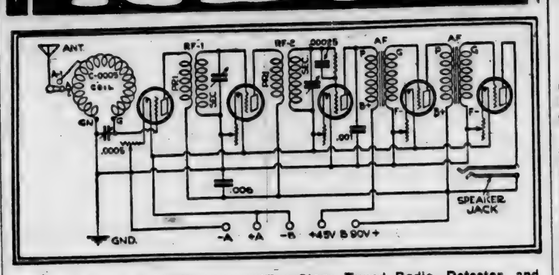
RADIO



Five-Tube Tuned Radio Frequency (Two-Stage Tuned Radio, Detector, and Two Stages of Audio Frequency) Receiver Using Low-Loss Doughnut Coupler in First Stage.

The latest improvement in radio apparatus, the low-loss doughnut coil, can be used in any of the neutrodyne and tuned radio frequency to stabilize the circuit. Its use in place of the customary aperiodic coupler used for tuning the first stage will improve any existing receiver and is a good piece of apparatus to incorporate in any receiver.

The interference, noise and general tuning qualities of the first stage are amplified and eventually become the output of the receiver. If the first stage is broad in tuning, the receiver will very likely lack selectivity. The action of the first stage has a great deal to do with the ultimate performance of the receiver.

Usual Type of Transformer.

The usual type of transformer used has a single-layer wound coil on a tube, with a tap taken off for the antenna connection. The field of the magnetic lines of force around the ends of the coil, created by the flow of current through the wire, spreads out and sprays nearby pieces of apparatus, causing distortion and making the receiver unstable in operation.

The low-loss doughnut type of coil, on the other hand, has an entirely self-contained field that prevents magnetic spraying effects. The low loss feature of the coil is due to the fact that the wires are indented at every other face around the coil, thereby lowering the distributed capacity and resistance losses below that of ordinary coils to a noticeable degree.

To incorporate the coil in a regular neutrodyne or tuned radio-frequency receiver, all that is necessary is to remove the present coil used for tuning the aerial circuit and replace it with a low-loss doughnut coupler. The same condenser can be used to tune the receiver providing it is of .0005 mfd. capacity.

Parts Needed.

To construct the complete receiver as shown in the diagram, the following list of apparatus will be needed:

1 low-loss doughnut coupler.

2 radio-frequency transformers tuned type. (Low-loss doughnut coil transformers may be used here with excellent results.)

3 .0005 mfd. variable condensers preferably straight line frequency low loss condensers so that the lower wave length stations will be separated far apart enough to make tuning easy.

5 standard vacuum tube sockets and five rheostats, 25 ohm for the C 301-A and 40 ohm for the C 299 type tubes.

2 low-ratio audio-frequency transformers, 3 to 1 ratio.

1 .00025 mfd. fixed grid condenser; 2 megohm grid leak; single-circuit phone jack, binding posts, wire, a 7 by 24 or 26-inch panel and a 7 by 23-inch baseboard will complete the list of apparatus necessary.

Follow out the wiring diagram in building the receiver, spacing the regular tuned radio-frequency transformers at least 6½ inches apart. If the low-loss doughnut coil transformers are used, as well as the coupler, then the spacing can suit the arrangement of the rest of the apparatus in your set without fear of interstage coupling.

Light Waves' Speed Is 186,000 Miles Second

The mysteries of the radio are never ending. Scientists have now figured it out that the speech of a man in New York, if broadcast by radio, is heard in San Francisco before it is heard by the audience facing him.

Astounding? Sure, but true just the same, due to the fact that the New York audience hears by sound waves which travel but 1,126 feet per second, while radio audiences over the country hear by means of vibrations or light waves and these travel at the almost incomprehensible speed of 186,000 miles per second. As San Francisco is but 3,000 miles from New York, it would take but the veriest fraction of a second for the radio to transmit the speaker's voice to the Pacific coast less time than it takes sound waves to carry the same voice to the audience directly in front of the speaker.

The radio is the wonder of the age. It practically eliminated time and space, and in that opens up tremendous possibilities for the future, besides giving an insight into that which has heretofore been most incredible. The flight and traveling capacity of the so-called soul of man which death is supposed to release from the body. Having witnessed the performances of the radio, is there anything that is not possible?

Distance Advantages by Discarding Primary

Better distances can be covered at a slight sacrifice in selectivity with present-day low-loss tuners by removing the antenna and ground connections to the untuned primary and connecting them to the secondary coil through two .0005 mfd. fixed condensers, that is, one condenser should be connected in each lead. This method will give a capacity coupling between the primary and secondary and will eliminate the coupling control between the primary and secondary.

Greater signal strength will also be had, due to the direct feeding of energy into the tuned circuit without the loss which usually is had when a transfer of energy is made from one circuit to another.

Life of Radio Tube Is Governed by Use It Gets

The life of any radio tube is governed by the use it receives in the hands of the operator, and its existence may be terminated either by the filament burning out or a decrease in the electronic life of the tube. Now, the burning out of a tube may be caused by excessive filament current, or by a short circuit with the "B" battery, or it may naturally burn out of its own accord. The decrease in electronic emission in a tube is caused by excessive filament voltage, or excessive "B" battery voltage. The majority of operators of receiving sets can prolong the life of their tubes by burning the filaments as low as possible and by keeping the "B" battery to 90 volts or less.

Use of More Coils to Add Selectivity to Set

In the construction of the additional coils, writes a correspondent in Radio Digest, use one spider-web form and wind on two wires, one ten turns more than the other. For instance, if your original tuner coil C has 45 turns make the coil A 40 turns and coil B 50 turns. Disconnect the input of the set from the usual coil D and make connections as shown. Place an 11-plate or 23-plate variable condenser in the antenna circuit.

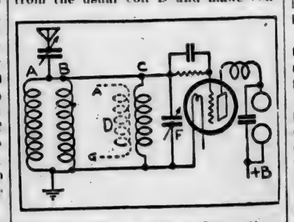


Diagram Showing How Connections Are Made.

The coils A and B are tuned simultaneously by the 24-plate condenser F. This automatically tunes out stations having a slightly different wave length on each side of the station wanted and narrows down the static band. If this is properly assembled it will make a very sharp tuner for the regenerative set.

Airplane Is Piloted by Radio From Ground

Experiments have been successfully conducted in the past in which ships at sea were successfully guided by radio controlled from the shore or from some other ship. Capt. Mar Boucher recently succeeded in piloting an airplane flight over Paris from the ground with two passengers on board the plane. A control board in front of Boucher on the ground enabled him to steer the plane, cause it to ascend and descend, turn about and in every way answer his commands. The two passengers in the plane testified that the entire procedure was carried out with the greatest smoothness.—Brooklyn Eagle.

Here Is Simple Plan to Remedy Loose Bulb

There is often too great a clearance between the bulb sockets and the base of the bulb. This is often the cause of vibration of the bulb, which, in the case of a single-wire system, prevents a positive ground and causes a flickering light. Sometimes a drop of solder on the end of the bulb will eliminate the trouble, as the projections of the bulb base will be forced tighter into the socket slot. Or, if the slot openings are slightly pressed in, the socket is given a tighter grasp on the bulb base. If these methods fail, a brass wedge can be slipped between the socket wall and the bulb case.

How Weather Cuts In on Reception

Direction and Differences in Pressure Important Factors.

Prof. Eugene Van Cleef of Ohio State university in an article in the Radio Magazine says that the weather affects radio reception.

"It seemed that with broadcasting and receiving stations oftentimes 500 to 1,000 miles apart," he declares, "the local weather conditions at the receiving stations could not have much influence on reception, unless the same conditions prevailed over all the country between the two stations. Such uniformity is not common. Therefore, to ascribe poor receptivity to local weather could not be an accurate analysis. Furthermore, it was true that occasionally when the weather was 'bad,' reception was good, although the association of the two facts at such times was overlooked.

Result of Observations.

"The situation led to an investigation which has thus far revealed some striking conclusions. It seems that since broadcasting involves the transmission of electro-magnetic waves, a wave motion transverse in type, there might be a definite relation between such transmission and the circulation of air in high and low pressures. Observations were made to determine whether any such relationship might exist, or whether there could be a relation between the strength and clarity of the reception and the arrangements of isobars. A five-tube neutrodyne set was used, with an outside antenna about 125 feet long. The direction of the antenna was almost exactly north-east-southwest and about 30 feet from the ground." The observations follow:

1. If a line connecting the receiving station with the broadcasting station crosses the intervening isobars at right angles, reception is at its best.

2. The steeper the isobaric gradient (that is, the closer the isobars to each other) the stronger the reception.

3. The more nearly the transmitted waves approach parallelism with the isobars, the weaker the reception. Under these conditions fading occurs.

4. Reception in a low-pressure area tends to be somewhat weaker than in a high of corresponding intensity.

5. Reception is weaker when the transmitted waves cross from one pressure area into another.

As to "Bad Weather."

6. The strength of reception for any station is a factor of both its location in a pressure area and its position with respect to the broadcasting station.

7. "Bad weather" does not affect reception, excepting as it may be the index of an unfavorable pressure distribution.

8. Reception can be as good in "bad weather" as in good weather if the pressure distribution is right.

9. Temperature does not influence reception, excepting as it may be the index of pressure distribution, as follows:

(a) Reception is better in winter than in summer because the cyclones and anticyclones are more intense in the winter period.

(b) Reception is better when temperatures are low than when high, because low temperatures usually indicate intensive high-pressure areas, that is, areas with intense isobaric gradients.

(c) Low temperatures accompanying poorly defined high-pressure areas make reception poor.

10. Shallow or flat-pressure areas result in much static—noise in the receiver.

Single Tube Circuit That Is Satisfactory

The illustration herewith shows a hook-up with which I have had very good results, writes a correspondent in Radio Digest. My variocoupler is an old-style one and it was necessary to place variable condenser C across the secondary in order to reach the higher wave lengths, but it does not prevent me from getting the lower meters also, if your coupler is wound according to present requirements you can dispense with this condenser. The condenser C1 is a plain 23-plate.

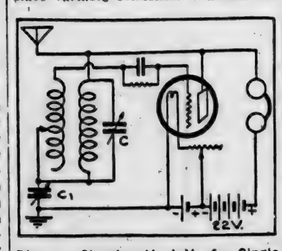

Diagram Showing Hook-Up for Single Tube Circuit.

RADIO WAVES

Tubes should always be well set in the tube sockets.

Silver is considered the best conductor of electricity.

The average life of a standard "B" battery is about nine months.

A sewing machine motor when in operation may create noises in a radio set.

A variometer and a variable condenser make an easily operated set for beginners.

EVERYBODY IS USING Forst's Original Bare-to-Hair

Because it is the first thing that ever grew hair on a bald head. For Sale at Drug Stores, Barber Shops, Beauty Parlors. Inquiries given personal attention. W. H. FORST, Mfgr., Scottdale, Penna.

Indians Gay in Buckskin Clothes

The annual tanning party held by Flathead Indians on the western boundary of Glacier National park has become a holiday event. The braves having "brought down" the animals with unerring "gun barrel sight" only have to "look" after the papooses and children, while the squaws transform the hairy pelts into material for shelter and raiment—mostly holiday raiment in these modern days, for most of them live in houses and wear woolen clothing in their everyday agricultural life.

The United States Indian department indulges the red man in this custom, for without the finery of beaded buckskin clothes, the gala events on reservations would be robbed of the very background which gives them their impetus.

Cuticura Soothes Itching Scalp. On retiring gently rub spots of dandruff and itching with Cuticura Ointment. Next morning shampoo with Cuticura Soap and hot water. Make them your everyday toilet preparations and have a clear skin and soft, white hands.—Advertisement.

Big Legal Fees

Among the large legal fees on record are those reported to have been paid Samuel Untermyer for his services in the merger of the Boston Consolidated and Utah Copper companies, $775,000; to William Nelson Cromwell for reorganizing Decker, Howell & Company, $260,000; to counsel in the reorganization of the Missouri, Kansas & Texas railroad, $750,000, and that given Stanchfield & Levy and Elihu Root of $600,000 for settling the Marshall Field estate. Max D. Steuer is credited with getting $1,000 a day every time he goes to court.

Lights for Caverns

The Shenandoah caverns in Virginia and the Tunpanogos caves in Utah are both being wired for electric light. Electric lamps of from 100 to 300 watts are to be used, and when these underground places have their electric illuminating equipment in order the sightseer will be able to see their beauties in safety and comfort.

Every department of housekeeping needs Red Cross Ball Blue. Equally good for kitchen towels, table linen, sheets and pillowcases, etc.—Advertisement.

Early Broadcasting

As early as 1896 the capital of Hungary, Budapest, had an organization called "Telefon Hirmondo," which broadcast music, news and whole operas by telephone.

Men can become civilized in their relations with each other much more rapidly than nations.

Natural leadership comes to the front in a mob; but it is not the best leadership.

Old Theory Shattered

Prof. Franz Wutz of Germany has collected what he calls newly found facts about the Hebrew Bible. He has with his claims shattered the old theory that the Greek-Alexandrian translation of the Old Testament known as the Septuginta, is derived from original Hebrew text. He says the Septuginta is largely a reproduction of Hebrew words written with Greek letters and that as early as 200 B. C. Jewish scholars utilized Greek-Hebrew texts for their translations into Greek. His claim opens up an entirely new vista on old biblical literature.

In the JUNGLE

With Cheerups and the Quixies

by Grace Bliss Stewart

PATH TO CHEERUPS' DOOR

"NOW just look at that path, Brighteyes," called Cheerups to a little brown Quixie who was peeping out of a bush near by.

"You couldn't really call it a path, could you, sir?" asked Brighteyes. "Hardly a blade of grass is worn off."

"No, that's just the trouble, Brighteyes; there's no one to wear it off," replied Cheerups. "Nobody comes to see us. Maybe they can't find the way.

"I Have an Idea," Called Cheerups to His Companion.

It must be that, for I'm sure they would like us if they could get here."

"I'll go once more and look," cried Brighteyes. "I'll climb the very tallest tree on the tipmost top of the mountain and look as far as I can to see if anyone is coming," and he jumped aboard a passing breeze and flew away through the air.

There sat Cheerups in the doorway of his little house. It was only a hole in the side of an old hollow stump, but this jolly little fairy liked his home and was so happy that it would have made you laugh just to look at him.

But even if the rest of the world hadn't come to Cheerups, he had friends. Anyone so jolly and kind couldn't help it. There were four little Quixies who were his faithful companions, and they were called Brighteyes, Quickear, Softfoot and Sniffsniff.

These Quixies lived up in the Great Pine Tree which waved its whispering branches over Cheerups' hollow stump, and they were so much alike that you couldn't tell them apart unless you knew them very well. They were as slender and brown as Cheerups was plump and green, and being so slender and brown, they looked like brothers to the pine needles which fall from the great pine trees and feel so soft under your feet in the woods.

Brighteyes could see very well indeed. His eyesight was so wonderful that he could almost see around a corner. Quickear said that he could hear the grass grow. Softfoot stepped so lightly that even Quickear couldn't hear him, and Sniffsniff could smell a violet a mile away.

Of course, with such good friends near him, Cheerups couldn't be very sad about the lack of visitors. It was really because he was so glad that fine morning that he wanted to share his good spirits with every one.

"Yes, I'm sure they would like us if they could only get here," murmured Cheerups to himself. "I would so love to broaden my acquaintance. They say travel does it. That's it, we'll travel! Oh, Brighteyes, Quickear, Softfoot, Sniffsniff; I have an idea!"

"Yes, sir, here I am, sir; I couldn't see anyone from the top of the mountain coming this way, sir," cried Brighteyes, as he fluttered to the ground.

"Never mind that now," shouted Cheerups excitedly. "I have a wonderful idea. We'll go to them!"

"To them?" piped Quickear.

"To whom?" chirped Softfoot.

"To where?" sputtered Sniffsniff.

For they had all dropped down from the Great Pine Tree at Cheerups' first call.

"We are going to travel," chuckled Cheerups. "Isn't it exciting?"

"But please, sir, when do we start?" chimed the Quixies in chorus.

"We begin here and we start now," cried Cheerups gleefully. "All aboard for Somewhere," and he hopped on a passing leaf and rose into the air. The four little Quixies were most too astonished to move but they didn't want to be left behind, so each grabbed a bit of thistledown and followed Cheerups on his voyage of discovery.

(© by Little, Brown & Co.)

"What's in a Name?"

By MILDRED MARSHALL

Facts about your name; its history; meaning; whence it was derived; significance; your lucky day, lucky jewel

GEORGIANA

GEORGIANA is a modernism which has quite a bit of interesting history behind it. It means "husbandman" and dates back to the allegorical saints of the Greek church, one of whom was called by a Greek name which meant "worker of the earth."

The fame of St. George and the dragon carried the masculine name to extraordinary heights of popularity. From it various feminines were formed with a distinct idea of honoring the saint. It was not a slow growth, but a deliberate manufacture. The first English lady bearing a name akin to George was a god-child of Anne of Denmark, who had her christened Georgia Anna in commemoration of herself and the popular saint. Later the two names were run together and Georgiana is the result.

Georgia is now regarded as a contraction of Georgiana, although it has the right to separate existence. Georgine and Georgette are French versions which have also acquired popularity in this country.

The emerald is Georgiana's talismanic gem. It is believed to guard her from unfortunate love affairs by giving her extraordinary keenness in judgment. Wednesday is her lucky day and 8 her lucky number.

(© by McClure Newspaper Syndicate.)

THE WHY of SUPERSTITIONS

By H. IRVING KING

SPIDERS

TO SEE a spider spin down before you is an omen of good luck. That is the broadest form of the spider superstition which extends to all parts of the world. The more restricted form says that the spider sometimes called the "Book Spider" and sometimes the "Money Spider"—that little fellow who drops down on his slender thread from ceilings and window ledges—is the bringer of good luck. His appearance, spinning down before you, is a sure sign of money coming to you. Some say that it is almost as sure a sign of good luck to find one of these spiders on your clothing.

The origin of the spider superstition has been seen by some in the old Hebrew tradition telling how David, being pursued by Saul, took refuge in a cave across the mouth of which a spider at once wove a web. Saul, coming along and seeing the unbroken web, said: "Nobody in there," and went on. Therefore, the spider, having saved David, was reverenced ever after. Others cite the story of Robert Bruce, who was inspired, when his fortunes were at their lowest, to make another attempt to restore the independence of his country by watching the persistency with which a spider, after repeated failures, hauled himself up by his slender thread.

But the spider superstition prevails in countries which never heard of Bruce and where the legend of David's spider is unknown. It is an ancient superstition of psychological origin—a cognate idea arising from a fact.

Old Fuller mentioned the spider superstition 300 years ago and gave as the explanation of it the fact that "such as imitate the industry and perseverance of this contemptible insect may, by God's grace, weave for themselves wealth and the purchase of a large estate."

(© by McClure Newspaper Syndicate.)

Desert Arventures

The journey across the Libyan desert from Cairo to the oasis of Siwa and back, a distance of 1,200 miles, has been accomplished on motorcycles by T. M. Moore and A. Whitaker in 14 days. Their arms were badly swollen from the strain of holding up their machines in the sand.

Health and Home

PROPER FOOD FOR SCHOOL CHILDREN

The age during which children are attending school may aptly be called "The Dangerous Age." It is the period of rapid growth and every care should be taken to insure the child of a normal and healthy body. The idea of eating only fit and wholesome foods should be early impressed on the younger members of every family in order to protect them against later ill health and its accompanying unhappiness. If the utmost care is not taken in the diet that is used by children, cases of food poisoning, indigestion and kindred ailments may result.

And milk, being the chief item in the diets of most children, should be carefully guarded. It is, because of its nature, prone to infection if exposed to germs and may soon become unfit for use. Wherever there is the slightest reason for doubt as to its purity and food value, steps should be taken to insure the sterility and the fitness of milk intended for consumption by children. Many mothers have adopted the excellent practice of using milk that is absolutely pure and sterile and free from any germs or bacteria. The most satisfactory, as well as the safest milk used in preparing food for the growing child is evaporated milk.

It is sterile, and therefore safe. It is more digestible than market milk. Its uniformity, convenience and cost are qualities that recommend it.

The following dishes are well suited to the needs of the growing child; they are easily digested and very nourishing:

Caramel Custard.

1 cup evaporated milk diluted with	¼ cup sugar (caramelized)
1 cup water	2 tbsp. sugar
3 eggs	½ tsp. salt
	½ tsp. vanilla

Scald the diluted milk. Caramelize the sugar and add to milk to dissolve. Beat eggs slightly, add sugar, salt, and flavoring and combine with scalded milk. Pour into custard cups and set in a pan of hot water and cook in a moderate oven. When done, a knife blade run in the center will come out clean.

Fish Chowder.

1 pint raw fish cut in 1-inch dice	3 cups boiling water
6 small potatoes, sliced	1 cup evaporated milk diluted with
2 onions chopped fine	1 cup water
¼ pound fat salt pork, sliced	6 crackers

Fry out the salt pork. When brown, remove pieces of pork and put fish, potatoes, and onions in kettle. Cover with boiling water. Simmer until potatoes are tender. Add the milk and cook 5 minutes longer. Season with salt and pepper. Just before serving add the crackers.

Watch Your Diet, Says Prima Donna

Cyrena Van Gordon, prima donna of the Chicago Opera company, believes in the flapper and her privileges. She believes in the practice of this much-discussed person in wearing no corsets, in wearing short skirts, going in for athletics and outdoor life and in thoroughly upsetting the theories and practices of her mother and grandmother. Miss Van Gordon, who is, in private life, Mrs. S. Bogart Munns, the wife of Doctor S. B. Munns, says that all of these things are woman's right and are necessary if a woman is anxious to keep her youth and beauty. But exercise is not the only thing that is necessary for the woman who is desirous of being attractive. She must watch her diet and be careful not to eat anything that will, in any way, be fattening.

Cyrena Van Gordon.

There are certain dishes to which Miss Van Gordon is partial and to which she gives the credit for the retention of her beauty. These dishes, she prefers to prepare herself and, when on tour with the Chicago Opera company, she carries a small electric stove in order that she will not be deprived of the food she deems necessary. These dishes are easily prepared.

Miss Van Gordon uses for

Celery and Cheese Casserole.

1 cup cheese	1 tbsp. butter
2 cups chopped celery	1 cup cooked spaghetti
½ cup evaporated milk	½ cup buttered bread crumbs
½ cup water	½ tsp. salt
2 tbsp. flour	

She makes white sauce of milk, water, butter, flour, and salt, and mixes it with all ingredients except crumbs. She then places it in an oiled baking dish and covers with crumbs, baking in a moderate oven until brown.

Chicken a la King.

2 cups cold chicken, diced	1 cup evaporated milk
2 tbsp. butter	¼ lb. mushrooms
2 tbsp. flour	1 cup chicken broth
½ green pepper, shredded	1 egg yolk
½ pimento, shredded	Salt and pepper

Cook the peppers (also mushrooms, if they are used) in the butter for 15 minutes, keeping them covered while cooking slowly. Add the flour and seasonings, also the milk and broth. Stir to a smooth sauce. Put chicken in sauce to heat, and just before serving, stir in beaten egg yolk. Cook in double boiler to prevent curdling.

MOTIVES OF MIRTH MANY AND VARIED

But Adults and Children Are Much Alike.

What do children laugh at, always and everywhere? Kurt Pinthus asks in Uhu (Berlin). They laugh because things are breakable. They laugh at smaller children whom they can trip up, and at the naughty pranks with which they disturb the normal order of events.

In general, we may say that they laugh from a feeling of superiority over the weaker or the injured; and they laugh whenever they can show themselves apparently superior to the older persons in charge of them—perhaps by misbehavior before a teacher.

A child laughs from malicious enjoyment, from the triumphant consciousness of another's humiliation, from an impulse which the child knows is "naughty" by the traditional moral code.

As a result of the hindrances involved in our ordering of society, most grown-ups attain in early youth a mental level not too far removed from the child's. So that the laughter of adults, even though they have learned—or should have learned—to understand the traditional distinction between good and evil, springs for the most part from the same roots as the laughter of children.

The motives of adult laughter are mere variations of the things that children laugh at. The adult laughs at physical oddities or their imitation. He laughs because somebody else has fallen down or because somebody else has caused a second somebody to tumble, or because somebody who thinks himself in safe superiority goes sprawling.

The adult laughs, above all, at anyone to whom he himself feels superior and in whom some antisocial quality is represented with very one-sided exaggeration. Thus he laughs at Don Quixote, who forgets the world of reality while he plays at being a knightly hero in a world which no longer knows such heroes. In comedies he laughs at the greedy man, the vain man, the boaster, the timid man, and the sham—because in every situation these types show themselves to be exaggeratedly greedy, vain, boastful, timid or deceitful, and because the preponderance of these typical characters which dominate each like a kind of fixed idea leads to unusual and surprising situations.

Give and Take

Representative Clint Cole was talking about the aircraft controversy:

"First one side scores," he said. "then the other side scores. It's like the doctor and the man with the mumps.

"The man with the mumps halted the doctor and said:

"'Doc, what ought a chap to do when he's got the mumps?'

"The doctor's lips closed tight at the thought of being buncoed out of a free prescription, and then he gave a harsh laugh and said:

"'Such a man, my friend, ought to consult a good physician.'

"The man with the mumps laughed harshly in his turn.

"'Thanks, Doc,' he said. 'That's what I'll do, then. So long!'"

His Looks

"The bank was robbed just before I got to town," announced Gap Johnson of Rumpus Ridge upon his return from the county seat.

"Mercy sakes!" ejaculated his wife. "It must have been exciting!"

"It shore was! Just as I driv' in I met the robbers tearing along the road in a rattling old auto, and after 'em came eight or ten other old cars with fellers in 'em, all shooting at the innercent bystanders at every jump, as you mought say. I'll b'dogged if I don't reckon the reason I escaped with my life was b'cuz I didn't look innercent."—Kansas City Times.

His Guess

"What kind of a store is that fellow over at Toad Rock running?" asked a motorist.

"Well, he has auto parts for sale," replied the attendant in the filling station at Ten Degrees, "buys butter, eggs and poultry, deals in real estate, paints houses, marries folks in his capacity as justice of the peace, runs the post office, sells stamps, hams, molasses, etc., and takes boarders upstairs. I reckon you'd call it a drug store."—Kansas City Star.

Modesty Insisted Upon

Men at Marshfield, Mass., may not parade the shore clad only in bathing suits. The movement to censor women's bathing attire was extended to include that worn by men also, with the result that this famous old town, once inhabited by Daniel Webster and Thomas Lawson, requires that neither men nor women parade the streets or avenues unless they are covered with wraps that extend at least to the knees.

Anglo-Jap Air Project

A four-day nonstop transarctic airship service between England and Japan is promised, the route to be across Scotland, Norway, northern Russia, Siberia and Saghalien, a distance of 5,000 miles.

Diamonds From Belgium

Diamonds sent from Belgium to this country in a recent month were valued at $1,500,000, while steel shipped from there in the same time was worth only $500,000.

NEWS OF THE TOWN

Miss Alice Tustison, of Auburn, spent over Sunday here with her parents.

Albert Wade of Detroit, joined his family here Sunday and will spend his vacation at this place.

Miss Martha Ayers of Loudenville, Ohio, is the guest of Mr. and Mrs M. T Bishop for a few days.

Mr. and Mrs Wm. Pepple were Saturday night and Sunday guests of Mr. and Mrs. James Sherwood near Auburn.

Harry Hursh and wife and Rev. Havens and family attended the home coming at Kendallville Sunday afternoon

Lee O. Tustison, wife and son, Keith, and Mr saunders of Defiance, were Sunday guests of Will Hamilton and wife.

F. D. Tope, wife and little niece, Lily Ernest, attended the third Tope family reunion held Sunday at Van Wert O io.

Stanley Koch and wife of Fort Wayne, were Saturday evening supper guests of their parents, Mr. and Mrs. Chas. Koch.

Mrs. Bertha Henderson, Isaac Meese and Mrs. Frank Meese, were Wednesday dinner guests of Mr. and Mrs. Reuben Koch.

Roy Kinsey spent over Sunday in the Waterbeck home at Garrett. Mrs. Kinsey, who had been there the past week, returned home with him.

Mrs. Saxe Hadsell and Miss Minnie Walker and their Sunday School classes of Coburn's Corners, held their class meeting in the church basement and enjoyed a potluck dinner.

A woman used to "torture" a man with uncertainty as to whether he would win her or not; but nowadays, most of his "torture" consists in the uncertainty as to how he will escape her

Mr. and Mrs. C. C. Woodcox entertained at Monday dinner, Mr and Mrs. Henry Hoffman, daughter, Mildred Ellen and Miss Sarah Bartlett of Chicago, Mrs. Mary Bartlett of Fort Wayne and Vern on Woodcox and family.

Mr. and Mrs. Judson Davis of Chicago, returned to their home Sunday after a week spent here with Mr. and Mrs. H M Widney. Mr. and Mrs. Ray Davis and children of Auburn, were Sunday guests of Mr and Mrs. Widney also.

Mrs. Marion Jennings, aged 32, who was operated on at the Garrett hospital Wednesday for gallstones and appendicitis, died about 11:30 Sunday night. The baby was taken to the home of her parents, Mr. and Mrs. Levi Oberlin south of Butler. The husband, a son aged three and a little five months old daughter survive.

George Leland and family of Dayton, Ohio, were Sunday guests of J. C. F. Abel and wife and called on other St. Joe friends. Mr. Leland will be remembered as a teacher in the St. Joe schools about fifteen years ago He is now president of the Leland Electric Co., who specialize in electric motors. They were pleased to see their old acquaintances.

A new farm record has been printed for DeKalb County by the Farm Record Publishing Co., of Fort Wayne and for free distribution to farmers wanting the book St. Joe business men who have books for distribution are John Barger, Wm. G. Harmon, E. R. Kinsey, Ridgway & Freeburn and St Joe Elevator. At Spencerville the books can be secured for the asking of D. Coolidge, R E. Furnish, F. A. Higgins and Geo. Jenkins. If farmers will but use the record they will find the year's information valuable to them.

Mr. and Mrs Ed Miser spent Saturday afternoon at Waterloo with relatives.

Mrs. Belle Barney is at Bowling Green, Ohio for a few weeks visit with relatives.

Mrs. Alice Copp and guests, B. V. Widney and wife, were Fort Wayne visitors Friday.

Sam Kees and wife went to Ft. Wayne Saturday where they visited relatives until the middle of the week.

Faurot Melton returned Sunday with his son, Frank from a two weeks visit at Chicago, with his daughter.

A St. Joe man was knocked out of bed the other morning by lightning. It takes that to get some fellows up.

F. M. Monroe and wife spent Saturday night and Sunday at New Haven with their daughter, Mrs Jesse Copp.

Mr. and Mrs. Charles Jordan will move their household goods to Garrett soon. They will remain here for a couple of weeks yet

Mrs. Charles C. Fridlin and two children of Kokomo, were guests of her brother, Charles Rice, and wife from Friday until Sunday.

Ora Meese, wife and daughters and Mable and Cora Meese, daughters of Robert Meese, all of Nebraska, were Sunday visitors of Isaac Meese and wife.

The thirty fourth annual reunion of the Sechler family will be held at the home of Merritt Sechler, on Sunday, August 9th. Basket dinner Merritt Sechler is president and Agnes Monroe, secretary.

Mr. and Mrs R J. Pugsley, of Butler, were Sunday dinner guests at the home of their son, Lester Pugsley. Mrs. Pugsley's mother, Mrs. Al Jennings and son, Delbert, of Butler, were afternoon callers.

Now and then some St. Joe woman gives us the impression that the only reason she married her husband was to have him around where she could devote all her time to telling him what ails him.

Lightning burned the H. D. Boozer barn east of Waterloo, Saturday morning. The barn on the old Sam George farm west of Concord was burned last week also the barn on the Cook farm just east of the Magginis Corners.

Mr. and Mrs. Harry Hoffman daughter, Mildred and Miss Sarah Bartlett of Chicago, George Bartlett and daughter, Bessie, of Fort Wayne were Sunday dinner guests of Mr and Mrs. Harry Kees. Afternoon guests were Mr. and Mrs. Charles Bartlett and Mr. and Mrs. John Wilson and son, Charles, of Waterloo.

Lutheran Notes

Sunday School 9:30.

Preaching 10:20.

Prayermeeting Thursday evening.

S. D. Steffey, Pastor.

Does St. Joe Have Jay Walkers, Eh?

Don't make the mistake of thinking that "Jay walkers" are confined to the cities alone And neither is it wise to believe that every time someone is run down and hurt or killed that it was the fault of the man who drove the car. You don't need to go any farther than St. Joe to find "Jay walkers" people who cross a street or highway without looking carefully in all directions to see that danger is not near, people who cross from one side of the street to the other without using the regular crossing, or who change their mind and start back when they have reached the middle of the street. All of these are "Jay walkers" of the worst type, and are to be found here the same as in the large city. The only difference is there are more people there. But that doesn't mean that death between the wheels of an auto is more pleasant one place than it is another. Watch your step.

Hoosier News Briefly Told

Lincoln City.—In company with members of the state highway commission on a tour of state highways in southwestern Indiana, Gov. Ed Jackson stopped here at the Nancy Hanks Lincoln park and visited the tomb of the mother of Abraham Lincoln. The reception committee was headed by A. J. Wedeking of this city, formerly a member of the state legislature. The people of this locality are interested in having the governor take definite steps to have needed improvements made which will convert the burial ground of President Lincoln's mother into a real state shrine. The tour, which was made by automobile, started from Indianapolis Tuesday afternoon. The first stop was in French Lick, where the governor and his friends were the personal guests of Thomas Taggart, veteran Indiana Democratic leader, at his hostelry, the French Lick Springs hotel. The governor and members of the commission, especially Mr. Burch, discussed to some extent the matters concerning the state road program and the affairs of the highway department.

Indianapolis.—Dairy farmers and business men in 51 Indiana counties will be organized for automobile tours to the 1925 National Dairy exposition here October 10 to 17, according to reports received from county agricultural agents of the Michigan Agricultural college extension department by W. E. Skinner, secretary and general manager of the exposition. This exposition affords an opportunity for every one interested in agricultural development to observe the finest dairy cattle in America and latest types of farm and factory machinery and to learn the best methods for making farming more profitable.

Terre Haute.—State Senator Charles S. Batt, who recently expressed opinions of some length about the state motor officers, and Orth Brown in particular, fell victim to the functioning of the department when Brown found Batt driving at high speed on the National road east of Brazil. After abandoning his own machine, Brown commandeered a faster vehicle and caught the senator several miles west of Brazil. When arraigned at Brazil it cost Senator Batt $12.50. He pleaded guilty.

Indianapolis.—The state highway commission received and opened bids in this city for the construction of 23.7 miles of hard surface paving in various parts of the state. Chief in the list of projects which were concerned in the bids was the paving in State Road No. 1 from Franklin south to a point two and a half miles south of Amity, in Johnson county, a distance of 6.84 miles.

Lafayette.—An event of particular historical significance to Indiana will take place September 27 to 30, when Lafayette and Tippecanoe county will celebrate the one hundredth anniversary of the founding of the settlement on the banks of the Wabash. A four-day program, which will be featured by a $10,000 pageant, "The Heritage," produced by Miss Esther Janett Simon of Winchester, has been arranged.

Indianapolis.—A stricter enforcement of all laws, stiffer penalties, quicker trials and a closer co-operation between the judiciary and the law enforcement agencies of the country were advocated by Albert A. Carroll of Grand Rapids, Mich., president of the International Association of Police Chiefs, in his address at the association's annual convention here.

Hammond.—Lake county bankers will pay $2,500 for the body of a dead bank bandit. This was announced following a meeting of representatives of 85 banking institutions here. As a result of that meeting every bank in Lake county will have a special deputy sheriff, fully armed, on guard at all times. For the capture of a live bandit the bankers will pay $1,000.

Indianapolis.—Damage to trees, poles, wires and crops was reported from the parts of the state visited by heavy wind and rainstorms. A boy was killed by lightning at Nashville, Brown county. The corn in some fields was beaten down, but it is believed it will straighten and that the damage to the crop will not be heavy.

Salem.—In an effort to relieve the water situation here, which again has become critical, wells will be drilled west of here, where experienced drillers say they hope to find water which can be drawn on to supplement the present supply, which comes wholly from springs.

Connersville.—Members of the 1897 graduating class of the Connersville high school held their first reunion at the Connersville Country club. All the graduates of twenty-eight years ago are still living and thirteen of the sixteen members of the class attended.

Indianapolis.—Leading negro musicians of the United States, including Hazel Harrison, Chicago, pianist, and Nathaniel Dett, composer, will meet here during the National Association of Negro Musicians convention July 26 to August.

Evansville.—Further action in the primary election contest of Alvin V. Burch, defeated Republican mayoralty candidate, and Herbert Males, successful candidate, was eliminated when attorneys announced that they would not appeal from the decision of the Superior court in which Judge Edgar Durre held that the local court had no jurisdiction.

Terre Haute.—Arrangements are being made for the annual miners' picnic of District No. 11, United Mine Workers of America, August 15, at Stadium park, the old fairground site.

Indianapolis.—Medical attaches of Ft. Benjamin Harrison began a series of military sanitation and personal hygiene talks to the various companies of the citizens' military training camp in this city. With the recreational facilities on the reservation completed it is the hope of Lieut. Col. E. J. Nowlen, commandant, to send the boys attending the camp home at the end of their month's training in better physical condition than they ever knew before.

Oakland City.—The fourth sectional conference on rural education, embracing a tier of southern Indiana counties, was opened in the auditorium of Oakland City college. The conference is under auspices of the Indiana Farm Bureau federation, Township Trustees' association, Indiana County Superintendents' association, Parent-Teacher associationn, Indiana university, Indiana League of Women Voters, Indiana State Teachers' association and the state department of public instruction.

Evansville.—Judge E. Q. Lockyear, judge of juvenile court, sentenced an eleven-year-old lad to one year's regular attendance at Sunday school, paroling him to his Sunday school teacher, Miss Marion Whitehead. The boy stole a horse from a livery stable here last week and attempted to sell the animal for $10. Before releasing the lad the judge ruled he must commit to memory and recite the Ten Commandments to Adolph Stallman, probation officer.

Frankfort.—Mrs. Joseph J. Doan of this city has been notified of the death of her sister, Mrs. Elsie Hadley White, wife of Frank White, treasurer of the United States and former governor of North Dakota, which occurred at her home in Washington. Mrs. White was the daughter of Artemus and Elizabeth Hadley, and was born in Ohio. With her parents she moved to Richmond, where she lived until 1873, when the family moved to Indianapolis.

Frankfort.—Hearing of the injunction suit filed recently in the Clinton Circuit court by the T. H., I. & E. Traction company against the Hiner Red Ball lines and the Red, White and Blue Coach line has been continued indefinitely by Judge Earl Stroup. The continuance was ordered by the court after he had received a telegram from Indianapolis attorneys saying an agreement had been reached and the suit would not be pressed.

Lafayette.—Problems of interest to Indiana farmers will be discussed at the country life conference which opened here as a feature of the annual summer session at Purdue university. The conference was designed primarily for more than 100 teachers from all over the state, most of whom have come from rural schools, to give them something in addition to the usual course of study during the summer.

Frankfort.—Gladys Galley, eighteen-months-old daughter of Mr. and Mrs. Lonnie Galley, was found smothered to death in bed here. Mrs. Galley had put the child to sleep early in the evening. When she went to the room two hours later the child's body was found wedged between the bed and the wall and tangled in bed clothing. it had been dead a half hour.

Indianapolis.—A slight improvement in the labor conditions in Indiana, especially in the farm-labor situation, was revealed in the monthly report of the employment service of the United States Department of Labor. Conditions generally were about the same during June as in the preceding months of the year, according to the report.

Hammond.—Finding a letter from a South Bend man to his wife asking her to visit him there so enraged John Merta of East Chicago that he struck her in the head with a hatchet, causing a compound skull fracture. She is at the point of death in a Gary hospital. A posse is seeking Merta, who made his escape after the attack.

Indianapolis.—Closer co-operation between the judiciary and the law enforcement agencies for the suppression of crime was urged by Albert A. Carroll of Grand Rapids, Mich., president of the International Association of Police Chiefs, speaking at the chiefs' convention here. He advocated heavier penalties and speedier trials.

Rockport.—John L. Snyder, eleven-year-old son of Mr. and Mrs. A. L. Snyder of this city, at the risk of his own life, saved William Hewig, Jr., sixteen-year-old son of Mr. and Mrs. William Hewig, Sr., from drowning in the Ohio river at Ferry park on the Kentucky side of the river opposite Rockport.

Brazil.—Archie Fishback, graduate of Indiana university and former holder of the high-jump record in Indiana, will be principal of the junior high school of this city. Mr. Fishback has been a principal in the Evansville schools. He succeeds Prof. B. C. Rush, who goes to the Indianapolis schools.

Bloomington.—Rev. A. Elliston Cole, Bowling Green, Ky., has been named rector of Trinity Episcopal church to fill the vacancy caused by the removal of the Rev. William Burrows to Indianapolis.

Valparaiso.—Harry Diamond, electrocuted at the Indiana State prison for the murder of his wife, Nettie Diamond, left an estate of $75,000, it was shown here. Diamond was alleged to have killed his wife while on a motor trip between East Chicago and their home at Gary. The prosecution attempted to show he desired his wife's estate.

Indianapolis.—By a vote of 3 to 1, Dr. R. C. Julian was renamed state veterinarian for a one-year term at the meeting of the live stock sanitary board in the statehouse here.

Cultures No Good for Nonlegumes

Farmer Should Not Waste His Time or Money on Doubtful Cultures.

(Prepared by the United States Department of Agriculture.)

Worthless preparations calculated to stimulate nitrogen fixation in such nonlegumes as corn, cotton, and tobacco, are being offered the farmer at the rate of a dollar a pound, says the United States Department of Agriculture.

The farmer should not waste his time or money on such doubtful preparations, cautions the department. Even the most alluring advertisements and claims should fall on deaf ears. All efforts to inoculate the seeds of nonlegumes with nitrogen-fixing bacteria have failed, says the department. Corn, wheat, oats, rye, cotton, tobacco, and other nonleguminous plants do not harbor such nitrogen-fixing bacteria in their stems and leaves, although such is the assertion of some commercial concerns engaged in the business of manufacturing and selling commercial cultures for inoculating the seed of these nonlegumes.

Cultures for Legumes.

On the other hand, the use of commercial cultures for inoculating the legumes—such as alfalfa, clover, vetch, peas, soy beans, and cowpeas—is often to be recommended. These and other legumes attain their best development if their roots have many well-developed nodules in which the nitrogen-fixing bacteria are present in large numbers. Not all soils contain these desirable bacteria in the right quantity or quality to assure a normal natural inoculation, but fortunately this lack can be supplied by the use of properly prepared commercial cultures.

Many investigators have tried to select and cultivate useful bacteria in the laboratory for the artificial inoculation of the soil or seeds of nonleguminous plants, hoping that results would be similar to those secured when the legumes are inoculated artificially. However, all efforts made in this direction have failed thus far and all such commercial cultures have been found to be without value to the farmer.

Composition of Cultures.

Usually these cultures prepared for the nonlegumes have been found to contain such substances as dried animal manure, compost, guano, phosphates, lime, and prepared humus. All of these substances are in the nature of a fertilizer and may, if relatively large amounts of them are applied in pot or small plot tests, stimulate noticeable growth. This apparently beneficial effect from the substance will be as a fertilizer and not as a nitrogen-fixing agent.

Deep Cultivation Cuts Yield of the Corn Crop

"Stir as shallow as possible when cultivating corn," is the advice of soils men at the New York State College of Agriculture at Ithaca. Within recent years it has been found that deep cultivation of corn injures the roots and reduces the yield of the crop.

In wet seasons, when the weeds get a big start, deep cultivation may be the only way to kill them, but it nips the corn roots, too, and holds back the growth of the crop.

Another reason for deep cultivation has been the theory that a soil mulch was a great moisture-saver. This is only partly true, and it is only in dry seasons that this mulch conserves much moisture with New York's normal rainfall.

Cultivation before planting the crop is the most effective, say the soils men, and it can be done more cheaply and easily then than later. Proper preparation of the seed bed is necessary for later cultivation to be effective. If the seed bed has been properly worked, shallow cultivation should do the business later on when the crop gets up above the ground. Wet weather may interfere, of course, but the same rule holds: The best cultivation is that which injures the crop roots least and still kills the weeds.

These principles of cultivation apply to all weed crops, such as corn, beans, potatoes and cabbage.

Good Feed for Stallion During Breeding Season

A few combinations of rations which are suitable for a stallion during the breeding season are as follows:

1. Oats, timothy or prairie hay.
2. Oats, four parts; corn, six parts, and bran, three parts by weight; timothy or prairie hay.
3. Oats, four parts; corn, six parts; linseed meal, one part; timothy or prairie hay.
4. Corn, seven parts; bran, three parts; linseed meal, one part; timothy or prairie hay.
5. Corn; alfalfa hay one-third and prairie hay two-thirds.

No specific directions can be given as to the total amount of feed required, since this depends on the exercise the animal gets and whether he is a "hard" or "easy" keeper. A safe rule is to keep the stallion in good flesh, but not "hog fat," for this will injure his breeding powers. Most horsemen advise that in the breeding season he be kept gaining just a bit, rather than allowed to run down in flesh. While some recommend feeding three times a day, four is preferred by others. In either case no more should be fed than will be promptly cleaned up. Plenty of exercise is very essential.

Cultivate to Kill Weeds in Cornfield

Moisture Conservation Is Not Chief Object.

Producing corn at the lowest possible cost requires that it be cultivated only enough to keep down weeds, according to D. C. Wimer, University of Illinois. It is now well established that weed control and not moisture conservation is the chief object of corn cultivation and consequently cultivating weed-free corn with the idea of conserving moisture by creating a mulch only swells the cost of producing the crop.

Experimental results show that weedy corn probably suffers more from lack of nutrients than from lack of moisture. Consequently it would seem that moisture conservation is not a reason for cultivating corn, except possibly in the case of heavy soils that check badly. Cultivation may be necessary on such soils to fill large cracks and thus stop the direct loss of moisture from the subsurface or even the subsoil. On soils that do not check badly the loss of moisture from the immediate surface is of little significance.

Since cultivation is the only practical method of controlling weeds, the depth and frequency of cultivation should be determined by their growth. In so far as possible the growth of weeds should be prevented by shallow rather than deep cultivation, since the latter generally injures the corn roots and thereby cuts the yield.

On soils that are reasonably free from weeds and where the seed bed has been well prepared, corn needs little or no cultivation. Unless cultivation kills weeds, closes large openings in soils that are subject to excessive cracking or puts soils in condition to absorb more water, it can hardly be justified in the face of experimental evidence.

Several Crop Varieties Are Tested at Illinois

Several new varieties of crops have been introduced in the experimental tests which are being conducted at the University of Illinois. The alfalfa tests which were started in 1923 include six varieties which are now in their second crop season. These are Grimm, Cossack, South Dakota No. 12, Common Kansas grown, Common Idaho grown under irrigation, and Argentine grown seed. These varieties present some interesting comparisons.

In the oat tests a new variety, Kanota, is making an interesting showing. This is an early oat introduced from the Kansas experimental station. It appears that it may prove to be a better variety than Iowa 103. Nova, a variety introduced from Denmark, promises to be a good late variety.

The most interesting varieties of wheat are two hybrids, Michikoff, a Purdue variety, and Minnturki. Both are hard wheats. The Michikoff is smooth and the Minnturki is bearded. Twenty-six other varieties of winter and spring wheat are being tested. These tests are helpful in determining the best varieties for farmers of the corn belt to use in their crop rotations.

Ridding Farm Lands of Different Rodent Pests

The tremendous scope of rodent-control work can be seen from a report to the biological survey, United States Department of Agriculture, of what was accomplished in Arizona in a single month. Rodent-control campaigns in this state in April were directed against prairie dogs, pocket gophers and rabbits. About 12,000 rodents a day were killed, or 360,000, approximately, for the month. Nearly 80,000 acres of infested lands were treated with about 8,000 quarts of poisoned bait by 379 co-operating farmers and stockmen. No matter how conservative the estimate of the value per acre of ridding lands of rodent pests, it must be evident that the results are worth thousands of dollars to the landowners.

FARM NOTES

Now we'll wait to see who tested their seed corn.

• • •

Eat, can, or sell the slacker hens.

• • •

More April chicks are likely to live than those hatched in any other month.

• • •

Waste oil from the tractor, car, or truck engine crank case works fine as a hog oiler.

• • •

A little sweet clover for pasture may become a "lifesaver" in seasons of drought or in other emergencies.

• • •

Golden Bantam sweet corn is adapted to the home garden, as it will produce well in small, closely planted plots.

• • •

Frequent and thorough cultivation is the only economic method of weed control in cultivated crops. Once started, it is very difficult to get rid of weeds without injuring the crop.

• • •

Use a good fly spray, particularly on dairy cows, but don't soak their hides so as to blister. If you spray before milking allow time for the spray to settle so as to avoid tainting the milk.

ROAD BUILDING

SUBGRADE MUST BE PROPERLY PREPARED

Subgrade soils which absorb and retain a large amount of moisture give the most trouble in the construction of roads. These are the various forms of clay and a few of the heavier claylike loams. They are difficult because they cannot be drained by side ditches or tile. When frozen, the wet soil expands and lifts the pavement. When it dries out it often shrinks so materially that wide cracks form, setting up tensile stresses in the slab above which may prove disastrous. When the dried soil again absorbs moisture it expands, lifting the slab.

Unless laboratory tests have located the good and bad soils in the project the inspector must depend upon personal observation alone. Ask those who live along the road where the worst spots appear each spring. Accompany the roller and note any spongy places. Keep your eyes open for seepage water.

Bog holes, or short, deep, spongy spots, are usually caused by a pocket in an impervious underlying stratum. Water from some higher point is caught in this pocket and then absorbed by the earth above.

There are several methods of remedying bog holes. If not too deep they may be drained by cutting through the impervious stratum and laying tile to the bottom of the pocket. When the bog hole is formed by a rock pocket it will probably be necessary to intercept the seepage water before it reaches the road or to remove the spongy material and replace it with cinders, sand, gravel or crushed stone.

If the spongy soil extends for some distance along the roadway its removal would be too expensive. If the other suggested courses seem impracticable and it is impossible or inadvisable to relocate the road, the plastic material can be greatly improved by harrowing sand into it until a 6-inch crust is formed. This crust should be 8-10 to 9-10 sand. Sometimes a 1-inch sand cushion is placed under the slab. With such treatment there is little danger that the pavement will be damaged. Hydraulic lime or light road oil harrowed into the soil has proved beneficial in stabilizing adobe and heavy clay.

The light soil encountered in past bogs will support a pavement much as water supports a boat and need not be feared. It will, however, settle under the superimposed load and at approaches of bridges should be removed and replaced with stable soil near the bridge. The solidity of the fill should be gradually reduced as the distance from the bridge increases so that the change from firm to yielding foundation will not be too abrupt.

Automobile Is Credited for Improved Highways

America would have comparatively few good roads if it were not for the automobile. Since about 1900, when automobile companies started to pioneer the new era, more miles of good roads probably have been built than in all the previous history of the United States.

While each little community was quite isolated and self-centered, except for the railroad, telegraph and mails, there was no great need for good roads. Poor soil roads sufficed when the comfort and extent of cross-country travel was limited to horse-drawn vehicles.

But the standard of highway conditions was suddenly and tremendously elevated when time and distance were conquered by the motor car. Highways of improved construction and greater permanence reached out in all directions from every local center of population to tie up with the great outside world that at last had been opened up by the auto.

The stupendous total of more than $742,000,000 was expended on highways by federal, state and county governments in 1922 alone! Automobile tourist camps, which were undreamed of institutions a few years ago, now have overnight population of hundreds and even thousands of people since the motor car and resulting good roads have mastered distance and given people time to enjoy the wonders and beauties of the great outdoors in comfort and luxury.

Better Roads Cut Cost

American motorists cash in a yearly dividend of 10 per cent on the capital invested in the improved highways of the country. It has been estimated that the average car runs 6,000 miles a year. A saving of 2½ cents a mile for 6,000 miles amount to $150 a year. For 17,000,000 automobiles this means a saving of $2,500,000,000 a year on gasoline, tires, parts, upkeep, renewals and all phases of operation.

Spreading Highway Gospel

Tests made by the state highway department of Iowa indicate that gravel roads will show a gain of 50 per cent over the earth roads in the ton-miles per gallon of gasoline, while the higher type roads, show a gain of 100 per cent. Let us take 75 per cent as an average gain for the improved roads over the unimproved. This means that with a gallon of gasoline we could transport over an improved road a load of one ton over a distance 75 per cent greater than on a poor road.

IMPROVED UNIFORM INTERNATIONAL

Sunday School Lesson

(By REV. P. B. FITZWATER, D.D., Dean of the Evening School, Moody Bible Institute of Chicago.)

(©, 1923, Western Newspaper Union.)

Lesson for August 2

THE EPISTLE OF JAMES

LESSON TEXT—Jas. 1:19-27.

GOLDEN TEXT—"Be ye doers of the word, and not hearers only."—Jas. 1:22.

PRIMARY TOPIC—Loving and obeying.

JUNIOR TOPIC—Be Ye Doers of the Word.

INTERMEDIATE AND SENIOR TOPIC—Doers of the Word.

YOUNG PEOPLE AND ADULT TOPIC—Religion According to James.

The book of James was written to Jewish Christians scattered abroad who were passing through sore trials and persecutions. The pre-eminent aim was to show these humble believers how to live in such trying times. James recognized the difficulties of Christian living resulting from the attitude of the unbelieving Jews, and knew also the added difficulties of pride, jealousy and cowardly compromises which might spring up within. He showed that all these must be met with the realities which inhere in the religion of Jesus Christ.

I. Receiving the Engrafted Word (vv. 19-21).

1. What Is the Engrafted Word?

"Engrafted" means implanted. In verse 18 he speaks of having been begotten by the Word. The figure is that of a planting of the seeds of truth. The Christian doctrines as contained in the Word, when quickened by the Holy Spirit result in regeneration. The divine method of regeneration is the preaching of God's word made living and active by the Holy Spirit.

2. How the Word Is Received (v. 19).

(1) "Be swift to hear." This means to be ready and eager to use every opportunity to get acquainted with God's word.

Obedience to this injunction will make one diligent in the reading of the Bible, and in attendance at the church services where the Word of God is being taught.

(2) "Slow to speak." From what follows we infer that this refers to religious controversies. It means that whether in the places of worship or in whatever circumstances, we should give respect and thoughtful attention to what our Christian brethren are saying.

(3) "Slow to wrath." Heated discussions sometimes develop in our conferences, even when we gather to consider the doctrines of God's word. Sometimes one may even fancy that anger is justifiable. In such cases we should remember the injunction, be slow to wrath.

3. The Reason for Receiving the Word (vv. 20-21).

"The wrath of man worketh not the righteousness of God." Angry debating among Christians never helped to make known God's righteousness. Man's anger springs out of the fountain of his depravity. Therefore its expression can only have a blighting effect upon those who listen, and even upon the speaker in its reaction upon him.

II. Coming Into Self-Knowledge (vv. 22-25).

Receiving the engrafted Word through swiftness to hear, and obeying its holy precepts will result in that experimental knowledge of one's self which brings true blessings. By "doers of the Word," is meant those who make obedience their habitual attitude.

The truths of God's word will permeate their very life and be expressed in everything they do and say. Those who hear and do not obey are self-deceived. Those who go through the form of religion without coming under its power are likened to men who gaze into the mirror beholding the natural face, and then go away and forget how they look.

III. Pure Religion (vv. 26-27).

This means that those who have become doers of the Word will in their outer lives manifest the following traits:

1. Bridling the Tongue (v. 26).

This means that they will speak with discretion. God gave man two ears and but one tongue. The ears are exposed, but the tongue is walled in by the teeth. Just as the tongue reveals the condition of the physical system, so the use of the tongue reveals the religious condition.

2. Sympathizing With and Helping Those in Need (v. 27).

The widow and orphan are the symbols of helplessness and need. Those who have true piety will visit such and render the necessary aid.

3. Keeping Himself Unspotted From the World (v. 27).

The one who has the true life will separate himself from the world.

Giving Up Pleasure

When we have given up an immediate pleasure for character's sake, we are impressed with how much we have sacrificed. Jesus was impressed with how much a man had gained.—Harry Emerson Fosdick.

Overcoming

We sometimes sing, "The Crowning Day Is Coming." That is true, but remember that coronation in Scripture is associated with overcoming.—Charles Inglis.

0247

Midsummer Modes Are Favored by Paris

The prince of Wales marches forth in a gray felt hat with down-turned brim, and it becomes the smart masculine uniform for two continents—the Comtesse de X. wears a flared-back skirt and all the midinettes in Paris can not supply the sudden demand. At Longchamp a hundred graceful mannequins disport themselves in the smartest costumes of Patou, Lanvin et al, and they attract only the casual attention of the passing throng—Lady W. is noticed wearing an exclusive but no more attractive frock than the others, and she immediately becomes the cynosure of all eyes—every slight detail of her wardrobe du jour is remarked, reported and commented upon, and her single dress is given far greater attention than all the costumes of the hundred mannequins.

Vicarious glory is the explanation of this phenomenon—and it accounts for the importance of Longchamp and the Lido, of Cannes and Monte Carlo, of the opera and all other functions which serves as fendezvous for the haute monde on both sides of the Atlantic. Why should the chance ensemble worn by Lady W. at Longchamp have a greater sartorial significance than the carefully studied creations of the Paris couture worn at the same races by models who have marched before the mirrors for weeks in order to achieve the most perfect effect? Why should the effete masculine world lend an eager ear for the latest sauntering suit of the prince of Wales? asks a fashion writer in the New York Herald-Tribune. It isn't that the haute monde always wears the smartest clothes—they usually do, but the rule is not inviolable—it is because at the root of all fashion there lies the inescapable and universal instinct of vicarious glory, the same authority asserts.

Vicarious Glory and the Mode

Defined briefly, vicarious glory means glory by proxy—and it is the portion of most of us who can achieve it in no other way. One of the transcendent qualities of human nature is the wish for self-glorification. Where is the youngster who does not wish to become, one day, another "Babe" Ruth—where is the fair tennis player who does not eagerly emulate the costumes and racquets of Suzanne Lenglen and Helen Wills? The same instincts prevail in later years except that they are directed toward different ideals. Unfortunately, the Napoleons and the Joans, the princes of the realm and duchesses are few and far between, and the rest of us are compelled to glorify ourselves by means of identifications with some dominating movement or persons. The almseeker in the parks, penniless, will boast that he is a citizen of the richest country in the world—the cripple will glory in the fact that his country is the world's greatest athletic nation—the lady who can never hope for social recognition will bask in the reflected glory of society's leaders—

New Scarf Frock by Drecoll; Panel Effect at One Side.

and, consciously or otherwise, the medium of identity in almost every case is dress. Possibly because that is the most easily copied trait of heroes and heroines—possibly because clothes are such an integral part of every personality. Whatever the reason, the fact is indisputable, and there you have one of the great basic secrets of fashion, the why and wherefore of fashion reporters and an excellent opportunity to predict future modes for yourself by means of close observation.

Gathering Places of Society.

All these comments are prefactory to a discussion of the Longchamp fashions, drawn from the haute monde race devotees. The significance of Longchamp derives from the fact that in France the races are the daytime gathering places of society—they are the stage for the latest clothes of this season and the anticipatory frocks of the season that will not open for several months.

The huge flower beds of Longchamp are always filled in the early spring with cineraria of the most wonderful shades of blue, red and purple, and this year it seemed they were especially planned to give the dressmakers a seasonal hint as to the colors for summer frocks. The soft blues and purples have been in perfect harmony with the racing frocks worn at this course. The women's tribune of the Jockey club has been a mass of color, the few times the weather permitted, with more than half the hats and scarfs of fuchsia and purple tones and the other half periwinkle and cineraria blue.

One of the prettiest costumes noted at Longchamp recently was worn by the former Miss Gwendolyn Robinson, daughter of the late Mr. Moncure Robinson, of Paris and New York

Ensemble Suit of Navy Wool Rep Created by Rence.

two days after her marriage to Senor Martin de Alzaga Unzue. Her coat, of the straight, mannish type, was of a rich, mauve kasha over a plaited crepe de chine frock of the same shade, and her hat mauve felt, with a narrow brim turned up in front.

It begins to appear as though the Louis XI hat may soon replace the ubiquitous small felts which have been so much overdone. Baronne de Fouquier, always smartly dressed, wore a hat of this type at the races the other day, a model of bois de rose felt with a round well-fitted crown—not nearly so high as the crowns have been recently—and a broad flaring brim, which rolled up on one side and across the back, and well down over the eyes in cloche shape in front.

The Tailored Note.

Brilliant colors displaced what had almost come to be regarded as the inevitable black-and-white as the reigning hues at the Belmont Park spring racing season. Belmont Park, from a sartorial viewpoint, comes a little closer to the Continental ideal than almost any other American track, and the fashionables of this country are invariably among those present on important dates. The United Hunts meet, which occurred during the first days of spring, indicated that gay colors were about to come into their inheritance, and the official season has entirely confirmed that prediction. Petunia, fuchsia, violet, deep-sea greens, the beige range, and vivid blues were the leading colors, and though an occasional dowager fared forth in the more sober black-and-white, the costume of the day was distinctly colorful.

The tailored note—as evidenced by the tailleur proper and the various mannish manifestations of the other members of milady's wardrobe—was decidedly worsted by the gentler or more feminine element in dress. Even the sports frock was temporarily overshadowed by a group of very feminine dresses which accented their gossamer fragility by the utilization of chiffons and the most delicate of crepes. The jumper-frock has been the costume of the day at Belmont Park since the season opened, and it has been closely followed by the ensemble.

Dress details are more diversified than in many months. The tunic has been a consistent note at smart gatherings all season and its peak has not yet been passed. The skirt length remains short, but not acutely so—the extremely abbreviated lengths have never met with favor in fashionable circles. The flare continues its roving popularity and shows definite signs of changing its locale in the near future. The straight back is still popular, but it is frequently being displaced by flares and other details. And there are general indications that frills are to be welcome visitors.

The separate wrap has been a prominent note all season, particularly on the crisper days, and it is more varied than any other item of milady's wardrobe. The cape-coat numbers many smart sponsors among its adherents— it is most usually worn as part of an ensemble, the dress of which has sleeves to match the outer coats. The sheer wrap is appearing in greater numbers, and it is destined to be an outstanding note of the season. The vogue of the ensemble coat continues, and printed linings remain the principal liaison medium. Coat trimmings are far more simple than at Longchamp.

SAFETY IN TRAFFIC RULES IF OBEYED

Never pass a street car that has stopped to take on or let off passengers. Automobiles should come to a stop at a distance of fifteen feet behind the street car, starting again only after the car has started.

FILLED RADIATOR IS BIG CONCERN

Water Circulation Is Essential Feature of Most Gasoline Engines.

Frequently, the most serious engine malady, leading to overheating, may have such a simple origin that it seems scarcely necessary to call it to the attention of either experienced or inexperienced motorists. Such is the mere neglect to fill the radiator with water.

Discover Trouble.

How many times has the careless motorist started on an automobile trip and, after proceeding a short distance, observed steam emanating from the radiator? A great many, of course, with consequent picturesque language and vilification of the manufacturers of the car. The usual sequence of events is as follows: The motorist gets out of his car, raises the hood and looks suspiciously at the engine. The engine looks all right. He then studies the rear axle, and finding nothing wrong there, feverishly examines the running board. After a half hour or so of such investigation, it occurs to him to remove the radiator cap, and he makes the astounding discovery that there is no water in the radiator.

Cure Is Simple.

The cure, of course, is very simple—but the danger is that the cure, applied too late, may not be a complete one. For, deprived of the circulation of the water, which is an essential feature of the design of most gasoline engines, a considerable injury may happen to the motor. Low water means a rapid rise in engine temperature, and the only sure way to prevent this, short of remembering to fill the radiator, is to keep an eye on the heat indicator on the radiator cap and to stop and examine when this indicator registers above the danger line.

Simple Test Indicating Suitability of Gasoline

Comprehensive tests of gasoline quality cannot be made without laboratory equipment, and then only by experienced men. There is a simple test, however, that can be taken as directly indicating the suitability of any gasoline for use in an internal combustion engine. This test can be made in a few minutes by any motorist without expense. It is conducted as follows:

Into a small porcelain crucible pour about 30 c. c. of the fuel to be tested. Light it and allow it to burn freely till the fuel is entirely consumed. If only a small amount of carbon is left on the side walls of the crucible, and the bottom remains practically clean, the quality of the fuel is good. If the deposit of carbon on the side walls of the crucible is heavy and black, and if there is a thick black residue at the bottom, the gasoline is poor. There are, of course, any number of degrees of variation between these two extremes.

Primary consideration for judging the quality of gasoline and its suitability for motor vehicle fuel are the relative ease of starting in cool weather, mileage per gallon in ordinary use, heaviness or slightness of carbon deposits in the combustion chamber, and degree of adulteration of the lubricating oil in the crankcase.

Don't "Ride the Clutch"

The clutch collar will wear and become noisy if the feet of a motorist are kept on the clutch and brake pedals all the time he is driving. This is a very bad habit, as it also tempts the driver to slip the clutch when slowing down instead of changing to a lower gear. If the clutch is constantly slipped in this way, the clutch plates or faces wear very rapidly and soon are liable to cause the brakes to drag. Keep the feet off these pedals, but have them in such a position that the pedals can be reached instantly.

Ridicule Is Real Jay-Walking Cure

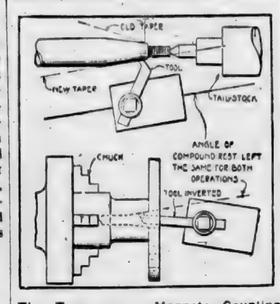
The pedestrian who disregards all the principles of safety and ambles heedlessly about the streets is rapidly being relegated to the realm of historic figures. Nobody likes to be called a "jay-walker," and ridicule has done a great deal toward eliminating this dangerous element in traffic control.

Los Angeles is now operating under a jay-walking ordinance, and it has proved highly successful. The unlucky individual who fails to heed the traffic signals is jeered and laughed at, and this has proved efficacious in educating the pedestrian in the necessity of traffic control.

The pedestrian who ignores the traffic warning and deliberately walks ahead in defiance of the regulations contributes a dollar to the city treasury.

Simple Plan to Replace a Coupling and Magneto

A simple way of replacing a coupling and magneto when the taper is worn is to true up the taper by using the compound rest on a lathe (not by moving the tailstock). Set the compound rest so that it will turn the new taper as shown in the illustration.



The Taper on a Magneto Coupling May Be Easily Trued Up by Setting It in a Lathe.

After the taper has been turned on the magneto shaft, do not move the compound rest, but leave it at that setting.

Put on the chuck, and turn up a new flange coupling, finishing it all but the taper. Then turn the boring tool upside down and run the lathe the same way as before, the tool cutting at the back instead of the front. the taper must be the same and the coupling will then fit perfectly.—Popular Science Monthly.

For Economy's Sake

Many motorists run up repair and upkeep bills unnecessarily through failure to avoid rough spots in highways and through letting the wheels of their cars drop off the sides of concrete roads. Permanent damage may be done to a chassis by allowing the rear wheels to drop six or eight inches over the shoulder of a concrete road. Bent rims often result from this.

To Keep Carbon Down

To encounter the least amount of trouble from carbon formation, the following rules should be observed: First, keep the piston rings in proper condition. Second, use only the best quality of oil. Third, employ the leanest possible fuel mixture at all times, and fourth, give the engine a dose of carbon-removing compound occasionally.

Lock Emergency Brake

When leaving the car in gear as a means of holding it securely, always lock the emergency brake. This serves as a two-way precaution. The main feature of it is that should you forget to put the gears in neutral when cranking, the starter motor would not, or could not, move the car if the emergency brake were set.

POINTS ON KEEPING WELL

DR. FREDERICK R. GREEN
Editor of "HEALTH"

(©, 1930, Western Newspaper Union.)

THE IMPORTANCE OF BABY TEETH

MANY parents think that baby teeth are of no importance. What's the use of bothering with them. They'll soon drop out and be done with.

This is a serious mistake. Few people know that, at birth, every child has already in its jaws all its teeth both baby teeth and permanent teeth. They can't be seen or felt but they are there in storage. Early in life, the baby teeth begin to appear, shoved up through the gums by the permanent teeth below, just as a cork is forced out of a popgun by the plunger behind it. By the time the child is three years old all the baby teeth should be in place.

The baby teeth are smaller and not as numerous as the permanent teeth. Every mother and nurse should know what are the baby teeth and how many there are, so she can check them off as they come and know the first permanent tooth when it appears.

Beginning in the middle line there are, on each side, the two incisors, or cutting teeth. Two on each side, above and below. That makes eight. They are the biters, with sharp thin edges. Then the eye teeth, one on each side, above and below. That makes four more.

The eye teeth are long, sharp teeth, not for biting but for holding. They are sometimes called the canines, because they are especially large and strong in dogs, which are descended from wolves, and in cats of all kinds.

Then the bicuspids, two on each side above and below. That makes eight more, or twenty in all.

These are the baby teeth and if the child is healthy and the teeth are kept clean, they work perfectly from the years of age when they are all in position, until eleven or twelve, when the last one drops out.

But if by decay or accident one of the baby teeth is lost before the permanent tooth behind it is ready to take its place, then the whole program is upset. The teeth back of the lost tooth are pushed forward and the teeth in front are pushed back by the pressure of the lips, so that the vacant space left by the missing tooth is closed. When the permanent tooth tries to grow up into position, it is twisted and so comes in crooked. This is the most common cause of crooked teeth.

If one tooth grows in crooked, all the others are apt to be affected. Correcting this defect is very slow, painful and expensive.

You can't improve on nature. Keep the baby teeth clean and sound and the permanent teeth will come in straight and perfect.

ARE YOU GROWING DEAF?

DEAFNESS is the most common affliction of the human race. One person out of every ten has some defect in one or both ears. This is not only an annoyance but in many cases it is an actual handicap, both socially and in a business way.

If asked which one would rather lose, hearing or sight, almost every one would say he would rather be deaf than blind. But persons who have had to do without both hearing and sight, like Helen Kellar and other blind and deaf persons, are unanimous in saying that deafness is far worse than blindness.

Deafness, even those forms which do not develop until middle age, are largely due to diseases of childhood. Scarlet fever, diphtheria and measles are responsible for more deafness than all other causes put together. In all of these childhood diseases, the infection, located originally in the throat, works up into the ear through the eustachian canal, the long, narrow tube connecting the throat with the ear. Here the germs develop, causing middle ear disease or "running ears," as it is commonly called, which not only destroys the drum but also sets up an inflammation of the bones and other structures in the middle ear, which may persist for years and often lasts as long as the victim lives.

This condition is extremely difficult to treat. It may be relieved and may apparently disappear, only to break out again whenever the patient takes a fresh cold. Untreated, it not only continues to discharge but may also, at any time, cause mastoid disease or even brain abscess.

Other causes of deafness are the accumulation of wax in the outer ear, getting water in the ear while swimming, rupture of the drum by accident, working in chemical plants where there are constant fumes, such as chlorine or phosphorus, and working in noisy places, where there is constant pounding on the ear drums. "Many men were made deaf during the World war," says a recent writer in Science, "by the constant thunder of big guns which hammered on the ears until the drums actually became loosened and could no longer transmit sound."

Deafness of any degree is a serious affliction. Deafness in childhood may easily handicap the child throughout its entire life. Better control of children's diseases, better care of children's ears and frequent examination of any suspected cases will help to reduce the amount of deafness.

Wit and Humor

NEEDED A BETTER EXCUSE

A jury was being qualified. A salesman from Plunk Center spoke up.

"Your honor, I don't think I'm fitten fer to be a juryman."

"Why not?"

"I ain't read all the laws of this kentry."

"Neither have I," said the judge "You'll do."—Louisville Courier-Journal.

Same Old Thing

Doolittle was unquestionably the kindest hearted man in town; also the laziest.

"Dearie," he told his wife, "when I pass away I shall leave everything to you."

"That's what you've been doing ever since we married," she snapped back. —Rehoboth Sunday Herald.

Had Enough of Those

The landlord had at last agreed to repaper several of the rooms. "What kind of paper would you like?" he inquired; "something with large figures?"

"Decidedly not," answered the tenant. "They would be a constant reminder of the rent I have to pay."

That Was That

"John, it is bad form to court a girl on a park bench. Why don't you court the young lady in her home?"

"No chance. There are eight daughters in her family."

PISCATORIAL ARITHMETIC

"When the boys got home from their trip last week I suppose they divided the fish?"

"They did—and multiplied 'em, too."

Cow Called Zephyr

A farmer's best cow was called Zephyr;
She seemed a real amiable hephyr;
Yet when he drew near she would kick off his ear,
Which made the old farmer much dephyr.

Didn't Understand

"My electric curling tongs turned out so well I think I will buy a washing machine."

"All right, Maria. But won't it give the kids a shock if you wash 'em with electricity?

Too Tough

Wife (with sudden inspiration)—Dear, how would you like to have mother for lunch?

Husband—No, thanks. My digestion isn't what it used to be.

Those Whiskers

She—Gee, your whiskers scratch worse than John's.

He—Yes, that's what Mary told me last night.—Denver Parrakeet.

AMERICAN AS SPOKE

Britisher—What do Americans mean by "giving a man the air"?

American—Tying a can to him, putting the skids under him, giving him the gate. Get it?

Britisher—I hear you, old top. But please explain your bally explanation.

Made-Up Giddy Girlie

I know a giddy girlie
Who dresses like a whizz,
And though her mind's not oft made up,
The rest of her sure is.

Telephone in Australia

"That's old Dogsbody just come out of the telephone box—he's turned 92."

"Lord! How old was he when he went in?"—Sydney Bulletin.

A Surprise

Suitor—I hope my proposal for the hand of your daughter hasn't taken you by surprise, sir.

Father—Well, to tell the truth, it has. You've been so jolly slow in getting around to it that I thought it wasn't coming at all.

Her Interpretation

Mrs. White—Why don't you try cooking with electricity?

Mrs. Green—My husband says we must keep down current expenses.

JULY

PATTERSON-FLETCHER'S

GREAT HALF PRICE SALE.

Begins Thursday Morning, July 30, 8 o'clock

OUR GREAT HALF-PRICE SALE

Is always the most wonderful merchandising event of the year --- no other store in Northern Indiana ever equals our VALUES. Men, young men and boys who want to practice economy wait for this great sale. This year it will be "BIGGER and BETTER" than ever. More merchandise and greater bargains than we have ever included in any previous sale. Many thousands of dollars worth of fine high grade merchandise will be sold during this GREAT SALE at just

HALF PRICE

Come and get your share of the wonderful bargains---tell your friends about this sale. You'll be doing them a big favor.

PATTERSON-FLETCHER CO.

WAYNE AND HARRISON FORT WAYNE, INDIANA

(Continued from Page 1)

"I jerked the sheet aside and felt his face. It was cold too. His hands were cold, and then I knew that he was dead.

"Mrs. Bryan sat just outside the door reading and I called to her 'Mrs. Bryan, I'm afraid something has happened to Mr. Bryan.'

Knew He was Dead

"She dropped her papers and her face went white. She knew he was dead before she came in and touched him.

"'Darling, darling,' she called and went to his side and shook him. He didn't answer and she fell across the bed crying. I went in and helped her away and out on the porch where she dropped into a chair. I yelled for Mr. Hicks and some of the others—I don't remember it all very distinctly, it was such a shock—and somebody, I don't know who, came running.

"His lawyer friends went into his room and came out solemn-faced. One of them cried a little. We called a doctor but he couldn't do anything but tell us something we already knew—that Mr. Bryan was dead."

The physician drew the sheet over the commoner's face and then attended Mrs. Bryan who was fighting against a collapse. After the first outburst of her grief she bore up bravely. She reclined on a bed in the adjoining room and lay sobbing faintly while preliminary arrangements were made for disposition of her husband's body.

News of the death spread rapidly through the town. Dayton loved Bryan and the shock of the report was a stunning blow to the citizens; many refused to believe the report and hastened to the residence where the commoner lay. Soon a solemn gathering of the townsfolk who recently had cheered him in his prosecution of John T. Scopes, assembled at the home.

All stood respectfully bareheaded, some tearfully, trying to realize the news that seemed almost unbelievable.

Because everyone, including himself, believed he had passed through the strenuous days of the evolution trial without suffering the least detriment to his health, Bryan's death came as a tremendous shock.

Only a few hours before the end, he had talked with friends of the big battle ahead in connection with the Scopes case. Friends suggested he take a vacation before continuing the fight, but, Bryan refused to desist.

At the time of his death, one of Bryan's chief ambitions was for the creation of the proposed Bryan university at Dayton. He had planned to confer today with the promoters of the proposed college with the idea of arranging a financial program and the curriculum. After the conference he was to have addressed a mass meeting at the Dayton courthouse. This was to have been the final demonstration of Dayton in his honor before he left.

Led Church in Prayer

Less than five hours before he died, the commoner had been the center of interest at the Southern Methodist church, where he led the congregation in prayer. Later he conferred with C. Wesley Hicks, choir director, on the music for the sermon on "What Shall I Do With Jesus?" which Bryan was to have delivered last night.

Bryan is entitled to a military burial at the National cemetery, because of his services during the Spanish-American war, when he raised a regiment of volunteers and served as its colonel.

Dayton today mourned the loss of the "foremost citizen of the world." Mayor A. P. Haggard issued a proclamation calling upon all business houses to close fo the day. Flags were half masted and everywhere there was genuine sorrow.

Mrs. Bryan today was bearing up well.

"I am glad he died in peace and without suffering," Mrs. Bryan said.

Telegrams of Sympathy

Tentative arrangements are for the body to remain here until Tuesday night when it will be shipped to Washington for burial. Telegrams of condolence and sympathy poured in on the bereaved widow from all parts of the nation today.

The bitter words that passed between the principals in the Scopes evolution trial were forgotten and Bryan's opponents came forward with statements testifying to their high regard for him.

"I am pained to hear of the death of Mr. Bryan," said Clarence Darrow, chief defense lawyer, in the evolution trial, who subjected Bryan to a merciless examination on his knowledge of the Bible and scientific subjects.

"I have known Bryan since 1896 and supported him twice for the presidency. He was a man of strong convictions and always espoused his cause with ability and courage.

"I differed with him on many questions but always respected his sincerity and devotion. I am very sorry for his family and for his friends who loved him.

The widow, an invalid who cannot move about except with assistance, stoically directed arrangements for her husband's funeral today while awaiting relatives now enroute here.

The townspeople suggested that Bryan's body lie in state in the courthouse where only a few days ago he participated with all his energies to keep the "written word" supreme. Mrs. Bryan, however, vetoed this plan. It was her preference that complete simplicity mark all arrangements so the little parlor of the Rogers home was selected as the place where friends and followers might go to see the Commoner for the last time.

That Bryan died of heart failure instead of apoiexy, was the belief expressed by Dr. Raymond Wallace, Chattanooga physician, who made an examination of Bryan last Friday.

This examination revealed, according to Dr. Wallace, a slight dilation of the heart with missed beats. Blood pressure was normal, though the ankles showed a slight swelling which the physician attributed to faulty heart action.

Dr. Wallace said he advised rest and change of diet but that same day Bryan went to Jasper and made a speech, followed by another speech at Winchester Saturday.

The Law of Compulsion, Do We Want It?

Insurance today is purchased without the pressure of public authority. Premiums are voluntary payments made by the buyer for protection to his person or property, or both. It is this absence of compulsion and enervating influence of bureaucracy which has permitted insurance to develope freely and to become a potent factor in the social and industrial development of the last century. To change insurance from the status of a voluntary association for self protection to the status of an involuntary association for protection of other means the prostitution of insurance to meet political needs and class demands. If insurance can be made compulsory and used for the purpose of providing indemnity for certain highway accident victims, it may be made compulsory in a variety of other situations.

Home-Coming Celebration

Saturday, September 5, 1925, promises to be the one big day at St. Joe, when the merchants and citizens join in the second annual Home-coming event. Plans are being developed by the committees to entertain our visitors in A-1 style. We will be in a position to announce the program in a later issue. Plan your work now to be in St Joe the 5th. and see your old acquaintances.

Which Way are the Small Towns Going?

The main reason why the average small town is traveling in reverse gear is that too much money is sent from the place where it is earned to make the millionaires in Chicago and other big cities. Don't let this community get that way. Work with the construction gang, not with the wrecking crew. And yet in our little town we find merchants who ought to be working with the construction gang, are allowing their little, narrow, petty jealousies, to tear down the things that are really worth while. Some are indifferent and don't care whether the town progresses or goes down. They fight every undertaking started by persons who have a public spirit, unless they can see where they will get a nickel out of it. But pshaw, every little town has that fellow to contend with.

The whole condition is shouldered on the merchants and should justly be placed there. Only a few in the little towns bear the burden.

Did you ever stop to think that the community could get along without your business, but in order that you make a success, you must advertise and give them reasons for trading with you instead of sending away, price, quality and service all go to make the sale.

WHY IS IT—

The fellow who so noisily asserts that "Advertising Does Not Pay"

DOESN'T TRY TO

Run his auto without gasoline? Or—

Buy a store without windows or lights? Or—

Borrow money at the bank without paying interest?

HE'S

The same fellow who wouldn't spend one nickel for an ad and yet go to New York City and let a couple of "sharps" sell him the Woolworth Building.

Ever notice that all "self-made" men seem to run with the muffler wide open?

Every now and then, a married pair, like a piano, must be readjusted and tuned up, if they are to go on singing love's old sweet song without discord and inharmonies.

SIMPLE GOSPEL PRAYER

Dayton, Tenn., July 27.—The last public utterance of William Jennings Bryan was a prayer for divine guidance delivered in the Southern Methodist Episcopal church here Sunday morning.

"It was a plain, simple gospel prayer," said Rev. O. R. Jones, pastor of the church. "It was a prayer that stirred the hearts of those who heard it and convinced them that he who prayed was a servant of God."

Sunday School Report.

HIS LAST WORDS

Dayton, Tenn., July 27—William Jennings Bryan's last words were:

"Well, I think I am going to get a good sleep."

They were spoken to the housekeeper, Mrs. C. Stephens, just before he retired to take a nap, during which he died.

County Agent Given Farewell

About 250 persons attended the farewell reception for Mr. and Mrs. B. F. Repp, held in the assembly room of the McIntosh high school Friday evening. Mr. Repp, who recently resigned as county agent, and his wife are moving their household goods to Attica, Indiana where they will make their future home.

The reception was to have been held in the Commercial club base ment but plans were changed later and the McIntosh building select ed as the meeting place.

At about 8 o'clock plates were passed and were soon filled "Cafeteria Style" and all seemed to enjoy a half hour of "Real Country Eats." After the pot luck supper the party assembled and was addressed in an able manner by H. M. Widey, apple grower at St Joe who reviewed some of the important things done in DeKalb county during the past few years, due to the tireless energy and faithful efforts of Mr. Repp. He remarked that while a few were listless and were not benefitted directly by organized promotion work, still a look into the intelligent faces of the boys and girls and knowledge of some of their accomplishments, was sufficient ev dence that county agent work is a success and that there is no question but that another man will soon be appointed. However, he advised the policy of giving the DeKalb County Board of Education plenty of time to investigate and select an agent who will continue to advance the interests of DeKalb county.

Mrs. Goldsmith, County Chairman of the Home Bureau, then called upon the different townships who entertained with piano and violin music, songs and recitations.

A beautiful floor lamp was presented to Mr. Repp and family by the Farm and Home Bureaus as a token of appreciation of Mr. Repp's efforts. Mr. Repp found it difficult to properly show his appreciation of the honor shown him and stated that he did not think he ever did any more than his duty while here. He said that he had enjoyed the work and especially the large acquaintanse formed during his stay here.

He regretted having to leave the work and invited all who could to call on he and his family at their new home in Attica, when they will "Say it with flowers" as they have purchased a large green house in Attica and are very busy planning for future business.

A little girl about six years old sang "Goodbye Mr. Repp, Goodbye to you. Is there anything for you we can do? We have done the best we can, stuck to you like a man Goodbye Mr. Repp, Goodbye to you."

Mr. Repp and family will be missed not only by DeKalb county farmers but by the Auburn Commercial Club the Methodist church of Auburn and citizens and friends in general —Star.

Squirrel Season Is Now Open

Squirrels may be hunted legally commencing today, the opening day of the squirrel season. Geo. N. Mannfeld, of Indianapolis, head of the fish and game division of the state conservation department, says farmers have been complaining about the damage done to their crops by squirrels. The season remains open until December 1. Mr Mannfeld also reports an abundance of duck and season which opens September 16. Rabbits have been legitimate game since April 1 and are still numerous.

Wm. Harman Believes in Advertising

Wm. Harman, our live and up-to-date butcher, is more than pleased with the response to his ad in last week's News, in which he featured Hamburger at 15 cents per pound for last Saturday. Bill says: "I cut up everything I had available for Hamburger I figured 50 pounds would be the limit, but I cleaned up on 100 pounds." Readers of The News are learning that Mr. Harman is a constant advertiser and they watch his ads with interest. People who trade with advertisers are usually saving their money, or in other words get more for their money, as in this case of Mr. Harmon. Ordinarily, when you buy for less than 15 cents you are getting the very poorest of meat ground up, but not with Harmon. He took his regular stock of beef on hand and specialized. You are making a mistake if you do not read ads in this paper and then take advantage of the things you can use.

Morris Minnick Accidentally Killed

Dr. Minnick was at Burnitsville, Ind., Sunday attending the funeral of his grandson, Morris Minnick, who was killed at Cincinnatti. Morris was 8 years old, son of Homer Minnick, who visited the doctor here a number of times while living in Michigan.. The two children of the Minnick home were in their yard playing and Morris was turning cart wheels. The yard is filled in and a cement wall near the sidewalk furnishes the curb. In turning he came too near the edge and fell over striking the back of his head on a man hole. The boy lay unconscious for two days, arousing just long enough to tell how it happened.

Geo. Wade Got Down in the Mud

George Wade, who is hardly able to get about town, took a stroll Tuesday along the river to the Curie Run in search of a hickory cane. In crossing the run he mired in the mud, fell down, and for more than an hour he tried to crawl out. When he finally was able to get out he made it to the top of a small hill and there he was found when his wife sent for him. Tom Abel took Mr. Wade to his home.

Home For Sale: Lights, water and furnace, 7½ acres land. A bargain. O. E. Ginther. 31t1p

Mrs. Maude Woodcox, daughter, Miss Lucile and Mr. McCarthy, of Columbus, Ohio, were weekend guests of friends here. Sunday they in company with Mrs Jennie Sechler and Mrs. Alice Lewis took dinner with Merritt Sechler. Miss Lucile Woodcox remained for a week's visit at the home of her uncle, C. C. Woodcox, and family.

County Agent Election Postponed

The election of a county agricultural agent, scheduled for Monday afternoon, was again postponed by the county board of education. Two applications were presented, J B. Cunningham of Goshen and Earl Stinson from Orange county Wilbur Stonestreet made a motion that election be postponed until the next meeting and same was carried. Larry Brandon and Bert Bachtel were made investigating committee for all applicants.

Beauty Parlor

Bobbing, 25 cents, Marcel and curl, 50 cents Hours afternoon and evening. Forenoon by appointment. Grace Sheffer. 31t1

There may not be enough single men to go around, these days; but there are plenty of married ones who keep right on "going around," just as though they were single.

Peters Bros. Musicians to Be Here

The Home-Coming committee has just made contract with Peters Bros., Concertina Experts, of Belleville, Ill. They will furnish music for the entire day's program. Further announcements will appear later as the management desires. Details of the program have not been completely worked out. Plan your work now so you will have September 5th off.

Amos Leavy Critical

Amos Leavy, who makes his home with Sam Mumaw is in a critical condition, having been unconscious for some days. He still emains very low, only rallying for a short time and the only thing they can understand is "water." Amos has not been well since his sick spell a year ago, although he has been about and did some work. He took his bed last week.

The Vanishing Men

By RICHARD WASHBURN CHILD

(W. N. U. Service) (Copyright by E. P. Dutton & Co.)

CHAPTER I

—1—

He had gone to London the moment he was out of uniform, and he had gone there for a reason typical to him.

For most Americans a single track success is an inspiration of life; there is a raw meat satisfaction in hewing to the line until some tree falls and also an instinct for playing the latest game. If it is money-making, or trade, or industrialism or production-efficiency, the rank and file go panting after it until some one rings for the undertaker. I have always thought that the source of the imagination which was responsible for Peter DeWolfe's tastes, policy and conduct was most difficult to uncover. The true sense of play, not only applied to play but to all the endeavors of life, even those which are usually accounted grim—like war and marriage—is a rare flower to bloom on the American soil; it is still more rare a blossom to find growing in a family tree rooted, as Peter's was rooted, in a bed of money and only fertilized by that humdrum conventional pretense of our large cities which at latest accounts is still giving many persons the same old pale glories.

This rare flower bloomed in Peter and saved him from doing the commonplaces with himself which rich young men who have become orphaned bachelors usually do. It made Peter a great deal more like those individuals, rare enough even abroad—the whimsical Englishman, the adventurous Frenchman, the humorous Spaniard and the practical Russian, who, though they be the white crows of their respective flocks, exceed in numbers the Americans who value full living above that rather uninteresting and easy prize which is called "Success."

Peter took an interest in living. The common run of bachelors who are provided amply with millions accept the alternative of going to the devil or going to business; DeWolfe's imagination came to his rescue and provided him with a third choice which, in his quiet way, he seized about the time he left college. It was to live for the sake of living.

To some this might have meant self-indulgence; to Peter it meant an indulgence of mankind. To some it might have meant fads and whims, such as hunting big game from airplanes at the source of the Nile; Peter would do that very thing, perhaps, but it was an incident not half as interesting to him as an oil field he developed in Texas or a settlement house he promoted in New York. He kept himself as a very neat, well-cleaned slate upon which life could write if it wished; if it failed to do so Peter wrote on it a little himself—enough to keep himself useful. The same man who invented the DeWolfe millimeter also set down from time to time some charming verses, and the public knows at least one short lyric from the "Leaves of Argonne" which he wrote in the hospital before his promotion to major.

Dark skin, blue eyes, thin sensitive lips, the appearance of one well bathed in ice-cold water, the flexible lean waist of a good horseman, the long muscular fingers of a good tennis player who had not lost the delicacy of touch which made him something less than a distinguished performer upon a cello—these were the outward introductions which made that particularly admirable little group of British gentlemen officers find his acquaintance so quickly.

Eversby Benham of the R. A. F. must bear the blame for the months in which DeWolfe found his great adventure at a time when to Peter adventure had become dull beyond words and the mind-image of himself sitting on a New York park bench, surrounded by engaging little foreign brats, listening to a hurdy-gurdy in the summer dusk, was the most exciting and delicious picture conjurable from his resourceful imagination of what a wonderful moment of life after a whirl with war could be. For it was Benham, who only later went home to the office of the air ministry, and who has since distinguished himself in the development of civil-flying, who first steered the young American across the path of Brena Selcoss.

"Are you going back?" said Benham.

"Home," said DeWolfe, with an attempt to say the word without sentiment.

"Red Cross ladies, Waacs, beautiful high caste Parisiennes and even the charming daughter of your what's-his-name at the peace conference—and still a bachelor! By the by, DeWolfe, what happened to your lady with the gorgeous arms at that flubby little cafe on the south bank of the Seine?"

"An engaging goddess," said DeWolfe. "She is, I believe, a petticoat buyer. She tried to convert me into the Methodist faith. Those beautiful arms are for the neck of some Y. M. C. A. man with glasses and a tickling cough. She borrowed thirty francs from me and then went off to see a daughter of hers who is driving an ambulance near Coblentz."

"You are well armored, Peter," Benham had said, gazing with a reflective and perhaps mischievous smile across the flat fields of France with their tilled squares and wisp-armed trees and thin mists of dusk. "By the by, I say, doesn't this landscape remind one of Corot's paintings?"

DeWolfe grinned.

"What would make you fall in love with a woman?" asked Benham.

"Almost anything," Peter replied. "But that's not the problem; the problem is what will prevent a man falling out?"

"You're saying that any woman—that is, with the thing you Americans call a come-on, good or bad—may make a man fall in love with her?"

"I was saying that we are all hypocrites. Such a woman would touch us all—affect any of us—me, for instance. We are made ready by a wise nature. 'Stand by for love,' she says, and youth stands by, Benham. But what's the use, if that's all? Life is a long pull. No dimpled chin should be allowed to turn the tide. No discourse of brilliance chattered off like a disk record in a conservatory. No nosefull of the faint odor of violets nor moonlight on a bare shoulder nor a rating of the old man. That's what I mean. That's why most men marry; but I am hardened by too many inspections of dimpled chins."

"From a discreet distance?"

"Exactly."

"You want more than that pull of the moment or the month."

"To make me give up my own quarters in New York where the sun comes in upon my bare ankles and my coffee, and my Jap brings the newspaper and the cigarettes? I should be glad to say so!"

"You should try Brena Selcoss."

"Who is she?" asked Peter carelessly, as he tried his arm out of its bandage sling.

"You like the name?"

"I confess—"

"Of course—so many names of women—just the names—give a man a thrill. Most extraordinary! She's an American and—"

He paused.

"Well, what?" asked DeWolfe.

"A puzzle," said Benham. "But then you are not interested in women."

"To tell the whole truth, they are my only interest except food," Peter said. "The devil of it is that if a man saw ten thousand of 'em he didn't want and couldn't love he'd always expect year after year until he was ninety that the first over the thousand would be the one. Well, that's what leads us on. We all say, 'No, thank you,' when the dish is passed, but we all look to see every last piece on the dish just the same."

"Brena Selcoss is a friend of my sister," said Benham. "I must say she takes the breath out of me. It's that queer combination of beautiful fresh youth with the flavor of all the guile and conspiracy of the ages. She's a Saint Cecilia or a Lucrezia Borgia. But that's not bothering my mother."

"What bothers her?"

"Funny thing. We don't know who she is. From Texas, I believe. With some money. But why does a girl from the United States come down to Beaconshire Heath and buy a cottage next to our place and live in a garden and stay out of London and read lying flat on the grass and see nobody and evade all questions? And the look in her eyes!"

"What look?" asked DeWolfe in the hush.

"Fear," said Benham.

"Fear?"

"Yes, fear. And besides there is something about her that tells a person that she is waiting—marking time—treading water—staring out over life—just like a watcher on the shore stares out across the empty sea."

"Maybe she's thinking of an ice cream soda."

"There's nothing of that kind of thing in her," the British officer replied with positiveness. "Your ice cream soda and millinery and looking-glass lady has a personality of a pink color. Brena Selcoss is the color of firelight on the walls of an old temple."

"You might go on to say that she gives the impression of an Inca princess. Some dried mummy from the sands of a prehistoric citadel. Bathed in some magic liquid, her limbs expanded to the lovely contour of girlhood, her face warmed with a renewed coursing of spirited blood."

"You've seen her!" exclaimed Benham.

"My dear fellow, I've never seen her; but I confess that as you talk about her I feel a little as if I had known her—long ago."

Benham said, "Perhaps you could lift the cover—"

He stopped suddenly.

"And I'd like to have you meet Muriel, too. She's a very decent sort of sister. I've a mind to give you a letter to my mother and send you over the Channel to loaf around in flannels at our place in the country."

"I'm leaving Brest tomorrow night on a transport. Sorry."

"Oh!"

"Well, I said nothing about it."

"Afraid of farewell dinners?"

Peter smiled.

"Home," said he. "Bring your sister over to America. She'll probably think it a jolly little unfinished country."

Benham clasped DeWolfe's hand and yawned; he had seen the American covered from head to foot with blood out of his own arteries when Peter had brought him in with the aid of an artillery horse. It was an intimacy not to be befouled with demonstrations.

"So long," said DeWolfe.

He climbed down from the broken wall of the house where the Englishman had been billeted and with a nod of farewell walked away, leaving Benham perched there—a black figure as if cut out of black cardboard pasted on the sunset glories of the skyline.

He walked a hundred paces and stopped. He looked at a group of peasant children bringing in fagots, but laughing and jostling each other as if it were a game. Childhood had been untouched. In one of the little rubble and plaster sheds a new-born calf was bawling, and yet in Paris, as he reflected, serious men were discussing the future of the world exactly as if they could touch or affect its fundamental nature.

He walked on. The trees trained against the high wall spread their branches like fans, edged at the tips with the pink blossoms of a new year, symbolic of the eternal round of promise, fruit and decay.

"It goes so soon," said DeWolfe aloud, and this voice which spoke was just as if some old friend had given him counsel as they strolled together in the dusk. He turned.

The Englishman waved to him from the wall and held one arm aloft in a gesture of farewell; Peter could see every finger on his hand as if they all were painted in sepia on the velvety gold of the sky.

"By the by," called Benham, "the strange lady is half a Greek. I say! Can you hear? Her father was a banished patriot—a fighting professor of chemistry or something."

Peter smiled and waved his hand. He turned the corner of the wall and stepped into the cobbled street where

Peter Smiled and Waved His Hand.

the endless wagons of some French artillery maneuver were rumbling deeper into the ruts of War worn in the ancient stones.

Only at nine that evening did he hear more. Benham called him by the service wire of the signal corps.

"Saying good-by, that's all," said the Englishman, lying glibly. "Good luck. And I forgot to say that her mother was Irish."

"Send me that letter to your family, care of the American port officer at Boulogne," said Peter calmly after a moment in which Benham wondered whether the line had been cut off. "I'm off for England tomorrow."

He put his cigarette down and allowed it to burn the edge of the table, staring at the wall with its maps and blue-prints, his eyes full of wonder.

This explains, in part, why the reason for his going to London was typical of Peter DeWolfe.

CHAPTER II

Muriel Benham was savagely a woman. She conceived woman as a species as distinct from males as flora is distinct from fauna. The acquisition by women of the right to vote had been the occasion for mourning, as Peter found out before Mrs. Austin Benham had beamed through two meals, first upon her guest and then upon her lovely daughter.

The widow of Austin, as DeWolfe discovered after a week of agreeable neglect of the calendar, was a true beamer. She did not beam with the insincere beam of affectation, but with the beam of an expansive nature oozing good will and demonstrativeness through the crevices it could find in the walls of a life which was like a vessel of conventionality, containing, according to all the traditions of her husband's family, a liquor of precious quality, not to be spent freely. She believed in new things and in a new world, but she beamed upon Muriel not because she agreed with her but because, not daring to voice an opinion, she could still love her daughter for being so healthy and so irreproachable.

Muriel considered herself as dedicated by duty and adaptability to being a woman, and being a woman meant that her brown hair must be made attractive and stable for tennis—a game which she executed with a good deal of dash, in a costume designed to keep freckles off a milk-white skin. Even her forearms were covered in the game she took from DeWolfe, who made rather a botch of his unpracticed play, because just as it was a womanly woman's duty to be well exercised and in fine condition for the market, so also was it her duty to be milk-white in an evening dress. The same thought made her appear before Peter in the hedge-walled garden before breakfast clad in a part wispy and part fluffy gown, with a basket of roses hung on one elbow and flower scissors in the other hand.

"You do all things so well," said Peter with a great delight filling his being. "There is a thoroughness in your method which positively upsets me. I looked at the library in your study and as far as I can see you have spent your twenty years collecting, among others, books on how to do things—how to ride a horse, how to play golf, how to knit, how to cast a fly, how to speak Italian, how to grow roses, and who knows what else."

The English girl was sincerely grateful to Peter. She said: "To know the way, to practice the methods—these are the sure steps toward results; but you must not think I take myself too seriously, as my brother probably told you. I think it is all as nothing compared to the skill of being a woman—a fit woman—a woman whose one aim is to be a woman."

"You have attained it," said Peter, a little light dancing in his eyes under his heavy brows as fireflies sparkle behind a hedge.

The girl tossed the ball up and caught it in her white skirt spread from knee to knee as she sat cross-legged upon the edge of the Benhams' lawn. This lawn began again after the interruption of the square tennis court and rolled gently down to a line of trees at the bottom of the hill that half hides the little town of Becon with its nestling red brick houses with their chimney pots and roofs tempered by the smoke of coals on home fires. They lived peaceably together without any bold assertions of individuality, none of them doing any outrage to the countryside, as Peter, contrasting it with an American town, had said. Beyond the village were the chalk downs where grass was light green and the heather a deeper color, and narrow roads were as white as marks of crayon, and trees standing alone were like feathery plumes stuck here and there into the rolling country by some giant hand. Somewhere, still further on, was the sea into which the bright sky fell like a blue back curtain flecked with clouds of feathery white.

Peter, with half-closed eyes, gazed out across this magnificence of quiet space toward the distant backbone of a chalk ridge where ancient Britons once drove their cattle into caves and Druid priests had once held solemn rites. He was quite unconscious of Muriel's attention fixed upon him somewhat as a faithful dog watches a master; he had been in many of his own dreams in these ten days and might well be forgiven for failing to notice that something of violence was going on within this English girl whose outlines, like those of a volcano, were still clear and cold against the sky, exposing nothing of the fires and steam which may blow their surroundings into fragments.

The most that Muriel had ever said was that Peter was one of the "nice Americans," a patronizing compliment which had made him tell the girl and her mother that he was gratified at that judgment expressed by "the better type of English." He did not know that by the processes within the Benham sister's lovely head, she had weighed carefully his physical appearance, noting his high bronzed forehead, his straight nose, his lean hard cheeks and the thin judicial lips which had been an inheritance of the family ever since Justice DeWolfe had been painted by Copley. She had judged him as one would judge an animal, and satisfied, had methodically passed on to his clothes.

Peter's clothes are famous for their charming incorrectness. No one quite knows how he succeeds in expressing through some expensively fashionable and unimaginative tailor so much of his own brand of distinction in dress. Evening clothes or bathwrap, major's uniform or lounging flannels, it is always the same; Peter's clothes and Peter are one. An envious broker in New York named Moore once said that Peter's clothes even expressed Peter's moods—they could be limp, soft and contented in his idleness; they could stiffen into fine dignity with a turn of his thought. Muriel's father had given attention to clothes; the hunter's-pink riding coat that still hangs in the hall closet in Beconshire Heath reminds his successors of the dominant, rare-roast-beef personality of Sir Austin. His daughter, like other women who are in the profession of being women, gave importance to the decorative qualities of a male; she only forgot about Peter's face and figure and clothes when they had been swallowed by his complete whole—a whole which defied her methodical judgment and made her eyes swim and begun to turn within her heart and body the elementary machinery that two hundred years of Benham tradition had kept locked in neutral.

"Peter, I saw you before breakfast," she said. "From my window."

"You saw me?" he said. "Why didn't you call to me and say one of your cheery good mornings?"

She leaned so close that he could catch the faint aroma of the lavender which Mrs. Benham, with a beaming face, sprinkled in the drawers. She said, "Because I was waiting to see what you were doing."

"What was I doing?" said Peter.

"The telescope—father's telescope."

"Oh yes—the telescope," repeated Peter, as if he had been accused of stealing the squeaky old glass. "I did have the telescope, didn't I?"

He was thinking that one could not very well tell hosts like these two women who had treated him as if he were the owner of the estate and of the old stone house and even quaint Spode coffee cups which came on at breakfast, that he had come to Beconshire not to see them. He was thinking that if they had not chosen to mention an acquaintance other than the rather stiff and dull and correct persons who had come to tea almost every afternoon and three or four times to dinners, saved by the Chateau Yquem graciously left by Sir Austin as a legacy in the wine cellar, he could not very well mention this acquaintance. Furthermore he had begun to feel that Muriel in some strange manner of her own had created an atmosphere of a proprietress without any other intimacy than calling him Peter and, upon one occasion, dressing a cut of a hawthorn on the back of his hand with a peculiar tenderness mixed with all the care of procedure that one can find in "What to Do in an Emergency." He shrank from making the one inquiry he would have wished to make.

He now had a chance to make this inquiry, because Muriel said: "You were standing there under that beech tree. I thought—"

"What did you think?"

"That you were looking through the glass across the fields toward that place under the big trees—the place we call the Curate's because one used to live there."

Peter might have spoken then to ask who now occupied the little gabled house with its guardian trees. It was the opportunity to hear a name he had not heard since he had heard it from Colonel Benham's lips; Peter's characteristic perversity that often made him allow life to set its own pace and bring events at its own whim, added at this moment to his disinclination to disclose one of his reasons for idling under the Benhams' roof. It prevented him from speaking. The sun was warm, there was a fatalistic assurance that he would hear the name soon enough, and there was the possibility that a look of pain would come into Muriel's face and he would hurt a girl for whom he had acquired a good-natured, companionable and almost paternal affection.

He only smiled, and Muriel's pink fingers being near upon the glass, he touched them lightly. After a long pause, he said: "I was looking around the country."

"I do not believe you," the girl said, jumping up with startling suddenness.

"Where are you going?" he asked.

"Into the house. I have a—headache."

(TO BE CONTINUED.)

Cure for Blisters

Blisters, caused by the shoe rubbing the foot, develop into a real painful ulcer if they are not properly treated. Mr. Mann of Anytown learned.

If pricked, some disinfectant should be applied immediately. The best way to let the water out is to pass a bit of vaseline thread through the blister.

When the blister is on the sole of the foot where the skin is thick, take a fine white thread and grease it well with borated or pure vaseline.

Thread a coarse needle and pass it through the blister from one end to the other. Cut the thread on each side and cover the spot with a bit of vaseline. Next day draw the thread out. The blister will be gone.

Blisters on the hand may be pricked with a needle and then covered with a layer of collodion one ounce, castor oil eight grains; soft turpentine eight grains. Two or three coats are required.

Bishop's Bible

The Bishop's Bible, a revision of the Great Bible of 1539, was published in October, 1568. It was the work, undertaken in 1563, of Archbishop Matthew Parker, eleven other bishops and four deans and prebendaries.

Tactful Husbands

From an English Book—"Newly married couples always decide to be tenderly considerate one to another, but as their rival unselfishness immediately begins to create friction, the husband, with his usual courtesy and foresight very soon withdraws from the contest and gracefully leaves his wife a monopoly of unselfish devotion. That is why so many couples get on splendidly together, and it is a fine tribute to the tact and good management, not to mention the foresight, of the husband."—Boston Transcript.

Just a Day Dream

Fifteen years ago a Japanese priest had a dream in which he was told that 15 years later he would find a large pot of gold under a certain tree. He has been digging all around the tree for several weeks, but so far has found no gold.

Swiss Waterways

At an international exposition in Basle, Switzerland, this summer new and old methods of producing hydro-electric energy by converting natural watercouses into navigable waterways by construction of dams and locks will be demonstrated.

The war has made table linen very valuable. The use of Red Cross Ball Blue will add to its wearing qualities. Use it and see. All grocers.—Advertisement.

Happily, if one has a large family, he hasn't time to worry about anything else.

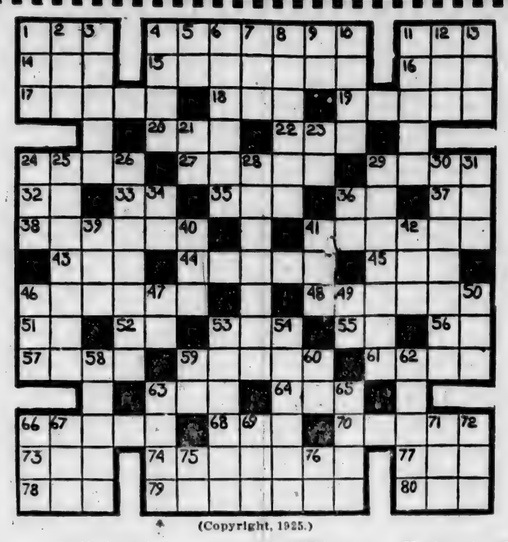
CROSS-WORD PUZZLE



(Copyright, 1925.)

Horizontal.

1—Crazy
4—Is of importance
11—Delved
14—To stray from the right
15—Advent
16—To employ
17—Groups enlisted in sports
18—A monkey
19—Opposite the middle of the ship's side
20—A child (slang)
22—A negative
24—Sounded in metallic way
27—At no time
28—An Egyptian goddess
32—A negative prefix
33—A note in the diatonic scale
35—To dispose of
36—An indefinite article
37—A point of the compass
38—Characterized by two things
41—An herb used for winter salads
43—Wet earth
44—A vegetable
45—Anger
46—A fabric with a glossy surface
48—A kind of juryman in ancient Athens
51—A preposition
52—A British means of defense
53—India (poetic)
55—A point of the compass
56—Tellurium (symbol)
57—Procures
59—Beginning
61—A town in Persia
63—Part of a circle
64—A little pocket in men's trousers
66—One not of age
68—A suffix meaning "suited for"
70—Ordinary
73—A beverage
74—Listens
77—A gypsy gentleman
78—Old (poetic)
79—Width
80—Still

Vertical.

1—Came together
2—Part of the verb "to be"
3—To free from liquid
4—A cover for the face
5—A measure of area
6—One who does business
7—To tilt
8—Leveled
9—An ancient sun god
10—A lath
11—Entertainments by two people
12—A republic
13—A jewel
21—Within
23—A conjunction
24—To burnish or polish
25—Alive
26—Devices for sorting out sizes of broken stuff
28—Dreams
29—Guide or pointer (plural)
30—Clothes or endows
31—To behold
34—A suffix denoting an agent
36—An indefinite article
39—A hard-shelled fruit
40—Yonder (poetic)
41—Finis
42—A boy's name
46—To droop
47—Half the width of an em
48—Partakes of reality
50—A social gathering
53—To arouse
54—To protest
58—Furnished with prongs
59—Yellow or gold color (heraldry)
60—A preposition
62—An exorbitant rate of interest
63—A Semite
65—A shrub
66—A girl's name
67—Sick
69—A meadow
71—Yes
72—Allow
75—Terbium (symbol)
76—Doctor of theology

Solution will appear in next issue.

HOW TO SOLVE A CROSS-WORD PUZZLE

When the correct letters are placed in the white spaces this puzzle will spell words both vertically and horizontally. The first letter in each word is indicated by a number, which refers to the definition listed below the puzzle. Thus No. 1 under the column headed "horizontal" defines a word which will fill the white spaces up to the first black square to the right, and a number under "vertical" defines a word which will fill the white squares to the next black one below. No letters go in the black spaces. All words used are dictionary words, except proper names. Abbreviations, slang, initials, technical terms and obsolete forms are indicated in the definitions.

PROPOSE TO MOVE DUBLIN LANDMARK

Nelson's pillar, the most familiar of Dublin landmarks, was erected in 1808 to commemorate the victories of the great British admiral. It stands at the intersection of four streets and as the base is unusually large it has always obstructed the traffic. It divides the great thoroughfare, O'Connell street, and the northern end of the street beyond the pillar seems to belong to a different city. The transverse streets, one of them having at the end of it the terminus of the Great Northern railway, are among the busiest in Dublin and the huge pillar at the junction is much in the way. Frequent attempts in the past to remove the pillar to a more open site have failed, sometimes for political reasons. The city commissioners who replaced the Dublin corporation are trying again. They say there is no political motive in displacing Nelson and that only traffic considerations compel the change. The views of the traders are divided. Those in O'Connell street would like to see that street unified in one great avenue. The traders in the side streets down which the pillar now diverts some of the traffic think they would suffer by the change.

American Films Find Much Favor in Brazil

American motion picture films seem to have made a complete capture of the Buenos Aires market. All the big American producers now have offices in that city and have ousted the films of the German, French, Italian and Danish producers. Immediately after the World war French, Italian and Danish films made spirited campaigns to regain their prestige but, although the French and Italians were supposed to know the Latin temperaments and likes and dislikes, there was something lacking in the films they sent to Buenos Aires and American films continued to grow in popularity. It is seldom now that any but American films appear in the local houses. Occasionally there is featured one produced by a local company, but only patriotism makes it attract attention and then not for long. As yet the local theatrical stage is poor in quality and the cinema seems destined to be the chief attraction for the people of Buenos Aires.

Diminutive

At a club meeting one lady was inveighing against the habit of tacking nicknames to young ladies. It was so undignified, she claimed, to say the least, and was calculated to handicap a girl all through life. She became so vehement that Aunt Hepzibah sought to calm her. "I don't think it is serious," said Aunt Hepzibah, in soothing tones. "People just do it to have something to call a girl for short. Now, take my daughter Ruth. We call her Ruthie."

Admits He Needed Help

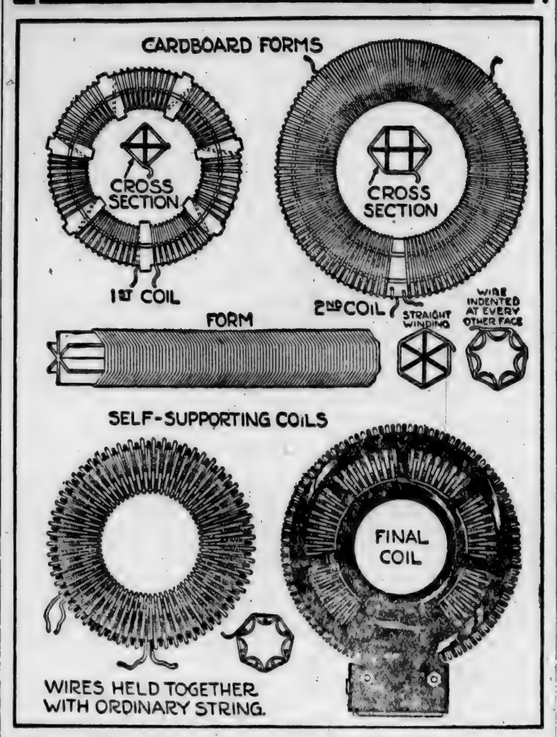
Honesty is increasing in American schools and colleges, according to Carl Salser, head of the Emporia Teachers' college extension department. Several days ago an Emporia freshman, who had loafed through most of the semester, was confronted with final examinations. In compliance with the instructor's request that he write at the bottom of his paper a statement to the effect that he had received no help in answering the questions, the freshman wrote the following: "I have neither asked nor received help, but God knows I need it."—Topeka Capital.

Prairie Land

A schoolmarm in Cape Town was teaching her pupils to sing "God Bless the Prince of Wales." "Was this song used in America first?" one of the children asked. "Certainly not. What ever made you think that?" "Because," was the reply, "it says, 'Let the prairie echo, God bless the prince of Wales.'"

Only then did the teacher discover that the whole class was singing the above instead of "Let the prayer re echo."—Boston Transcript

RADIO



Method of Winding to Produce the Doughnut Coil, One of the Latest and Most Satisfactory Improvements in Radio Construction.

By FRANK REICHMANN, B. S., E. M.

Improvement in apparatus, rather than new and revolutionary circuits, is responsible for the rapid increase in efficiency of our radio receivers. This is accomplished by the elimination of losses, balancing up of circuits, and the confining of straying capacities, improvements that are the result of months of experimentation and practical test work on the part of far-seeing radio engineers, and very rarely stumbled upon or accidentally discovered.

The latest radio improvement, the Reichmann doughnut coil, may at first glance seem to be the result of a few minutes' playing with a coil of wire and a broomstick. The real facts of the case are that the coil is the product of six months' intensive work on the part of three radio engineers seeking a new type of inductance that would be free from the drawbacks commonly associated with coils. Pioneering in a new field, without the successes or failures of previous experimenters to guide them, the pitfalls and blind alleys along the way were thoroughly investigated while slow progress was being made toward the ultimate coil.

Corrects Loss of Energy.

In ordinary layer-wound coils a considerable loss of energy takes place, due to the fact that, through a condenser action, the current tends to travel between adjacent wires as well as through the conductor itself. This condenser action is due to the "self" or "distributed" capacity of the coil, caused by the paralleling of the conductors. In the low-loss and honeycomb-coil type of windings, this is remedied to a certain extent by running the wires at right angles to each other and crossing at intervals.

The first experimental coil form was made by cutting out a circle of cardboard with little protruding tabs on the inside and outside edges. A narrow strip of pasteboard was bent around in the form of a circle and pasted on each side of the flat circle.

The original idea was to wind the wire around the form, hooking it over the tabs at intervals. When this coil was constructed and tested, it was found to be no better than present coils, due to the fact that the wires ran parallel to quite an extent, making the distributed capacity of the coil high.

The next attempt was made by winding the wire around the form, disregarding the protruding tabs, so as to make a closed coil, supported by the four edges of the cardboard strips. This coil was an improvement, so larger forms were tried and it was decided to continue to experiment with this type of coil.

Winding the wire over and over the circular form by hand became rather laborious, so one of the engineers tried winding the coil on a straight form, then removing and bending the coil in a circle to form a toroid coil. It was difficult to keep the wires in place with this method, so he tried pushing the wire in at every other face of the winding form with his thumb nail, so that a string could be threaded through the indentations and so hold the coil together when the form was removed. Measurements of this coil showed a decided improvement over other types, as the greater share of the losses, due to the distributed capacity and coil support losses, had been eliminated.

The Final Coil Developed.

Over two hundred coils were built up in this manner in search of the proper diameter, size of wire, and general over-all dimensions of the coil, consistent with low losses and efficient inductance. The coils held together with string proved to be too flimsy for practical use, so a form was designed to hold the winding made of a material that did not add to the capacity of the coil.

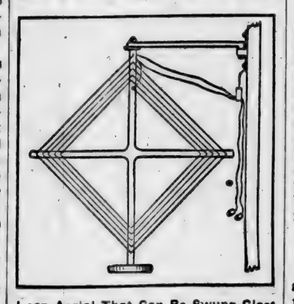
Now that the indentations in the winding for allowing string to be threaded through to hold the wires together were no longer necessary, it was found that they were responsible for the low distributed capacity losses and the high performance of the coils. Without indenting the windings, it was necessary to separate the wires further apart, resulting in a larger and more impractical coil, with magnetic field losses.

The final coil developed, the low loss doughnut coil, has the wires indented all around. Special complicated machines had to be developed and perfected to accomplish this. The coil is rigidly held in an attractive holder.

Comparative tests were run with every other type of coil obtainable on the market, for measuring losses. It was found that the doughnut coil had lower losses in every measurement than any other coil, and when built into a receiver had more volume and signal strength, tube for tube, and coil for coil, than had ever been known before.

Loop Aerial Mounting Saves Space on Table

My set is of the type that requires a loop aerial, but I found when ready to connect up everything that I did not have room on the table for the loop, writes a correspondent in Radio Digest. I fixed it up as shown in the sketch herewith. The loop was mounted base up to one end of a stick. I then obtained a bird-cage swivel hanger and secured it to the other end of this stick. However, a strap hinge will work just as good if handy.



Loop Aerial That Can Be Swung Close to Wall.

The swivel hanger or hinge is, of course, screwed to the wall or window frame. The loop, when out from the wall, can be turned in the desired direction at will. When not in use it is turned parallel to the wall and then swung against it. The idea is to have it out of the way when not using the set; this idea should prove welcome to many loop aerial users.—Alvor B. Olson, Portland, Ore.

Fixed Crystal Best for Portable Reflex

For a portable reflex set which requires a crystal detector it is advisable to use one of the fixed variety. Ordinary crystal detectors are difficult to adjust when miles from a powerful broadcasting station, because a steady loud signal is required to find the most sensitive point on the crystal. Fixed crystals require no adjusting after the set is once built. They are not, however, quite as sensitive, but are excellent for portable use.

Be sure of good bread; use Yeast Foam

Loquacity Not Fault of Barrie

Jerome K. Jerome, who says Sir J. M. Barrie is the most silent man he ever met, relates the following story in the Strand Magazine:

Once a beautiful but nervous young lady was handed over to his care. With the sole au gratin, Barrie broke the silence:

"Have you ever been to Egypt?"

The young lady was too startled to answer immediately. It was necessary for her to collect herself. While waiting for the entree, she turned to him.

"No," she answered.

Barrie made no comment. He went on with his dinner. At the end of the chicken en casserole, curiosity overcoming her awe, she turned to him again.

"Have you?"

A far-away expression came into Barrie's great deep eyes.

"No," he answered.

After that they both lapsed into silence.

Are You This Man?

I want to hear from the man who wants not only to sell honest merchandise, but render REAL service to the Farmer. Hundreds of men are now engaged with me in this work.

Many of these men are farm men. They came to us without selling experience and we trained them to sell.

We are the makers of the famous Colt Lighting and Cooking System—the largest firm of its kind.

Write me if you are really interested in learning our selling plan, drive your own car and are over 25 years of age.

H. F. Reiss, Vice-President, 30 East Forty-second St., New York.—Adv.

She Undid the Spell

Two ladders were leaning against a downtown building. Everybody walked around them, mindful of an old superstition, until a young man and a young woman happened by. They were looking into each other's eyes, didn't see the ladders and walked under them. But the young woman looked around. She saw the ladders. And with a little cry she went back to undo the spell. The second time past she walked not under but around. Other pedestrians laughed at her. But even those who laughed did not walk under the ladders.—Detroit News.

Men's Evening Clothes

A tailor tells us that there are five stages of evening clothes. At twenty a man gets his first dress suit, is tremendously proud of it, but is self-conscious that he isn't comfortable in it. At twenty-five he rather fancies himself in one, and wears it at the slightest provocation. At thirty he wears it as a matter of course, without much thought. At thirty-five he wears one, on special occasions, but does so protestingly. At forty he would have to be chloroformed to get himself into it.—Kokomo Tribune.

Cost of Poor Lighting

Investigators of lighting matters assert that the production in American factories can be increased by two and a half billion dollars through better lighting. This superior lighting is something, they add, that electricity is especially qualified to contribute.

To Have a Clear, Sweet Skin

Touch pimples, redness, roughness or itching, if any, with Cuticura Ointment, then bathe with Cuticura Soap and hot water. Rinse, dry gently and dust on a little Cuticura Talcum to leave a fascinating fragrance on skin. Everywhere 25c each.—Advertisement.

Javanese Colonization

Java plans to spend nearly $50,000,000 within the next ten years in construction of railways, hydroelectric plants and irrigation equipment in connection with colonization projects.

Less Horse Feed

Horse feed is giving way swiftly to auto fuel. Consumption of hay in New York, for instance, has decreased from 25 to 35 per cent in the last year.

SCHOOL DAYS

SOMETHING TO THINK ABOUT

By F. A. WALKER

VIALS OF HATE

AMONG the many poisonous things which we humans are prone to carry about us, and uncork with more or less frequency, are the diminutive vials of hate.

Hidden in the heart, these banes are brought forth when the heart beats a little faster than is its wont under the pressure of some imaginary wrong, to be scattered broadcast, quite regardless of where they may fall or whom they may injure.

If we could measure the truth accurately, we would find that most of the sorrows and upheavals which gnaw away our peace and happiness, are directly traceable to this common scourge.

In all grades of society, among all peoples, hate is ever seeking new victims.

It lifts up its flattened head like a deadly snake and shows its frightful fangs at every opportunity, spitting venom and striking from unexpected places with the swiftness of a rattler.

Character quails before its terrible hiss.

Homes are darkened and sorrowed by the plague it carries through the back door, to find its way to the drawing room and the bedchamber.

Some one has uncorked a vial of hate when blaring bugles call to war and nations are turned from their peaceful pursuits to face the killing guns; some one has uncorked a vial of hate and ruined the chaste name of a lovely maiden.

All along the pathway of life, hate leaves nothing but sobs and tears, creped doorways, curtained windows, crazed minds and bleeding hearts.

After all the human emotions have been mustered to the front, carefully weighed and inspected, it will be found that hate is the most treacherous, the most persistent, dangerous and destructive.

If we suspect that we have a vial of hate hidden in the pockets of our hearts, or beneath our tongues, let us proceed without another moment's delay to find it and fling it away, so that we may preserve our good name, the tranquility of our home and our country and perhaps the salvation of our souls.

THE YOUNG LADY ACROSS THE WAY

The young lady across the way says the income tax isn't bringing in as much as it was and she supposes the government won't have much money on hand until the next bond issue is paid off and it gets the actual cash.

(© by McClure Newspaper Syndicate.)

Among the NOTABLES

FRANCOIS CATREAU-BRIAND

FRANSOIS RENT CHATEAUBRIAND was politician, rhetorician and author, a great figure in French literature who marked the transition from the old classical style of writing to the modern romantic school.

He was born September 4, 1768, in St. Malo, a region of France filled with legends and quaint customs which impressed him considerably. His father was strangely morose, his mother extremely pious, his sister passionately devoted to him—and all these influences tended to bring out the romantic in him, to give him a love of mysterious things and to build up his egotism.

He escaped persecution during the French Revolution (which occurred when he was a young man) by an attempt to discover the Northwest passage, during which journey to the Western continent, he found material for his "Atala," a sort of Paul and Virginia story. The piety of his mother must have influenced him greatly, for he labored years over a great work on the Christian religion, which was published just as Napoleon re-established the Catholic religion in France, and which brought him great political favor.

Chateaubriand was a great literary figure of his time, and his political pamphlets were works of great importance, though, curiously, his own opinions varied again and again.

(© by George Matthew Adams.)

WHO SAID

"Great pleasures are much less frequent than great pains."

THE man who uttered this expression was a philosopher, whose philosophy is marked by the rather serious view of life which is to be noted in the phrase quoted above.

Life to David Hume was a sober thing—a thing to be taken with seriousness and regarded as a stepping stone to some future existence where one's status would be determined by his conduct here. "Great pleasures" were scarce in his life and not nearly so frequent as "great pains." In fact, it is safe to say that great pleasures were viewed askance by men of the school of David Hume, who retained the ides of the Puritans—that pleasure was an invention of the Devil and must be indulged seldom.

Hume is best known as a historian and philosopher. His best known works are an "Inquiry Concerning the Principles of Morals," and a "History of England," the first written in a philosophic vein while the latter is purely historic. In the year 1754 Hume published the first part of his "History of England," but it was not until 1761 that he completed it. His "Inquiry Into the Principles of Morals" was written and published in the year 1752.

The publication of the "History of England" brought considerable fame to its author and he was well rewarded financially for his work. In addition to the royalties he received from the publication of the book, he received a pension from the government because of the reputation it made for him.

Hume was born April 26, 1711, reckoning the years by the old style calendar then in vogue. In 1741 he became secretary to General St. Clair and traveled with him to the courts of Vienna and Turin on behalf of the British government. In this capacity he procured much valuable material which was later used in writing his history. He died in Edinburgh, Scotland, the year that the American Declaration of Independence was signed.—Wayne D. McMurray.

Icebergs on Lake in Glacier National Park

Icebergs are usually thought of only in connection with the sea, but there are a few places where glaciers have their outlet on bodies of fresh water and where masses of ice float about on lakes, writes T. A. Church in St. Nicholas. One of these is in Glacier National park, in Montana, and visitors pronounce it one of the most spectacular features of this scenic wonderland.

Iceberg lake, as this body of water is most appropriately called, is about seven miles from the famous Many Glacier hotel, and lies in an amphitheater formed by the precipitous Cathedral wall and Mount Wilbur. Between the lake and the cliffs is a glacier, fronting on the water, and large blocks of ice break from its face, so that there are icebergs in the lake, in midsummer.

The snow for the formation of the glacier blows over the walls of the amphitheater, and collects in the basin in huge drifts. These, thawing and freezing, result in ice. The outlet of the lake is too shallow to allow the icebergs to pass out, so they melt there, with the result that the water has, even in summer, a temperature of only 39 degrees Fahrenheit. Despite the coldness of the water, many visitors swim in it and are photographed scampering about on the ice floes.

Near Iceberg lake is Gunsight lake and Gunsight pass, the latter being one of the most famous passes over the Continental Divide. Glaciers are on every hand, and dozens of streams tumble into the picturesque lake. At one time a fine chalet was located on the shore, but it was swept away by an avalanche. Ice may occasionally be seen floating on Gunsight lake, but most of the glaciers which feed the lake are high above the water. The Blackfoot glacier, two miles distant, is the largest in the park, covering an area of ten square miles.

How Sargent "Got" Them

Only a fortnight ago Mr. Ernest Ipsen, a distinguished portrait painter himself, in talking of the character displayed or concealed in the faces of sitters, told me a story of Sargent. It seems that in painting Wertheimer, the artist was watching eagerly for the psychological moment. "Finally," said he, "I deliberately asked him a question about an interesting investment—then I got him." But indeed he nearly always got them; the strong set face of a soldier, like General Wood, the lady whose gowns were more important than herself, and the lady whose face in its character would make you forget any gown, the wind and sea tan on the skin of an admiral, or the soft texture of the complexion of a little Beatrice Goelet, the person who was bursting with health and the one who would soon see the doctor.

Yes, he got them.—Edwin H. Blashfield, in the North American Review.

Private O'Leary, V. C.

Michael O'Leary, one of the first men to win the Victoria cross in the war and now a resident of Canada, has been released from custody by United States immigration officials; he has been cleared of the charge of trying to smuggle aliens into this country. Michael won the cross in the early fighting in the Ypres sector. Alone, he advanced up to an enemy machine gun nest and killed half the crew, compelling the other half to surrender and bring their guns along with them. Michael was brought to London to be decorated by the king. Admiral Lord Fisher, that hard-bitten old sea dog, was standing about at the time of the ceremony and remarked: "Mr. O'Leary, you're a d—d good fighter, I wish to God I had you in the navy!"—Pierre Van Paassen in Atlanta Constitution.

Plaster of Paris Houses

Gypsum, commonly called "plaster of paris," which has been used for centuries for plastering walls, is the essential part of a new fireproof building material. Mixed with cinders, gravel, crushed stone or furnace slag, and poured in forms, it can be used in the construction of one and two-story houses at a cost that compares favorably with that of wooden buildings, says Popular Science Monthly. In a recent laboratory test the outside of a six-inch gypsum concrete wall was subjected to a temperature of 1,700 degrees for an hour, and at no time did the interior surface become warm.

Began "Digging" In

During their advance to the Marne, the Germans left sappers behind them to intrench a position on the Aisne to which they could return if necessary. After their retreat from the Marne, following the first phase of the Battle of the Aisne, September 18, 1914, they took up their position behind the trenches and the trench warfare, which featured the World war, began.

Torch Fights Fires

A new apparatus for fighting forest fires consists of a kerosene blow-torch, useful for setting backfires, says the Popular Science Monthly. By its use all the firing, it is claimed, can be done by one experienced man, thus reducing the attendant danger to a minimum.

Wholly Untrue

"John, dear; dinner's on the table. Now don't rush; take your time and finish reading your story—there's no hurry."—Life.

Croatian Railroads

Railroads connecting Croatia with the ports of Sebenica and Spalato are being constructed.

HERE AND THERE

Call on M. T. Bishop for Mend-Well Paste.

Mr. and Mrs. Ray Koch and children, spent Sunday at Fort Wayne.

Mr. and Mrs. J. E Foltz attended a family reunion at Ohio State Dam Sunday.

The Bassett family reunion will be held next Sunday at the home of Sol Ely, near Cederville

Derwood Ridgway and Glen Freeburn with their wives, were Fort Wayne visitors Monday.

Miss Dorothea Scholes spent over Sunday with her sister, Mrs. Robert Ulm, and family at Butler.

John Dilley and family of near Waterloo and Frank Baker and family of north of town, were Sunday guests of Mrs. Anna Dilley.

J. D. Kuhns, of Springfield, O., Field Secretary for Wittenburg College, spent the past week in this territory, in the college interests.

Mr and Mrs. H. F. Myrtle, son and mother, Mrs. Frank Myrtle, all of Chicago, stopped at the Wm. Randall Sunday and Monday enroute to New York.

Mr. and Mrs. Harley Philips, daughter, Nina and son, Donald, of Chicago, are here guests of Mrs. Philips parents, Mr and Mrs. Ed Lindley and also in the home of her uncle, Harvey Lindley.

C. C. Bassett and family had as Friday afternoon guests, Mr and Mrs S N Brunson, daughter, Ethel and son, Robert, of Waterville, Ohio, Mrs A. D. Brunson and Tom Brunson and family.

Mr. and Mrs. J. P. Buckingham returned home Thursday from Ann Arbor, Mich., where they had been with the latter's brother, C. J. Foltz, who had been there a patient in the hospital for the previous week.

Indianapolis Piano House has player piano near St. Joe. Want someone to take it over and pay balance due. Terms to reliable party Write M. Blocher, 35 Monument Circle, Indianapolis, Indiana.

John Crothers and Charles Bassett attended the Twelfth District Convention of American Legion, held Sunday at Oliver Beach, in Lagrange county. The former's family accompanied them as far as Auburn where they visited Mrs. Crothers parents.

Miss Thelma Dickenson, Home Economic teacher of Butler, will take the place of Miss Marguerite Milliman in the County Girls Club work Miss Milliman, who recently suffered an operation for appendicitis, will not be able to do the work for some time.

Friends here will be pleased to know that Miss Phyllis Rickett underwent a successful operation for removal of badly infected tonsils, Monday at Dr. Fannin's office, at Butler. She will remain at the Robert Ulm home this week while convalescing.

A number from here attended the Newville Home Coming at the Church of Christ. While the attendance was not so large as last year. Elder Thomas gave two very inspirational addresses. Dr. Charles R. Scoville, who usually speaks at these meetings could not be present because of being in a meeting in Texas.

Donald Kinsey is enjoying his vacation this week.

Lewis Griest, of Hicksville, was a St. Joe visitor Monday.

Harcourt Miser has taken the place of Mrs. Lena Meek at the postoffice.

Mr. and Mrs. Charlie Koch with their sons and wives, spent Sunday at Selina, Ohio.

Mrs. Guy Kilpatrick and little daughter, Margaret, of Fort Wayne are here guests of Dr and Mrs. C R. Price.

Chas. Quance and wife and Fred Quance, of Fort Wayne, were Saturday night and Sunday guests of relatives here and at Concord.

Mr. and Mrs. J. S. Crawford and Garrett Crawford of Sherwood, O Mrs. Del Crawford returned home with her husband after spending several days here in the Terman home helping to care for Mrs Terman.

PATTERSON FLETCHER'S GREAT HALF-PRICE SALE ANNOUNCED IN THIS ISSUE

Elsewhere in this paper you'll find an advertisement of Patterson-Fletcher's announcing that their GREAT HALF PRICE SALE begins Thursday morning, July 30th.

This sale is an annual merchandising event with this well known firm, and thousands of men, young men and boys wait each year for their announcement to supply their clothing needs. For more than thirty years Patterson-Fletcher's have been selling fine clothing and this sale gives those who want to practice economy an opportunity to buy fine merchandise at a Big Saving.

During this sale there will be men's and young men's and boys' suits, odd trousers, men's and boys' furnishings, straw hats, caps, hosiery, handkerchiefs, etc., that will be sold at just half of Patterson-Fletcher's regular prices which are always lower, quality and make considered, than the same merchandise is sold for in other stores.

Many thousands of customers will attend this sale and they will be from every city and town within the trading radius of sixty to seventy-five miles of Fort Wayne. Everywhere Patterson-Fletcher's Great Half Price Sale announcement causes a general moving of economically inclined buyers toward this great merchandising center.

INDIANA STATE NEWS

Indianapolis.—Field examiners of the state board of accounts made a report to the board on their investigation of the conduct of the office of city judge of Elkhart by Judge Walter G. Walker. The report charges discrepancies and irregularities aggregating $2,898.69 in the handling of funds, including fines, docket fees and other money, but it points out that Judge Walker has repaid $2,679.69 of the amount, leaving, the examiners said, a balance of $219. They reported he made errors in the distribution of money received in part payments of fines paid on the installment plan.

Anderson.—The work of paving state highways Nos. 11 and 37, connecting Anderson with Indianapolis, Marion and Muncie, will be finished about October 15, it was said by J. E. Shelton of the Indiana highway commission. The Anderson-Muncie section lacks only three miles of being finished. Ten miles remain to be paved on the Anderson-Indianapolis stretch. Only seven miles remain unpaved on the Anderson-Marion highway.

Indianapolis.—Indianapolis steadily is approaching a population mark of 400,000 persons, carrying out predictions that have been made by civic and industrial leaders, a study of available census figures discloses. The city had a population of 371,745 June 1, according to estimates of R. L. Polk & Co., compilers and publishers of the city directory. This figure showed an increase of 12,745 during the preceding twelve months.

Indianapolis.—Arthur L. Gilliom, attorney general, declared in an opinion to the state highway commission that the commission may proceed with plans, specifications and survey for a bridge over the Ohio river at Evansville, without consent of the federal government. Construction of the bridge, jointly by Indiana, Kentucky, Vanderburg county and the federal government, was authorized by the legislature.

Elkhart.—A protective association to guard against bank robberies and holdups through units of armed vigilantes in every town and city was formed at a meeting of the Elkhart County Bankers' association. Elhart is the sixty-seventh county of the state to form such a body. James G. Rylands of the protective department of the state bankers' association assisted in the organization.

Avoca.—A record for fish planting in streams and lakes of the state was established in June, when 571,224 were placed in various public waters. According to the report of George Berg, hatchery superintendent, to the state conservation department, this is the largest number of advanced fry planted in any June since the hatcheries have been in operation.

English.—As a step in its campaign to stimulate interest in the Sunday school work in the county and to increase attendance at the sessions the Crawford County Sundny School association, which is interdenominational, has posted cards reading "Select a Church and Go to Sunday School." The placards are found in every public place over the county.

Hammond.—Lake county bankers wall pay $2,500 for the body of a dead bank bandit. This was announced following a meeting of representatives of 85 banking institutions here. As a result of that meeting every bank in Lake county will have a special deputy shcriff, fully armed, on guard at all times. For the capture of a live bandit the bankers will pay $1,000.

Indianapolis.—E. J. Barker, secretary of the state board of agriculture, predicts that the new cattle barn will be filled to the limit with entries during the state fair this year. "There is an amazing number of exhibitors of shorthorn cattle from other states, some of whom never entered an Indiana show before," Mr. Barker said.

Monticello.—Bernard A. Vogel, age fifty-seven, for many years cashier and a director of the Monticello National bank, died at St. Elizabeth's hospital, Lafayette, after an illness of several weeks. He had submitted to an operation for appendicitis. Mr. Vogel was president of the White county Bankers' association.

Indianapolis.—E. A. Gannon, associate in dairy extension of Purdue university, has been appointed superintendent of the cattle department of the 1925 national dairy exposition, to be held in Indianapolis October 10 to 17, W. E. Skinner, exposition secretary and general manager, has announced.

Clinton.—Julius Judson Higgins, former state senator, age seventy-six, died at the wheel of his auto here. Death was attributed to either heart disease or paralysis.

Indianapolis.—Delegates from all parts of the United States will attend the national Christian Family convention, which will be held in Indianapolis October 4 to 14.

Indianapolis.—An increase over 1924 of approximately $5,000,000 in the assessed valuation of real estate in Vanderburg county for 1925 was disclosed in figures presented to the state board of tax commissioners, sitting as a board of review.

Attica.—Ward Caster, twenty-two years old, was injured fatally while at his work on highway No. 10 near Veedersburg. He fell from a gravel truck and a truck following closely behind the one on which he was riding struck him and passed entirely over his b

ROAD BUILDING FOR 1926 BEING PLANNED

Indianapolis.—Members of the state highway commission were in conference recently at the commission's offices with John D. Williams, director, and discussed the preliminary aspects of the commission's program of road and bridge construction work for 1926. The conference was the direct result of the wishes of Governor Ed Jackson, who is of the opinion that the commission should outline its program as soon as possible.

Governor Jackson is desirous that the commission in 1926 carry out the most extensive paving and general construction program it ever has undertaken in a single season. Under the new budget law the state highway commission will have $1,250,000 for bridge construction and $5,250,000 for pavement construction, to which is to be added money available from the federal government in federal aid. These two appropriations will be available October 1, 1925.

Lincoln City.—In company with members of the state highway commission on a tour of state highways in southwestern Indiana, Gov. Ed Jackson stopped here at the Nancy Hanks Lincoln park and visited the tomb of the mother of Abraham Lincoln. The reception committee was headed by A. J. Wedeking of this city, formerly a member of the state legislature. The people of this locality are interested in having the governor take definite steps to have needed improvements made which will convert the burial ground of President Lincoln's mother into a real state shrine. The tour, which was made by automobile, started from Indianapolis Tuesday afternoon. The first stop was in French Lick, where the governor and his friends were the personal guests of Thomas Taggart, veteran Indiana Democratic leader, at his hostelry, the French Lick Springs hotel. The governor and members of the commission, especially Mr. Burch, discussed to some extent the matters concerning the state road program and the affairs of the highway department.

Frankfort.—Hearing of the injunction suit filed recently in the Clinton Circuit court by the T. H., I. & E. Traction company against the Hiner Red Ball lines and the Red, White and Blue Coach line has been continued indefinitely by Judge Earl Stroup. The continuance was ordered by the court after he had received a telegram from Indianapolis attorneys saying an agreement had been reached and the suit would not be pressed.

Lafayette.—An event of particular historical significance to Indiana will take place September 27 to 30, when Lafayette and Tippecanoe county will celebrate the one hundredth anniversary of the founding of the settlement on the banks of the Wabash. A four-day program, which will be featured by a $10,000 pageant, "The Heritage," produced by Miss Esther Janett Simon of Winchester, has been arranged.

Indianapolis.—A stricter enforcement of all laws, stiffer penalties, quicker trials and a closer co-operation between the judiciary and the law enforcement agencies of the country were advocated by Albert A. Carroll of Grand Rapids, Mich., president of the International Association of Police Chiefs, in his address at the association's annual convention here.

Indianapolis.—Included among the 59 regular army officers and noncommissioned officers who have been ordered to act as instructors of the Indiana National Guard in its two weeks' training at Camp Knox in August, are many who have been assigned with guard units in Indianapolis and other Indiana cities.

Indianapolis.—The State Federation of Branches of the American Association of University Women will publish a monthly magazine bulletin, beginning with the September issue. Copies will be sent to all local and national members in the state. The Indiana federation is the first group to establish a local magazine.

Indianapolis.—Frederick E. Schortemeier, secretary of state, says that all lobbyists active during the last session of the legislature have reported to him. It is said that this is the first time in the history of the state that reports have been received from all lobbyists, although the law requires that they must submit them.

Indianapolis.—W. T. Martindale of Wilkinson was reappointed organization director of the Indiana Farm Bureau Federation for another one-year term beginning September 1, at a meeting of the board of directors of the bureau Tuesday.

Terre Haute—William Kidder, age ninety-three, a factor in the development of Terre Haute during the last half century, died at his home recently.

Warsaw.—Fire threatened Kosciusko lodge, one of the largest hotels at Winona lake. The fire was discovered in the room of the south wing, having started from sparks from a kitchen chimney. The blaze was extinguished with slight loss. The hotel, which is located near the south end of the park, is owned by Mrs. W. A. Sunday.

Indianapolis.—Mrs. B. B. White of Terre Haute, president of the Indiana League of Women Voters, has been appointed league representative on the committee on rural education of the state department of public instruction.

Mannish Mode Is Losing Prestige

The spring compromise has been extended to summer and the mode is still casting bewildered glances, now at the unadorned severity of the mannish costume and now at the dainty fragility of the feminine frock. The situation is unique in the annals of fashion—perhaps never before have two diametrically opposed tendencies pursued their even tenors so long undisturbed, each stubbornly retaining its popularity. If the semi-masculine drive had commenced a year earlier, its domination would have been complete; if the firm hold of the straight-line had been less tenacious, airy femininity would have reigned alone. As it is the issue is still clouded and the mode, sanctioning both, has been forced into a liberality it seldom relishes and will not long continue, says a fashion writer in the New York Herald-Tribune.

The severe mannish vogue was occasioned by a series of circumstances, fortuitous for those to whom that type of dress appeals. The tailleur had been knocking at the door for several seasons, and milady, tiring of older styles, had begun to lend a more responsive ear. The unprecedented popularity of the bob and the short skirt furnished splendid propaganda for further extensions of the less frilly masculine ideal. Greater than these, the youthful straight-line had come to the beginning of the end, and the beginning of the end of any mode is a phase always characterized by the most bizarre extremes.

The feminine vogue on the other hand was a natural reaction against a group of "simple and youthful" tendencies which had overstayed their time—which had actually begun with the war and which were now being pursued to limits which lacked the relieving grace of charm. Smart women eagerly welcomed the flare and its vogue was wide and instantaneous, and yet the flare was far more significant as a gesture than as a fashion—its decorative touch was a definite protest against an increasing unadorned severity which was threatening the art of the mode.

The Eternal Feminine Returns.

Eventually one of these tendencies must prevail, and only a close analysis can clear the maze. The fact that frills are more abundant these summer months has little bearing on the situation—torrid days always necessitate gossamer fabrics and these do not easily lend themselves to the severe tailleur. It is apparent, however, that of the two governing impulses of fashion one is the final flare of a departing cycle, while the other is the initial manifestations of the future mode. The mannish style is the last attempt of the simple straight-line to maintain its place in the sun—the gentler jabots, frills and flares are harbingers of the graceful femininity that is to be the newer portion of the mode. Both are en regle for the moment, but if you wish to march with the advance guard of the fashionables, you will make your selections from the frocks which do not essay to make the modern maid an amazing duplicate of her brother.

Inverted Box Plaits and Rows of Fagoting Are Featured.

Some interesting models are mute evidences of the approaching triumph of the eternal feminine—and they are typical of the styles launched at what are called the demi-openings. Their essential femininity is at once apparent—there is nothing of the unnatural unadornment of the closely coiffed and sharply tailored ladies. And a review of some of the representative mid-season salons will serve to substantiate the impressions of returning furbelows.

In her demi-season collection Chanel features some attractive black frocks having the same charm and youthfulness of lines so distinctly her first consideration in all creations. One of her new dinner frocks is of black mousseline de soie and has a flounce attached to the skirt at the hip-line which is edged with a ruching made in the same manner as the single flower which Chanel used on the lapel of her spring coats. The scarf continues to be a feature of such dresses. With this particular model the scarf is a straight piece of black chiffon about ten inches wide and is not attached to the dress. Often these little scarfs take the form of a tiny shoulder cape, a practical touch, as the cape is frequently not more than a handkerchief to carry in the hand when not needed to cover the shoulders.

Panel, Flounce and Godet.

Chanel has entirely departed from printed fabrics in her new models. Indeed, there is a tendency in all of the demi-season collections to get away from the printed materials which have been so popular for the last two years. The Miller Soeurs are showing a new collection featuring the most wearable frocks, all of solid colors, using no printed fabrics even as

Charming Combination of Flowered Silk and Crepe de Chine.

trimmings. The line is fairly straight but there is considerable more flare to the skirts than heretofore. Red is a favored color in evening dresses of crepe georgette or mousseline de soie, these usually having two circular flounces on the skirt and often a long straight panel either at the side or attached to one shoulder so that it may be used as a scarf. One of the most popular models is made of a rich red crepe with a plain flat bodice and a skirt of many godets finished around the bottom in small scallops. A beige crepe afternoon frock is attractive, made on straight lines with the skirt slashed at the front to show a black satin foundation, giving the effect of a tunic coat—a style that is being featured by many of the important French dressmakers.

Only two of the Miller Soeurs evening models have a beaded design. All other dresses depend entirely on good lines for their charm. This house shows a tendency to slightly shorten the waistline, though it does not go as far as to insist upon the normal waistline. Practically all of the models that have been shown in red have been reproduced in black. Brown has a similar popularity and there is no doubt that these sober shades will be most acceptable in the autumn after a very colorful summer.

Waning of Mannish Vogue.

It requires no crystal gazer to read the handwriting on the wall. From the details of the summer and advance autumn collections and from the marked preference shown by the continental haute monde, it is clearly evident that the mannish vogue has reached the end of the trail. In less exclusive circles its vogue may be prolonged for another season, but for the beau monde its appeal is waning. Numerous attempts will be made to extend its dynasty by those whose interests are involved.

The tendency is distinctly toward a greater amount of softening details—gradual flares, back flares, lace, jabots and the like—and the smart mode for summer and fall will once more be dominated by the eternal feminine.

Black, navy blue and brown are favored in the Jenny collection for all types of dresses, the monotony of the somber colors being characteristically broken by bits of trimmings in bright colors. A trimming of colored buttons is frequently employed on black dresses, and tiny composition pendants developed in varied colors often appear instead of flat buttons. A black poplin de laine frock has a row of these pendants in red, green and yellow around the bottom of the skirt and finishing the sleeves. A brown kasha dress has a plaited skirt with the plaits held down by bands of brown silk of a darker shade, these bands trimmed with buttons. Another kasha frock is trimmed in colored square buttons. Diamond-shaped buttons in bright colors are also employed to carry out Jenny's favorite trimming in Roman stripes.

ROAD BUILDING

POORLY BUILT ROAD CREATES LIABILITY

When a road is built that will not outlast its cost, the builders are buying trouble and paying cash for it. They borrow money to buy a liability—create a debt to buy something that will be a continual expense until it finally becomes a total loss through being worn out. And borrowing money to build a road that will not last under modern traffic conditions is unsound finance. In the old days of macadam and gravel roads it was no uncommon occurrence for a county or township to have as many as three sets of outstanding bonds on a main traveled highway. The sooner a bad road is put out of existence, that much sooner will a wholly unnecessary expense be cut off. Not only that, but land values will begin to improve.

Permanent road building costs money, and it is well to look at the cold-cash side of the proposition. True, the beneficial effects upon the social and educational standards of the community are not always susceptible of exact calculation, but they are certain to come; and since a permanent road costs money, we must know there is to be a profit from somewhere to offset the cost. Something for nothing has never yet been found. Profits from a permanent road come to the farmer in the reduction of hauling costs. It puts him in a position where he can get to market every day, and where he can haul two loads at one trip instead of having to make two trips to haul one load. These are a few plain reasons why a good road should be built, rather than continue trying to maintain a bad one.

How to get a good road system is not a difficult problem if a county or township is willing to be guided by common sense. The first step is to employ a competent highway engineer. He will make a study of traffic conditions, ascertain where the main market road runs, and build accordingly, constructing feeder lines to the main market lines with a type of material that will be less expensive than that required on the main market lines, and yet will at the same time meet all traffic requirements on the feeder lines. The main lines, if built with a solid base will be permanent.

Bridging Major Streams Helped by Federal Aid

One of the most helpful results of federal aid to road construction has been the bridging of major streams which it has encouraged and made possible, according to the annual report of the bureau of public roads of the United States Department of Agriculture. Such streams are, in many cases, the boundaries of counties or states, and the necessity of securing joint action of the authorities of the two political divisions, coupled with the inadequacy of funds available, has made the construction of modern structures over wide rivers an almost hopeless problem. Yet it is evident that no continuous road system is possible without bridging these barriers.

Federal aid and the co-ordinating influence of the federal government have been the means of securing practical action in a great many cases of this sort. The careful study of the principal lines of travel leading to the designation of the federal-aid highway system has developed clearly the need of bridges of this character over certain streams and has brought about agreement as to the locations in which the bridges should be built. This benefit has been experienced by the majority of the states, especially those of the South and the Mississippi valley.

Illinois Is Leader

Recent construction reports show that Illinois now is the unquestioned leader in pavement mileage, with California second, New York third and Pennsylvania fourth. The Illinois state highway department has succeeded, this season, in constructing more than one-sixth of all roads laid in the United States.

Good Roads Facts

North Carolina has the longest asphaltic hard-surfaced highway east of the Rocky mountains, the road extending 165 miles.

• • •

Enough highways to circle the earth, 24,000 miles in all, are scheduled for construction in the United States during 1925 by various state highway departments. Good roads are coming to be a reality in all states of the Union.

• • •

Twenty-four thousand miles of state highways are scheduled for construction in 1925, according to the United States bureau of public roads.

• • •

The state highway department of Pennsylvania has completed renumbering more than 376 separate highway routes and combining them in less than 80, through trans-state thoroughfares. Motor tourists coming upon these routes at the border can follow them the entire length or breadth of the state.

IMPROVED UNIFORM INTERNATIONAL

Sunday School Lesson

(By REV. P. B. FITZWATER, D.D., Dean of the Evening School, Moody Bible Institute of Chicago.)

(©, 1925, Western Newspaper Union.)

Lesson for August 9

BEGINNING THE SECOND MISSIONARY TOUR.

LESSON TEXT—Acts 15:36—16:5.

GOLDEN TEXT—"He shall have dominion also from sea to sea, and from the river unto the ends of the earth." —Ps. 72:8.

PRIMARY TOPIC—How the Boy Timothy Became a Missionary.

JUNIOR TOPIC—Silas and Timothy Become Missionaries.

INTERMEDIATE AND SENIOR TOPIC—Missionary Recruits.

YOUNG PEOPLE AND ADULT TOPIC—Strengthening the Churches.

I. Contention Over John Mark (ch. 15:36-41).

1. Paul's Proposal (v. 36).

This was to revisit the scenes of their missionary endeavor, and see the state of the believers—what progress they were making in their Christian experience. This is a pattern for missionaries in all ages and countries.

2. Barnabas' Determination (v. 37).

It was to take with them John Mark. The human relation of these men was uncle and nephew, (Col. 4:10).

3. Paul's Opposition (v. 38).

He was suspicious of Mark because of his desertion on the former journey (Acts 13:13).

4. Their Separation (vv. 39-41).

Their contention was so sharp that they separated. It is impossible to absolutely determine which of these men was right. It is quite clear that both were sincere. That John had done wrong in turning back could not be disputed. That one failure in a young Christian should condemn him for life is a wrong conclusion. It may be that nearness of relationship warped the judgment of Barnabas. On the other hand, this very fact may have given insight into Mark's nature which better qualified him to judge of his fitness than Paul. Then again, it is to be presumed that Paul, whom God was thrusting out to be the leader, had a clearer understanding of the matter.

Besides it may be that this sternness of Paul was the very thing that brought Mark to his senses. Frequently the demands of justice make the man. This painful incident resulted in these devoted missionaries parting company, but God over-ruled it to the wider extension of the work. Barnabas took Mark and sailed to Cyprus, and Paul chose Silas, and being recommended by the brethren unto the grace of God, went through Syria and Cilicia confirming the churches. The fact that Paul went forth with the recommendation of the brethren may be a vindication of the rightness of his action. It is comforting to know that the frailties of men cannot thwart the purposes of God, nor even delay them. One of the most serious difficulties in Christian work at home and abroad, is to get Christians to work harmoniously together.

II. Finding Timothy (ch. 16:1-5).

1. The Place (v. 1).

This was at the very place where Paul on his first journey had endured cruel stoning. The conversion of this young man may be regarded as the fruitage of his testimony at that time.

2. His Parentage, (v. 1).

His mother was a believing Jewess, and his father a Greek. The mother's name was Eunice (II Tim. 1:5). Timothy's unfeigned faith had passed from his grandmother Lois through Eunice to him.

3. His Character (v. 2).

He had a good reputation in the church at Lystra and Iconium. This shows that the young man from the very first had followed in the footsteps of his spiritual father as a witness for Christ.

4. Timothy Circumcized (v. 3).

Though Timothy had been carefully instructed in the Word of God by his mother and grandmother, the Mosaic rite of circumcision had not been complied with. Doubtless this was because his father was a Gentile. In order to avoid offense among the Jews, Paul circumcised Timothy. This may seem strange in the light of the decision of the Jerusalem Council which set them free from this rite, but it showed his willingness to conform to any reasonable demand for the sake of expedience. However, when this act involved principle he was unyielding, as in the case of Titus, when he refused to have this done at the behest of Judaistic teachers, (Gal. 2:3).

5. The Ministry of Paul and Timothy Through the Cities (vv. 4-5).

It is likely that at this time Timothy was ordained (I Tim. 4:14). They went through the cities and delivered the decrees which had been ordained at the Jerusalem council (Acts 15:19-24). This resulted in the establishment of the churches in the faith, and the daily increase in the number of believers.

To Love God

To love God is to hate delusion and to long to know that which really is.—The Spirit.

Personality

Personality has been well defined as "capacity for fellowship."—C. A. Anderson Scott.

Abraham Lincoln Said:

"God bless the churches, and blessed be God who gives us the churches."

AUGUST

RESIDENCE ON WHEELS VERY COMFORTABLE

G. L. Mosher (left) and M. A. Hurd (right) with their residence on wheels at Hallowell, Maine, which is said to be one of the most comfortable ever designed to carry the traveling vacationist.

TRAFFIC CONTROL VERY IMPORTANT

Matter of Right-of-Way on Streets Still Continues Paramount Issue.

(By C. B. AUOL, President National Safety Council.)

The first automobile brought with it a complex problem which has increased in complexity until at the present time it affects, directly or indirectly, every inhabitant of this country. There are now 17,700,000 automobiles registered in the United States, and it is estimated that by 1950 there will be 30,000,000. There is one automobile for every six people in this country. Cities were almost wholly unprepared to meet this new age of transportation, and the question of traffic control has risen suddenly in importance. Almost anyone who travels the streets of our large cities either afoot or in the cushioned seats of an automobile realizes the vast necessity for adequate means of controlling traffic.

Right-of-Way Question.

One of the quibbles of motorists and pedestrians is: Who has the right-of-way? A poet with an ample sense of humor has written an ode to the man who died maintaining his right-of-way. Laws have been passed in an attempt to define the matter of the right-of-way on the streets, but still it continues as a paramount issue in the traffic control problem.

It is demonstrated daily in the larger cities that proper control and supervision of traffic has resulted in fewer accidents. Elimination of left-hand turns, segregation of street traffic, pedestrian control, traffic officers, synchronized traffic lights, and numerous other devices have been invented to lessen the hazards to life and limb. Busy streets where traffic is thus controlled have much fewer accidents, in proportion to the number of vehicles and pedestrians, than uncontrolled streets have.

Traffic-Control Problem.

A feature of the traffic-control problem is the increasing importance of mechanically operated control. The traffic officer is becoming a huge burden of expense to the larger cities. In the congested districts there are sometimes as many as four or more officers on each of two or three shifts supervising the traffic at one intersection. The salaries of these men, capitalized at 6 per cent, sometimes represent a permanent investment of half a million dollars for one intersection.

As an example of what the synchronized traffic signal can do for traffic, the city of Chicago may be cited. Michigan avenue, which is an unusually wide street, bears the heaviest through-traffic in that city. In the length of street covered by the traffic lights, fatalities have been reduced 75 per cent since the lights were installed two years ago. The use of these signals has been found to speed up traffic during the rush hours, although it slows it during the non-rush periods.

Friction Common Cause of Engine Overheating

Every machine, whether a mechanical motor or the human body, requires thorough oiling in order to secure efficient operation. Where there is improper oiling, there is friction, and where there is friction, heat generates. Heat, in the last analysis, is responsible for burnt-out bearings in motors and death by scarlet fever in human beings.

It is generally believed that in the oil sump there lies a pool of oil, into which the bearings dip and which the motor pump forces into the various running parts of the motor. This is only half the truth. When a motor has been running long enough to be warm, it heats the oil and creates a mist, or fog, of tiny oil particles, which permeates thoroughly all the lower parts of the motor. The danger in letting your oil supply run low is in thinning out or entirely abolishing this oily mist. This is a danger you cannot see. You will be made aware of it by watching the heat indicator on the radiator cap, however, and should the mercury in this show a swift rise, look at your oil. Ask your garage man, and he will tell you that burned bearings, scored cylinder walls and broken rods are some of his chief items of repair—due to low oil supply.

Tips on Washing Car

1. Wash the car only when necessary.
2. Use plenty of water, good soap, a sponge and two chamois.
3. Wait until the hood and radiator are cool.
4. Remove the dirt by washing, not by spraying with the hose.
5. Don't fuss with the electric lights while your hands are wet.
6. Use the best chamois on the windows and hood.
7. Have the chamois soaking in water before going to work.
8. Rub the nickel trimmings with a dry rag after chamoising.
9. See that the ignition wires and distributor have not been wet in the washing process.
10. Do not try to polish the enameled fenders in the damp atmosphere of the washstand.

Give Steering Gear and Brakes Right Attention

There are two elements of every motor car upon the perfect operation of which vitally depends the lives and limbs of the passengers. These are the steering gear and the brakes.

The engine may "go dead," the gears strip, or important parts of the mechanism may break, with not more serious result than delay, inconvenience and a repair bill; but when the steering gear fails, an accident of a more or less serious character usually takes place, explains an expert. It is thus obviously advisable, as a reasonable precaution, frequently to inspect all parts of the steering gear with the utmost thoroughness in order to forestall derangements.

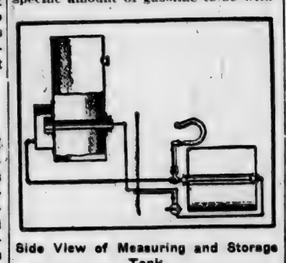
All steering gears are very much alike, and consist of these parts: The steering column and steering device usually located at its lower end under the hood, with its crank extending down under the car; the drag-link, which connects the steering crank with the knuckle of one or the other of the front wheels; the parallel rod, which connects the knuckles of the two front wheels and the pivoted knuckles of the two wheels with their spindles and pins.

In a general way the inspection of a steering gear consists in assuring oneself that the fastening devices connecting these parts are all perfectly secure and that there is no undue looseness or lost motion in any of the joints, or elsewhere in the system.

Mechanism to Regulate Withdrawal of Gasoline

The Scientific American in illustrating and describing a gasoline tank, the invention of W. E. and C. A. Levison of Covington, Va., says:

This invention has for its object to provide mechanism for permitting any specific amount of gasoline to be withdrawn from the storage tank into the measuring tank and to be afterward discharged into a supply tank, all of the gasoline being held in an underground storage tank so that only the actual quantity needed may be delivered.



Side View of Measuring and Storage Tank.

Extra Light Bulbs

Carry an extra set of light bulbs with you. If your headlights have become dim, put in new bulbs or have the reflectors resilvered. Good driving lights are all important. A spotlight is handy, although not a necessity. Some of them come so mounted as to form a trouble-light which may be used around any part of the car. Watch your tail-light to see that it doesn't burn out. Be courteous with your lights on the road. Switch on the "dimmers" when meeting another car, even though you have so-called nonglaring lenses.

On the Funny Side

PLAYING SAFE

"I am going to speak over the radio tomorrow night."

"I shall listen in with great interest," said Miss Cayenne.

"I shall talk about the ideals of our modern culture."

"Simply wonderful!"

"Would you like to hear it beforehand?"

"No. Save it, so that if I don't happen to like it I can tune out for my favorite hotel orchestra."—Washington Star.

SPORTS IN PROPER PLACE

College Head—And sports have their proper place in our curriculum, of course.

Student's Dad—Glad to hear it—glad to know my boy will have some chance to study, you know.

Had No Honker

Here he sleeps.
One Johnny Fonker;
He rounded a turn
Without a honker.

Too Late

"Good heavens! Who gave you that black eye?"

"A bridegroom for kissing the bride after the ceremony."

"But surely he didn't object to that ancient custom?"

"No—but it was two years after the ceremony."

Subject to Release

She—But, Algy, I'm very cross with you, really! You promised faithfully to bring your engagement ring tonight.

He—Believe me, dear, I'm sorry. The truth is—the other girl hasn't returned it yet.—Stray Stories.

Not Too Realistic

"That's my statue of Peace."

"You've made her very beautiful—too beautiful."

"Ah, well, you see, I didn't model her from nature."—Paris L'Illustration.

Boston Outing

"We must pause," remarked the professor, climbing out of the auto.

"Yes, dear," agreed his wife. "I heard the tire puncture."—American Legion Weekly.

Unthinkable

Mrs. Scales—Scientists say that we really laugh and grow fat.

Mrs. Diete—Of course! No one would grow fat and laugh!

PERFECT GENTLEMAN

"He's a perfect gentleman, you think?"

"I do—he always rises and gives a lady his seat in the barber shop."

Health Again

To get his wealth he spent his health,
And then with might and main
He turned around and spent his wealth
To get his health again.

Judge With a Heart

Here's a judge with a heart. A small boy was arrested for playing hookey from school on circus day. "I just wanted to see the parade," said the boy. "Sure, you did, and there's no law against skipping school on circus day," said the judge.

No, No. Merely Shared It

Times of India—America, we are informed, has given up the worship of the golden calf in favor of the silken calf.—Boston Transcript.

THE KITCHEN CABINET

(©, 1925, Western Newspaper Union.)

"Why give a thought to that which has been done?
No triumph can from out the past be won;
But in the future there is not a height
Where we from life cannot win delight."

SIMPLE DESSERTS

A dinner is not complete without some form of dessert. For the busy housewife who has all the planning and work to do, the simplest the food served if wholesomeness is considered, the better. Two or three stuffed dates, stuffed with a marshmallow or a few nuts, rolled in sugar, will make a most acceptable finish to a dinner. They may be prepared and kept in readiness for any emergency.

For the sultry days of midsummer frozen dishes are the most favored. When one has plenty of ice and a good freezer, the process of making a few quarts of ice cream or sherbet is no more exacting than many pies or puddings. A custard pie is a favorite one for the hot weather; made and cooled on ice it is especially delicious.

Coconut Pie.—Line a deep pie plate with pastry and let stand in the ice chest for an hour to become thoroughly chilled. Beat four eggs (three will do), add one-half cupful of sugar, the grated rind of a lemon, two cupfuls of milk, mix well and stir in two cupfuls of coconut, sprinkling well over the top. Bake in a moderate oven one hour.

Date Crumbles.—Beat two eggs, add one cupful of sugar, two teaspoonfuls of baking powder, one tablespoonful of flour, one cupful each of chopped walnuts and dates. Mix all together and spread on two greased pie tins. Bake in a slow oven three-quarters of an hour. Crumble and serve in tall glasses with whipped cream. Sweeten and flavor the cream and stir in the crumbles.

Fruit Cream.—Beat one egg white, one-half glass of jelly and two tablespoonfuls of cream until stiff enough to stand. Serve in sherbet cups with a custard sauce or with cream, whipped or plain.

A layer cake put together with sweetened and flavored whipped cream, the top well covered, is a dessert that most people enjoy.

Salads and Things.

A simple salad which is easily prepared and as well liked, is fresh pineapple cut into fine pieces sprinkled over head lettuce. Serve with a rich mayonnaise.

Apple and Blackberry Jelly.—To a peck of red astrakhan apples add three pints of blackberries. Cook the fruit with as little water as possible. Drain but do not squeeze. Use two-thirds as much sugar as juice and cook until it jells. Cook the juice ten minutes before adding the sugar. If carefully made it will be a beautiful red.

Hot Southern Slaw.—Melt, but do not brown, one tablespoonful of butter, one tablespoonful of lard, and work in two tablespoonfuls of flour, then add chopped or shredded cabbage, salt to taste and one-half to one cupful of cold water. Stir and cook. When the cabbage is cooked, pour over the following dressing: One-half cupful of sour cream, one teaspoonful of sugar and two tablespoonfuls of vinegar; beat until thick, pour over the cabbage and let it just come to the boiling point. Stir and take up immediately.

Peach Marmalade. — Boil twelve pounds of peaches until reduced to a pulp, adding a small amount of water, then put them through a sieve and add a pound of sugar to each pound of fruit. Boil, stirring constantly until thick. Put away in glasses for winter.

Spanish Salad.—To two cupfuls of diced chicken add one cupful of diced cucumber, one cupful of walnut meats, and a cupful of cooked peas. Mix with a boiled dressing and serve on lettuce.

Peas, pickles, green olives, peanuts and a little celery make a good salad combination.

Cherry Pudding.—Take one tablespoonful of butter, one-half cupful of sugar, one beaten egg, two cupfuls each of sour milk and flour, one-half teaspoonful of soda, mix and beat well, then stir in a quart of cherries, pitted; bake for three-quarters of an hour.

Preserved Cherries.—To every pound of Morello cherries allow one pound of sugar. Stone the cherries, cover with the sugar and let stand in a cool place over night. In the morning put over the fire in a preserving kettle and cook slowly without stirring until the fruit is soft and the sirup clear. Skim carefully and put into jars.

Pepper Relish.—Take one dozen each of green and red peppers, fourteen medium-sized onions, one cupful of sugar, two cupfuls of vinegar, one tablespoonful of salt; boil fifteen minutes and can whole hot.

An inventory of all household goods, furnishings, linen, silver, china, canned goods as well as clothing, is invaluable. Keep a list in the safety deposit box; in case of fire it will be found useful.

HOW TO STOP BLEEDING

MOST people are terrified at the sight of blood. This natural instinct is probably inherited from our primitive ancestors, who knew that any amount of bleeding was dangerous to life but didn't know enough about the body and how it was made to know how to stop it.

Blood is a vital fluid. It is present in all parts of the body, except the nails, the hair and the teeth. Even in the nails there is blood in the "quick" or living part at the base and in the teeth in the sensitive pulp.

The blood is carried from the heart to all parts of the body by the arteries, so called by the ancient wise men, because they were found empty after death and so were supposed to carry air. The arteries break up into fine network of tiny vessels called capillaries, which carry the blood into the finest tissues so that every cell in the body may receive its needed supply of blood. Other capillaries collect the blood and return it to the veins, which become larger and larger as they approach the heart, where the venous blood enters the right side to be pumped to the lungs and recharged with oxygen.

Any scratch or cut, no matter how small, causes bleeding if the true skin is broken. Such oozing is slight and is usually checked by the coagulation of the blood. In more severe injuries, the larger arteries or veins may be torn and considerable hemorrhage may take place.

In bleeding from the veins, the blood is dark blue and flows in a steady stream. Unless one of the large veins is opened, venous bleeding is not specially dangerous and is comparatively easy to stop. Packing the wound with clean gauze, or, if this is not available, with clean handkerchiefs and then making firm pressure, either with the fingers or by tight bandages, will generally stop it.

If an artery is cut, the blood is thrown out in spurts with each contraction of the heart and is bright red. This is the most dangerous form of hemorrhage and should be stopped at once. Every one should know how to check such bleeding, otherwise much valuable time and sometimes life itself may be lost by delay in waiting for the doctor.

Bleeding from a large vein or an artery can be stopped by pressure. If an artery is cut, the pressure should be between the cut and the heart, if a vein, on the side away from the heart.

Pressure with the fingers will often stop it but this is difficult to keep up. A stone or a pad of any kind, wrapped in a handkerchief, should be tied around the limb, with the pad resting over the artery above the cut. The handkerchief can then be twisted with a pencil, fountain pen, pocket knife or a stout stick. A belt, a pair of suspenders, a good sized cord or a strip torn from a skirt or shirt can also be used. Twist the bandage tight enough to stop the bleeding and keep it on until the doctor comes.

HONEY AS A MEDICINE

HERE'S good news for the kids. An eminent English doctor has just written an article for the Lancet in which he states that honey is a valuable medicine. That's just like telling a small boy that watermelon is good for him (which, by the way, it is).

Honey was the candy of the ancient world. It is frequently mentioned in the Bible, although sugar is not once referred to. That's because cane sugar and beet sugar, our principal sources of sweetness, weren't known until a comparatively short time ago. When the Jew, the Greek or the Roman craved something sweet, he had to eat sweet fruits or use honey, gathered by the bees from a thousand flowers. These old people knew that honey was good food. They made a famous drink by mixing honey with water. They found this most refreshing and stimulating when they were tired.

It has long been known that sugar and water would stimulate the heart. The Frenchman, with his glass of eau sucre, is not such a sissy as some would have us think.

Now comes Dr. G. N. W. Thomas of London, who says and has proved that honey is of great value in stimulating the tired body, both in health and in sickness. In his article he says that honey has a marked stimulating effect on the heart and is of value in severe cases of malnutrition. He says it is of more value in fevers than beef tea, which used to be the favorite invalid food, and that it is especially valuable in heart failure.

Medicine used to be considered of value in proportion to its nastiness. The worse it tasted, the more good it did you. That was a survival of the days when all kinds of nauseating and disagreeable mixtures were poured into the unfortunate patient, in the hope of disgusting the devil that caused the disease and so driving him out. They apparently didn't hurt the devil and they did disgust the patient. But he had to take them just the same!

Today we are all from Missouri. We have to be shown. We know honey is good and pleasant food and if it is also a good tonic and a heart stimulant then, by all means, let's eat more honey.

WOMAN'S BACK STOPPED ACHING

I Suffered Three Years. Relieved by Taking Lydia E. Pinkham's Vegetable Compound

St. Paul, Minn.—"I have a little girl three years old and ever since her birth I have suffered with my back as if it were breaking in two and I have felt as if something were falling out all the time. I also had dizzy spells and was sick at my stomach every month. I had read several letters of women in the newspapers and the druggist recommended Lydia E. Pinkham's Vegetable Compound to my husband for me. As a result of taking it my back has stopped aching and the awful bearing-down feeling is gone. I feel stronger and do all of my housework and tend to my little girl. I have also taken Lydia E. Pinkham's Liver Pills for constipation. I have recommended these medicines to some of my friends and you may use this letter as a testimonial if you wish. I will be pleased to answer letters of other women if I can help them by telling them what this medicine has done for me."—Mrs. PRICE, 147 W. Summit Avenue, St. Paul, Minnesota.

Skylarks

Lieut. J. A. Macready, the air champion, said at a dinner in Dayton:

"Flying has become so common that we will soon have air fiends, the same as we have automobile fiends.

"What will be the most suitable name to give the air fiend's mania? Shall we call it nitrosipelas, or would flyphoid be better? Maybe we'll decide on influewenza. But, after all, I think the best name of all would be skyatica."

At You

The Maid—"I'm going to sneeze." The Man—"At who?" "Atchoo!"—The Progressive Grocer.

A good wife never calls her husband down—unless he is upstairs.

Tired, Lame, Achy?

Are you dragging around with a constant backache? Feel weak, worn and achy; so miserable you can't enjoy a moment's comfort? How about your kidneys? Well kidneys filter off body poisons. But when the kidneys slow up, poisons accumulate and upset the system. Backache is apt to follow, with sharp pains, dizziness and annoying kidney irregularities. Don't delay! If you suspect faulty kidney action, use *Doan's Pills*. *Doan's* have helped thousands—are recommended the world over. *Ask your neighbor!*

An Ohio Case

Mrs. John Park, 114 Jackson St., Port Clinton, Ohio, says: "A cold settled on my kidneys. I also had backaches. My back was lame and weak. Severe dizzy spells came on at times and I had to lie down. Two boxes of Doan's Pills cured the trouble and my back has been free from pain and the dizzy spells vanished."

Money to Burn in Italy

The favorite pastime of the Italian minister of finance during the past few months has been presiding at bonfires of Italian paper money. About a billion lire in bank notes and currency bills have been burned up already, and by the end of the month another half billion will be destroyed in the same way. This withdrawal from circulation of an enormous amount of paper money is expected to prevent inflation and help the national credit. Italy is making a determined effort to prevent any dangerous depreciation of her currency.

If you use Red Cross Ball Blue in your laundry, you will not be troubled by those tiny rust spots, often caused by inferior bluing. Try it and see. —Advertisement.

Scotch Sugar Beets

Sugar beets planted in Scotland have given satisfactory results, and it is likely, in view of the subsidy granted by the government, that a factory will be built.

DON'T BROOD OVER STOMACH DISTRESS

Don't lay awake nights and feel miserable all day—there's one right way to fix up your gassy, rebellious disordered stomach in such a short time that your heart will be gladdened.

Today Dare's Mentha Pepsin is the one remedy supremely efficient where acute or chronic indigestion or gastritis is making your days and nights miserable.

Reports of its mighty power to overcome unbearable, near suffocating stomach agony have swept the land until today its sales are marvelous.

Get one bottle of this pleasant speedy acting medicine today with the distinct understanding that if it doesn't help you—your money will be returned.

FAT FEE ALMOST LOST TO LAWYER

But He Recovered Himself in Nick of Time.

In a Missouri town there resided a lawyer who had become rather successful in getting people out of trouble, H. K. Ford tells us in the Docket. Most of his clients were white people, and those who were in good circumstances would be charged "all the traffic would bear." But occasionally an impecunious white person or darky, whose feet had become entangled in the meshes of the dragnet of the law, would call on him and seek his professional services in getting the aforesaid feet extricated from their inhospitable surroundings. From these people he sometimes received very small fees; but he went on the theory that "half a loaf is better than no bread at all," so he accepted their business, and collected what he could from them.

One day an elderly negro, plainly clad and humble looking, entered his office. The lawyer told him to be seated, and inquired:

"What can I do for you?"

The old darky said:

"Boss, dey's got my boy in jail. Whut will you charge to get him out?"

The lawyer, sizing up his prospective client as one who was not very prosperous, replied:

"Oh, ten dollars."

Thereupon the negro, who had been away from the community for some time, and who had, without the home people knowing anything about it, accumulated a little money, pulled out a large roll of bills and commenced turning them over, presumably in an effort to find one of as small denomination as the fee demanded.

The lawyer saw the bills, and hastily said:

"What jail is it where they have your boy?"

"Why, boss, it's de county jail, dey calls it, up heah on de hill."

"Do you mean he is in the big stone jail up there, with steel bars on all the windows?"

"Yas, suh; yas, suh; dat's de place, boss."

"Oh, well when I answered your first question, I thought you meant they had him in the little wooden building down here that they use as a holdover. If he's in the stone jail, with the barred windows, it will cost $200 to get him out of that."

The old darky slowly counted out the required amount, the while muttering:

"Dat pestiffous boy cain't be satisfied wid no little wooden jail; seems lak he allus picks out dem 'spensive places."

Imagine

The statistician of a large manufacturing plant states that the time may come when historians will look back on our mechanical age as a curious freak, for, he says: "Merchandising our processes undoubtedly lowers the intelligence of all who have to do with production except the experts who make the machines. It also makes possible the rapid depletion of natural resources. We are now going a mile deep for copper here in Michigan, where we used to get it from the surface. Just what our mechanical age will do to the human race is a nice problem. Among other things, the ease with which we get great quantities of natural resources converted into usable supplies appears to make possible the rapid increase of the population of the earth to a point where we seem to be reaching a state of over-crowding."

Royalty Taken Seriously

Imperial portraits are serious matters in Japan, though the incidents in connection with a certain set cannot appear other than comic to the outside world. Eight years ago copies of the portraits of the royal family disappeared from a schoolhouse near Osaka. The authorities immediately prohibited the press from mentioning the fact. Though the mystery has never been solved, the government, doubtless feeling that the danger to the public weal lurking in the episode had died with time, has lifted the censorship, and the Japanese press may now publish the fact that the portraits have disappeared.

Her Choice of Suitors

"What a lucky girl you are, Daphne, to be able to choose between two such handsome and stylish young men! Have you made up your mind which is to be your husband?"

"To tell you the truth, I'm in a bit of a fix. If I decide to wear my cream-colored dress at the wedding, I shall take Alphonse, as he is dark-complexioned, you know; but if I decide to go in my blue dress, I rather think fair Algy will make the better match of the two."

Judge With a Heart

Here's a judge with a heart. A small boy was arrested for playing hookey from school on circus day. "I just wanted to see the parade," said the boy. "Sure, you did, and there's no law against skipping school on circus day," said the judge.

Argentine Government Oil

Oil exploration in Argentina has made such progress that the government is to build an oil refinery. Returns from sales of petroleum in 1924 amounted to $1,733,000.

ST. JOE NEWS.

VOL. XXXIX | ST. JOE DeKALB COUNTY, INDIANA, THURSDAY AUG. 13, 1925 | NO. 32

Newville Chautauqua Is Now On

The Eleventh Annual Rural Free Chautauqua, held in the Newville U. B. Church, is now on and is creating a general interest among the people for miles The service for last Sunday was splendid, featuring Roy A. Burkhart, Dayton, Obio, denomination leader of Young People of the U. B. Church. Mr. Burkhart is a young man of unusual leadership ability and the success of his work will find expression in the future of the U. B. Church. With this fine leader to start the week, promises are held out for a strong program for the entire week.

On Monday evening the West Creighton Church of Christ Orchestra of Fort Wayne, gave the entire program; Tuesday, Elder W. E. Harmon, Augola Church of Christ, Wednesday, Oswald Ryan, Anderson, Ind., "The Challenge to War;" Thursday, Rev. O. P. Givens, Roanoke, founder of the Newville Chautauqua; Friday, Hon. A. P. Sandles, Columbus, "Copper Cents and Common Sense;" Saturday a miscellaneous program by Mrs. B. A. Rhoads and daughters of Angola and Mr. and Mrs. Forrest Clouse, of Auburn in songs and readings. Sunday will be the closing day with another denominational leader, P. H. Welshimer, of Canton, Ohio, pastor of Church of Christ, in three services.

The music for the week is in charge of Mr. and Mrs. Harry Richer, of Peru, Indiana. For three years these people have had charge of the music and means much to the success of the meetings, as they are able to keep their audience in fine spirit.

Fertilizer Time

We are now taking orders for thefamous **Bradley Fertilizer**, the kind we have sold for **35 years.** Ask your neighbor about the quality of this brand. Orders are now in for **3 Carloads** and we expect to double that before finishing. We can sell you cheaper fertilizer, but there is a reason for

Buying Bradley's.

Wm. Curie, Implement Dealer

Coal! --Coal-- Coal!

Now is the time to lay in your coal. We have always tried to give you the best advise as to best time to buy and we now firmly believe this is the time to get busy and prepare for the winter.

Feed

Mr. Hog Raiser, we have a good line of feeds on hand, also car of ear and shelled corn. If you need any give us a call.

Grain

We are paying highest market prices for all grains and will be pleased to have you bring us your grain.

The St. JOE ELEVATOR

Samuel Keesler, Mgr. Grain Dept. | **Bert Jackson,** Mgr. Coal Dept.

NOTE—Pay your accounts. They are due now.

SUCCESS

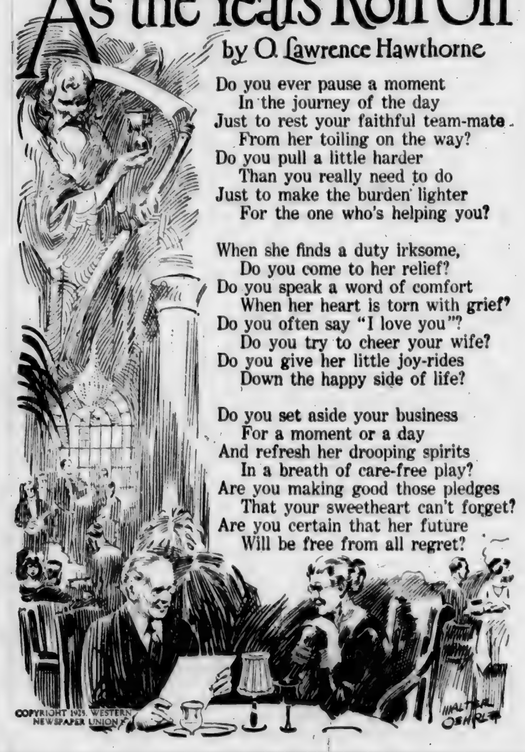
consists not so much in sitting up nights- as being awake in the daytime

A steadily growing interest account with this bank is a sure sign of your success.

The St. Joe Valley Bank, A STATE BANK

As the Years Roll On

by O. Lawrence Hawthorne



Do you ever pause a moment
In the journey of the day
Just to rest your faithful team-mate
From her toiling on the way?
Do you pull a little harder
Than you really need to do
Just to make the burden lighter
For the one who's helping you?

When she finds a duty irksome,
Do you come to her relief?
Do you speak a word of comfort
When her heart is torn with grief?
Do you often say "I love you"?
Do you try to cheer your wife?
Do you give her little joy-rides
Down the happy side of life?

Do you set aside your business
For a moment or a day
And refresh her drooping spirits
In a breath of care-free play?
Are you making good those pledges
That your sweetheart can't forget?
Are you certain that her future
Will be free from all regret?

Mrs. Ada Olds Dies of Paralysis

The death of Mrs. Ada Olds, wife of Mort E. Olds, former St. Joe merchant and editor of The St. Joe News, came as a schock to all St. Joe residents. She was stricken with paralysis on Wednesday noon of last week, from which she did not regain consciousness. Mrs. Olds was born at Spencerville sixty years ago and died Saturday morning at Clinton, Mich.

Mrs. Olds, whose maiden name was Coder, was a sister-in-law of Mrs. John R. Bishop of Auburn. She is survived by her husband, a son, Archie, of Indianapolis, and a sister, Mrs. Priscilla Zimmerman of Cleveland. The funeral was held Monday afternoon.

Funeral of Mrs. J. M. Dermott

Mrs. Miller Dermott, aged about 68 years, died Monday forenoon at the home of her son, Olen, of this place. Funeral services was held from the son's home Wednesday afternoon at 2:00 o'clock. Rev. J. O. Rose, of Angola, officiating. Burial in Alton Cemetery. Obituary will appear next week.

Home Bureau Activities

Mrs. Daisy Woodcox

The meeting as called for the 14th. has been postponed until August 21st. Mrs. Katie Storer is hostess. All day meeting and potluck dinner. Come.

Beauty Parlor

Bobbing, 25 cents, Marcel and curl, 50 cents. Hours afternoon and evening. Forenoon by appointment. Grace Sheffer. 32t1p

Coolidge Sells Store To Move on Farm

Dwight Coolidge, Spencerville merchant, and family will say goodbye to friends and patrons, when they will move to a farm near Hillsdale, Mich., secured from B. L. Smith in a real estate deal.

The Coolidge family have run the Jack Beams store for several years and done a thriving business. Moving from a farm to enter the business, they never had gotten away from the thought of the farm life and when the opportunity came they were pleased to return to the farm life and to again enjoy its independence.

Mr. Smith will move his family to Spencerville and occupy the Coolidge residence. He has been the proprietor of a number of general stores. Mr. Smith is not entirely a stranger here as he frequently visited the county, when his father, G. H. Smith, lived in Jackson township.

The News wishes the new merchant success in the Spencerville store and we are sure he will find congenial merchants to work with.

LOCAL ITEMS IN BRIEF.

Mr. and Mrs. F. H. Langley spent Wednesday at Defiance.

The Vanishing Men

By Richard Washburn Child

(Copyright by R. P. Dutton & Co.)
(W. N. U. Service)

SYNOPSIS

Out of uniform, at the end of the World war, with the rank of major, Peter DeWolfe, young American of wealth and family, is urged by an English comrade in arms, Everby Benham, to visit the Benham home and meet the Englishman's mother and sister, and, incidentally, Brena Selcoss, young woman about whom there is an air of mystery. Muriel Benham, Eversby's sister, becomes infatuated with Peter.

CHAPTER II—Continued

—2—

She had often insisted that she never had headaches, as if not having headaches was a part of a proper program for a woman who intends to marry correctly, have children correctly and be correctly buried with a correct husband's tears. Perhaps this came into her mind, for at the vine-covered portico she turned, put her arm against one of the ancient stone pillars and, making a pretty picture with her high color and her lean young body, she called out: "Do you want a walk this afternoon—to Besman wood?"

Peter nodded his assent vigorously, and when she ran into the house he threw himself back into the grass and through half-closed eyelids watched the ever-changing patterns in cottony clouds and the flight of wheeling martins.

Muriel began that afternoon walk with great gayety of spirits, as if, perhaps, she had found a triumph over some difficulty, a victory at the end of twenty-one years of preparation for victory. As soon as they had struck off across the downs she threw her arms toward the sky and sang into the wind an old hunting song of quaint and engaging melody.

"Let's learn the song together," she said to Peter. "Look over there on the edge of the horizon. That square tower. That's Saint Dunstan's—the very tower in which the fox sought sanctuary in the song—the old song, written six hundred years ago, they say."

Peter, with his usual adaptability, acquired both words and music. He sang. He danced upon the rolling green plain. And at last, seizing Muriel's waist around the belt of her sporting coat, he swung her almost off her feet and together they whirled merrily—two tiny tops spinning upon the vast expanse. When they stopped, the girl, almost dizzy, and breathless, clung for a moment to his coat and looked up into Peter's eyes. He could feel her warm breath upon his chin.

Peter was not lacking in perception; he knew at once that his visit at the Benhams' must come to an end. All the cold assurance in Muriel's face, all the steady, stable English look had gone. No refusal of hers to vote or smoke a cigarette or adopt an article of clothing which in any way might have unsexed her could have proclaimed her as a woman rather than as a companionable playmate as completely as did this searching, half-troubled, hungry look in her swimming, brimming eyes.

"Come on, now," he said as if to a private soldier who had disobeyed orders. "Let's walk. Let's walk hard and fast and long."

He was wondering now whether he had made his journey to Beconshire in vain; whether, indeed, his willingness to solve the puzzle that Benham had told him was waiting for him had not been a piece of folly leading to nothing. When he and the girl had dipped down the slope into the single track path that led across the moor he nearly walked blindly into the silver stream through the rushes that grew at the water's edge.

"You are not vexed?" asked Miss Benham invitingly.

"Vexed!" exclaimed DeWolfe. "With you? God bless you, dear, no!"

She looked at him gratefully, watching him as she walked by his side a good deal as a setter might look up to catch a glance of approval from a man. Peter expected no storm from her. He knew he must pack up his things and go back to London. This was only fair to Benham, and certainly fair to Benham's sister, who had let herself imagine so much from an acquaintance with a stray American who inwardly believed that to live a lifetime of Muriel's program of days and years would be a close second to a term in jail or to having a berth in a Wall Street broker's office. He supposed, however, that if not actually, at least metaphorically, Muriel had read a book on "How to Keep One's Balance." He did not figure upon the explosive forces which can be generated in a conservative family, as if occasionally the fundamentals of mankind liked to show their half-concealed existence of which all are aware, each for himself, but never as to our armored neighbor. Muriel, in fact, was just the person the fundamental human forces would pick out to give a glorious exhibition of blowing up the crusts of restraint. Peter, like most of us, had heard a slight crack in her cover, but like most of us he had endless faith in the strength of habit and conventions.

The depression which fell upon the girl, as if a shadow cast by the dusk, gathering about them as they came back from Saint Dunstan's tower after ten miles in the wind, gave no warning of crisis to him. And certainly he was under no obligation to foresee that which the night would bring forth.

At dinner he discovered that he could talk to Mrs. Benham; to his astonishment he found that behind her beam there were a great many years of orderly thinking whose product, not consumed by her family, had been put up onto the shelf in many careful layers like bolts of cloth with an unfashionable pattern. It was almost worth while to have Muriel so silent; it was almost a relief to turn away from her long Byrne-Jones face with its sensitive lips contrasting with her stern eyes and be beamed upon sunnily by the broad strong face of her mother. Peter took a delight in making this beam expand into a laugh. He was never so whimsical. Each time he leaned forward toward the white-haired widow who, with her middle-Victorian

"Do You Want to Take a Walk This Afternoon—to Besman Wood?"

figure, weighed at least two hundred pounds, Muriel stared at her mother with a look which might have been the expression of jealousy.

Peter, as he chatted with Mrs. Benham, faced the long French windows in a curved bay at the end of the dining room. The floor was covered with ferns and flowery plants in pots, giving forth to the room at all meals that smell of warm dark earth which fills greenhouses; but just outside the reflection of his own dinner coat on the long panes of the doors, there was the blue stone driveway of the house and the path to the side door. Upon this path Peter thought he had seen a flush of white. It might have been a reflection of his own white linen; he had only seen this flick of movement out of the corner of his eye as he put down his gilt coffee cup.

"What did you see?" asked Muriel suddenly.

"I? Why, I thought I saw a white spot in the dark out there—like a person's face."

Muriel stiffened. "I don't know who it could be," she said. "Lucy, turn on the light outside the North door."

Peter smiled, but only because he had thought of how red English maids could be—just as red as valets were white.

The smile disappeared the moment the electric lamp above the outer door just behind the French windows threw down its light like an overturned bucket of yellow liquid. A woman was standing there, and Peter believed that as she had stood in the dark, unseen, she had been looking straight into his face. She wore no hat and her hair piled up in immense snake-like coils was the color of certain frost-turned leaves of autumn which are neither red nor gold, but both colors at once.

"Her Irish mother!" he almost said aloud. He knew by her hair and her great dark eyes in which, even from a distance, there appeared the expectancy or fear described by young Benham. The British officer had not overdrawn her beauty. There was a still grandeur about it, a permanence, a thing making it awful as well as alluring; it was like the beauty of Grecian sculpture dug from the dust and transformed by miracle into living warmth glowing through a skin which, compared to Muriel's fine cold white, was as heavy cream is to skimmed milk. She stood in the posture which Peter learned later to know was characteristic—a posture of one who waits with resignation. For what? Heaven knows. Perhaps for a reincarnation into a life less troubled, less besmirched with small affairs.

That she wore a white draped gown over which a wrap of flame color hung from her half-bare shoulders DeWolfe did not notice. She was one who cannot be described in detail, and her clothes made no impress, though their illuminated colors and contrast in any other case might have left a vivid picture. One never saw her except as a whole—a woman too short of stature, if one measured, but the height of a goddess if one only looked; a girl whose face, though capable of a great range of expression, nevertheless changed its moods as slowly as the clouds in the sky change their contours; a human being whose personality belonged, it appeared, to the kind of personalities which are found usually only in a deep forest, or belong to a pinnacled mountain range. Any detail was nothing.

"She has come to see my mother," said Muriel.

"So she has!" admitted Mrs. Benham, beaming out through the window.

"I might have known who it was. I heard a high-powered car. But she doesn't like to be driven almost into our dining room, so she stopped on the South wing. Let's go into father's den, Peter. Bring the cigars in there, Lucy."

No protest appeared possible. Mrs. Benham had beamed and nodded, and the American could not very graciously say, "Oh, no. I want to stay."

He turned once as he left the dining room. The woman outside was still waiting at the door for Mrs. Benham to waddle to the latch, the waterfall of light still covering her, still looking in, apparently at Peter, and with a smile and warmth thrown toward him like a message from her great dark eyes.

He could not wipe away the impression of that look. In it there had been a call, an understanding, a password, a magic formula. To shake it off he walked nervously about Sir Austin's old study, stopping before the photographs of members of the house of commons who had been Benham's friends, but were like the ends of so many empty spools to Peter's eyes at this moment. He read an inscription on a portrait of General Wolseley, he touched an ivory idol from Benares.

"Let's light the fire," suggested Muriel in a weak and trembling voice.

"All right," said Peter, and struck a match.

He did not smoke.

"Why not?" asked the girl.

"I have a—headache," he said with a laugh.

"Come here, then. Lie down on father's sofa. I don't mind. Be comfortable, Peter."

He stretched out upon the springs bent and sagged by years of pressure of the fox-hunting banker's solid weight, and closed his eyes.

Muriel, who had drawn up a stool, sat down upon it, staring into the firelight. There in the study behind the heavy door, which she had closed, the two seemed suddenly very remote.

"I had a wonderful time—this afternoon," she said in a tense and trembling voice which made a struggle to appear normal.

"Good!" said DeWolfe.

Her hand moved timidly forth and her soft fingers touched his forehead, brushing back the hair.

Peter closed his eyes.

She leaned over quietly and with a little cry hardly audible pressed her lips to his.

He knew what had happened—the real Muriel had come up through layer on layer of tradition, training, pride, habit, restraint. He only was confused by his own stupidity in allowing this to happen.

He sprang up.

"I never did that before. I never—by any one," she said, clenching her hands.

"Oh, I say, I'm sorry—" he began.

"Sorry!" she said.

"Of course," he replied with unnecessary coldness. "Of course I'm sorry. I've allowed you to think—"

Muriel's eyes were wide and blazing. She threw her clenched hands apart until her arms were outstretched to their utmost. The firelight was upon her face and Peter could see elementary passions enough upon it.

"You needn't say more," she almost screamed, so that suddenly Peter had a great distaste for the exposure of things he did not know had lived in her. "You needn't say more, because I know."

"Know?" said Peter in a low tone, as if inviting her to speak more quietly.

"Yes—know. It's her!" she said, pointing toward the wall where the deer's heads were hung. "I know it's my brother Eversby. He told you about her. That's why you came. That's what you've been thinking about. My brother was a fool!"

Peter raised his hand.

"I kissed you and I'm glad," she went on furiously. "Yes, I am. I'm glad. It has brought out the truth. I never did it before. I'm glad. The truth."

"Yes," said Peter sternly. "It has brought out the truth."

"You came here to see her. I know. I guessed. I knew Eversby told you about her, but you never asked. And I knew why. I didn't want to know. I wanted—"

"I'm sorry," Peter said again.

The girl came on several paces and leaned forward toward him.

"For God's sake, Peter, keep away from her. She might like you. Of course she'd like you. And if she liked you—"

"What do you mean?" he said.

"I know. I can't tell. It's a matter of honor, a matter of confidence—her confidence—something I learned. I wish I didn't know. But I warn you."

She moved toward the door.

"Wait a moment," he said.

"No. I want to go. I hate you now, Peter. Yes, I do. It has been awful, though. I never want to see you again. If you will only go while I hate you!"

"Of course," he said.

"But she is—"

Muriel stopped aghast.

"Well?" he asked.

"I can't tell you. But I warn you. It is too awful to believe. If she takes you in, you will— This is all I can tell."

"What?"

"Vanish," she whispered, "—like the others."

The door closed after her.

"Too late to go to London tonight," he said, looking at his watch. He listened for a moment. There was rain upon the window panes. "Vanish? Vanish—like the others? Oh, it's absurd. A piece of jealous outburst. Vanish? Nonsense!"

CHAPTER III

The name of Peter DeWolfe, U. S. A., was upon the register of the Carleton hotel, written in a hand purposely scrawled and blotched to prevent any one in the flux of diplomats, army officers, correspondents and gentlemen adventurers, the classes from which this rich New York bachelor drew a large and almost affectionate acquaintance, from bellowing through his door to come down to the bar.

He was waiting for a steamer that had made up her mind frequently not to leave Liverpool for another five days. Two nights he had spent already in London where, if he had wished, he might have dined at at least one of half a dozen recognized homes, had luncheons with a Russian ex-ambassador or Tommy Caminthorn of the war office, or Boleby Broke, the critic who writes the reviews for the International Gazette, or taken breakfast with Mrs. Holderee Rabb, the widow of a certain maharajah's son who had gone wrong at Oxford. He had an inclination, however, to write verses and wander by himself through the naughty jam of soldiers and yellow-haired girls in Leicester square and the Circus. He ate his meals in lonely state.

Unfortunately the unpleasant flavor which had attached itself to the memory of his visit to Beconshire Heath still clung. He could see Lady Benham—that good old soul who had insisted that she never be addressed by her title—beaming at him as she told him how sorry she was that business had called him away so suddenly. He felt guilty of the polite lie he had told to make his exit from the lives of the Benhams. He could see Muriel's cold, hard expression when, having pressed her lips to his, she found no response and told him at once that she hated him. He would never see her again, and though it had been none of his fault, or at least not in large measure, there would be a certain impression in her mind that he had willfully dislodged her from her correct and virtuous pedestal, and Colonel Eversby Benham—a good friend, provided with a sense of humor—could not fail to see the affair through his beloved sister's unimaginative eyes. Peter had tried to reach him and found that on forty-eight hours' notice he had gone to Mesopotamia.

Above all, Peter had gone to England to do a certain thing—to meet the strange Brena Selcoss and at Benham's challenge dissolve the mystery which surrounded her. All that he had accomplished so far had been to look once into her wonderful eyes from a distance and hear from Muriel that

"I Kissed You and I'm Glad," She Went On Furiously.

terrible and unspeakable and undisclosed horrors awaited the man upon whom this extraordinary young woman, with her mixture of Grecian and Irish blood, her gorgeous hair and jersey-cream skin, her American origin and her inexplicable English isolation, bestowed her favor.

Peter had always said that many men were really two persons—one, the actor in life, clothed with a body of flesh and bone; the other, a second personality without tangible reality, but who, as a counselor possessed of a voice almost audible, often advised caution, sometimes played the role of conscience, was always a friend, but sometimes took on a damnable, patronizing manner. It was this invisible friend who had advised Peter to shut himself up with his attempts at verse writing and had led him to procure a passage home; it was Peter himself who knew very well that he would not go on board the Aquitania, that he had come to England to meet some kind of a witch woman, that he had seen her great dark eyes once and saw them gazing at him out of every corner now, that he had committed himself to finding out all that was to be known of her and that in the end he would do some unconservative, break-neck thing to throw himself with a crash of conventions into her lap and note what happened afterward.

Peter's determination, making ready to reject every advice of his counseling and invisible second personality, was completely wasted. Brena Selcoss acted first.

On the third afternoon of his restlessness, when the night was falling and the fog leaned on the exterior of the window panes of his room like a pile of wet sheep's wool, he had started a lyric twenty-two times and twenty-two times balked for meter or expressive word, had crumpled up the sheet of paper and thrown it at a wastebasket. His pencil was blunt; the crumpled sheets, in the evil gray light of late afternoon, having missed their receptacle, lay around the floor as if DeWolfe's product were not poetry but snowballs.

"I'm a nice chump to be writing verses," he said to himself in the mirror. "You look less of a poet than a lion-tamer."

Some of Peter's friends who are able to realize that this man who can play polo like a centaur actually is the author of the lines beginning, "Call ye to the souls of shadows," would have agreed with him. There were strips of interwoven muscle upon his bare brown forearms and a firmness about his mouth, both tightened a little by his service with the army, and if there is a poet in him it is as a Virginia farmer once told him, "a streak of something," perhaps indeed a part of that fundamental essence of Peter which calls him to a many-sided life.

As he looked at his own troubled face in the mirror the telephone bell rang.

"Are you there?" inquired the operator, using the conventional London phrase. "Right! Wait, please."

He heard a voice which came out of distance like a voice which comes nearer through a damp grove of dark green trees, like an aroma which comes forward on the wind, until it rose slowly to its full power. When the words were distinguishable he knew that some one was asking for him.

"Yes," said he, for the moment enthralled by the warmth and rhythm of that voice.

"I must see you."

Brena Selcoss had come to find him. She had taken the initiative; she had come to London. He did not have to say, "Who is this?" She had come.

Something, however, in that phrase, "I must see you," said with intensity by that extraordinary woman, about whom the Benhams knew so little and perhaps Muriel so much, filled Peter for the moment with an inexplicable dread. This sudden chill of self-preservation was not founded upon the repulsion of that telephonic, "I must see you," uttered by a female and always forerunner of the unpleasant, nor was it based upon the suspicion which he had always had when, to use one of his own phrases, "a man ought to know that no woman who comes toward one is safe," nor indeed did it rise from the fact that he gave new credit to Muriel's absurd warning that men who knew Brena Selcoss disappeared like broken soap bubbles. The dread that Peter felt was like a dread communicated by some subtle message in a human voice which expressed some eternal fear. It came, perched upon his soul for a second, and then was gone.

He became at once the usual Peter, thinking quickly, alive to the dangers of a woman who would follow a stranger to London, suspicious of her and above all thoroughly delighted to risk himself in any tangle she cared to weave for him.

"Where are you?" he said genially.

"At Mulberry's," she said.

"The tea room?"

"Yes."

"Will you wait for me there?" asked Peter. "Please." His voice sounded very young—compounded of the breathless expectancy and spontaneous pleading of little boys.

(TO BE CONTINUED.)

What Your Eyes Tell

We are told that the eyes of the intellectual man are gray, and it is a fact that most men of genius have gray eyes. Brown eyes are said to express temperament rather than intellect.

Although brown eyes flash with anger, light up with joy, and change swiftly with jealousy, blue and gray eyes can express greater sadness.

Green and black eyes are supposed to be the most wicked. Becky Sharp's green eyes played an important part in her various conquests.

The "vamp" in modern fiction usually possesses flashing eyes of either green or black. Actually, there are no black eyes; dark brown or dark gray eyes have the appearance of being black in certain lights.

Ancient Juniper Tree

What is believed to be the oldest juniper tree in the world is now being protected by the forest service, United States Department of Agriculture, according to word received from the Cache National forest in northern Utah. A careful examination of the tree by scientists from the Utah Agricultural college and by Forest Supervisor Carl B. Arentson shows the age of the tree to be not less than 8,000 years, thus placing this tree on a par with some of the big redwood trees in California which have so often been spoken of as the "oldest living things on earth."

IMPROVED UNIFORM INTERNATIONAL

Sunday School Lesson

(By REV. P. B. FITZWATER, D.D., Dean of the Evening School, Moody Bible Institute of Chicago.)
(©, 1928, Western Newspaper Union.)

Lesson for August 16

TEMPERANCE LESSON

LESSON TEXT—Gal. 5:13-24

GOLDEN TEXT—"Be not deceived: God is not mocked: for whatsoever a man soweth, that shall he also reap." —Gal. 6:7.

PRIMARY TOPIC—A Picture of a Good Life.

JUNIOR TOPIC—Good and Bad Fruits.

INTERMEDIATE AND SENIOR TOPIC—Drunkenness and Kindred Evils.

YOUNG PEOPLE AND ADULT TOPIC—The Flesh Against the Spirit.

Having shown in chapters 3 and 4 of this epistle that the believer is free from the law as a means of justification, Paul makes practical application of this doctrine.

I. Christian Freedom (vv. 13-15).

1. It Is Not an Occasion to the "Flesh" (v. 13):

Liberty is not license. The notion that when one is free from the law he is free from constraint, is wickedly erroneous. "License of the flesh means not merely the indulgence of the flesh in actual material sins, but in the expression of a self-centered life in biting and devouring one another (v. 15). Bickering among Christians is an example thereof.

2. By Love, Serving One Another (v. 13).

Freedom from the Mosaic law means slavery to the law of love. "The emerging from bondage through Christ is the passing into a sphere of life in which all the powers should act under the dominion of the true motive, love."—Morgan.

II. Walking in the Spirit (v. 16-18).

This discloses the secret of how a life of service to another can be lived.

The governing principle in the life of a believer is the Holy Spirit. Walking in the Spirit results in:

1. Loving Service to Others (v. 13).

2. Victory Over the Flesh (vv. 16-17).

By the flesh is meant the corrupt nature of man expressing itself in the realm of sense and self. The renewed man becomes two men between whom a mortal conflict is going on. The Christian must choose between good and evil. When he chooses the evil, the Holy Spirit opposes, and when he chooses the good the flesh opposes. Notwithstanding this deadly conflict, victory is sure if one chooses the good.

III. The Works of the Flesh (vv. 19-21).

By works of the flesh is meant the operation of the carnal nature. The one who chooses to live according to the impulses and desires of his natural heart will be practicing the following sins.

1. Sensuality (v. 19).

The sins enumerated here are practised in the sphere of the body and are:

(1) Fornication. (The word "adultery" is omitted from the best manuscripts.)

(2) Uncleanness. This includes all sensual sins, open or secret, thought or deed.

(3) Lasciviousness. This means the wanton reckless indulgences in the shameful practices of the flesh.

2. Irreligion (v. 20).

These acts take place in the realm of the spirit and are:

(1) Idolatry, which means the worshiping of idols.

(2) Witchcraft or Sorcery. This means all dealing with the occult such as magical arts, etc.

3. Sins of the Temper (vv. 20-21).

These take place in the sphere of the mind and are:

(1) Hatred.
(2) Variance, which means strife.
(3) Emulations, jealousy.
(4) Wrath, bursts of passions.
(5) Seditions, factions in the state.
(6) Heresies, factions in the church.
(7) Envyings.
(8) Murders.

4. Sins of Excess (v. 21).

(1) Drunkenness. This means indulgence in intoxicating liquors.

(2) Revelings, acts of dissipation under the influence of intoxicants.

IV. The Fruit of the Spirit (v. 22-24).

This indicates action in the realm of life, the product of the Holy Spirit indwelling the believer.

1. Love, to God and man.
2. Joy, glad-heartedness because of what God has done.
3. Peace with God and fellowman.
4. Longsuffering, taking insult and injury without murmuring.
5. Gentleness, kindness to others.
6. Goodness, doing good to others.
7. Faith, believing God and committing all to Him.
8. Meekness, submission to God.
9. Temperance, self-control in all things. Against such there is no law.

Man's Sorrows

Man's sorrows are a mystery, but that sinners should not have sorrows were a sadder mystery still. And God pleads with us all not to lose the good of our experiences of the bitterness of sin by our levity or our blindness to their meanings.—Alexander Maclaren.

Do It Today

There are a lot of people who never put off till tomorrow what they can get somebody to do today.—Western Christian Advocate.

WOMAN SO ILL WASHED DISHES SITTING DOWN

Mrs. Ashcroft's Remarkable Recovery After Taking Lydia E. Pinkham's Vegetable Compound

Covington, Ky.—"I was so weak and nervous I could hardly do my housework as I could not stand because of the bearing-down pains in my back and abdomen. I sat down most of the time and did what I could do in that way—as washing dishes, etc. One day a book describing Lydia E. Pinkham's medicines was put in my mail-box. I saw how the Vegetable Compound had helped others so I gave it a trial. I had to take about a dozen bottles before I gained my strength but I certainly praise this medicine. Then I took Lydia E. Pinkham's Blood medicine for poor blood. I was cold all the time. I would be so cold I could hardly sit still and in the palms of my hands there would be drops of sweat. I also used the Sanative Wash and I recommend it also. You may publish this letter and I will gladly answer letters from women and advise my neighbors about these medicines."—Mrs. HARRY ASHCROFT, 632 Beech Avenue, Covington, Kentucky.

Rubber Soles Soar

The rise in the cost of rubber has reached the crepe soles of shoes, and the cost of footwear having them is climbing.

Sure Relief FOR INDIGESTION

BELL-ANS

25¢ AND 75¢ PACKAGES EVERYWHERE

NR TONIGHT Tomorrow Alright

NR a mild, vegetable laxative to relieve Constipation and Biliousness and keep the digestive and eliminative functions normal.

Get a 25¢ Box

Used for over 30 years

Chips off the Old Block

NR JUNIORS—Little NRs

One-third the regular dose. Made of same ingredients, then candy coated.

For children and adults. SOLD BY YOUR DRUGGIST

Banish Pimples By Using Cuticura Soap to Cleanse Ointment to Heal

Try our new Shaving Stick.

Boschee's Syrup for Coughs and Lung Troubles

Successful for 69 years. 30c and 60c bottles—ALL DRUGGISTS

Logic

"But why are the bricks of ice cream so much more expensive than the bulk?"

"Well, madam, you know how high the wages of the bricklayers are now."

Red Cross Ball Blue should be used in every home. It makes clothes white as snow and never injures the fabric. All good grocers.—Advertisement.

Unequal Distribution

Twenty more inches of rain fall every year in the west of England than in the east.

WHY SUFFER ANOTHER DAY WITH INDIGESTION?

The big seller today for acute and chronic stomach misery is Dare's Mentha Pepsin and it is such a fine, pleasant and supremely good medicine that if the first bottle you buy doesn't help you—your druggist will return the purchase price.

One man writes, "I Cannot understand why any person will continue to suffer from gastritis or indigestion when Dare's Mentha Pepsin is available."

And tens of thousands of people—many of whom almost died with stomach agony—think the same way.

It's the right medicine for any person who suffers from bad digestion, gas, heaviness and that feeling of suffocation which is always dangerous.

For gastritis, indigestion, dyspepsia or any stomach agony—acute or chronic keep Dare's Mentha Pepsin in mind.

RADIO

By NEAL FITZALAN, in Radio World.

With the many circuit diagrams available today, some of which are very efficient and some of which are not, the layman gets confused when he starts out to get a circuit which is simple and still workable. The uninitiated may tackle the neutrodyne (along with old-timers) with assurance of success. When this set is built on low-loss lines it is a charm. It is simple to neutralize and easy to operate. The neutrodyne has received some "booing," but this came from the people who didn't take the pains to build the set properly, and also those who used poor and inefficient material.

This set is a cinch to log and settings don't change, except if you have a poorly insulated antenna, when during the damp weather the insulators get wet and start to leak, thereby broadening the tuning and unstabilizing the set also.

All the neutroformers are wound serialtum on one low-loss form for the basket-weave type. The panel of the set is the same as that of the standard Neutrodyne, that is, it has

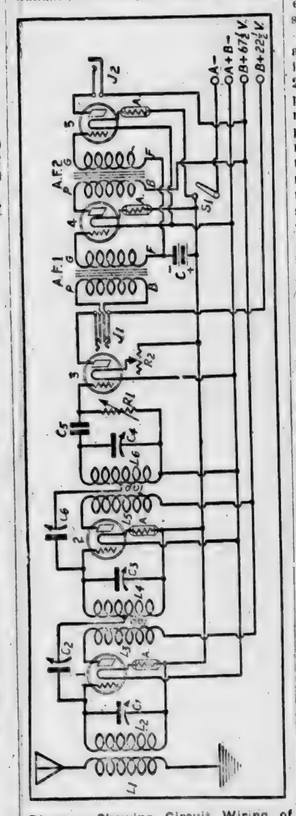

Diagram Showing Circuit Wiring of Low-Loss Neutrodyne.

the conventional three dials, one rheostat, a filament switch and the two jacks. You, therefore, can purchase a drilled panel that was originally designed for the Neutrodyne and use it for this set without going to the trouble of drilling the holes and also making the engraving.

Purchase of Parts.

Three low-loss straight-line frequency condensers are used for tuning. The five sockets should be of the porcelain base type. The neutralizing condensers are variable from .000015 to .000019 mfd., and are very easy to adjust. The resistance across the grid and filament of the detector tube is a variable grid leak. The grid condenser is a .00025 mfd. (mica). J1 is a double-circuit jack, and J2 a single-circuit jack. Five UV201A tubes are used. Make sure that when you purchase the tubes that the prongs do not shake and also test the tube in a set and see if it is noisy, as this is the cause of a lot of trouble in neutrodyne receivers.

Changing around of tubes will help a great deal in making the set work efficiently. A filament switch, a terminal strip, a 6-volt storage battery, two 45-volt B batteries and a 4½-volt C battery are needed. The resistances A are amperites, type 1-A.

If you desire to drill the panel, the following data are given: Six and a half inches from the left of the panel and 3½ inches from the top of the panel drill a hole for the first dial, which is a 4-inch dial; 6½ inches from this hole and 3½ inches from the top of panel drill the hole for the final dial. All the holes are 3-16-inch in diameter. Six and a half inches from the left of the panel and ¾-inch from the bottom drill a hole for the first jack, J1, the diameter of the hole being ½-inch. In the same line and 13 inches from this hole drill a hole for J2, also ½-inch in diameter. Three inches from the right of panel and 2 inches from the bottom drill a hole for the rheostat, the diameter of the hole depending on the type of rheostat being employed. Going back to the left-hand side of the panel, 3¼ inches from the left and 1½ inches from the bottom drill the last hole for the switch, the diameter of the hole being ½ inch.

How to Wind the Coils.

The coils are wound in basket-weave fashion L1L2, if desired, may be [illegible] continuous winding. Using No. 22 DCC and a 3-inch diameter form, with 15 dowel sticks equi-distant on the circumference, wind ten turns for L1 and 50 turns for L2. The division of the two windings is denoted by a tap. Both the ground and the A minus are connected to this tap. This affords conductive coupling of the aerial to the grid. For conductive coupling L1 is wound separately and so is L2. The two other transformers, L3L4 and L5L6 are wound with ten turns of the same kind of wire for the primary, and 50 turns secondary, tapped at the fifteenth turn for the connection to the neutralizing condensers.

The single winding on the aerial coil works very well, but a little more selectivity will be obtained by following the diagram, with the two windings separate.

The coils are wound "under two and over two." When the winding is finished the coil may be raised about 1 inch from the form and cord inserted in a wave form through the inside length of the winding and knotted for security, or the cord may be employed in any other fashion for support.

The coils are removed from the form after this lacing is completed. L1L2 is mounted on the baseboard at least 2 inches in back of C1, the coils' axes parallel to the baseboard (windings at right angles to baseboard). For this purpose two dowel sticks may be used, reinserted at two adjacent holes in the winding, using two 2-inch hard rubber or brass right angles, secured to the baseboard and to the dowel sticks. L3L6 is mounted in the same way. L3L4 is mounted with its axis perpendicular to the baseboard, the more conventional fashion. Thus adjoining coils are at right angles to each other and magnetic interplay is successfully avoided.

Place all the instruments in their respective places, taking care that the RFT are all near their own sockets, so as to have very short leads, and thereby save some energy.

The Wiring of the Set.

Bring the beginning of the wire of L1 to the antenna post of the terminal strip and the end of the coil (this being the ten-turn primary) to the ground. Connect the beginning of the secondary coil L2 to the stationary plates of the condenser, C1, to the grid post of the socket, and to one end of the neutralizing condenser, C2. The end of C2 going to the fifteenth turn tap on the coil, L4. The beginning of the coil, L3, goes to the plate post of the first tube socket, the end of this coil going to B plus post (67½ volts) on the strip. The end of L2 goes to the rotary plates of the condenser and also to the negative side of the A battery, and to one end of amperite. If you desire to obtain volume and a bit less selectivity, connect the end of L1 to L2. The beginning of L4 goes to the grid post of the second tube and also to the stationary plates of the condenser C3 and also to one end of the neutralizing condenser, C0 (this is the second one), the end of L4 going to the rotary plates of C3 and to the end of the amperite which in turn goes to the A minus. The beginning of L5 goes to the plate of the second tube and the end goes to the same place the end of L3 went to, that is the B plus 67½ volts. Bring the end of the second neutralizing condenser to the fifteenth turn of 16, the beginning of the coil goes to one post of C5 and also to the stationary plates of C4. Bring the end of the coil to the rotary plates of C4 and also to the post of the leak, and finally to the A-plus and B-minus post of the terminal strip. The left-off terminal of the grid leak goes to the left-off terminal of the C5, which in turn goes to the grid post of the detector socket (the third tube). Note that all the amperites are placed in the negative lead of the A battery and the detector rheostat is placed in the negative lead, to same, the only difference here being that the grid return is put to the positive side of the low potential line instead of the negative as was done with all the grid returns of the other tubes.

The C battery is inserted in the F leads of the AFT, which go to the minus side of the C battery, the positive side of the C battery going to the switch, eventually to negative A battery.

The set is designed for earphone use only to facilitate tuning, otherwise always for speaker use. If earphone service on regular reception is desired, insert another switch between the filament side of S1 and the battery side of the audio amperites.

How to Neutralize the Set.

Neutralization is a simple process of follow out, but it takes a little time to get it just right. Put a small piece of paper between one of the filaments of the second tube from left and the spring on the socket. Push the filament switch out and light the tubes, then tune in a loud local station. If you hear the least undertone of a signal, there is some interstage coupling present. Adjust the small neutralizing condenser until this signal disappears. The same procedure is followed out with the first tube (extreme left). Both settings are left permanently and should never have to be touched, except if the ground is changed, which may change the apparent capacity of the tubes through the interchanging of current from the coils, and which in turn will change the capacity effect of the neutralizing condensers.

POINTS ON KEEPING WELL

HEALTH FIRST

ONE of the most valuable movements of recent times has been the "Safety First" campaign. It was unheard of 25 years ago. People were killed or injured on railroads, street cars and steamers. Workmen were killed, maimed, blinded or otherwise injured in factories and machine shops. Everyone said that a certain number of accidents were bound to occur; that they couldn't be prevented.

Then some skeptical gentlemen began to look into the matter. They found that there was almost no such thing as an unpreventable accident. Every time any one was hurt, someone was at fault, not knowingly or intentionally, but through carelessness, thoughtlessness, stupidity or ignorance. Then they got the big corporations and the large employers of labor interested. They showed them that accidents were not only largely preventable but also that they were very expensive, both to the men who were hurt and to the firms they worked for. In a word, they showed that accidents were pure waste. And waste is just waste. It's time and money and energy and life thrown away. It never does anybody any good and it does everybody harm.

So they started the National Safety Council and took as their war cry in their battle against unnecessary accidents—"Safety First." Today you'll see that sign everywhere, on railroad trains, in factories and shops, even on the little stool the pullman porter sets out for you to step on. Industrial accidents have been greatly reduced as a result, though the steadily increasing number of automobile accidents is more than making up for this reduction. If Safety First, why not Health First? A man is just as dead if he dies of typhoid fever as he is if he is struck by a train. A child who dies of diphtheria is just as dead as one run over by an automobile. And typhoid and diphtheria are more easily prevented than train or automobile accidents.

Most disease is due to carelessness, thoughtlessness or ignorance. We eat too much and then wonder why so many of us die from apoplexy. We run for street cars and trains and can't understand why our middle-aged friends died of heart failure. We overwork our bodies and then bewail the fact that so many of us die from Bright's disease. We expose ourselves to infection and think it strange that we have influenza and pneumonia.

Most disease is due to someone's ignorance or carelessness. Learn how to live, be more careful and so live longer and happier lives. It's worth trying, anyhow.

GETTING NEXT TO NATURE

GETTING next to nature is the present-day fad, especially during the summer months. This is all right but for those who are going out into the woods and fields, it is also desirable for those to "get next" to nature for their own protection.

For there are dangers in the fields and woods, as there are in the crowded city streets and the tenderfoot who picks some pretty little white berries may regret his enthusiasm as much as does the city girl who tries to pet the "lovely little black-and-white kitty" she meets in the woods.

There are three common and poisonous plants which every one going on a vacation or even to picnics ought to know. They are the poison ivy, the poison oak and the poison sumac. While it is well to know how to treat ivy poisoning, it is far better to learn to recognize these poisonous plants and to stay away from them.

Poison ivy is by far the most common. It is usually found in patches either close to the ground or growing about one foot high. It has broad, pointed, bright green leaves which always grow in clusters of three. It has greenish-white berries.

Poison oak is a shrub with oval pointed leaves in clusters of seven to thirteen. Its berries are greenish-white.

Poison sumac grows on swampy ground, so that, although it is the most poisonous of the three, it is not so dangerous, as it is harder to get to. Sumac is a bush from three to five feet high. Its bright green leaves grow in clusters of from seven to thirteen. Its berries, like the poison oak berries are greenish-white.

These characteristics of the three poisonous plants have been put into rhyme. Learn this and follow it and you will be safe from poisons in the woods:

Berries red, do not dread.
Berries white, poisonous sight.
Leaves three, quickly flee.

Poisoning generally results from picking the leaves or breaking the stems and getting the sap on the skin or crushing the berries. Infection is much more apt to follow if the skin is moist, either from bathing or perspiration.

Even with the utmost care, one may unconsciously come in contact with one of these poisonous plants during a stroll or hike through the woods. Keep the hands away from the face. As soon as possible scrub the skin especially the hands, with strong soap suds. Any kind of soap will do, as soap suds destroys the poison.

The secret of good bread: Yeast Foam

Are your children sturdy?

If your child is delicate, irritable, backward in school, look carefully to the food eaten. Have plenty of good home-made bread. It's wholesome and children love its flavor.

And There Is No Doubt That Julius Is Dead

"When you step on your starter think of your motor," is the suggestion urged upon our autocracy by a firm of advertisers.

It seems to me the advertisers give a lot of unwarranted credit to those whom they address. The admonition to think presupposes possession of wherewithal.

Granting, however, for the sake of argument, that the United States of America is not entirely bereft of inherent ability to reason, I should imagine an advertiser with an eye to preserving a few customers for the future might suggest:

"When you step on your starter think of Caesar!"

There may have been no motor in Caesar's chariot, but—he refused to believe in signs.

You guessed it—Julius is dead.—Stuart N. Lake, in the Saturday Evening Post.

Canards

John S. Sumner, head of New York's anti-vice crusaders, was asked by a New York reporter the other day if it was true that he had been trying to get the Bible expurgated.

"That story"—and Mr. Sumner laughed heartily—"is just about as true as the one they started last month. They said last month, you know, that I was behind a world movement to do away with vice presidents."

Mr. Sumner gave another hearty laugh. Then he ended:

"I guess they'll be accusing me next of trying to pass a law to prohibit boats from hugging the shore."

Yucatan's Sisal Trade

Yucatan's sisal trade is receiving attention and it is hoped to restore her dominance of the industry. A commission from the federal department of commerce and industry will present a project for the organization of a large co-operative organization, in which every factor interested in the production, transportation and sale of sisal will be represented.—Family Herald.

A Lady of Distinction

FAMOUS DETECTIVE CASES

By **Cleveland Moffett**

How Five Masked Bandits Forced Cashier to Reveal Combination to Vault in the Northampton National Bank and Escaped With Loot Valued at Over a Million Dollars.

(Copyright by W. G. Chapman.)

ABOUT midnight on Tuesday, January 25, 1870, five masked men entered the house of John Whittelsey in Northampton, Massachusetts. Mr. Whittelsey was the cashier of the Northampton National bank, and was known to have in his possession the keys of the bank building and the combination to the bank vault. The five men entered the house noiselessly, with the aid of false keys, previously prepared. Passing upstairs to the sleeping apartments, they overpowered seven inmates of the house, gagging and binding them so that resistance or alarm was impossible. These were Mr. Whittelsey and his wife, Mr. and Mrs. T. B. Cutler, Miss Mattie White, Miss Benton, and a servant girl.

The bedroom of Mr. and Mrs. Whittelsey was entered by two men who seemed to be leaders of the band. One wore a long linen duster buttoned nearly to his knees, also gloves and overshoes; the other wore a jacket and overalls. Both men had their faces concealed behind masks, and one of them carried a darklantern. On entering the room the two men went directly to the bed, one standing on either side, and handcuffed Mr. Whittelsey and his wife. Both carried revolvers. The proceedings were much the same in the other rooms.

After some delay and whispered consultation, the robbers ordered the five women to get up and dress. When they had done so, they were roped together by ankles and wrists, and taken into a small room, where they were kept under guard by one of the band. Mr. Cutler also was imprisoned in the same way. Then the two leaders devoted themselves to Mr. Whittelsey. They told him plainly that they had come for the keys of the bank and the combination of the vault, and that they would "make it hot" for him unless he gave them what they wanted.

Mr. Whittelsey was then taken downstairs, and commanded to surrender the keys, but he refused.

Mr. Whittelsey kept silent. Then both men came at him, wringing his ears, shaking him by the throat, hurling him to the floor and pounding their knees into his chest. For three hours this torture was continued. More than once the ruffians placed their revolvers at Mr. Whittelsey's head declaring they would blow his brains out unless he yielded. Finally he did yield; the suffering was too great; the supreme instinct of self-preservation asserted itself. Toward four o'clock in the morning, bruised from head to foot, and worn beyond further resistance, he surrendered the keys, and revealed the true combination of the vault.

Then the robbers went away, leaving two of their associates to watch over the prisoners. One of the band, before his departure, did not disdain to search Mr. Whittelsey's clothes and take his watch and chain and fourteen dollars in money. The last of the band remained in the house until six o'clock; and it was an hour later before Mr. Whittelsey succeeded in freeing himself from his bonds.

He hurried at once to the bank, arriving there soon after seven o'clock. He found the vault door locked, and its dials broken off, so that is was impossible at the moment to determine the extent of the robbery, or, indeed, whether there had been any robbery. It was necessary to send to New York for an expert before the vault could be opened, which was not accomplished until late that night, twenty hours after the attack had been made. Then it was found that the robbers had been only too successful, having secured money and securities estimated at a million and a quarter dollars. Much of this sum was safe-deposits, and the loss fell on the depositors; and to some it was the loss of their whole property.

At this time the authorities had no clue to the identity of the robbers, though they had left behind them numerous evidences of their presence, such as dark-lanterns, masks, sledge-hammers, overshoes, and the like.

When several months had elapsed, the Pinkertons were called into the case. They began by carefully studying certain communications that had been received by the bank directors from persons claiming to have in their possession the missing securities.

A fact of much significance to the Pinkertons was the rather remarkable interest in the case, and apparent familiarity with it, shown by one J. G. Evans, an expert in safes and vaults and the representative of one of the largest safe manufactories in the country.

As he studied the case, Mr. Pinkerton recalled a circumstance that had happened in the fall of the previous year. On the night of November 4, the First National bank of Pittston, Pennsylvania, had been robbed of sixty thousand dollars, and Mr. Pinkerton had gone there to investigate the case. He met a number of safe men, it being a business custom with safe men to flock to the scene of an important bank robbery in order to supply new safes for the ones that have been wrecked. While they were all examining the vault, still littered with debris of the explosion, the representative of one of the safe companies picked up a small air pump used by the robbers, and, looking at it critically, remarked that he would have sworn it belonged to his company, did he not know that was impossible. The air pump was, he declared, of precisely his company's model, one that had been recently devised for a special purpose. At the time Mr. Pinkerton regarded this as merely a coincidence, but now the memory came to him as a flash of inspiration that the man who had remarked the similarity in the air pump represented the same company that employed Evans.

In November, George H. Bangs, superintendent of the Pinkerton Agency, a man possessed of very remarkable skill in eliciting confessions from suspected persons had an interview with Evans. He professed to Evans that the detectives had secured evidence that practically cleared up the whole mystery; that they knew (whereas they still only surmised) that the robbery had been committed by the Dunlap and Scott gang; that for weeks they had been shadowing Scott and Dunlap (which was true) and could arrest them at any moment; that there was no doubt that the gang had been trying to play Evans false (a very shrewd guess), and would sacrifice him without the slightest compunction; and, finally, that there was open to Evans one of two courses—either to suffer arrest on a charge of bank robbery, with the prospect of twenty years in prison, or, save himself, and at the same time, earn a substantial money reward, by making a clean confession of his connection with the crime. All this, delivered with an air of completest certainty, was more than Evans could stand up against. He broke down completely, and told all he knew.

The story told by Evans is one of the most remarkable in the history of crime. He admitted the correctness of Robert Pinkerton's inference that the Northampton bank had been robbed by Scott and Dunlap and their associates, and in order to explain his own connection with this formidable gang he went back to its organization four years before. The leader of the gang was James Dunlap, alias James Barton, who, before he became a bank robber, had been a brakeman on the Chicago, Alton & St. Louis railroad. His inborn criminal instincts led him to frequent the resorts of thieves in Chicago, and thus he met "Johnny" Lamb and a man named Perry, who took a liking to him and taught him all they knew about breaking safes.

Dunlap's right-hand man was Robert C. Scott, alias "Hustling Bob," originally a deckhand on a Mississippi steamboat and afterward a hotel thief. Scott was a big powerful man, with a determination equal to anything. Their associates were what one might expect from these two. Other members of the gang were Thomas Doty, William Conroy, "Eddie" Goody, John Perry, James Green, a professional burglar originally from Canada, and the notorious John Leary, alias "Red" Leary, of whom more will be said later on. In addition to these, the gang contained several members of less importance, men who acted merely as lookouts, or as go-betweens or messengers.

The first large operation of Dunlap's band was the plundering of the Falls City bank in Louisville, Kentucky, of about two hundred thousand dollars, escaping with their booty. This was satisfactory as a beginning, but Dunlap and Scot dreamed of achievements beside which this was insignificant. They began a careful investigation through many states, to learn of banks of weak structure containing large treasure. One of the gang finally found precisely what they were in search of in the Second National bank of Elmira, New York, which institution, being a government depository, contained, as they learned on good authority, two hundred thousand dollars in greenbacks and six millions in bonds.

A survey of the premises satisfied the gang that, massive though it appeared, with its ponderous iron walls and complicated locks, the vault of this bank was by no means impossible of access. The floor above the bank was occupied by the Young Men's Christian association, one of the association's rooms being directly over the vault. There was the floor between, and under that four feet of solid masonry, some of the stones in it weighing a ton. And under the masonry was a layer of railroad iron, resting on a plate of hardened steel an inch and a half thick. All this, however, so far from discouraging the conspirators, gave them greater confidence in the success of their plans, once under way, since the very security of the vault, by structure, from overhead attack lessened the strictness of the surveillance. Indeed, the most serious difficulty, in the estimation of the robbers, was to gain easy and unsuspected admission to the quarters of the Young Men's Christian Association, on the second floor. The secretary, a very prudent man, had put on the outside door of the association rooms an improved Yale lock, which was then new upon the market and offered unusual obstacles to the lock-picker. Neither Dunlap, Scott, nor any of their associates had skill enough to open this lock without breaking it, which would, of course, have been fatal to their plan. For days, therefore, after all the other details of the robbery had been arranged, the whole scheme seemed to be blocked by a troublesome lock on an ordinary wooden door.

The Yale lock still continuing an insoluble difficulty, Perry finally made a journey to New York, in the hope of finding some device by which to open it. There, in the course of his search, and in a curious way, he made the acquaintance of Evans, then a salesman in the employ of a prominent safe company.

Before entering the employ of the safe manufacturers, Evans had conducted an extensive mercantile business for himself in a large Eastern city, where he was regarded as a man of wealth and integrity. He had large dealings through the South, with extensive credits; but the outbreak of the war had forced him into bankruptcy. It was hinted that there was some overshrewd practice connected with his failure, and his subsequent sudden departure for Canada gave color to the insinuation. At any rate, he compromised with his creditors on a basis advantageous to himself.

On his return from Canada, Evans took up his residence in New York city, and began to cultivate habits far beyond his income, notably the taste for fast horses. Perry heard of Evans through one Ryan, whom he had known as a crook years before, but who was then running a livery stable in an uptown street.

Before long Evans found himself much cramped financially. Being unable to pay Ryan the money he owed him for stabling, he began to talk of selling his horse; and one day, when he was complaining of being short of money, Ryan said: "If I had your position I'd never lack for money."

Evans asked him what he meant.

"Oh," said Ryan, "there are plenty of people who would put up well to know some of the things you know about safes and banks."

By degrees Ryan made his meaning more clear, and Evans grew properly indignant. The subject was dropped for the moment, but, in subsequent meetings, Ryan kept reverting to it. Meantime Evans found himself growing more and more embarrassed, and one day he said, "What is it these people want to know?"

"Well," said Ryan, "they would like to know, for one thing, if there is any way of beating these new Yale locks?"

"You can't pick a Yale lock," answered Evans—"that would take too long; but there is a way of getting one open."

"How?"

"We'll talk that over some day."

Having once nibbled, Evans was not long in biting at the bait thus adroitly held before him. He consented to be introduced to Perry, who shrewdly showed him what an easy matter it would be for a man who knew the secrets of safe-makers and could locate weak banks, to make a great deal of money, without danger to himself.

The result was that Evans, in consideration of fifty thousand dollars, finally agreed to provide some means of opening the Yale lock which barred the robbers from the coveted treasure at Elmira.

Perry, in great delight, hurried back to Elmira, and reported his success to Dunlap and Scott. In order to bring Evans to Elmira in a way not to excite suspicion, a letter was written to the company he served, containing a tempting proposition regarding the purchase of safes. Evans was at once sent to Elmira to look after the matter. He stopped at the Rathbone house, where he was waited upon by Scott, with whom he concerted a plan of operations. Scott was to slip a thin piece of wood into the lock at night, so that the lock would not work. Then, as Evans' presence in the city had been made known, it was hoped that he would be called upon, as an expert in difficult locks, to find out what was the matter. This would give him an opportunity to secure an impression of the key. The plan worked only too perfectly; and within twenty-four hours the conspirators were able to pass in and out of the Young Men's Christian Association rooms as they pleased, without the knowledge of any one.

Every night they gathered in the rooms of the Young Men's Christian Association after the young men had gone home, using their false keys to obtain admission; and they remained there hours at a time, doing what would ordinarily be the noisiest work; but their movements were so cautious and well-planned that their presence in the building was never suspected. Every night the carpet and flooring were taken up and, after they had finished their excavations, were carefully relaid. Tons of masonry and heavy stone were removed, shoveled into baskets and carried up to the roof of the opera house, adjoining the bank building, where there was small chance of the debris being discovered.

One day the president of the bank, Mr. Pratt, was surprised, on entering the vault, to find the floor sprinkled with a fine white dust. An investigation was made, and the whole plot was uncovered. The members of the gang, however, got word in time, and all managed to escape except Perry, who was convicted of attempted burglary and sent to the Auburn prison for five years.

Undisturbed by the failure, Scott and Dunlap proceeded to scour the country again in search of another bank suited to their operations, and the next February notified the gang, which now contained some new members, that they had "found something to work at" in Quincy, Illinois. The attack on the Quincy bank was made in very much the same way as the attack on the bank at Elmira. A Baltimore woman rented an old house which afforded shelter and concealment to the men; access was obtained to rooms over the vault by false keys, as before; the flooring was taken up and put down every night without exciting suspicion, the masonry was removed, the iron plates of the vault were penetrated, and, finally, one night Scott and Dunlap were able to lower themselves through a jagged hole into the money-room beneath.

It now remained to force open the safes inside the vault; and to accomplish this the robbers used, for the first time in the history of safe-wrecking in America, what is known as the air-pump method, which had been devised by Evans, and carefully explained by him to Scott and Dunlap. Evans' employers were at this time introducing a padding designed to make safes more secure; and Evans had hit upon the idea of introducing powder into the seams of a safe door by an air-pump, in the presence of a possible customer, in order to impress him with his need of the new padding. Evans himself was not present at the breaking open of the Quincy bank, and he had nothing to do with the robbery beyond furnishing instruction and the air-pump. Scott and Dunlap did the work.

At first step, all the seams of the safes formed by the doors were carefully puttied up, save two small holes, one at the top and one at the bottom. Then, at the upper hole, Scott held a funnel filled with fine powder, while Dunlap applied the air-pump at the hole below. By the draft thus created, the powder was drawn into all the interstices between the heavy doors and the frames of the safes. Then a little pistol, loaded simply with powder, was attached near the upper hole, and, by a string tied to the trigger, discharged from a safe distance above. There were several attempts made before a complete explosion was effected; but finally the safes were blown open and their contents secured, the robbers making good their escape with one hundred and twenty thousand dollars in money and about seven hundred thousand dollars in bonds. No part of this money was ever recovered by the bank, nor were any of the gang captured at this time. The securities were, however, afterward sold back to the bank. Indeed, so cleverly had the whole affair been managed that no suspicion fell upon either Scott, Dunlap or any of their associates.

Here were fortunes made easily enough, with plenty more to be made in the same way, and the gang were in high feather over their success. During the following summer Scott and Dunlap lived in princely style in New York.

By fall their money began to run short, and they decided to look about for another job. In the Quincy robbery they had broken their agreement with Evans, paying him only a small sum for the use of the air-pump which he had furnished them. Now, however, they called upon him again, and, partly by threats, partly by generous offers, induced him to assist them again. A series of unsuccessful attempts at robbery were made on banks in Saratoga, Nantucket, Covington, Kentucky, and Rockville, Connecticut. In several instances failure came at the very time when success seemed sure. In the case of the Covington bank, for instance, nitroglycerin was used in blowing open the safe, and the explosion was so violent that the men became frightened and fled in a panic, leaving behind untouched, although exposed to view, two hundred thousand dollars in greenbacks and one million five hundred thousand dollars in negotiable bonds. In the case of the Rockville bank their plans had worked out perfectly, and they had removed everything from the top of the vault but a thin layer of brick, when Scott accidentally forced the jimmy through the roof of the vault and let it fall inside. As it was too late to complete the work that night, and as the presence of the jimmy inside the vault would inevitably start an alarm the next day, they were obliged to abandon the attempt entirely.

The gang's most desperate adventure befell in connection with the attempt on the First National bank of Pittston, Pennsylvania. The bank occupied a one-story building covered with a tin roof, and the robbers decided to make the attack from the roof. But there was a serious difficulty in the fact that in case of rain coming at any time after they had begun operations, water might soak through the openings they had made and betray them. Dunlap's ingenuity, however, was equal to this emergency; and each night, after finishing their excavation, they carefully relaid the sheets of tin that had been disturbed, protecting the joints with red putty, which matched the roof in color. So well did they put on this putty that, although it rained heavily the very day after they began, not a drop leaked through.

On the night of November 4 only one layer of bricks separated them from the top of the vault, and it was decided to finish the work and do the robbery that night. Two hours' hard labor with drag and jack-screw sufficed to effect an opening, and Scott and Dunlap were lowered into the vault. They found three Marvin spherical safes protected by a burglar alarm. But Dunlap was somewhat of an electrical expert, and was able to so surround the burglar alarm with heavy boards so as to render it of little or no danger. They experienced much difficulty, though, in blowing open the safe. The first one attempted yielded on the second explosion, and they secured five hundred dollars in currency and sixty thousand dollars in bonds. The next one was far more troublesome, not less than ten explosions being required to make way into it. And just as the task was at last accomplished, and they were on the point of seizing a great sum of money, there came a warning call from Conroy, who was doing sentry duty on the roof, and it was necessary to fly.

When Dunlap and Scott had been dragged out of the vault by their associates, they were found scarcely able to run. During all the twelve explosions of powder and dynamite they had never left the vault, but, crouching behind the boards that guarded the burglar alarm, had remained within arm's length of explosions so violent that they tore apart plates of welded steel and shook the whole building. Worse than the shock of these explosions were the noxious gases generated by them, which Scott and Dunlap had to breathe. On coming out, their clothes were wringing wet with perspiration, and they were so weak that their legs tottered under them, and their comrades had to almost carry them for a time. But, nevertheless, they managed to walk thirty miles that night, to Lehigh, where they boarded a train to New York.

It was on this occasion that there was left behind in the vault the air-pump which Robert Pinkerton afterward recalled so shrewdly to Evans' disadvantage.

Coming, in his confession, to the Northampton bank robbery, Evans said that the gang considered making an attempt there for several months before the robbery was actually executed.

On the night of the robbery Evans was in New York, but he had gone to Northampton a day or two after, as already stated. Then, for the first time, he realized what immense wrong and suffering would be inflicted upon innocent people by the robbers, and he said it was this that had prompted him in his efforts to have the securities restored to the owners.

Returning to New York, he at once communicated with Scott and Dunlap by means of Herald personals, and had several interviews with them in the city during the month of February. While they were anxious to dispose of the securities, it was plain from the first that they distrusted Evans and proposed to lessen his share of the profits. While pretending to approve the steps he was taking for a compromise with the bank, they were really, without his knowledge, carrying on secret negotiations with the same object. The suspicion on either side grew until finally it could no longer be concealed. Meeting Scott in Prospect park some time after the robbery, Evans said, "When are you going to settle and give me my share?"

"You'll never get a cent," answered Scott; "you've given the whole gang away."

It was soon after this interview that Evans decided, under the management of Superintendent Bangs, to save himself by making a full confession. He had fewer scruples about betraying his associates, because he had become convinced that in the previous robberies, notably in the one at Quincy, Illinois, he had been treated most unfairly by Scott and Dunlap.

Evans said that for several weeks preceding the Northampton robbery the gang had concealed themselves in the attic of a schoolhouse which stood four of five rods from the highway and apart from other houses. His statement was substantiated by the discovery in this attic, after the robbery, of blankets, satchels, ropes, bits, pulleys, and provisions.

After hearing Evans' story, the question foremost in Mr. Pinkerton's mind was where the stolen securities had been concealed. From what Evans said, and from what he knew himself about the methods of the gang, he was satisfied that Dunlap possessed this secret, and would intrust it to no one unless absolutely compelled to do so. The likeliest way of compelling him was to put him under arrest, which might very well be done now that Evans had consented to turn state's evidence. For weeks Pinkerton "shadows" had never been off Scott and Dunlap, who spent most of their time in New York, the former living with his wife at a fashionable boarding house in Washington Square.

Instructions were accordingly given to the shadows to close in upon them, and on February 14, both men were arrested in Philadelphia, as they were on the point of taking a train for the South.

Despite the large sum of securities in their possession, the men had run short of ready money, and, while awaiting a compromise, were starting out to commit another robbery. They were taken to Northampton, and committed to jail to await trial.

It happened as Mr. Pinkerton foresaw. Brought into confinement, Dunlap and Scott were compelled, in the conduct of their affairs, to reveal the hiding place of the booty to some other member of the gang. They chose for their confidant "Red" Leary. The securities, as subsequently transpired, were at this time buried in a cellar on Sixth avenue, near Thirty-third street, New York. The precise spot was indicated to Leary by Mrs. Scott, who, in doing so, reminded Leary of an agreement entered into by the members of the gang before the robbery, that any of their number who might get into trouble could, if he saw a necessity, call upon his confederates to dispose of all the securities on whatever terms were possible and use the proceeds in getting him and others—if others were in trouble also—free. At the time Leary scoffed at this agreement, but was perfectly willing, even eager, to have it enforced a little later, when, by the orders of Inspector Byrnes, he was himself arrested on the charge of complicity in the memorable Manhattan bank robbery, which had occurred some time before.

While much of Leary's life had been spent in deeds of violence, he had shown on occasions such splendid bravery, even heroism, as almost atoned for his crimes. The ablest lawyers were now secured in his defense, and by every possible method of legal obstruction they kept alive a controversy in the New York courts for nearly two years. Meanwhile Leary reposed in Ludlow street jail, where he enjoyed all the privileges ever accorded to prisoners.

On the afternoon of May 7 Mrs. Leary called at about five o'clock with "Butch" McCarthy, and the three were alone in Leary's room until eight o'clock. After that Leary strolled about in the prison inclosure, and at about a quarter past ten keeper Wendell, who had charge of the first tier, in which Leary's room was located, saw him going upstairs from the second to the third tier. Although in this Leary was going directly away from his own room, there was nothing to excite surprise, for Leary had been accustomed to use the bathroom on the third tier. A quarter of an hour later Wendell started on his rounds, according to the prison rule, to see that each one of the men in his tier was securely locked up for the night. When he came to Leary's room he was a little surprised to find him still absent, but supposed he would be there shortly. But after waiting a few minutes and finding Leary still absent, the keeper became alarmed, and began a search. He first went to the bathroom, and not finding Leary there, searched in other places, high and low. Then he returned to the bathroom, and there made a discovery which filled him with consternation. He saw in the brick wall, what at first had escaped his attention, a gaping hole, large enough to allow the passage of a man's body. The hole opened into a tunnel that seemed to lead downward. The alarm was at once given, and it soon appeared that the keeper's fears were only too well founded. "Red" Leary had escaped.

It was found that the tunnel from the bathroom led into a room on the fifth floor of a tenement house at No. 76 Ludlow street, adjoining the jail.

Leary, after his escape, fled to Europe, but was afterward arrested in Brooklyn by Robert Pinkerton and three of his men, who held him up in a sleigh at the corner of Twenty-seventh street and Fourth avenue, Brooklyn; and before Leary could make use of a large revolver which he had on his person, the horse was grabbed by the head and pulled to a standstill, and Leary was dragged out of the sleigh and handcuffed. He was taken immediately to Northampton, and put in jail there.

Some time previous to this the Pinkertons had located Conroy, who had also escaped from Ludlow street jail, in Philadelphia; and immediately on the arrest of Leary, Robert Pinkerton sent one of his detectives from New York to Philadelphia, who was fortunate enough to arrest Conroy at one of his resorts on the same night, and he was also delivered in jail at Northampton.

Some months previous to this the Pinkertons had also arrested Thomas Doty, another member of the band, and lodged him in the Northampton jail.

In the meantime, Scott and Dunlap, now in state prison, had made a confession as against Leary, the holder of the securities; and when Leary was brought to Northampton, they wrote him a letter, notifying him that unless the securities were handed over to their proper owners, they would take the witness stand against him and convict him, but that if he did turn over the necessary securities they would refuse to take the stand. This resulted in the recovery by the Northampton bank of nearly all the securities stolen from the bank and its depositors, this not including, however, the government bonds and currency stolen at the time.

The trial of Scott and Dunlap took place at Northampton a year and a half after the robbery. Evans took the stand against them, his evidence making the case of the prosecution overwhelmingly strong. After three hours' deliberation the jury brought in a verdict of guilty, and the prisoners were sentenced to twenty years each in the state prison. Scott died in prison, and Dunlap, having been pardoned several years later, went to live in a Western city, a reformed man earning an honest living. As far as is known, since leaving the penitentiary he never returned to his evil ways. Conroy also took to new ways, and became honest.

"Red" Leary came to his death in a curious way. One night he had been drinking with some friends at a well-known sporting resort in New York, on Sixth avenue, between Twenty-seventh and Twenty-eighth streets. In the party was "Billy" Train, an old bunko man. They were all somewhat intoxicated and inclined to be uproarious. As they came out on the street, "Billy" Train picked up a brick and threw it up in the air, yelling: "Look out for your heads, boys." To this warning Leary paid no attention, and the brick came down on his head with full force, fracturing his skull. He was taken to the New York hospital, and died there, after much suffering.

As for the safe-expert, Evans, he is engaged in legitimate business, and is prospering. In compiling this chapter from the records, the writer has, by request, changed some of the names of the parties, who since that time have reformed, and are now respected members in the communities where they reside, and the author has no desire to injure them.

HERE AND THERE

See Furnish for that new Chevrolet.

J. E. Foltz and wife spent from Wednesday until Saturday visiting friends in Ohio.

Mrs. Anna Rice of Kokomo, leaves Thursday, after a two weeks visit here with her son, Charles Rice.

Mrs. C. S. Pinchon and son of Minneapolis, came Saturday for two weeks visit with Mr. and Mrs. William Randall.

Lillian Hull is at Wayne this week visiting relatives. Mrs. Hull will visit her daughter Flossie at Hicksville this week.

Dr Eugene Simons, wife and son and Sidney Steffey and family of Muncie, visited in the Steffey home over Sunday. Miss Clara Kincade of St Louis was also a guest.

Ralph Sechler and family left Saturday for a month's outing at Hamilton Lake Mr. Sechler will look after his pickle business and run in for the evening with his family. During their stay their parents will visit them.

Will Hamilton drove to Benton Harbor Friday returning Sunday bringing with him his family, they having been guests of Mr. and Mrs. Howard Northrup at the J. F. Pinegar home home. Mr Northrup is improving, which his friends will be glad to hear.

Mr. and Mrs. Van Hadsell and two children of near Ney, O., Miss Laura Hadsell of Cincinnati, Mr and Mrs. Harry Bushong, Mr. and Mrs. Gard and son, Cedric, of Fort Wayne were Sunday afternoon guests of Dr. B. S. Sheffer and Mrs Sheffer.

William Harmon and family attended the Stayner-Waite reunion heldat the home of P. W. McKibben near Orland, Mrs. Harmon's parents. Miss Rachel McKibben returned to St. Joe for a weeks visit while Master Lewis remained at Angola with his grandma Harmon.

A suit instituted by Howard Krise of near Concord, against Harry D. Draggoo of Auburn, was settled in the court of Justice T. C. Ford in Auburn Saturday morning. Mr. Krise claimed Draggoo owed him $82.50 for services in the sale of timber. Mr. Draggoo paid the costs amounting to $5.20.

Last Saturday, Harold Kraft shot the end of his left thumb off by accident. He had gone to the barn and set his gun up and it slipped down, striking the trigger, discharging the load. He had hold of the barrell with his left hand. Rather a lucky accident after all. Dr. Minnick is caring for the wound.

The Bassett family reunion was held Sunday at the home of Mr. and Mrs. Solomon Ely about two miles southwest of Cedarville. About fifty descendants of William and Jane Bassett, who came to this country from Kent county, England about 1830, were present. The day was fine for the occasion. A bountiful basket dinner was served after which a short business session was held at which time Solomon Ely presided with Miss LaVonia Ely acting as secretary. Officers to serve for 1926 are, C. C Bassett, president and Virgil Bassett, secretary and treasurer, both of St. Joe. The Hicksville Fair Ground was selected for the 1926 meeting to be held the first Sunday in August. Ice cream was served during the afternoon.

Club Work News

From Concord Boys and Girls

A group of boys who are up to date in club work will go to Blackman Lake to attend the club camp for four days, August 17-21. The social given by the boys on Wednesday evening was well attended The boys certainly do appreciate the co-operation of all in putting it over.

How Long "Lead" Pencils

To make the wooden tube in which the lead for a pencil is incased, the manufacturer cuts out a board about seven inches long, the width of six pencils and as thick as half a pencil in diameter. With a machine he then shapes it into six semi-rounded or semi-hexagonal sections and grooves one side to hold the lead. When the lead is inserted the halves are glued together. The "lead" in a pencil is composed of graphite.

AUGUST

INDIANA STATE NEWS

Indianapolis.—Howell Ellis, secretary of the public service commission, notified officials of Hiners' Red Ball Lines, Inc., that busses may carry newspapers to cities and towns in Indiana without violating the law. Mr. Ellis said the commission has no objection to bus drivers delivering bundles of papers at regular stops, but opposes delivery of single copies by bus drivers while the bus is in operation.

Bethany Park.—"We should urge and expect big things of our boys and girls, because we know they can grow only by doing," said Mrs. Philip Hoover, of Indianapolis, at the conference of the Indiana Christian Missionary society, in session here. Mrs. L. C. Howe, of Vincennes, led a discussion on "The Best Methods of Interesting the Church in Missions." A songfest on the hillside will be a feature of the program.

Elkhart.—A protective association to guard against bank robberies and holdups through units of armed vigilantes in every town and city was formed at a meeting of the Elkhart County Bankers' association. Elhart is the sixty-seventh county of the state to form such a body. James G. Rylands of the protective department of the state bankers' association assisted in the organization.

Indianapolis.—A series of demonstrations on woodland management has been planned by the forestry division of the state conservation department for the purpose of educating woodland owners in various parts of the state on the best practices in thinning, planting and conserving wooded acres. Two practical demonstrations will be conducted August 14, by the forestry experts.

Indianapolis.—Agricultural students from leading state universities in the United States and provincial agricultural colleges in Canada will come to Indianapolis to compete in the seventeenth annual intercollegiate cattle judging contest, at the 1925 national dairy exposition, October 10 to 17, according to W. E. Skinner, exposition secretary and general manager.

Indianapolis.—Game wardens who have been investigating the killing of many fish in White river just above the Williams dam near Bedford, have reported to George N. Mannfeld, head of the fish and game division of the state conservation department, that the fish found floating on the surface have been saved by transferring them to the water below the dam.

Warsaw.—Fire threatened Kosciusko lodge, one of the largest hotels at Winona lake. The fire was discovered in the room of the south wing, having started from sparks from a kitchen chimney. The blaze was extinguished with slight loss. The hotel, which is located near the south end of the park, is owned by Mrs. W. A. Sunday.

Kokomo.—The Rev. Charles E. Disoro, age eighty-six, civil war veteran and retired minister of the Methodist Episcopal church, died unexpectedly at his home here. He was the oldest member in point of continuous connection in the North Indiana conference, having been a member since he was twenty years old.

Fort Wayne.—A raid conducted by Sheriff Henry Martin and two deputies on the "Lone Oak," a roadhouse four miles east of this city on the Lincoln highway, resulted in the capture of thousands of dollars' worth of gambling equipment and the arrest of a man in charge of the establishment, who gave his name as John Brown.

Martinsville.—The third trial of the case of John Thomas Shaw, Indianapolis negro, who has been held here on a charge of murder in connection with the death of Mrs. Helen Welchel, of Indianapolis was set by Joseph W. Williams, judge of the Morgan Circuit court, for October 14.

Indianapolis — The public service commission approved the petition of the Indiana Bell Telephone company to issue $12,000,000 in common stock to pay debts and buy property. The American Telephone and Telegraph company was authorized to buy the stock issue.

South Bend.—The Indiana and Michigan Electric company was made defendant in a suit for $50,000 damages filed by William Roop, a farmer, who says he has been permanently disabled because of being burned by a broken live wire.

Clinton.—Julius Judson Higgins, former state senator, age seventy-six, died at the wheel of his auto here. Death was attributed to either heart disease or paralysis.

Noblesville.—The Woman's Relief Corps of Hamilton county held its annual convention here with the largest attendance since the organization was formed 36 years ago.

Indianapolis.—The public service commission authorized the operation of 12 motor bus lines in various parts of the state.

Indianapolis.—Sales of gasoline in Indiana last June were approximately 14 per cent greater than during June, 1924, according to estimates of Archie N. Bobbitt, state gasoline tax collector. Mr. Bobbitt based his estimate on the amount of state gasoline tax collected during the month just ended. Total gasoline tax collected during July, this year, was $785,338.67.

Indianapolis. — Delegates from all parts of the United States will attend the national Christian Family convention, which will be held in Indianapolis October 4 to 14

FOR INCREASE IN LAND VALUATIONS

Indianapolis. — Notices were sent out by the state board of tax commissioners recommending drastic changes in real estate valuations set by boards of review of 51 counties.

Increases ranging from 5 to 100 per cent were recommended in the assessments fixed in 50 counties. In only one county, Union, did the board recommend a general reduction that was for 3 per cent lower than the valuation set by the county board of review.

The board recommended an increase of 100 per cent on all lots, lands and improvements in the town of Cannelton, Perry county. It was the largest increase recommended.

Both increases and reduction were ordered in different classes of property in three counties, Hancock, Orange and Sullivan.

The board recommended no changes in the assessed valuation of personal property.

As a result of the recommendations, members of the state tax board expressed the belief that the changes will result in the addition of approximately $65,000,000 to the tax duplicates in the 50 counties.

Indianapolis.—Field examiners of the state board of accounts made a report to the board on their investigation of the conduct of the office of city judge of Elkhart by Judge Walter G. Walker. The report charges discrepancies and irregularities aggregating $2,808.69 in the handling of funds, including fines, docket fees and other money, but it points out that Judge Walker has repaid $2,079.69 of the amount, leaving, the examiners said, a balance of $219. They reported he made errors in the distribution of money received in part payments of fines paid on the installment plan.

Peru.—A hidden codicil to the will of the late William H. Huhn, well-known local Civil war veteran, which was found recently and immediately filed for probate, changes the entire status of affairs in an estate said to be worth several thousand dollars. Instead of going to the endowment fund of the Peoria Cemetery association and the Peoria Methodist church, as was provided in the original document the estate is bequeathed in the codicil in equal parts to three brothers and one sister.

Indianapolis.—The rise in public utility rates for services to Indianapolis, together with salary increases for clerks in the administration department, and anticipated assessment awards against the city on public improvements, are responsible, in a large measure, for the $158,850 increase in revenue the administration department of the board of works is asking for 1926, over the sum appropriated in 1925.

North Vernon.—For about five years tomato work in the vicinity tributary to North Vernon, Jennings county, has been on the drag. Farmers in this section are interested in growing tomatoes and a joint meeting of farm bureau leaders and leaders of the business men's organization was held recently for the purpose of arousing interest in the work and developing plans whereby more acreage will be contracted for in this territory.

Mitchell.—Horticulture in Europe and the Orient was pictured for the Indiana Horticultural Society by W. C. Reed, Vincennes nurseryman and fruit grower, who recently returned from a globe-encircling trip. Mr. Reed was the principal speaker at a banquet held in conection with the summer field trip of the society.

Terre Haute.—Authorities are seeking to learn the identity of a drowned man found attached to a hook on a fisherman's trot line in the Wabash river. The man apparently was about forty years old and weighed about 140 pounds.

Indianapolis.—A honey shortage is predicted for Indiana by Charles O. Yost, state apiary inspector of the conservation department. The season's honey crop will not exceed 4,000,000 pounds in the state, or about one-half the normal output.

Greencastle.—Mrs. Leonard Greenlee, twenty-three years old, and her daughter Alberta, three years old, died of burns as a result of pouring coal oil into a cook stove earlier in the day at the home in Limedale.

Terre Haute.—Three unmasked bandits held up Frank Layer, caretaker of the Terre Haute Country club, at the entrance to the club's grounds and robbed him of the weekly pay roll amounting to $525.

Lafayette.—Discussion of important questions before the Sunday school teacher and leader occupied the greater part of the third day at the Sunday school training conference at Battle Ground, near here.

Indianapolis.—Officials of the Hammond & East Chicago Railway company were informed by the state highway commission that unless the company takes steps immediately to remove its tracks to permit paving of Indianapolis boulevard, the Indiana entrance to Chicago, the highway commission will remove the tracks itself.

Muncie.—The local Young Women's Christian association has received a gift of $4,587.81 as provided in the will of Mrs. Lydia E. Beuoy, who died a few months ago at Shideler, north of Muncie.

Modes Predicted by French Makers

The virtue of patience, and its inevitable rewards are now becoming apparent to those ladies whose slender budgets are forever placing annoying strictures upon their sartorial fancies. Midsummer is proverbially the time for economical wardrobe acquisitions, and for the thrifty and long-waiting the hour of opportunity has struck. The problem is not nearly so simple as it seems—the numerous ladies who await this moment to complete their outfits are concerned far less with today than with tomorrow, and the new frock or coat or hat is acquired principally with an eye to its future utility. Obviously, says a fashion correspondent in the New York Herald-Tribune, it becomes necessary to approximate the next quirks and basic changes in fashion before proceeding, and it is equally essential to recognize modes whose vogues are losing their former potent appeal. The following considerations are directed toward those ladies who now are hesitantly approaching their couturiers after an unseasonal absence dictated by the laws of economics.

Moderately Short Skirt.

The question of skirt length is as mooted as ever. The acute abbreviations of some spring and summer models brought the few remaining Grundys to their feet with the usual philippics, but the remnants of that once large army are a little jaded these days and their lamentations are of no effect. Bizarre extremes in any style are checked by their own shortcomings, and no woman who has witnessed another fare forth in knee length skirt will ever wish to imitate her. And so the new skirt length will vary from about three to six inches below the knees, and there will be the expected dissenters, some Victorian in their inhibitions, others crude in their exhibitions.

A question that invariably presents itself in considering the new season is the silhouette. The diversity of opinion on this subject is unusual—many contend that the flare will be the dominating factor and an equal number insist that the unadulterated straight line is due to return. The latter are principally sentimentalists who live in the good old days and opportunists who once looked attractive in the garb of straight simplicity. As a matter of fact the youthful slimline silhouette has been quite eclipsed by an outline which emphasizes width anywhere from the waistline downward. The term "flare" means a sudden widening, and if you insist upon that connotation, the flare, except in its more tempered versions, will hardly be the ruling spirit of next season's fashions. The modish silhouette will

Srepe Roma Dinner Frock; Jabot on Skirt, and Narrow Sash.

emphasize a distinct wideness at some portion of the skirt—it may be a new interpretation of the hemline flare, it may be achieved in numerous and novel ways—but it will be neither straight nor ceaselessly slim and its departures from the narrow path will concentrate on the skirt section. Our preference is for a silhouette which utilizes back fullness and is otherwise fairly straight.

The Persistent Ensemble.

While the ensemble will again be featured for autumn, as a mark of chic its position will be neutral. In other words, it will neither designate its wearer as smart, nor will it stamp her as demodee. The ensemble has been a vogue too long and its numbers are far too numerous for it to be considered chic as a theme. Distinctly new interpretations of it will certainly find their way to the ranks of the fashionables, but the idea is no longer the ingenuity of the designer for an extension of its popularity. Personally we should avoid its acquisition, unless the model were particularly becoming. In other words, do not choose an ensemble merely because it is an ensemble—rather select it as you would a separate coat or hat, basing its appeal upon its personal attractiveness and upon the smart factors of the future which it incorporates.

Extremes are rapidly losing their appeal, and bizarre unadorned severity is traveling the same pathway—and for the same reason. The new mode will be feminine and rather more astistic than its predecessor. It will be a mode of details whose charm will have none of the exaggerated masculinity that served as the dying flare of youthful simplicity. And that is the most significant consideration for the hosts of women who are just now engaged in building wardrobes for the future.

Parisians are placing their fashion interests for the moment almost entirely in an exhibition of dresses and jewels by Callot, Cartier, Jenny, Lanvin and Worth in the pretty little Pavillon de l'Elegance as a part of

Tunic Frock, Straight-Lined, Simple; Embroidery Is Applied.

the Exposition Nationale des Arts Decoratifs. This season the exposition has become the smart center of Parisian society and fashions. A more beautiful display of French frocks has never been exhibited.

The Callot frocks are distinctly Callot in their gorgeous colorings and elaborate embroideries; Jenny is at her best, with her wearable frocks showing particular attention to the daintiness of their detail; Lanvin gives the best of her picturesque creations, which are always worthy of a museum; while Worth is distinctly himself with a rich collection featuring the handsomest of tissues, suggestive of court dresses. Without a display of jewels from Cartier no one could appreciate the true finish of French dress, and this feature rounds out the Pavilion de l'Elegance.

Very Full Fluffy Skirts.

Callot's tulle dresses, with very full fluffy skirts, which appear to wonderful advantage in the exhibition, are gaining in popularity by the minute. They are youthful and are a relief from the extreme straight lines that characterized the mode until this season—they demonstrate that youth may be attained without the slim-line silhouette. Callot's influence in the world of studied fashions is often taken lightly at first, but later invariably becomes more significant. The exhibition models of this great artist, however, are not all of the carefully detailed type.

A similar impression is conveyed by the Lanvin models. Her full skirts, which she has insisted upon throughout all the years of the slim-line silhouette, seem to speak more of the future than the past. The straight outline is not missing in this collection, but whenever there are clinging lines there is invariably much greater fullness around the ankles.

In the Worth collection mother-of-pearl in various embroidered designs is a strong feature. A dinner dress of wine red georgette crepe is embroidered all over in mother-of-pearl disks.

The Paris arts exposition has also had its effect upon millinery, and many of the modistes are adopting the futuristic trimmings suggested by it. Hand painting, bonnaz stitching, leather and fabric appliques are some of the methods by which the art of the exposition can be translated to modern millinery. Pasted feathers, odd ribbon cocardes and cut-outs in felt, velours and kid already have been used by leading modistes and will undoubtedly be in evidence for autumn.

THE KITCHEN CABINET

(©, 1925, Western Newspaper Union.)

'Tis toil's reward that sweetens industry,
As love inspires with strength the enraptured thrush."

SEASONABLE GOOD THINGS

Leftover fish may be used for an appetizing dish which is also economical.

Fish Pudding.—Free the fish from skin and bones and flake with a fork. To a one-quart bowlful, prepare the following custard: Cook one pint of milk with six eggs; while warm stir in one-fourth of a cupful of butter, season with salt, pepper, one tablespoonful of worcestershire sauce or anchovy paste, soften with a little hot water and two teaspoonfuls of lemon juice. Put the flaked fish in a baking dish and pour the custard over it. Bake until the custard is set.

Summer Soup.—Into one quart of water, add one quart of fresh ripe tomatoes, peeled and sliced thin, one cucumber also peeled and sliced and one clove of garlic. Add salt, pepper, and one tablespoonful of sugar. Strain the soup and set aside to cool. When thoroughly cooled add a few pieces of ice and one and one-half cupfuls of thinly sliced cucumbers sprinkled with pepper, salt and vinegar. Let chill in the ice chest one hour. Just before serving, toss into the soup tureen, one cupful of croutons which have been sprinkled with tarragon vinegar.

Pineapple Punch.—To two cupfuls of water add four cupfuls of sugar, cook until the sirup forms a thread. Remove from the heat and add two fresh grated pineapples. Let cool slightly, add the juice of six lemons and let stand over night. Strain and serve poured over a block of ice in a punch bowl. Add a pint of apollinaris water during the first serving and another when the punch bowl is partly empty.

Virginia Spiced Squash.—Take a sirloin of beef or a rump piece that has been in the pickle eight days. Put into a kettle with cold water over a slow fire. Skim well, add one or two lemons with the seeds removed, two bay leaves, a dozen peppercorns, and two tablespoonfuls of tarragon vinegar. Let the meat cook slowly until tender then allow it to remain in the liquor in which it was cooked, over night. Remove, drain and put under weight. From five to six pounds of beef will be required.

Savory Dishes That Satisfy.

Green corn which has been left from dinner makes a nice salad added to potato. Cut it from the cob and add with a bit of minced onion, a few slices of cucumber and half a dozen potatoes with a good dressing. Mix and let stand to season well before serving.

Hot Potato Salad.—Cook potatoes in their jackets and peel and cut them as hot as possible. Mix with a good salad dressing, chopped onion a little minced celery and a few leaves of fresh shredded mustard to give pungency. Serve at once.

Toast With Ham.—Prepare a white sauce, using thin cream, one cupful of cream, two tablespoonfuls each of butter and flour cooked together before adding the cream. Season with salt, pepper and one-half cupful of minced ham. Pour over well-buttered toast.

Onion and Chicken Soup.—Peel and slice three green onions and cook in a tablespoonful of butter four minutes, then add four cupfuls of chicken stock with one cupful of fine dry bread crumbs. Bring to the boiling point and simmer 45 minutes, then rub through a sieve and add one cupful of milk. Melt with two tablespoonfuls of butter; add an equal amount of flour, and when well blended pour over the hot soup. Cook for five minutes; add one cupful of cream and season well.

Prune Ice Cream.—Soak one cupful of prunes in water to cover, overnight. Cook in the same water until tender; put the pulp through a strainer; add one cupful of sugar, four tablespoonfuls of lemon juice, a pinch of salt and one and one-quarter cupfuls of heavy cream, whipped. Freeze and garnish with chopped nuts. Thin cream may be used with the juice of two oranges and the rind of one.

Aristocratic Johnny Cake.—Take two tablespoonfuls of shortening; add the beaten yolks of four eggs, a pint of milk, a cupful of corn meal and flour sifted with four teaspoonfuls of baking powder; a tablespoonful of sugar, a teaspoonful of salt, and lastly fold in the stiffly beaten whites of the eggs and bake 40 minutes in a hot oven. This recipe may be halved for a small family.

Pea Roast.—Take three cupfuls of dry bread crumbs that have been rolled and sifted. Take a pint of green peas, cooked, and put through a puree sieve while hot. Mix the crumbs with the pea puree. There should be about three-quarters of a cupful; add one-fourth cupful of walnut meats chopped, one egg slightly beaten, one teaspoonful of sugar, and one-fourth of a cupful of melted butter with three-fourths of a cupful of milk. Mix well and turn into a well-buttered pan. Bake 40 minutes in a slow oven. Serve with tomato sauce.

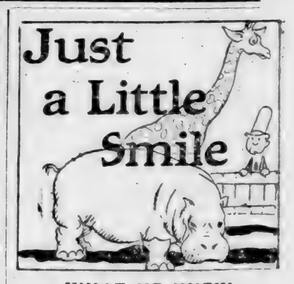
Just a Little Smile



WHAT HE KNEW

The guide baited her hook and tossed it into the water. The fair angler rewarded him with a smile and inquired:

"I suppose you understand all about fish?"

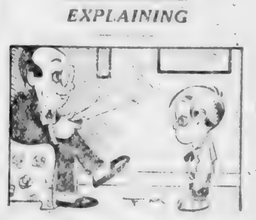
The guide considered this question in all its aspects before he replied slowly, "No, I wouldn't go so far as to say that. I know only 1,973 reasons why they don't bite."

Lady Jurors Show Mercy

"Ladies and gentlemen of the jury," began the attorney for the defense, "can you look upon the prisoner's tear-stained face and not take pity on her?"

And all six of the ladies on the jury did take pity on her and offered her their cosmetics.—Western Christian Advocate.

EXPLAINING



Little Bobby—What's the difference between matrimony and patrimony?

Professor Letterleaf—The words are derived from the Latin. Mater, meaning mother and pater, father. Thus, patrimony is supplied by the father while matrimony is promoted by the mother.

She Loved Dogs

"How I love dogs!" the maiden cried,
And when her suitor softly sighed:
"I wish I were a dog, you know—"
"Oh, well," she said, "perhaps you'll grow."

Moved a Long Way Since

"My boy has a camera, a radio set, and goes to the movies three times a week."

"Well, Jim, when we consider what it takes to amuse the youngsters of today, I often wonder how the dence we kids were ever able to get a thrill by looking into a kaleidoscope."

His Alias

"Well, we fooled the cops all right that time."

"I'll say we did. Where they cam in, I did like you said."

"Great. You didn't give your own name, eh?"

"Not on your life. I gave 'em yours."—Ohio State Sun Dial.

Too Soon

"You said that if your husband divorced you you would throw him into the sea. Why don't you?"

"The bathing season hasn't begun yet."—Nebraska Cornhusker.

Impossible Not To

"Betty has a rosebud mouth and expressive violet eyes."

"Yes, it's easy for Betty to say it with flowers."

Taken Too Seriously

Much disputation loud and free
Is self-promotion clear
Why can't they mark it ADV
And let it go at that?

HIS BEST EFFORT

"And the novelist said he'd caught fish more than four feet long."

"That's the best bit of romance he's gotten off so far, I suspect."

Couldn't Blame 'Em

Kind Lady (gazing at a fellow in College hospital)—Poor fellow. You must have been through some tight squeezes.

Sick Lad—Well, the nurses have been pretty good to me.—Washington Farmer's Day.

Earth's Population

Ernest George Ravenstein, geographer and statistician, estimated the population of the earth at 1,487,900,000 in 1890, and his figures stood unchanged for some years. Another computation made in the early '90s put the total at 1,440,650,000. Estimates of the world's population today range from 1,750,000,000 to 1,850,000,000.

No Witnesses Wanted

Welcome, Mischief, if thou comest alone.—Benjamin Franklin.

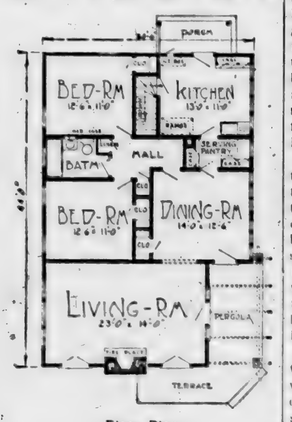
Bungalow Specially Designed to Be Constructed on Narrow Lot

By WILLIAM A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all problems pertaining to the subject of building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on the subject. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

Wide lots are becoming quite rare in most of the residence neighborhoods and with the present high level of real estate prices the prospective home builder must adapt his future residence to a rather narrow lot in many cases. In order that the house shall not look out of place in its setting it should be especially designed with this in mind. Nothing looks more out of place that a house designed for a broad lot, with open space about it, which is squeezed into a small lot barely able to accommodate it and with other houses crowding it on either hand.



Floor Plan.

A bungalow which meets this requirement should be welcomed by many who are planning to build and the one illustrated here is admirably adapted to the purpose. The building itself occupies a space just 30 feet wide. The front is centered on the chimney which serves the fireplace and this is flanked by two shuttered windows. The expanse of roof is broken by two small "eyebrow" windows. At one corner a pergola style of terrace is approached by a combined walk and automobile drive. From it doors open into both the living room and dining room.

The living room is large, occupying almost the entire front of the house. It is 23 by 14 feet and a large fireplace is placed in the center of one side. There is also a door from the living room into the dining room, to the right, rear. Back of the living room the house is divided into rooms which practically pair. The dining room and a bedroom, a serving pantry and the bathroom and last the kitchen and second bedroom.

Between the dining room and front bedroom are three closets. One opens off of the dining room, another off the bedroom while the third opens off a hall about which these rooms are grouped. There is a second closet, for linen, opening off this hall beside the door to the bathroom. The rear bedroom, of course, is provided with a closet of its own. Both of the bedrooms, which measure 12½ by 11 feet, are reached from the central hall, as is also the bathroom.

The dining room also has a door into this hall and another which leads to the kitchen through the serving pantry. This serving pantry is well equipped with built-in cases and cupboards which afford ample storage space for household supplies. The kitchen, too, is well equipped in this way and is also supplied with a refrigerator which can be iced from the back porch without entering the house.

From the kitchen there is a stairway which leads to the basement where heating plant, laundry and other household machinery are installed.

Returning to the front of the house it will be noted that brick has been effectively used for ornamental work on the chimney and porch, and that small rubbed trees and shrubbery have been carefully placed to give the best effect. It will always pay to give considerable thought to this matter of landscaping the ground about the new house. When well done it adds the finishing touch and makes the view complete. When neglected or poorly done the result is an unfinished appearance which detracts greatly from even the best designed and well built home.

Colored Roof Adds to Charm of Any House

The roof is adding its quota of brightness and gay charm to the landscape in this age which is so colorful both literally and metaphorically speaking.

No matter how demure a color scheme is chosen for the house itself, the roof may blossom forth like a rose or a bluebell on a quiet Quaker bonnet.

For the new house the painted or stained shingles are best. These are colored before being put on, and may be had in a variety of tones. Some of the very newest roofs have shingles variegated in color. That is, shades of green and blue, soft browns and dull purple will overlap and seem to blend into each other with charming effect.

Such an arrangement is especially good on a house that is painted cream or white. The gray house needs a brighter touch of color on the roof to relieve its drabness. A certain shade of light red is particularly effective on the house that is painted in a neutral shade. So, also, is a rather bright green roof.

Plumbing Equipment Is Important Item

The choice of plumbing equipment is one of the most important, if not the most important, item in home building. Equipment recommended as just as good as the more expensive or medium-priced should not be considered.

Manufacturers of high-grade plumbing equipment have established exhibit rooms in the larger cities where one may see all types of equipment for bathroom, kitchen and laundry.

Every piece of plumbing equipment to be installed in the home should be designated in the specifications by manufacturers' name and number to avoid any chance of substitution.

Ash Chute Necessary

Never build a fireplace without an ash chute, and in building the chute make it of sufficient size to take care of all sizes of ash and wood. The greatest mistake is to build one which is so small it clogs up and makes more work than to shovel out the ash in the first place. An automatic ash door is on the market which opens through the weight of the ash and dumps automatically.

Paint Increases Value of Property

It is surprising how prevalent the idea is that paint is merely applied for the sake of looks. Therefore, many persons have come to regard paint as more or less of a matter of artistic expression and have relegated it to the realm of luxury.

Exposed wood quickly deteriorates. Prolonged neglect will mean a repair bill. Paint is by far cheaper than repairs.

Paint has a curious effect. Many an architectural eyesore has been entirely changed within the space of a few days and has become an asset instead of a liability to the community and its owners. On the other hand, many an architectural masterpiece has been ruined by the lack of paint used at the right time.

Painting serves three very fundamental purposes. It protects the woodwork, it adds cash value to the home and lot, making the home an asset to the community, and it establishes a firmer credit rating for your home.

Any banker will tell you that well-painted buildings are an indication of thrift. Appearances in many cases may make or break the business transaction.

Ice Boxes Are Saved by Applying New Paint

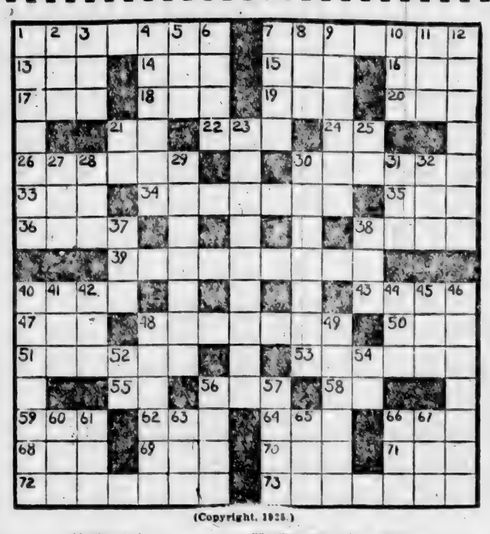
Are there little beads of glistening moisture on the outside of your icebox? Even in the well-made refrigerator it is almost impossible to prevent "sweating." It is quite impossible to prevent a difference in temperature between the outside casing and that of the room. Consequently any moisture held in the room atmosphere is bound to condense on the outside of the box.

If the refrigerator is kept well finished with varnish or shellac, this moisture is prevented from seeping into the box; causing the panels to warp, seams to open, wood to rot. This condition offers germs an opportunity to develop and causes ice to melt more rapidly.

Kitchen Ventilation

Ventilation of the kitchen is being given consideration in modern homes. An exhaust fan is installed close to the ceiling which carries away all smoke and odors from the cooking which would otherwise be carried throughout the home.

CROSS-WORD PUZZLE



(Copyright, 1925.)

Horizontal.

1—Specimens
7—To diminish in amount
13—An article of men's clothing
14—An affirmative 15—Own (Scotch)
16—A high card
17—Material representation of beauty
18—The seat of the authority of a bishop 19—Unsullied
20—A large container
21—Partakes of reality
22—The female deer
24—An indefinite article
25—One that lends
26—A garden implement
29—The fruiting spike of any cereal
34—Disjoined 35—An epoch
36—Hauled
37—The leading lady in a play
38—Is visible again 40—To kill
43—An apartment of a hospital
47—A metal 48—Lures
50—Eggs of fishes
51—Aquatic fish-eating mammals
53—Sober, serious
55—An ancient sun god
56—An affirmative 58—A proposition
59—To cry like a cat
62—To go to court to gain legal redress 64—To fondle
68—Assessment 69—Before
70—A Greek letter
71—Chewed and swallowed
72—To possess
73—A piece of chamber furniture
73—Laboriously occupies one's self with getting money

Vertical.

1—Kenneled 2—To ventilate
3—Came together 4—Girls
5—An organ 6—An immature plant
7—Of sound mind 8—To hasten
9—Forward
10—To make a lace edging
11—A small triangular shield carried in the Fourteenth century
12—Of the nature of a faint cloudlike matter far outside the solar system 21—Not out
23—To more than balance
25—A negative 27—To propel a boat
28—Part of the verb "to be"
29—Remnants
30—A combination of cards in whist (plural) 31—Moist
32—An epoch
37—Contorted or twisted
38—A point of the compass
40—Raged 41—Illuminated
42—An insect
44—A southern constellation
45—To decompose
46—Makes graver in tone 48—Deletes
49—A hunting dog
52—A suffix denoting an agent
54—To perform 56—A number of days
57—Mineral springs
60—To deviate from the true course
61—Tiny
63—A certain American Indian
65—And so forth 66—A dandy
67—A sheep

HOW TO SOLVE A CROSS-WORD PUZZLE

When the correct letters are placed in the white spaces this puzzle will spell words both vertically and horizontally. The first letter in each word is indicated by a number, which refers to the definition listed below the puzzle. Thus No. 1 under the column headed "horizontal" defines a word which will fill the white spaces up to the first black square to the right, and a number under "vertical" defines a word which will fill the white squares to the next black one below. No letters go in the black spaces. All words used are dictionary words, except proper names. Abbreviations, slang, initials, technical terms and obsolete forms are indicated in the definitions.

"BUG" THAT IS DISTANT RELATIVE OF THE CRAB

Every one has seen the curious little flat gray creatures that scurry out of sight when one lifts a decayed log or a moss-covered stone in the woods or near the water. They are the Armadillidia or isopods or the genus Oniscoidea, commonly called the armadillo, sow-bug and pill-bug.

Now, these creatures are not really bugs at all, but crustaceans or distant relatives of the crab, with gills provided with air tubes not unlike the air tubes through which insects breathe all over their body. A favorite food of frogs, toads and salamanders, the pill-bug (so called) subsists largely on decaying vegetable matter, and some authorities believe it to be a useful scavenger.

In the view of most scientists the name armadillo was given it because of its habit when disturbed of rolling itself up into a ball, as the mammal of South America does; but the crustacean is shrewder than the mammal, for whereas the armadillo never uncoils when it is caught or frightened—and, therefore, its shell often serves as its own roasting pan in the ovens of equatorial countries—the pill-bug, after rolling itself up once or twice and discovering that it is still in the presence of danger, will give up the useless stratagem and try to make off unnoticed.

Criticism

"It is not criticism that the loudest yodelers against criticism object to but the printing of criticism," says George Jean Nathan. "Oral criticism though it be exactly like the published criticism, you will find they don't in the least object to. It is criticism set down in black and white that disquiets them. The average man called a 'lausbub' by another man simply laughs it off with genial unconcern. But the moment the other man calls him a 'lausbub' in print he gets hot under the collar."—American Mercury.

Cool Burglar

Returning to his shop for something he had forgotten after closing late one night, a London tobacconist discovered a burglar rifling his showcases. "Hi, what are you doin'?" he shouted, too frightened to move. "Who, me?" queried the self-possessed burglar, feeling very much in command of the situation. "Hi'm just taking a smoke before retiring. 'Ave one?"

"Mark Twain"

In "Life on the Mississippi" is the story of a cocky young pilot whom the crew of the boat made the butt of a practical joke. While navigating one of the deepest places on the river they gave false soundings. He was finally frightened into ordering the engineer to back the ship. The leadsman's cry: "Mark three, quarter-less-three, half twain, quarter twain, mark twain," suggested the pen name of the greatest American humorist.

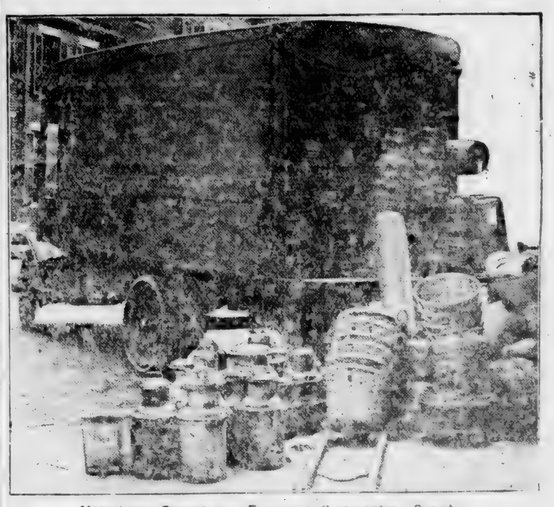
English Bloody Assizes

In the Bloody Assizes of 1685, as the so-called trials for participation in Monmouth's rebellion against James II are called, over 300 innocent persons were executed. Baron Jeffreys presided at these travesties on justice.

Frankness in Filching

The old-time sharper with the gold brick had his good points. He didn't call it a worthy cause.—Baltimore Sun.

MOTOR TRUCK IS PROVING OF GREAT ADVANTAGE TO FARMERS IN HAULING



Motortruck Owned by a Farmers' Co-operative Society.

(Prepared by the United States Department of Agriculture.)

Transportation of farm products by motortruck has increased tremendously in the last few years, particularly in dairying and live stock regions. This development, moreover, has not, with a few local exceptions, invaded the proper and profitable field of railroads, says the Department of Agriculture. Usually, it declares, motortrucks and railway service are complementary and not competitive.

In a detailed study of the motortruck situation the department says the motortruck has increased farm efficiency, developed old markets and established new ones, speeded the conversion of raw material into finished products, facilitated marketing and distribution and made it possible for farmers to take advantage of variations in demand at various markets. It has provided a service giving a complete movement from shipper to consignee without transfers or reloadings.

Good Example Cited.

A good example is the transportation of hogs into the Indianapolis live stock market. In 1923 nearly one-third of the receipts of hogs at Indianapolis were delivered by highway, compared with less than 5 per cent in 1913. No fewer than 934,930 hogs were delivered by truck in Indianapolis in 1923. Within a 50-mile radius of Indianapolis, 95 per cent of the hogs marketed are delivered by motortruck. There are scattering shipments from territory 75 to 100 miles away.

For carload shipments of hogs, rail transportation rates are generally cheaper than truck rates. Not many farmers, however, are in position to make carlot shipments. For the shipment of smaller lots, the cost per head is often higher by rail than by truck, especially when the barnyard-to-stockyard service given by the truck is taken into consideration.

Shipment of hogs by truck has given producers direct access to central markets, where their stock is sold at the market price. This is an immense advantage over the situation formerly prevailing. It was common, before the day of good roads and the motortruck, for many hog raisers who marketed 20 or 30 head to sell their stock to a local buyer. This buyer assembled hogs in carload lots and traded on a wide margin. As he could not know when he would move his newly acquired stock, he generally paid 75 cents to $1.25 below the market price. He also required the farmer to deliver his hogs at a point chosen for assembling a carload.

This method, with its obvious disadvantages to the farmer, has been entirely changed by the motortruck. The local hog buyer has been eliminated within the trucking radius of Indianapolis. Farmers are now able, by watching market prices, to take advantage of favorable price changes. Radio reports enable them to catch market openings, and ship their stock by truck to the yards before closing time.

Studies of Transportation.

Studies of highway transportation made by the department at Baltimore, Cincinnati, Detroit, Indianapolis, Milwaukee, Philadelphia, St. Paul and Minneapolis, showed that in all of these markets, with the exception of Philadelphia and Baltimore, approximately 90 per cent or more of the milk received is transported by motortruck. Baltimore gets 45 per cent of its milk by truck and the proportion there is steadily increasing. Philadelphia's percentage, 20 per cent, is low, because the city's large demands necessitate drawing milk from an area outside the economical motortruck radius. Nevertheless, Philadelphia has been getting more and more milk by truck in recent years.

Rates for transporting milk by motortruck usually conform closely to the rates charged by railroads. No case was found where the truck rate was less than the railroad rate. In some cases it exceeded the rail rates. In comparing motortruck rates with railroad rates, however, the department points out that the motortruck rates include pick-up service in many cases, and in all cases includes delivery service at the city milk plant. Rail shipments of milk have to be hauled by farmers to country railway stations, and by dairy or city milk dealers from railroad terminals to milk distributing plants.

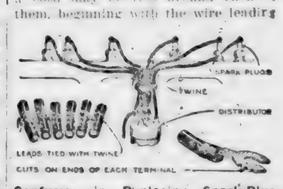
Terminal Handling Costs.

It is estimated by the dealers in Baltimore that terminal handling costs from half a cent to one cent a gallon, a charge which is eliminated when milk is brought direct to the plant by truck. A questionaire to milk producers indicated the saving they are able to make in costs by the use of the motortruck. Forty-eight shippers figured that shipping by truck saved them an aggregate daily road haul of 1172.5 miles. The producers who are most likely to ship by truck are those who are most distant from their railroad stations.

Many other farm products are efficiently handled by motortruck, notably perishable fruit and vegetables. Shipments of such goods by motortruck has provided a continuous supply of perishable foods at many smaller towns where such supplies could not formerly be maintained because rail service was infrequent and irregular. It has lessened the operating costs of mercantile establishments by enabling them to replenish their stocks at more frequent intervals.

Trace Spark-Plug Leads by Marking in Some Way

When the high-tension wires leading to the spark plugs of an automobile engine are disconnected for any reason, some trouble may be encountered in replacing each lead on the proper plug, unless the leads are marked in some way to identify each one with its plug. Two methods of doing this are illustrated. Before disconnecting the wires, a cord may be tied around each of them, beginning with the wire leading



Confusion in Replacing Spark-Plug Leads May Be Avoided by the Use of Either of Two Simple Methods of Distinguishing Them.

to the plug at one end of the engine and ending with the wire belonging to plug at other end of cylinder head. The cord may then be left permanently attached, and if two or more leads are disconnected at the same time, they can be easily replaced. Another method is to cut notches in the terminals, one notch for the wire belonging to the first cylinder, two for that leading to the second cylinder, and so on.—Popular Mechanics Magazine.

Tires Changed Often Will Yield More Wear

The fact that tires on the right hand side of a car wear out faster in proportion than those on the left-hand side often puzzles motorists. The popular supposition that this wear is caused by turning many corners to the right is incorrect. The fact is that the increased wear is actually caused by the pitch of the road, which throws more of the car on the right side than on the left.

The round of the road from curb to curb is far more important in determining the sequence in which tires normally wear out—right rear, left rear, right front, left front—than is gutter wear and abrasions from grinding off and on the pavements.

The slope of the road causes the right rear tire to carry more weight than the left rear tire. Thus the right rear wears the faster of the two.

However, as the left rear wheel receives a driving pull while the right front does not, it will wear the faster of the two. Under average conditions the right rear tire wears out first and the left front last.

Depreciation Average

While the life of an automobile is fixed at about six years, on an average, dealers and insurance companies figure an annual depreciation about as follows; First year, 40 per cent; second year, 20 per cent; third year, 15 per cent; fourth year, 10 per cent; fifth year, 10 per cent; sixth year, 5 per cent. The first year's depreciation on some cars may run as high as 60 per cent, while it may be as low as 20 per cent on others.

Obituary

Ames Levy, second son of Jacob and Susanne Levy, was born in Paulding county, Ohio, December 13, 1873, departed this life August 5, 1925, aged 51 years, 7 months and 22 days.

With his parents, at the age of 14 years he moved to DeKalb county, where he spent the remainder of his life.

He made his home with Mr. and Mrs. Samuel Mumaw for the past ten years, who with relatives and friends tenderly cared for him during his last sickness. Amos had been in failing health for the past two years but he bore his suffering patiently, ever hoped for the best. He was honest, sincere, a kind and loving friend, always ready to help in time of need and will long be remembered by th se who knew him.

In youth he was baptised and received into the Lutheran church at Paulding, Ohio. He delighted to sing the many songs of faith and hope for there was music in his soul.

He leaves to mourn his departure three sisters, Mrs. Cora Lepper, Mrs. Mary Ferney of Hicksville and Mrs. Christena Engle of St Joe, two brothers, William and Hubert also of Hicksville, with many sorrowing friends and neighbors.

Leaves have their time to fall
And flowers to wither at the north winds breath,
And stars to set--but all
Thou hast all seasons for thine own,
O Death.

Funeral was held at the home of Mr. and Mrs. Samuel Mumaw, August 7, 1925. Rev. Havens of the M. P. Church officiating with Rev S. D. Steffey of the Lutheran church assisting Interment was made in Riverside Cemetery. E. R. Kinsey, funeral director.

Card of Thanks

We wish to thank all who assisted in the care of our loved one also for the beautiful floral offerings.

The Family and
Mr. and Mrs. Samuel Mumaw.

September McCall's is now on sale at News office.

George Kees and family, and Burl Rude and family spent Saturday evening at Hicksville.

Homer Woodcox, of Ft. Wayne, spent over Sunday here with his parents, Charles Woodcox and wife.

John Barger and family attended the Cook family reunion held Sunday at Eckhart Park at Auburn.

Dr. Harry Farnham, of South Bend, was a St Joe visitor, Monday. He expects to move soon to Florida.

Misses Mina Bensteel and Gladys Baker, of Detroit, Mich., were weekend guests of Miss Priscilla Borthwick.

Mr. and Mrs. F. R. Bowman and daughter, Miss Eloise, Mrs Emma J. Baker and Martha Miser, spent Sunday at Coldwater, Michigan.

Twenty-five members of the Ladies Aid Society of the Lutheran church, were entertained last Wednesday at the Mrs. Mary Bowman cottage at Hamilton Lake, besides a number of visitors A pot luck dinner was served and after the business session a good social time was enjoyed.

Roy Kinsey and wife had as Sunday dinner guests Mr. Frank Moses and family and Sylvester Springer of Arcola, Mr. and Mrs. Frank Brindle and Ervin Moses and mother of Fort -Wayne. In the afternoon all motored to Garrett and visited Charles Waterbeck and wife.

Coolidge Store Sold to B. L. Smith of Michigan

I have purchased the Coolidge Store and wish to announce that we will arrange the stock and make additions to be able to meet the needs of our trade. An invitation is given the public to call and get acquainted. Special Clean-Up Prices will prevail next week on a number of broken lines that will be money savers to you. Bring us your cream. Watch for our ad.

SMITH'S GROCERY, Spencerville ..

Fertilizer Time

We are now taking orders for thefamous **Bradley Fertilizer**, the kind we have sold for **35 years.** Ask your neighbor about the quality of this brand. Orders are now in for **3 Carloads** and we expect to double that before finishing. We can sell you cheaper fertilizer, but there is a reason for

Buying Bradley's.

Wm. Curie, Implement Dealer

Coal! --Coal-- Coal!

Now is the time to lay in your coal. We have always tried to give you the best advise as to best time to buy and we now firmly believe this is the time to get busy and prepare for the winter.

Feed

Mr. Hog Raiser, we have a good line of feeds on hand, also car of ear and shelled corn. If you need any give us a call.

Grain

We are paying highest market prices for all grains and will be pleased to have you bring us your grain.

The St. JOE ELEVATOR

Samuel Keesler, Mgr. Grain Dept. — **Bert Jackson,** Mgr. Coal Dept.

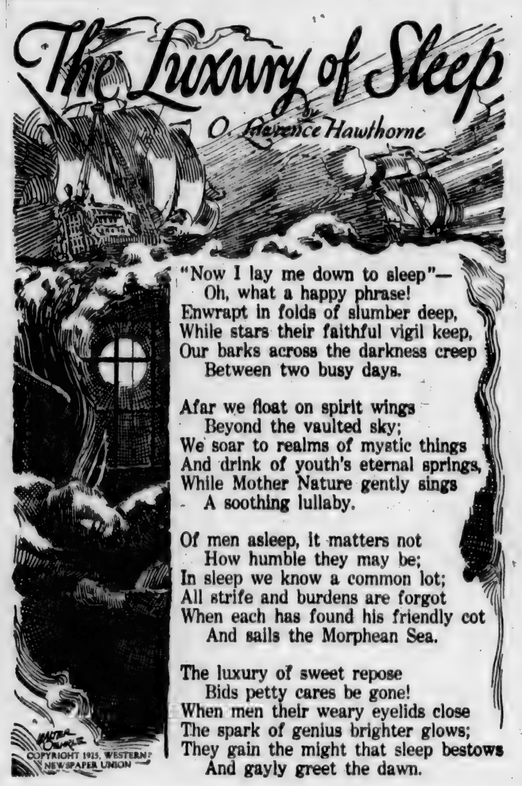
NOTE—Pay your accounts. They are due now.

Benjamin Franklin Said:

Save while you may, no morning sun lasts a whole day.

Think of the power of this short sermon and then determine to save all you can, while you may. Deposit your savings with this bank.

The St. Joe Valley Bank, A STATE BANK



"Now I lay me down to sleep"—
Oh, what a happy phrase!
Enwrapt in folds of slumber deep,
While stars their faithful vigil keep,
Our barks across the darkness creep
Between two busy days.

Afar we float on spirit wings
Beyond the vaulted sky;
We soar to realms of mystic things
And drink of youth's eternal springs,
While Mother Nature gently sings
A soothing lullaby.

Of men asleep, it matters not
How humble they may be;
In sleep we know a common lot;
All strife and burdens are forgot
When each has found his friendly cot
And sails the Morphean Sea.

The luxury of sweet repose
Bids petty cares be gone!
When men their weary eyelids close
The spark of genius brighter glows;
They gain the might that sleep bestows
And gayly greet the dawn.

To Select Postmaster For Spencerville

Receipt of applications to close September 9, 1925.

The date for assembling of competitors will be stated in the admission cards which will be mailed to applicants after the close of receipt of applications.

The United States Civil Service Commission has announced an examination to be held at Butler, Indiana, as a result of which it is expected to make certification to fill a contemplated vacancy in the position of fourth-class postmaster at Spencerville and other vacancies as they may occur at that office, unless it shall be decided in the interest of the service to fill any vacancy by reinstatement. The compensation of the postmaster at this office was $926 for the last fiscal year.

Applicants must have reached their twenty-first birthday on the date of the examination, with the exception that in a state where women are declared by statute to be at full age for all purposes at eighteen years, women eighteen years of age on the date of the examination will be admitted.

Applicants must reside within the territory supplied by the post office for which the examination is announced.

Home Bureau Activities

Mrs. Daisy Woodcox

The meeting as called for the 14th. has been postponed until August 21st. Mrs. Katie Storer is hostess. All day meeting and potluck dinner. Come.

Auto H.ts Horse In Road at Night

Last Wednesday evening as E R Kinsey was going to Auburn, he had a collision with one of Roy White's horses on the stone road. It was dark and Roy was putting the horses out to pasture on the south side of the road, the animal was blind in the left eye and walked into the machine. The damage was considerable to the machine as well as the horse. It is thought the horse will be worthless.

Two Big Days In Jackson Township

The Jackson Township Sunday School Association will celebrate its Golden Jubilee and Home Coming in the Mary Provines grove north of Grove Bethel church on Saturday August 29. For 50 years this township has been active in the Sunday School work until today she stands at the top in the county association. Any person having lived in the township is asked to attend this meeting and in case of rain, Rehobeth church will be used for the services. Special committees are at work making plans for the day.

On Sunday, August 30, the Young People's Council will hold an all-day picnic in th same grove commencing at 9:30. This meeting includes the young people of the entire county. Bring your lunch, your pep and all your bunch.

Home-Coming Nearing

Final plans for Home-Coming Saturday, Sept. 5, are being made and persons knowing of anyone at a distance who ought to be invited will do the committee a great favor if they will leave a list with Mrs. Charlie Koch or News office. The program will be prepared for next week's paper.

Stray Cow Is Located

D. L. Carpenter lost a cow last week and Tuesday she was located in a hole at the foot of a tree which had blown over in the woods and had partly filled with water. A thorough search had been made and Tuesday she was found by her bawl. She was in a terrible condition having floundered in the mud and water for days.

Help Wanted

Wanted pickle pickers at once. Inquire of Vernie Monroe.

The Vanishing Men

By RICHARD WASHBURN CHILD

(Copyright by E. P. Dutton & Co.)
(W. N. U. Service)

SYNOPSIS

Out of uniform, at the end of the World war, with the rank of major, Peter DeWolfe, young American of wealth and family, is urged by an English comrade in arms, Everby Benham, to visit the Benham home and meet the Englishman's mother and sister, and, incidentally, Brena Selcoss, young woman about whom there is an air of mystery. Muriel Benham, Eversby's sister, becomes infatuated with Peter, but he is interested only in the mysterious Brena Selcoss, of whom he has had only a glimpse. Muriel urges him to forget her, warning him that if she (Brena) should like him he is in danger of "vanishing—like the others." Peter gets a phone message from Brena to meet her.

CHAPTER III—Continued

—3—

He found her sitting at a table beside a window overlooking Bond street, where the fog was like a gray stew and passersby hurrying home were like solids stirred up to the surface from the bottom of some kettle. She greeted him with a quiet smile and pointed to the empty chair.

Peter, conscious of his shrewdness, said exactly what she had said—nothing. He sat down across from her, and for the benefit of the waitress whom he could see out of the corner of his eye as a black dress and white apron, he pointed to Brena's steaming chocolate and nodded. He did not take his gaze from his companion's large dark eyes which had in them the same look he had seen once before and which had made him think of eyes which knew no death but had been looking out upon the world for centuries and centuries. A friend of his had once advanced the idea, at a dinner party in New York, that men and women's souls were new or old, that some of those present had been aged through countless residence in human form back through eras of history, that others had been created only a few hundred years ago and that still others were new souls just out of the wrapping. Peter recognized as he looked into this young woman's eyes that if he, in worldly terms, were a half a dozen years older than she, in fact, she had outlived him in rounds and rounds of ages.

Her eyes were so compelling that it was difficult to give attention to the fact that her countenance had in it a baffling riddle. Her face was long with a straight and perfect nose below a forehead which might be considered by a classicist lacking a good fraction of an inch in height. She had a full rounded chin below lips so flexible and of so warm and rich a moist color that their thinness was scarcely noticeable. But there was combined in her features, which taken together were by no means perfect, a still beauty which represented the Greek in her, with some undercurrent of shimmering chameleon elusiveness.

"You are shocked at my behavior," she said at last, arranging the white ruffling at her throat as if she preferred to treat Peter's state of mind casually. "Perhaps you are pleased?"

"The two go together," he said quickly.

"You did not ask me who I was. Yet, you had never heard my voice before."

"That struck you forcibly after you left the telephone," Peter told her with authority. "It was not surprising. I had never heard your voice. But I had seen you. It was only necessary to look at each other—"

"Yes, that was memorable," she said solemnly, and looked far away. "But unfortunately the tempo of this meeting does not warraant that little laugh of yours," she went on in reproval. "I came to London to see you, but I came because of Muriel Benham."

Peter looked up in dismay. He said, "You don't mean that she told you—?"

"No one told me," said Brena Selcoss. "You were there. I heard scraps of conversation. Once I heard my own name. It was no fault of mine. Nor is it a fault of mine that with Mrs. Benham's word or two about Muriel's desire to go away, after your sudden departure for London, that I can see what has happened. I have come down from the country to beg you to go back."

Peter shook his head from side to side.

"In some way—some mysterious way—just such a thing as this involves me always. I have been, unwittingly, the cause of—"

"Oh, no, you haven't," said he, with rigor.

Apparently she did not hear; she leaned forward and said, with great earnestness. "It touched me deeply—not because Muriel was once a great friend to me—but because I cannot bear—"

He interrupted her again by saying, "The whole thing is nonsense, Miss Selcoss. I am sorry that the only way I can put an end to it is to be ungallant. The plain truth is that I do not have the slightest emotion of any kind about Miss Benham. No doubt she is a very admirable English girl—she is healthy, lovely and correct. No doubt there was an unfortunate misunderstanding, but it was not because of any inclination of mine, and nothing need be said about it. I left Beconshire Heath because of it."

Brena sat back in her chair with a sigh which appeared to Peter to state, sincerely, relief from a great anxiety. She folded her expressive hands, interlocking her fingers, free of all rings, and allowed her eyelids to almost close.

"I would have liked to stay longer," he said.

"Why?"

"To see you."

"You did not know me."

"I had seen you."

"But I would not care much for that kind of judgment," she said. "It is a man's great delusion to base inclinations on a glance."

"Women do it, too," said Peter. "I admit—we both admit—that it is a mistake, don't we?"

"Yes—perhaps, I am not sure."

"Then you too hoped that I would stay?"

She neglected his question completely, but she did not rebuke him for that smile of pleasure that had arisen with the idea that she, too, had a belief that upon a rare occasion the exceptional first exchange of the eyes is a true and a wise guide to the importance of the future. Peter felt a glowing sense of understanding and of companionship.

Suddenly, with a quick tensity that startled Peter, she looked swiftly about from face to face of the persons, men and women, who sat at the other tables. He saw in her eyes at that moment the look which Benham had described so vividly—that expression of fear of some unknown peril.

"You have been in the country a long time," he said as promptly as he could. "You do not like London, evidently."

She smiled rather sadly. "I love London. But I choose to stay at my

She Greeted Him With a Quiet Smile and Pointed to the Empty Chair.

little retreat among the old beech trees. I have not come to London since last summer."

"And you have no inclination to play in London—to forget Beconshire for a day?" he asked. "Of course, now you are here."

"I do not know anyone in London now," she said. "I have an apartment here—one which I had when I first came to England."

"Came to England?" He inquired when, without using the words.

"Yes, three years ago. I think it must have been three centuries."

She sat for a long time thinking, and the coming and going of the waitress with check and change did not interrupt her thought. Peter believed that she was debating something; therefore he said, "Life—even little life—the pleasures—the decent pleasures—well, they ought to be seized."

"You have a sentient mind," she said, awakened.

"Then do it, whatever it is," he said. "There are two kinds of persons in the world—the minus persons and the plus persons, negative folks and positive folks. You notice I say folks; I am from America."

"So am I," she said.

"Well, do it!" said Peter, referring to the undisclosed problem.

"Perhaps I have shut myself up too much," she said reflectively. "I did not know how much I loved to see human beings—just see them sitting here and there, walking in the street, jostling each other, so various, so like—"

"Unsolved riddles."

She looked into his face long and as if conducting a search.

"I want to stay in London for a few days," she said at last, shaking her gloves as if to express the thrill it would give her.

"Why not?" asked Peter. "Even if staying in London is the hazardous business which you seem to think it is, no one will know."

He waited.

"Except me," he said.

Her eyelids narrowed almost imperceptibly as she answered. "But doubtless dozens of persons claim your time here. It is, to use your expression, known that you are in London."

"No, no, no," protested DeWolfe, impulsively. "Not a soul."

She drew on her gloves.

"I think I will stay in London," she said, and Peter thought he heard her murmur under her breath, "God forgive me."

CHAPTER IV

He was reckoned a shrewd player of life. Men who knew Peter DeWolfe best say that if he left his traveling bag on the sidewalk on Fifth avenue while he did some shopping within some store, it was only because he had estimated carefully the psychology of any thief and concluded that one could depend upon human nature to believe that luggage sitting alone on the pavement was placed there as a trap. Peter always found his bag where he had left it.

This is said because, unless some complex reasoning and calculation of the same kind can be applied to his conduct, it is necessary to say he went blind into love of woman.

"A few—a very few—men—and fewer women," Peter said once in a letter, "know just how near the top of the world can be reached by the adventure of free days together where there are no hours, and time springs in magic jumps from noon to next daylight perhaps, and the world is a playground and a city is your toy and mankind is the ultimate friend of both of you. Unfortunately," he added, "the men who have the quality of greatness to see that such a companionship over a span of hours is a greater accomplishment than a life in a law office or the presidency of some blooming bank, are few. Those who ever find the girl are fewer. And those who can prove some essential quality of a gentleman and a whole man needed to walk that delicious tightrope up above the moon, without taking a vulgar step into space with a nasty crash on landing, are fewest of all."

He may have been demonstrating these words. But apparently he had abandoned his inquiry into the mystery of past and future. He had abandoned suspicion of her or curiosity about her life, though ever and again he found her glancing around with the unexplained fear in her dark eyes, as if she expected to meet the eyes of recognition or find some fiend walking softly along behind. Outwardly he had given over all but one inquiry, and that was the exploration of the heart and mind and soul of Brena Selcoss.

Just when he had shelved his first purpose, awakened by Benham's challenge, and when he wiped from his mind the memory of his one moment of dread of this girl, which, of course, might be traceable to Muriel's extraordinary and tragic warning, perhaps Peter himself could not have told. It might have been at the moment when, after their first evening of strolling aimlessly through the mystery of the symbolic fog with their selves reaching toward one another, they had perched like two ravens on the pediment of Trafalgar monument, supperless, content and watching the blurred lights of one motor omnibus after another move like luminous fish in cloudy water.

"What time is it?" Peter had asked, listening in vain for the great bell of St. Paul's.

Brena Selcoss, sitting on her own coat, drew back the loose sleeve of her white silk waist from her rounded cream-colored wrist and, after a glance at her watch, had said, "It is after two. I am hungry and I am cold."

Peter had said quickly, "Perhaps it is my fault. But you wouldn't go to the theater or the cafes. How could I deal with any one who stubbornly insists upon exploring alleys and arcades and the banking district and Hyde park until an old campaigner's legs are almost worn out?"

"You couldn't."

"I shall find a place now and I shall like to see you eat," he had said, jumping up. "There are some persons, after all, who give us delight when they eat. Did you ever see an old French peasant woman who was really fond of animals feeding them? Why, her brown wrinkled face has a smile like a lighthouse! And I can imagine wearing that smile when one's own children are over their bowls of gruel. Yes, I shall like to see you eat. I am sure. I would like it still better if I had planted and harvested or caught everything which was put before you. But that cannot very well be, because I'm not a farmer or a trapper or Izaak Walton—only a New York idler. Besides, Trafalgar square has no soil for turnips, no brook trout, no pheasants."

She had looked up with a wistful smile. "Who is pleased when you eat?"

"Nobody," he said. "You see I am an orphan. There is an old waiter at the club. I forgot him. He rubs his hands when I am hungry, but for all I know it is because the palms itch. He waited on my father—the banker—and he looks like a shaven Mephistopheles. That's all I can remember."

"You may come with me, then; to my chambers," she had said. "We can stop on the way—goodness knows where—but somewhere and get eggs and butter and cheese and milk. We'll go there."

"Can you cook?" he had exclaimed.

"Oh, no. Not at all. Does that make any difference?"

"Why should it?" Peter had inquired with sincerity. He had come to the point of departure from his first ideas of his destined relationship with Brena Selcoss.

In the days which had flowed on, Peter's coming and going at the new hotel to which he had moved so that no one might attach themselves to him, attracted the attention of the doorman with the worn livery, brass buttons and chronic apoplexy. "A wery peculiar young 'un," he had said to the porter. "A wery odd 'airpin! 'E's in an' hout at hall hours. I think 'e's gaming."

Perhaps he was. That might have been how he began. But the delight of a concentrated nothing-to-do settled over the two and Peter's steamer at last left the dock at Liverpool with American soldiers blaspheming between decks like a swarm of hornets returning to their hive and a purser scratching his head over the name of one DeWolfe, who was printed on the passenger list but did not claim his telegram. Peter had lost himself and, like a runaway child, he was glad of it. There was only this difference—for Peter no one but his lawyers would make a search.

If one desires to know how far the breaking down of conventions had gone, it is only necessary to point out that upon one occasion where a laughing Sunday crowd had gathered about a hectic man preaching revolution from a stepladder in Hyde park, Peter had sat down with the girl to listen. The sunlight was comfortable, the voice of the orator rose and broke with the regularity of waves upon a long warm beach, and Peter, dropping back with his head on the grass, watched a silvery airplane up from Hendon wheel about like a gray beetle who couldn't decide where to light, until he fell asleep.

When he awoke he was generating apologies. He intended to say that Brena and he, like fairy folk, had acquired the magic exemption from sleep but that, of course, occasionally—

None of his embarrassment was negotiable; she, too, was asleep; her hair, with its red-brown variations of autumn leaves, was alive with the sheen of the sunlight, her arm was under her forehead. The orator had spun his web to the end and all the crowd had buzzed away like escaping flies; but a little stray dog, with a face badly needing soap and water, had gone to sleep at her feet with its face on its paws, whining over a dream of a piece of meat with legs which could run faster than he.

To them life had become abundant with those unnoticed values, neglected by the commiserable blind beings who run along the ruts of unimaginative existence with their hands put into the course fist of some conventional, vulgar purpose. Together they went to the docks at night and listened to Chinese coolies in the galley of a tramp steamer from Hongkong, where up from the yellow smoking interior, as from a yellow smoking volcanic crater, arose the strange crooning, bubbling, wailing songs of the Far East. They went to Hampstead and laughed at the smug little houses with their washed, respectable faces. They strolled through the National gallery, where they found a room of portraits of men of the time of Pitt, all of whom, as if by a manner of the time, had their hands thrust palm down into their buttoned coats; they called it the Stomach-ache gallery. They sat on strange doorsteps while Peter wrote verses to the unknown inmates behind the barrier. They invited a match woman to dine with them and were well repaid by hearing from her lips a discourse upon the conceit of each age which always flatters itself into belief that it is the world's crisis. They said good-night at all hours, they ate when hungry, and were as skillfully silent when the mood came as they were spontaneously chattering when their minds danced together.

Peter might have guessed, but he could not have known to what crisis this would lead.

"We have not forgotten how to play," he said to her.

A look of pain had come into her face, and into her eyes the old look of fear.

"I don't like it when you look like that," he had said.

"How?"

"Afraid."

"I'm afraid of nothing, Peter—nothing which makes ordinary fear in ordinary hearts, Peter. You will see some time that I am not afraid."

She had laughed at his perplexed expression, but without joy.

"Don't you bother about me," she told him. "You've promised that you wouldn't, you know."

He nodded. "I've kept my word."

"Perhaps—"

"What?"

"Perhaps I'd better go back tomorrow—back to Beconshire."

It was the first word suggesting the end of their holiday. Both knew that this word must finally be spoken, but Peter had not expected to see quite the quick pallor which came into Brena's face as she forced out the sentence.

"We agreed, Peter, didn't we? And the time has come, I think."

DeWolfe felt as one who had been touched suddenly and unexpectedly upon the elbow by the dank, bony fingers of a corpse.

"There is one evil passion which I think does more harm than all the others," he said, clasping his strong hands over one knee. "It's fear. It ought to be made a crime."

"You know nothing of fear," she replied quietly. "You have not lived with fear day in and day out—years after year."

"No, I have not lived with fear at all," he went on, looking straight into her eyes. "I have not lived with it because it is a parasite. I have been wounded, but I learned that five-eighths of the pain was fear. I have been apprehensive of some terrible calamity add the fear was the major part of the calamity. There are men in the world in myriads who fear that they may lose their money. Fear is worse than poverty, Brena. For God's sake, let's not fear!"

"I did not say that I had fear," she said. "I only said I had lived with fear."

"The world is a fool about fear," Peter drove on. "It makes cowards, but it is also the mother—"

"Of what?"

"Of murderers," he said.

Brena was silent.

To Peter, as the day came to an end it became more and more plain that she had indeed decided to go from London. She spoke of it as if it were a flight from some kind of danger. Once she said, "You are much too nice to take any risks, Peter." He had asked her about these risks, but she said, "Among other risks, that of wasting your energies on something which leads nowhere." When they had dined at a little cafe in Jermyn street, she said, "Come home with me. No one sees us go in and out. It is like a nest hidden in an old stump. We can talk and then—"

"What?"

"Good-by. Good-night. Good-by."

All the way up Regent street she kept her arm through his as if she feared that suddenly the mortal part of him would melt away, as if this contact might be made so real that it would live on in memory, and sometimes the illusion of this strong forearm, warm through its sleeve, might return to her.

The apartment, which she had retained without occupancy for some unexplained cause, was on a street of colorless brick houses where three street lamps, spaced with irritating precision, spread their radiance on the front walls in a fan-shaped insolence. It was in a house at the far end of this street—modest quarters for one who appeared to have plenty of money at her command; two flights of carpeted stairs led up to a little landing and her door.

She lit the lamp in the corner while Peter took the key from the hole, and the expanding light showed again the gray and gold room with its chintz curtains and its old English mahogany and the carved desk with its burly-maple panels and the hangings woven in Java at the windows. But Peter closed the door gently with his foot because he saw none of the room where the light was dim. Once more, as when he had seen her first, she stood beneath a light which poured down upon her its flood, emphasizing her as if she, of all the universe, had the quality of radiance and life. She had thrown aside her cloak; she stood with an aura of eternal youth about her, a girl who had come out of the ages and would live on without end, the center of all things. She gazed back at Peter from her dark eyes, wondering, waiting for him to move.

He walked toward her slowly, but without hesitation. In his face there was a square look—the look of a fixed will that has come into its own at last.

"Brena, I'm going to break my promise."

(TO BE CONTINUED.)

First "Boucaniers"

The name "buccaneer" was given to piratical English, Dutch and French adventurers, united in their opposition to Spain, who maintained themselves chiefly in the Caribbean sea during the Seventeenth century. The first of the class were French settlers, whose occupation originally was hunting the wild cattle on the islands, especially Hispaniola, and preserving the flesh at little establishments called "boucans," they being known as "boucaniers." After being driven from these pursuits by the Spaniards, these boucaniers took to piracy, particularly upon Spanish vessels, and to raiding Spanish settlements on the islands and mainland. Their career closed about 1700.

Animal Life on Everest

Animal life, it appears, is to be found on high mountains far beyond plant growth. The highest growing plant that the Mount Everest expedition of 1924 observed was the blue vetch, at 18,000 feet, but animals live at as great a height as 22,000 feet. "A minute and inconspicuous black spider," says a member of the expedition, "hops about on rocky cliffs and hides beneath stones in those bare places that happen to be swept clear of snow by the wind. I cannot think on what it lives at such a height. In these altitudes there is no other living thing—nothing but rock and ice." This little spider is worthy of note as being the highest permanent inhabitant of the earth.

Slow in Missing $2,500

A grocer of Cardiff docks, Wales, left his case containing $2,500 in treasury notes in his automobile outside his office for an hour, then drove to another part of the city before he learned that the case and contents had been stolen.

Tokyo's Great Subway

The cost of constructing Tokyo's new subway system will be somewhere in the neighborhood of 187,000,000 yen, according to the plans drawn up by the municipal authorities. There will be about 40 miles of the subway. It is expected that the surveying of routes will be started shortly and actual construction work begun toward the end of the year or early next spring.

You never can tell. It isn't always the fellow with the broadest shoulders who carries off the honors.

Back Giving Out

Weak, tired—utterly miserable these summer days? Morning, noon, night, that throbbing backache; those stabbing pains? Feel years older than you are? Too often sluggish kidneys are to blame. Once they fall behind in filtering off impurities, blood and nerves are upset. It's little wonder, then, you have constant backache, dizziness, rheumatic pains. Don't risk neglect. If your kidneys are sluggish, use *Doan's Pills*. *Doan's* have helped thousands—are used the world over. *Ask your neighbor!*

An Indiana Case

Jacob French, retired farmer, Prairie Ave., Goodland, Ind., says "Sharp pains took me across my kidneys and when I stooped, I couldn't straighten. Morning my back was sore and lame. I had dizzy spells and specks blurred my sight. My kidneys acted too freely. I used Doan's Pills and they brought a lasting cure."

SICK 3 YEARS WITHOUT RELIEF

Finally Found Health by Taking Lydia E. Pinkham's Vegetable Compound

Columbia, S. C.—"Your medicine has done me so much good that I feel like I owe my life to it. For three years I was sick and was treated by physicians, but they didn't seem to help me any. Then I took Lydia E. Pinkham's Vegetable Compound and got strong enough to do my housework, where before I was hardly able to be up. I have also taken the Vegetable Compound during the Change of Life and it has left me in good health. I recommend it as the best medicine for women in the Change of Life and you can use these facts as a testimonial."—Mrs. S. A. HOLLEY, R. F. D. No. 4, Columbia, South Carolina.

Why suffer for years with backache, nervousness, painful times and other ailments common to women from early life to middle age, when Lydia E. Pinkham's Vegetable Compound will bring relief? Take it when annoying symptoms first appear and avoid years of suffering.

In a recent country-wide canvass of purchasers of Lydia E. Pinkham's Vegetable Compound over 200,000 replies were received, and 98 out of every 100 reported they were benefited by its use.

Cheerfulness Wins

Be cheerful! The worst disease with which a man can be afflicted is that of being a continual knocker or grouch. It gives one a sickening feeling to meet on a pleasant day men who are continually finding fault with everything and everybody.—Grit.

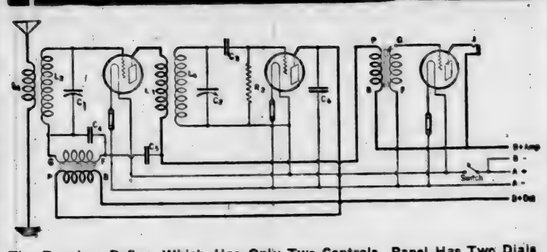
RADIO



The Freedom Reflex, Which Has Only Two Controls. Panel Has Two Dials for These, One Switch and One Jack.

By CAPT. P. V. O'ROURKE, In Radio World.

Many persons constantly inquire for a nonradiating three-tube set that still can give a good selectivity and volume. They do not want regeneration, because the set is for general family use, including children, and they are afraid that lack of care in tuning will cause neighbors considerable annoyance. And, besides, the controls are limited by the inquirers to only two, on the plea that no member of the family has more than two hands.

It is really surprising that so little attention has been paid generally to the hookup, which is probably the most stable and satisfactory three-tube reflex that you could build for aerial operation. Factory-made products, using only three tubes, may accomplish more, because reflexing, especially inverse reflexing, is a fine art. But the set shown will cause no trouble, either during building or afterward, and a reflex with the trouble element taken out must indeed be inviting.

List of Parts.

Two radio-frequency transformers, L1L2, L3L4.

Two .0005 mfd. variable condensers, C1, C2.

Three sockets.

Two 4 inch dials.

Two dial pointers.

Three 1A Amperites (for 201A tubes).

Fixed condensers. C3, .00025 mfd.; C4, .0001 mfd.; C5 and C6, .001 mfd.

One 2-megohm grid leak, R2.

Two audio-frequency transformers.

One single-circuit jack.

One battery switch, S.

One 7 by 18 inch panel.

Accessories: One 7 by 17-inch base board aerial wire, ground clamp, lightning arrester, lead-in wire, cabinet, speaker, A and B batteries, jack plug, four UV 201A, C 301A or DV2 tubes, terminal strip, internal connecting wire, hardware.

Set Needs No Neutralizing.

Why no neutralization? you may ask. First, because none should be necessary with only one stage of radio-frequency amplification. It's the second RF stage that compels the inclusion of some stabilizing device, like a balancing condenser, potentiometer, plate resistance or the like. If by any chance oscillations do occur where not wanted—which would be only below 450 meters—the neutralizing condenser may be inserted. However, I have built several of these sets; neutralization never was necessary, hence I will not include directions for neutralization tap, etc.

There are only two coils to make, one for the aerial circuit (L1L2), the other for the interstage coupling (L3L4).

This circuit is characterized by freedom from squawking, freedom from difficulty in construction or operation, and freedom from excessive number of controls. Therefore it is called the Freedom reflex, which has a timely touch to it, too.

No rheostats are employed, the resistance elements in the filament minus lead being amperites suited to the tubes employed. It is all right to use the amperite in the detector stage of this circuit. Thus one switch controls the entire filament lighting. As the set is designed for speaker operation, no phone jack is provided.

The Panel.

The set may be constructed on a 7 by 18 inch panel. The panel may be divided horizontally, with a line 3 inches from the top, and the center holes for the condenser shafts drilled 4½ inches from extreme left and extreme right, respectively. The only objects appearing on the panel are the switch S, the dials and the jack. The switch may be of the push-pull type, but if you can get the toggle kind with a small mounting hole required, that works more smoothly. The usual toggle switch (left and right or up and down motion) requires too big a panel hole, 1 inch or so, and few have the instrument necessary to drill this, or care for such a big "dent" in the panel.

The switch should be placed at a point near the A-plus line to the terminal strip (binding posts).

The aerial coil is made of No. 22 double cotton covered wire on a 3½ inch diameter, either tubing or basket-weave, L1 consisting of 17 turns and L2 of 43 turns, each winding separate and distinct, and the separation between ½ inch. L3 is wound also on a 3½ inch diameter, consisting of 12 turns of the same kind of wire, L4 having 45 turns. If, after the set is in operation, it is found that C1 has higher dial readings than C2, then remove a turn or two from L4, until the two dials read together. The variable condensers should be of the same make and capacity, .0005 mfd.

The coils should be mounted at right angles to each other, the aerial coil (L1L2) usually being mostly conveniently placed at left rear of baseboard, with coil axis parallel with the baseboard (the coil lengthwise, running in the direction of the panel width of 18 inches). The other coil may be placed to the right of C2, with form bottom secured to the baseboard with angles.

The connections to the coils should be such that ground and F-minus connections in the aerial circuit RFT are adjacent and B-plus and positive A connections in the interstage coupler are adjacent.

C3 is the grid condenser, C4, C5 and C6 being by-pass condensers. These by-pass condensers in some cases, probably many cases, may be omitted entirely, but if volume isn't what you feel it should be, put them in, and your solution is found. Sometimes there is enough automatic by-passing. If there isn't, then you need the fixed condensers.

The condenser C4 is physically mounted across the secondary of the first audio transformer.

Only Two Dials Need Be Adjusted to Tune

The wiring diagram of one of the simplest possible regenerative circuits will be found in this column. This circuit is ideal for portable use, as it can be made very compact and is very easy to operate. As may be seen from the diagram only two dials need be adjusted to tune the set. They are the variometer, which controls the regeneration, and the condenser, which controls the wave length.

The parts required for the construction of this portable are:

One variometer (150 to 550 meters).

One variable condenser (.0005 mfd.).

One grid condenser (.00025 mfd.).

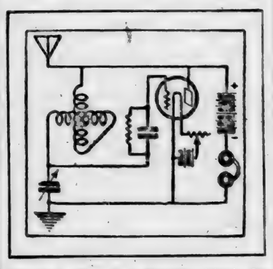


Diagram Showing Circuit, Ideal for Portable Use.

One grid leak (approximately 3 megohm).

One UV-199 or C-299 tube.

One 4½-volt A battery.

One 22½-volt B battery.

One 30-ohm rheostat.

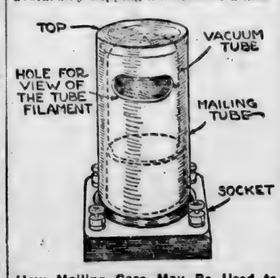
One type UV-199 socket.

Panel, cabinet, binding posts, etc.

When building this circuit two things should be remembered: First, that UV-199 tubes give best results in sets of this type, and, second, that a phone by-pass condenser must not be used. Also, when operating the set, take care not to short-circuit the aerial and ground posts, as this also short-circuits the "B" battery.—New York Herald-Tribune.

Tube Covers Protect Against Dropped Tool

Many a tube has been broken by something falling on it. This can be avoided by slipping a section of a mailing tube over it and closing the upper end. A hole is cut in the side for a clear view of the filament.—Radio Digest



How Mailing Case May Be Used to Protect Tube.

Round-Nose Pliers

One of the most useful tools for the radio constructor is a pair of small, round-nose pliers. With pliers of this type you can bend bus wires into any shape desired and form perfect loops on their ends to clamp under the binding posts of instruments that are not supplied with soldering lugs.

THE KITCHEN CABINET

(©, 1925, Western Newspaper Union.)

Take every good thing that comes your way. There are so many pleasant little outings that would send you home rested and with different viewpoint, but you think up some excuse and do not go.

DISHES FOR WARM DAYS

A nice drink which most people like is prepared with:

Chocolate Sirup.—Take three squares of chocolate, one ounce of cocoa, one and one-half pounds of sugar, and a pint of water, one and one-half teaspoonfuls of vanilla. Boil the cocoa in one-half cupful of water in a double boiler, ten minutes, add the chocolate grated, mixed with one-third of its mensure in sugar; add this to the boiling cocoa, stirring constantly, then add the remainder of the sugar and boil for ten minutes. Remove from the fire, strain and cool and add the vanilla. Add a tablespoonful of sirup to cold milk or ice water, top with a spoonful of cream or a marshmallow. This sirup will keep in the ice chest for some time.

Coffee Frappe.—Make a strong infusion of coffee, strain, cool and pack in ice and salt. Serve with whipped cream as a garnish. Chocolate or cocoa may be frozen and served in the same way.

When serving roast of lamb try this sauce to serve with it:

Orange Sauce.—Take one-half cupful of gravy from the roast, add two tablespoonfuls of flour and cook until smooth, add the juice of two oranges and the grated rind of one, one-half cupful of boiling water, salt, cayenne and the juice of a lemon. Serve hot.

Glazed Tongue.—Wash and soak the tongue over night. In the morning place it in a kettle with cold water to cover. Bring to the simmering point and cook at that temperature for several hours until the tongue is very tender. Set away to cool in the liquor. When cold remove the skin from the tongue and trim, fastening the tip and the end together, lay in a mold. Heat three cupfuls of the broth, add one cupful of tomatoes, a bay leaf, a slice of onion, salt and pepper to taste, twelve cloves, some allspice and simmer for twenty minutes. Strain and add two tablespoonfuls of gelatin which has been softened in cold water. Cover the tongue and set away to harden. Unmold and garnish with olives and parsley.

Seasonable Good Things.

A delicious cake to serve for a nice occasion is prepared as follows: Make a white cake, using egg whites and bake in a sheet. Cut in squares and when serving put together with slices of brick ice cream. Cover with whipped cream and decorate each square with bits of candied fruit.

Herring and Potato Salad.—Take one cupful of herring cut in dice, three cupfuls of cooked diced potatoes, one teaspoonful of onion juice, two tablespoonfuls of minced green peppers, four tablespoonfuls of olive oil, three tablespoonfuls of vinegar, a dash of paprika and a few grains of salt. Prepare a French dressing of oil and vinegar and let the fish and potato stand in it for an hour. Mix all the ingredients and pile in the center of a platter, surrounded with shredded cabbage mixed with salad dressing. Sprinkle with chopped green peppers and garnish with whole herring.

Stuffed Fruit Dessert.—Take halves of peaches or pears, place in a baking pan, fill the centers with marmalade, raisins, dates, figs or chopped nuts. When thoroughly heated, remove to a warm dish and pour over a soft custard.

Fried Corn.—Take the corn cut from half a dozen ears, add to three tablespoonfuls of hot butter in a frying pan, cover and simmer until the corn is cooked, adding more butter and salt and pepper to season.

Puree of Summer Squash.—Slice three onions and cover with two quarts of cold water; bring to the boiling point and add a large summer squash cut in thin slices. Let simmer slowly for two hours, then rub through a sieve. Mix one tablespoonful of cornstarch with a cupful of milk and seasonings; add to the soup with butter, if desired. Serve hot.

Blackberry Sherbet.—Strain the juice from a quart of blackberries, add half as much water as juice, and sugar if needed, with a tablespoonful of lemon juice. Freeze to a mush, then add the whites of two eggs beaten stiff, and freeze hard. Thin cream may be used in place of the water.

Sauted Tripe.—Cut pieces ready for serving; parboil for ten minutes, using equal parts of milk and water to cover tripe. Drain, season and roll in flour. Saute in butter.

Swiss Toast.—Mash half a box of berries, sweeten with one-fourth cupful of sugar. Cover five slices of bread with the berries, reserving some of the juice. Heat two tablespoonfuls of butter in a frying pan, and cook the bread until brown on the under side, basting the berries with the butter while cooking. Serve on a hot platter with the rest of the juice poured over the bread. Serve at once.

But Do Mothers Ever Get Periods of Rest?

In one of Indianapolis' largest department stores, there is employed as housekeeper, a little woman—the mother of four children. The father, now dead, was a Spanish war veteran and the three smaller children have been in school at Knightstown.

All the children are musical—the two oldest boys play cornets, the third boy a trombone, and the youngest, a girl, is learning to play the piano. It being vacation time the four were practicing together and the mother said, "Goodness me! An orchestra right in my own family! But what sha... I play?"

The oldest boy spoke up with—"When we come to the 'rest period, mother, you can play that."—Indianapolis News.

Guinea Pig's History

When the Spaniards first invaded the Andean region of South America the guinea pig was found domesticated and living in large numbers in the houses of the Indians, by whom it was used for food. The cavy was carried to Europe by Dutch traders during the Sixteenth century. Since then it has been kept in the Old world and in North America chiefly as a pet, and until recently has been generally regarded as an animal of little practical utility. The name pig is readily suggested by its form, but the origin of "guinea" as applied to it is unknown, but may be a corruption of "Guiana pig."

Shave With Cuticura Soap

And double your razor efficiency as well as promote skin purity, skin comfort and skin health. No mug, no slimy soap, no germs, no waste, no irritation even when shaved twice daily. One soap for all uses—shaving, bathing and shampooing.—Advertisement.

News From School

Alice had learned the story of Columbus at school, and was telling it to her mother.

"An' his ships were named the Nina, the Pinta and—and—"

"Santa Maria," prompted her mother.

"Yes, and the queen's name was—was—"

"Isabella," suggested the mother.

"Mother," demanded Alice, with sudden suspicion, "have you ever heard this story before?"—Western Christian Advocate.

See Need for Canal

Much discussion has been revived concerning the making of the Tiber river navigable from the Mediterranean as far as Rome, at least, for freight barges and small tugs. Proponents of the plan argue that the growing population of the capital is beginning to tax the railroads beyond their capacity to bring food and other supplies.

His Opinion

"My gracious!" ejaculated Mrs. Johnson in the midst of her reading. "Here's the account of another man shooting his son-in-law.

"That so?" returned Gap Johnson of Rumpus ridge. "'Pears like if this thing keep on the crop of son-in-laws will be sorter reduced after a while."—Kansas City Star.

Mohammedan Empire

Few people realize the wide extent of the Mohammedan world as it exists today. It covers a territory three times as large as that of the United States, extending from western Siberia southward into India and westward across Africa to the Atlantic.

"O Happy Day" sang the laundress as she hung the snowy wash on the line. It was a "happy day" because she used Red Cross Ball Blue.—Advertisement.

Proved

"You must believe what you see with your own eyes." "Not at all; I see you, but I don't believe you."

The famous Drury Lane theater in London was originally a cockpit, and was converted into a theater in the time of James I.

Map Long in Making

The immense topographical map of the United States that has been under preparation and construction for 26 years, will not be complete until 1945.

Don't always be wise—and overshadow people.

ATTENTION

Progresso, Florida Lot Owners

The year 1911 many people drew lots in Progresso, Florida, with each 10 acres of Everglade land purchased. In those drawings these lots were numbered. (SEE H. V. CALDER, FORT LAUDERDALE, FLA., they will receive valuable information whether lots have gone to state for taxes or not.

Mad at Somebody

American Eagle Well Named Monarch of Air

The American bald eagle is really misnamed. His head is well clothed with feathers, being pure white in the adult, which gives rise to the name "bald." The tail also is white, the remainder of the body is dark brown.

The young bird is dark throughout, three years being required for the assumption of the full white markings. In this immature stage the bird was once considered distinct and was variously known as the Bird of Washington and as the black or gray eagle. Young bald eagles are very like golden eagles and the two are often confused, but on close inspection the bald may be known by the fact that its legs are bare of feathers for some distance above the toes. There is little difference in extent of wing and total length between the golden and bald eagles, but the latter is stouter and heavier in body. It is a strange fact that immature bald eagles, due to greater length of feather, average larger than adults.

In aspect the bald eagle unquestionably is a noble and inspiring bird. The beak is heavy and strangely hooked, while the corners of the mouth have a downward curve, which gives the bird an appearance of severity. A bony place extends over the eyes and has a curious resemblance to the beetling brows often observed in men of strong character. The body is heavy and muscular, with a suggestion of latent strength, while the powerful legs and feet, with their tigerlike talons, confirm the impression of a creature able and willing to hold its own under any conditions.

In flight the bald eagle is magnificent. With pinions wide spread and floating with hardly perceptible effort, it glides through the air with an ease and grace which no man-made machine has ever equaled. Aided by favorable air currents and swinging in great circles, it rises to tremendous heights, often beyond the range of vision of the naked eye.—Lee S. Crandall, in Mentor.

Too Much Water for Fish

Even the finny inhabitants of old Father Thames suffered inconvenience on account of the floods of the past season. The first rush of water drives the fish from their customary swims, and in order not to be driven into unfamiliar waters, they take refuge in eddies and quiet corners where they can hold their own against the current, and into which food is borne and collects. As the river rises so the water colors and darkens, until light fails to penetrate to the bottom, so that food becomes invisible and the fish are driven to shallow water. When the stream overflows its banks and spreads over the adjacent meadows the fish quickly follow it in search of quiet water and the feast of drowned insects and earthworms to be found there. There is, however, always the risk that they may be stranded by a rapid subsidence of the flood.

Competition a Stimulant

A runner seldom breaks a record unless he is closely pressed. A baseball team plays its best game against a close adversary. A horse scores its best mark when pitted against fast horses.

The retail dealer plays his best game when pressed by competition. The one sure way to make a merchant slough into mediocrity and slipshod methods is to take away his competition. Honest, ethical competition develops good merchants, and makes fine, alert citizens. A lack of competition breeds laziness and insolence. The greater your competition, the greater your opportunity for growth.—Good Hardware.

Miners Travel by Plane

Recently to eliminate travel over vast desolate tracts in Alaska on the hard journey to the gold fields, the airplane has been called into use, with the result that the miners have flown into the faraway regions in a few hours at the most. The danger from starvation and of freezing to death have thus been eliminated. The experiment has been pronounced highly successful and more planes will be brought in for that work alone in the Cassiar county district of northern British Columbia.

Costly Suit of Clothes

A native found the first piece of gold in Australia.

Seeing his master counting gold coins, he said he found a rock which looked like the yellowish coins. He offered to give it to him for a new suit of clothes.

The master later sold the nugget for more than $20,000.

Too Absent-Minded

They were discussing the absent-mindedness of an acquaintance who had just passed.

"That habit nearly cost him his life when he was on his holiday," remarked one.

"How was that?"

"He fell overboard and forgot that he knew how to swim."

Athletic Prowess

For two decades records in practically every field of athletics have been broken, and the limit of physical endurance when no more records can be broken is not in sight.

Right-o!

"Six months' experience at working cross-word puzzles ought to come in handy when it comes to filling out the income tax blanks," says the Southern Lumberman.

CHATTER

Happy is the man who can laugh at trouble, his own as well as other people's.

—

Even when they are being pushed to the front some people can be pushed just so far.

—

Don't parade your virtues with the idea that the whole world is on the reviewing stand.

—

You never can tell. Many a man takes a train of thought without knowing its destination.

—

The fellow who boasts that he can always master himself may not be much of a boss at that.

—

The cynical bachelor observes that many a girl who fishes for a husband catches a skate.

—

Nor can you tell from the size of a man how far he can jump from the frying pan into the fire.

—

Blobbs—"Borrowell says he belongs to a swell family." Slobb—"Swell is right. They are all sponges."

—

As between turning the other cheek and hitting a fellow when he is down, it is just as well to strike a happy medium.

—

"I contend that every man should marry," said the newlywed. "Now, what possible excuse can you have for being single?" "Well, for one thing, I was born that way," replied the bachelor.

—

Muggins—"Closefist can't be so mean, after all. He insists that when an appeal for charity comes, he always puts his hand in his pocket." Buggins—"If he does, it's to satisfy himself that nobody else will."

GEORGIA NUGGETS

The gold in the land is only waiting for the grit in the man.

—

Reason the big fish get away is because they see the liars coming with their fishing poles.

—

Few authors can afford to write for posterity, with the cost of living higher than their hopes.

—

We won't believe in an optimist until we hear one giving thanks for a free ride on a hurricane.

—

If Happiness should shout hallelula on the highway he would be fined for disturbing the peace.

—

Thrift doesn't mean denying yourself a holiday to save the expense of a ticket to the picnic.

—

We preach and sing about heaven, but still prefer an airship on earth to the wings of the angels.

—

Our favorite mule was struck by lightning recently and kicked the lightning back to where it came from.

—

You pray for the goods, and if the goods come, you expect Providence to build the fire and wait on the table.

—

Only three new magazines were started recently. They are financed by wealthy writers, who will thus be in position to accept their own contributions.—Atlanta Constitution.

CRACKLINGS

Even an ocean liner tips occasionally.

—

A rose by any other name costs quite as steep.

—

A man's idea of a club is a place where there are no mothers-in-law.

—

Everything in this world is balanced—what a baldheaded man saves on haircuts he puts into hair tonic.

—

There are two kinds of ties in the world—the kind husbands wear and the kind their wives pick out for them to wear.

—

Judging from the way a man prides himself on picking chickens it would be a good thing to let him do the marketing for the house.

—

When a maid stays longer than a month in the suburbs she is immediately suspected of being in love with the country or the furnace man.

—

News Item: "Decrease in number of girls who marry after they reach twenty-five years." Explanation: No unmarried girl ever gets beyond that age.

SLANGUAGE

Pick that on your piccolo!

—

Tell it to your padded cell mate.

—

She thinks a knapsack is a sleeping bag.

—

Step on it; pass everything but the buck.

—

He was a man of metal, but he rusted.

—

Run along, pencil, I won't be led astray.

—

He's so tough he uses vitriol for an eye wash.

—

Telling a story in a day that would otherwise take a year.

—

A wholesale reminder to the public of what you have to offer.

—

Telling again and again the things that the public ought to know.

—

Going to the public instead of waiting for the public to come to you.

—

Letting everybody know what only a few people know about your goods.

—

Re-creating in the minds of the public the sales ideas in your own mind.

—

Sowing the seeds of ideas that grow into sales and, what is more—good will.

PHILOSOPHY

Since he had that raise in salary our congressman has bought a farm.

—

Trouble is as you look at it, and the more you look the bigger it gets. But it dwindles when you tell it to come out and fight like a man.

—

It isn't lonesome up where the high cost of living stays—so many people follow it in the hope of coaxing it to come down and be sociable.—Exchange.

PERHAPS

Jonah was the father of all fish stories.

—

Justice isn't blind, but only needs glasses.

—

Experience is feminine gender because it is so costly.

—

The hardest time to be brave is when there's nobody watching you.

—

Cupid might have better luck if he aimed at some pocketbooks instead of at some hearts.

—

Some day folks will give the postal carriers the same credit for carrying things to people on their backs as they do to Santa Claus.

LOVE IS DEAF

In my life I have had three loves, in all.

—

My first did nothing but talk, and I soon wearied of her.

—

My second merely listened, and I wearied of her even sooner.

—

But my third and I adored each other so much that neither of us spoke a word.—C. G. S. in Life.

SNAPPY SAYINGS

No man can exactly describe heaven, for every man's heaven is different.

—

Satan's place for doing business is always thronged. He doesn't have to advertise.

—

Efficiency and thrift have never been able to remove the buttons from men's coat sleeves.

Effective Trap for Mice

When setting a mouse trap, try tying the bait in a piece of muslin. There is a certain amount of curiosity in a rodent that compels him to gnaw through the muslin to get the bait, and the tug at the muslin is sure to cause the spring to close the trap.

HERE AND THERE

Mr and Mrs. Wm. Maxwell were Sunday dinner guests of their son, Merritt and family.

Lessie Meck has purchased a new Chevrolet touring car of R. E. Furnish at Spencerville.

Mrs. Barbara Dages of Portsmouth, Ohio, came Monday evening to be the guest of her daughter Mrs. Roy Maxwell for a few days

Former St. Joe Resident Passed Away

The entire community was shocked and saddened when it became known that Mrs. M. E. Olds was critically ill, following a stroke of apoplexy suffered early Thursday afternoon. All that medical skill and expert care could do was of no avail and she passed quietly on, Saturday morning at 6 o'clock.

It is difficult to estimate the loss to the community that the death of such a character as Mrs. Olds' occasions.

Quiet and unassuming, yet possessing an ability to accomplish great results Her work in the Congregational church was of a value which words fail to express, and the members feel almost unable to carry on without her loved presence She had been the teacher of the ladies' Bible class for several years, was prominent in the musical circle of her church and also of the community, and held officers in the Missionary society of the church, being the secretary of this society at the time of her demise.

Her activities were not alone confined to her church and home, but any movement for the good of the community had her hearty sanction and earnest help.

She was also president of the Woman's Missionary society of the Southern Association of Congregational churches, and as such had accomplished much work.

Mrs Olds was past president of the Culture Club and one of its most faithful workers, though to herself she took no credit for accomplishment.

A large circle of friends sincerely mourns what seems her untimely death and the sympathy of the community goes out to her grief-stricken family.

Funeral services were conducted at the home Monday afternoon at 2 o'clock by her pastor, Rev. B. A. Warren, and interment was made in Riverside cemetery.

—The Clinton (Mich.) Local, August 13.

Letters Much Handled

Many letters in this country pass through 15 handlings between time of mailing and delivery.

Miss Mary Crist of Indianapolis spent last week with H. J. Renner and wife.

Miss Edna Jackson spent a few days at Winona Lake last week visiting schoolmates.

Transfer paper at NEWS office 2 sheets for 5c. Get some now for that pattern you wish to transfer

Mrs. Earl Smith and son returned home from Eden, Ohio, Saturday after visiting a week with relatives.

Mrs Al Jennings and son, Delbert of Butler, were Saturday nite and Sunday guests of her daughter Mrs. Lester Pugsley.

Mr. Don Hughes of Deleware, Ohio and Miss Helen Renner of Waterloo, were guests in the H. J. Renner home a few days this week.

Jesse Copp and family of New Haven, spent from Wednesday until Sunday guests of their parents Mrs Alice Copp and F. M. Monroe and wife.

F. D. Tope and wife had as over Sunday guests Mrs J. C. Ernest and daughter of Jackson, Mich, Mrs. Mary Blake and granddaughter of Bryceton, Ohio.

Sam Keesler and family visited Rev. and Mrs. I Konkle at Butler Sunday afternoon. Rev. Konkle has been ill for the past week and was taken to the Lutheran hospital Wednesday morning.

The Coburn family reunion was held August 6 at Coburn's Corners church. Nearly one hundred being present. A basket dinner was served at the noon hour in the church basement. After the fine program was given a business session was held at which time the date of annual meeting was changed from the first Thursday until the second Sunday in August and will be held in Erick's grove south of town

Christian Church Notes

Bible School at 9:30 communion service immediately following.

Mrs Ida Williams will entertain the Martha Society Thursday afternoon.

As the Yearly Meeting of the DeKalb county churches has been postponed one week until August 30 instead of the 23rd, there will be the usual services next Sunday.

The Loyal Friends class will hold a class meeting Thursday evening at the home of Mildred Woodcox Each member is asked to bring a guest, also sandwiches and one other article of food for potluck supper.

Mrs. Anna Koch entertained the membership of the Loyal Delta Alpha class Thursday evening at which time Charles Bassett was elected secretary-treasurer. Eight members were present. Ice cream and cake were served.

TO JUDGE AN AUTO!

Ask the salesman.

Light a cigar.

Ignore your wife's suggestions.

Twist the right front door handle.

Look at the instruments on the dash.

Kick the left rear tire.

Bend down and look at the floor beneath the car.

Poke a finger into the upholstery.

Place right foot on front bumper and push gently.

Step back ten feet, close the left eye and get the ensemble effect.

Ask the salesman again.—J. M. in Judge.

GOLD BRICKS

A barber who stutters.

A fireman without a match.

A second-hand pair of spectacles.

The man who misses his train because he stops to go back for his rabbit foot.

SCHOOLBOY HOWLERS

Among some delightful schoolboy mistakes recorded are the following:

Two crochets make one Quaker.

Letters in sloping print are in hysterics.

Tertium quid is a legal term meaning 6s 8d.

A grass widow is the wife of a dead vegetarian.

"Ne plus ultra"—There's nothing beyond Ulster.

Etiquette is the noise you make when you sneeze.

Psyche was a black boxer who fought Carpentier.

Ambiguity is telling the truth when you don't mean to.

A circle is a round straight line with a hole in the middle.

One of the chief uses of water is to save people from drowning in.

Things which are equal to the same thing are equal to anything else.

The partition of Poland was a wall built by the Russians to keep the Germans out.

An equilateral triangle is a three-sided figure with all its angles equal to its sides.

Food goes through the windpipe to the pores and thus passes off your body by evaporation through a lot of little holes called capillaries.

Eclipses are of three kinds: An annular eclipse comes once a year, a partial eclipse goes on part of the time only, but a total eclipse lasts forever.

WORDS OF WISE MEN

The chief art of learning is to attempt but little at a time.

A little folly is desirable in him that will not be guilty of stupidity.

No worthy enterprise can be done by us without continual plodding and wearisomeness to our faint and sensitive abilities.

Language is an art, and a glorious one, whose influence extends over all others, and in which all science whatever must center.

Encourage such innocent amusements as may disembitter the minds of men and make them mutually rejoice in the same agreeable satisfactions.

Three means to fortify belief are experience, reason, and authority; of these the more potent is authority, for belief upon reason, or experience, will stagger.

Many excellent things are in nature which by reason of their remoteness from us, and our unaccessibiliness to them are not within any of our faculties to apprehend.

WE WISH

That prices would drop like the fall leaves do.

That we could see a centipede with skates on.

That a chicken was made up of all white meat.

That they would put down some pavements that didn't have to be taken up every month.

That we were President so that we would be sure of a good seat at the next world's series.

That a burglar would steal the pie our bride made, so we wouldn't have to finish it up tomorrow.

PUBLIC SALE

The undersigned will sell at Public Sale at his residence located 1-2 mile south-east of Spencerville on the old Clinton Wearley farm, commencing at 10:30, the following property:

Seen and Heard In Indiana

Training in leadership is being stressed in the Young People's conference held at Bethany park.

Plans for the sixth annual convention of the American Legion and Auxiliary in Indiana at Ft. Wayne, August 24, 25 and 26, are nearing completion.

Funeral services for Roswell S. Hill, eighty-three, Civil war veteran and formerly state treasurer, who died at his home at Brazil, were held at the home. Burial was at Indianapolis.

Sixty-eight students received degrees from the University of Notre Dame when the summer school commencement program was held at the university in South Bend.

Edward Rector, age sixty-two, prominent Chicago lawyer and a trustee of DePauw university, died in Chicago from heart disease. He was born at Bedford, Ind., July 7, 1863.

The evolution fight will not be carried into the Marion county schools, it became evident following the death of a resolution introduced in a meeting of the county board of education urging that the theory be taught.

Indiana has absorbed its entire quota of federal aid for state road and bridge construction, it was disclosed at South Chicago at the office of J. T. Voshell, district engineer of the United States bureau of public roads.

Contracts for a new horticultural building and another section of the new electrical engineering building, totaling $271,272.59, were awarded at a meeting of the board of trustees of Purdue university at Lafayette.

Co-operation of county officials in cutting budget expenses with a view to future reduction of taxes was asked in letters sent out from Indianapolis by Gov. Ed Jackson to auditors of each of the 92 counties in Indiana.

With the return to Indianapolis of I. I. Miller, state food and drug commissioner, the appointment of Harry Willetts, Indianapolis Republican party worker, to replace E. A. McCarty as deputy oil inspector was confirmed.

Harry G. Leslie, Purdue alumni field secretary, and speaker of the house of representatives at the last session of the state legislature, has been appointed general secretary of the Purdue Alumni association to succeed Noble T. Crane, who resigned.

At Clifty Falls state park, near Madison, a conference between conservation representatives of four states, Kentucky, Indiana, Illinois and Ohio, will be held October 15 and 16, looking to the development of conservation projects in the several states.

Characterizing home life of the United States as one of the fundamental factors in its greatness, Gov. Ed Jackson delivered an address on "Home Life and Its Influence" before 3,000 people gathered in the tabernacle of the Battle Ground assembly at Lafayette.

Clinton H. Givan, judge of Marion county Superior court at Indianapolis, issued a temporary injunction restraining four members of the Indiana state board of health from prosecuting charges of malfeasance in office against Dr. William F. King, secretary of the health board.

Further steps toward the establishment of Indiana's new state park were taken when F. G. Tykle of the Indiana conservation department and a crew of eight began a survey of 1,500 acres of dune land in Porter county. The survey and maps will require over five months' work.

A greater interest in the Indiana state fair is anticipated, more so than ever before in the history of the fair, is the belief of Linn Wilson of Fairmont, president of the state board of agriculture at Indianapolis. Mr. Wilson bases his belief in the fact that the board will present a more varied program.

Farmers continue to lead in the number of bankruptcies in Indiana. The records of the clerk of the United States District court at Indianapolis show 97 farmers filed voluntary petitions in bankruptcy last year. The total liabilities of the bankrupts amounted to $500,000 with assets of about $300,000.

Forty-seven county dairy cattle breeders' associations in Indiana will compete in each of four districts for a silver loving cup offered by the Indiana State Dairy association in a contest for the best record of attendance at the 1925 National Dairy exposition at Indianapolis, October 10 to 17, according to R. D. Canan of the Purdue dairy extension department.

Whether Indianapolis boulevard, link between Indiana and Chicago, will be completed this fall now is a matter for court decision, with petition for a permanent injunction against moving the street railway tracks to be heard by Judge Harry Crumpacker at Michigan City. The petition was filed in Laporte Superior court by the Hammond, Whiting & East Chicago Street railway.

A multitude of activities consumed the time of Indiana and Kentucky National Guardsmen at Camp Knox, the work mainly being taken up with the movement of brigades and regiments to demonstrate the facility with which large bodies of men can be moved under modern warfare conditions.

The findings of the interstate commerce commission in the southeastern class rate case are in favor of Indiana shippers, it was revealed when a notice of the findings in the case was received by the State Chamber of Commerce at Indianapolis.

Lesson for August 23

THE MACEDONIAN CALL

LESSON TEXT—Acts 16:6-15.

GOLDEN TEXT—"Come over into Macedonia, and help us."—Acts 16:9.

PRIMARY TOPIC—Paul's Wonderful Vision.

JUNIOR TOPIC—Paul Called to Europe.

INTERMEDIATE AND SENIOR TOPIC—The Macedonian Call and What It Led To.

YOUNG PEOPLE AND ADULT TOPIC—The Hand of God in Missions.

I. Forbidden by the Holy Spirit to Preach the Word in Asia (vv. 6-8).

The inclination of Paul and his companions was to tarry in the provinces of Asia Minor preaching the Word, but contrary to their inclination they were hurried along. There were many people in Asia who yet needed the Gospel. They might have reasoned, what difference would it make where we preach so the Gospel is preached! We have here a fine lesson on Divine guidance. The Holy Spirit is as active and faithful in closing doors as in opening them. "The stops as well as the steps of good men are ordered of the Lord." We ought as truly to recognize God's hand in the "shut-ins" as in the "open-outs."

II. The Call to Macedonia (vv. 9-12).

The Gospel having broken the confines of the Jewish city and country, the middle wall of partition having been abolished, the time has come for it to leap across the Aegean sea and begin its conquest on another continent. Christianity thus ceased to be an oriental religion, and through the centuries has been mainly occidental.

1. The Vision (v. 9).

Being hemmed in on all sides, a vision was given to Paul of a man of Macedonia pleading for help. This made plain to him the closed doors about him. In finding the Divine will we should look both ways. Before there can be any great forward movement, there must be a vision. There is no victory without a vision.

2. The Advance (vv. 10-12.)

As soon as the Divine way was known, they moved forward therein. Visions must be quickly translated, and aggressive action taken or else they are blotted from our skies. Paul never questioned the wisdom of God nor delayed action. This is characteristic of all God's true servants. With a straight course, Paul moved out of his own country to the strategic center of a new continent.

III. The First Convert in Europe (vv. 13-15).

The missionaries first went to Philippi and spent several days in studying conditions there. The Jewish element in this city was comparatively insignificant. So much so that they could not have a synagogue. Therefore, the devout people were accustomed to worship by the river side. To this humble gathering Paul came and preached to the women assembled there. A certain woman from Thyatira named Lydia, a proselyte, believed his message and was baptized. The steps in Lydia's conversion are worthy of note, for they are typical:

1. Attendance at the Place of Worship (v. 13).

Usually those whom God is calling are found at the place of prayer. Lydia was a woman of wealth, culture and wide experience, and yet she had need of Christ. She was seeking the heavenly light. God sends many an inquirer to the prayer meeting.

2. Listening to the Preaching of the Word of God (vv. 13-14).

The instrument used in the conversion of sinners is the Word of God. "Faith cometh by hearing, and hearing by the Word of God" (Rom. 10:17). It is highly important that at every prayer meeting the Word of God shall be spoken so that the inquirer after God may find the light.

3. Her Heart Was Opened by the Lord (v. 14).

Only the Lord can convert a soul. It is our business to preach the Word of God, and it is God's business to open the heart of the inquirer. Regeneration is a supernatural work. When the Gospel is preached the Spirit of God opens the sinner's heart for the reception of Christ.

4. She Was Baptized (v. 15).

Every one whose heart the Lord has opened desires to confess Him in baptism. Baptism is an outward sign of inward grace.

5. Her Household Believed (v. 15.)

Real conversion cannot be concealed. When one is converted those in the house will find it out.

6. Practical Hospitality (v. 15).

Those who have experienced God's saving grace are thus disposed to have part in His work by rendering aid to His ministers.

True Humility

True humility consists not in thinking little of oneself, but in not thinking of oneself at all.—Capt. J. Arthur Hadfield.

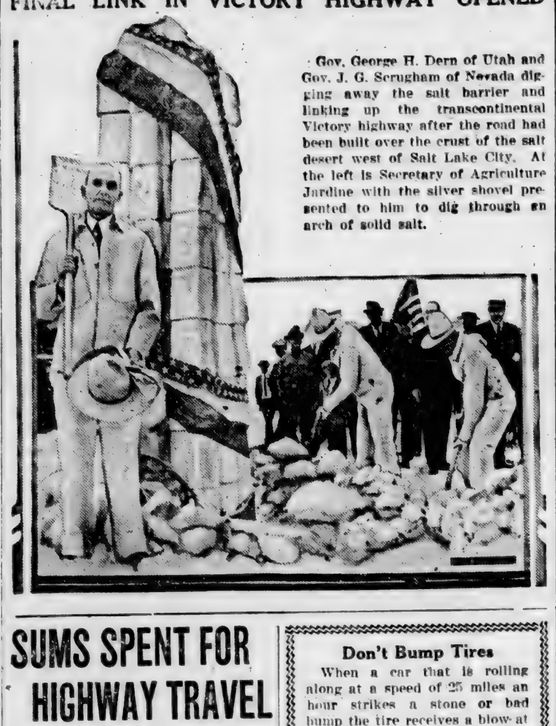
Selfishness

Nothing parches the soul like selfishness; the heart that feeds upon itself grows old fast.—W. L. Watkins.

Our Tasks

"Our tasks are easier when we pray about them."

FINAL LINK IN VICTORY HIGHWAY OPENED



Gov. George H. Dern of Utah and Gov. J. G. Scrugham of Nevada digging away the salt barrier and linking up the transcontinental Victory highway after the road had been built over the crust of the salt desert west of Salt Lake City. At the left is Secretary of Agriculture Jardine with the silver shovel presented to him to dig through an arch of solid salt.

SUMS SPENT FOR HIGHWAY TRAVEL

Much Money Spent for New Motor Vehicles and for Their Upkeep.

In most people's minds the amount of money spent for highway travel in a state is usually thought of only as the money invested in highway improvement. Yet that item in a state's transportation bill is always the smallest in comparison to the sums spent for new motor vehicles and for their operation and upkeep.

Of Value to Car Owner.

An interesting tabulation published in the South Carolina Highway Bulletin for January, 1925, sheds some light on this matter which is of value to the motor car owner.

During the year 1924 there was expended in South Carolina approximately:

For new motor vehicles ...	$25,000,000
For gasoline	16,000,000
For oil, tires, repairs and upkeep of motor vehicles...	21,000,000

This makes a total outlay in 1924 for motor vehicle operation of $62,000,000. Also there has been expended some $7,000,000 for road construction and maintenance, which is as much a part of motor vehicle operation as is the buying of oil or gasoline. The sums used for road purposes were furnished in part from gasoline taxes and motor vehicle license fees. In addition to these there have been expended about $2,000,000 in the improvement of city streets. Altogether, including miscellaneous and depreciation not covered by replacements, the total bill for highway transport in South Carolina for 1924 was approximately $75,000,000.

Equals Value of Crops.

This one item alone is equal to about one-half the value of all the crops produced in the state during the same year and it constitutes a very large proportion of the total budget for living expenses. The portion actually spent for highway improvement is only 12 per cent of the total transportation bill, yet it is in the building of better highways that lasting and definite economies are made in the largest item in the bill—the cost of operating and maintaining the motor vehicles.

Sudden Application of Brakes Is Bad Practice

The sudden application of automobile brakes and the consequent sliding of the wheels cause those worn spots on the tread of the tires which result in their being discarded long before they are really worn out. If the brakes are applied firmly but gently the car will be stopped as quickly, but without the disastrous results on the rear wheels which comes from jamming on the brakes. It would prevent the locking of the rear wheels, which causes the wheels to slide.

When the car is at a dead stop there is, of course, no wear on the tires, as there is no motion to produce external friction, the tire being in perfect contact with the road. If the car is started gently and slowly and nursed up to the proper speed the tire retains as nearly as possible the perfect contact with the road. Friction is held at a minimum and wear unnoticed.

How Owners Can Easily Test the Fuel Mixture

Car owners, particularly new ones, are often puzzled to know whether the mixture they are using is correct. To ascertain the correct proportions to be used, shut off the fuel at the tank and open the throttle. If the mixture that is going to the cylinders is too rich, the engine speed will increase as the level of the gasoline in the float chamber is lowered, since the operation weakens the mixture considerably. If the mixture is suspected of being too weak, the float chamber may be flooded while the engine is running and if the engine speeds up, it may be accepted as a sign that the mixture has not been rich enough.

Don't Bump Tires

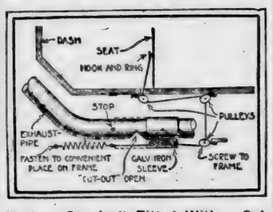
When a car that is rolling along at a speed of 25 miles an hour strikes a stone or bad bump the tire receives a blow at the point of impact of nine or ten tons in force. Many drivers who would regard it as an insane proposition to strike one of their inflated tires a blow with a ten-ton hammer ride merrily along day after day in their cars, taking no pains whatever to avoid bumps. Even the best tires give way in time under such treatment. A slight turn of the steering wheel when these obstructions are met means the saving of tire expense.

Muffler Cut-Out on Car Necessary for Testing

Nowadays the low-priced car is not provided with a cut-out; in fact it is against the law in many states. It is necessary, however, to have one for testing the engine.

This provides a quickly constructed homemade device for releasing the excess pipe pressure and exhaust gases. It is light, efficient and absolutely practical.

Procure a hack-saw and cut a V-shaped piece out of the exhaust pipe beneath the floor boards of the driver's



If Your Car Isn't Fitted With a Cut-Out, Make One From a Piece of Sheet Iron.

seat. Fit over the pipe hole a piece of galvanized sheet iron bent round about 2 3-16 inch. The sheet iron is connected in the manner shown in the illustration. The result is a practical cut-out ready for use at any time.—P. P. Avery, in the Popular Science Monthly.

Obstructed Vacuum Tank Is Easily Cleared Out

Sometimes the vacuum tank of a fuel system remains dry when there is plenty of gasoline in the main tank. Generally this is due to foreign matter making its way into the fuel pipe between the two tanks and obstructing the passage of the liquid. When this is the case the simplest remedy consists of filling the float chamber of the carburetor with gasoline—usually drawn from the main tank—and then starting the engine. This will clear out the pipe line by suction nine times out of ten and the vacuum tank will begin operating again. Sometimes it is necessary to speed up the engine somewhat in order to loosen the obstruction.

Occasionally the cause of the trouble is the stoppage of the small air hole in the filler cap of the main fuel tank. This should be kept open to give play to the pressure of the atmosphere on the fuel.

Noise Is Indication of Trouble for Car Owner

The modern car when properly adjusted is a remarkably quiet running piece of mechanism. Unusual noise is a certain indication of trouble, embryonic perhaps, but nevertheless trouble. The wise owner will not disregard this certain indication of something wrong, but will at once trace the noise and remedy the basic cause of which it is merely a symptom. There is no need of giving this advice to the veteran driver, because he has learned it by experience, but at this time, when there are many new hands at new steering wheels, we may be permitted to call attention to the fact that noise means trouble in the car's mechanism.

POINTS ON KEEPING WELL

DR. FREDERICK R. GREEN
Editor of "HEALTH"

(©, 1925, Western Newspaper Union.)

ANILINE DYES IN FACE POWDER

WHATEVER the chief end of man may be, the chief end of woman is evidently her nose. According to the Druggist's Journal, American women each year use two hundred and forty million packages of face powder. Next to having a well-powdered nose, the highest ambition of woman is to have rosy cheeks.

All this is good business for the manufacturer and retail dealer. But how about the ultimate consumer? If the powders and rouges are made of pure and non-irritating substances, no special harm results. But in the manufacture of cosmetics, as in every other business, there are always unscrupulous manufacturers who substitute cheap and impure ingredients, in order to reduce costs and increase profits.

As I said in an article some time ago, the earlier forms of face powder often contained arsenic, mercury and lead. The dangers of using such powerful and irritating chemicals have been repeatedly shown by a number of the leading authorities on skin diseases. As a result, only the cheapest and poorest powders on the market now contain any of these substances. Rice powders, formerly widely used, especially in the form of imported French preparations, are now little used by American women. The face powders now most generally used are made of barium sulphate or talcum. If pure and uncolored, these powders are harmless. But in recent years all sorts of tinted powders have been offered for sale. The coloring is generally obtained by the addition of small amounts of aniline dyes.

Aniline dyes, as everybody knows, are coal-tar products. They are excellent for coloring Easter eggs or for dyeing dress goods. But they were never intended for the human skin.

In a recent issue of the Journal of the American Medical association, Doctors Miller and Taussig of San Francisco report a number of cases of skin eruption and inflammation as a result of using these colored face powders. Rouge in which aniline dyes are used for coloring will also cause a skin irritation.

What shall it profit a woman if she powders her face to make her skin look better and then gets a skin eruption that makes it look worse? Love's labor is certainly lost in such a case.

Powder your nose and rouge your cheeks, by all means, oh, daughters of Eve, and woe betide any mere man who tries to prevent you. You're going to do it anyway. Only, for your own sake and the sake of your precious skins, buy powders and rouges colored with harmless vegetable and not with irritating aniline dyes.

THE DEADLY GAS STOVE

ILLUMINATING gas is what chemists call carbon monoxide. It is made by decomposing coal by steam, distilling it and catching the gas in large tanks, from which it is piped to houses, stores and factories for heating and lighting. As every one knows, it is extremely poisonous, and if any amount of it is breathed into the lungs, it causes unconsciousness, blueness of the face and extremities and shallow breathing, which becomes slower and slower in serious cases, until death follows from failure of respiration.

Every one knows that "turning on the gas" is a common method of suicide. In every town in which gas is used for lighting or cooking, there are frequent instances of victims, usually women, being overcome by gas escaping from defective ranges, gas stoves or lighting fixtures.

So frequent are these accidents that the Baltimore health department has made a careful study of gas accidents. One hundred and forty-five were investigated; thirty-five were attempts at suicide; forty-nine were due to defective appliances; seventeen were due to defects in the pipe; nine were caused by wornout rubber tubes, and eleven were the result of carelessness in turning off the gas.

The defects responsible for the largest number of accidents were dirty burners on gas stoves, leaky tubes and the use of gas stoves in small closed rooms for heating the room or for heating water. Water heaters in small bathrooms are especially dangerous. Some one in the household desires to take a hot bath. The heater is lighted. The victim goes into the bathroom and closes and often locks the door. The bathroom window is closed and the shade pulled down. Through defects or leaks in the heater, gas escapes and fills the small room. The odor is not noticed and the person is soon overcome. He can't get out or turn off the gas and, too often, by the time the accident is discovered and the door broken down, it is too late.

Gas heaters for small living or sleeping rooms also cause many accidents. Gas tubes, usually made of rubber, become hard and brittle. They crack and allow gas to escape even though the outer covering of the tube is unbroken; or they are tied onto the gas tip and to the stove or to the table light, and leakage takes place at the joint.

Don't use any broken or defective tube or appliance for gas heating or lighting. Don't use gas in any room that is not well ventilated.

Current Wit and Humor

FOR WHAT, INDEED

"Portaw! Portaw! Come heeah at wence!" cried the Englishwoman from the carriage window, in that exaggerated accent that the Scots cannot stand—the train was at Aberdeen station.

"What d'ye want?" asked the red-headed little Scottish porter.

"Portaw! I've lost my luggage!"

"Then"—strolling away—"for what wad ye be wantin' a porter?"—London Evening News.

Those Sweet Words

The presumptive bridegroom had brought his presumptive sister-in-law (aged five) a bar of chocolate.

"See how good Edwin is," said his fiancee.

"He's not only good—he's better."

"Better? How do you mean?"

"Well, I heard father tell mother that he was better than nobody!"—Tapis, Brussels.

THE KNOWN FACT

Wife—They say it takes nine tailors to make a man—I hope that isn't so in your case.

Hubby—I can't say; but I can tell you for a certainty one dressmaker can break me.

Caustic, Very!

She insisted hotly that, economy or no economy, a new frock she must have, and he, with equal warmth, declined to produce the cash.

"I'll never speak to you again!" she snorted angrily.

"How like a woman!" he sighed. "When everything else fails, you try bribery!"

A Selling Hint

Bill—Smith's grocery store was a failure until he engaged that pretty young salesgirl. All the sports of the town patronize it now.

Jack—That's what comes of having a counter-attraction.—The Progressive Grocer.

Careful Not to Overstate

"And have you proved this proposition?" asked the professor of the student of Euclid he was examining.

"Proved is a strong word," was the cautious reply, "but at least I have rendered it highly probable!"

Stripping Gears

When some fool woman driver strips the gears,
Said mean old Rip,
"If it is not my wife, I think that it's
A comic strip."

Suspicious

Russell (looking for work)—Where is the proprietor of this restaurant?

Waiter—He's gone out to lunch.

AND THEY MEAN TO BE

Mother—Boys will be boys, my dear; but girls should—

Modern Daughter—Should be boys' too!

Lighter Than Truck

This monument's
For Jackson Druck;
His Lizzie was lighter
Than the truck.

He Should Know

"Did you ever meet a man who made you feel as if he were secretly laughing at you?"

"Yes—my wife's divorced husband!"

WASHINGTON C. H.—A wheat field of 56 bushels to the acre on a ten-acre tract, reported on the John Douglas farm near Greenfield, is believed to be the state record for this year. Other wheat in the community has made as high as 42 bushels to the acre.

AUGUST

Latest Modes in Evening Dress

In the great volume of entertaining fashion news from Paris the summer evening costume is presented in a burst of color and beauty, observes a fashion writer in the New York Times. One hears much about the all-day frock, about evening sports clothes, about everything that tends to simplify the mode of dress for dinner and the dance. There are fads and facts among a large element in the world where fashions count. But there are still those in conventional society who enjoy the privilege of wearing the gown to fit the occasion, and who encourage the art of the best designers.

Those who define the styles and set the pace are doing glorious things this season. The leading creators have succeeded in intriguing the fancy of women of affluence and a love of fine raiment with the most important and artistic things that have been offered in many a year. These are being flashed before admiring audiences in fashion centers, both at the swagger resorts abroad and on this side.

The "season" in London and the various public and private affairs at Paris have given the summer styles an impetus that will carry on at Deauville, Le Tourquet and the Lido.

On this side a gay season is expected. The returning travelers from Europe who have had this year an unprecedented feast of beautiful designs and fine fabrics will bring back the last word in style.

The Exposition of Decorative Arts has been, of course, a rare opportunity for the world at large, the influence of which is already apparent in the models presented by prominent houses in New York. The prevailing models are forecast by some illustrious examples in evening gowns by many of the leading Paris creators. These are of as many different types as there are individuals in the artistic world. It is evident that the simplicity phase is changing; that more complex designs are in vogue, influencing to a greater or less degree all of the gowns, wraps and ensembles for midsummer.

Beaded or Embroidered.

The "slinky" one-piece frock is seen now only in the heavily beaded or embroidered patterns for which some women have a particular fondness. The flare or circular movement is seen in everything from the bias cut in a gown or coat of heavy satin or cloth to the swirling skirts and fluttering draperies of the sheerest lace frock. This effect is attained in the circular cut of the fabric by godets, inset panels, or by the addition of smaller pieces of the goods; sometimes of lace. There must be in dresses of this type no appearance of plainness.

A variant of the trimmed mode is apparent in the use of plaiting, which increases in popularity as the season advances and which is arranged in

Evening Gown Made of Purple Chiffon Over Rose Satin.

many different ways on gowns of soft or very thin material. This accentuates sharply the frilly appearance which is now so much liked, and some chic models from well-known couturieres are done in this manner.

Among the conservatives Worth employs plaiting in his composition; usually in long lines, from shoulder to hem or from the waistline downward. Doeuillet goes in for finely plaited flounces, using them across or up and down a frock as best suits the model, but usually lavishly. In this feature this artist is quite impartial, introducing small insets, long panels and skirts of fine plaiting, or trimmed with several plaited ruffles set on at even spaces.

Curiously enough the designs from this house of recognized art include some exceedingly handsome evening gowns of the directly opposite type, straight in line and trimmed in flat effects with silk roses and deep-knotted fringe in long curves.

This scheme is delightfully illustrated in white and silver lame over flesh color, the fringe of white silk and the roses faintly rose tinted and tipped with silver and rhinestones.

In a unique and somewhat startling dance frock designed for Deauville the bodice is entirely plain, in mauve satin made surplice with front and back, with bands of pale-green ribbon to finish the edge and crossing, suspender fashion, to the normal waistline, which has a soft belt of mauve. Over a straight narrow petticoat of satin matching the bodice is gathered a full tunic overskirt of tulle in the two shades, pointed front and back, very

Sash of Cold Cloth Girdles Dress of Heavy Pink Satin.

bouffant and edged with a narrow ruching of the tulle. The novelty of this dress is apparent, but it is a model which might nevertheless be easily and effectively copied in simple materials for a far less tax than is imposed along with the label of a prominent establishment at Paris.

Chiffon Is Used.

In one of these plaited gowns that is unusual, chiffon, shading from pale pink to cerise, is used; two flounces forming the skirt. Another flounce is used for the sleeveless, decollete bodice and each is ironed out for a space of five or six inches across the bottom to give the frilly appearance. A frilly little dance frock of pink chiffon has coral chiffon finely plaited to form a deep-pointed flounce around the neck and inset panels on the skirt.

An ingenious designer, whose models are often plain and of rich material, presents one particularly fascinating gown of crepe chiffon in petunia pink embroidered across the decollete bodice in a floral pattern of beads and pink-tinted pearls. In order to give a piquant effect a plaited fan of tulle is added at one side of the tunic.

Plaiting, as a relief from the severely plain lines that have been so long in vogue, has completely won public fancy, and most of the creators are making use of plaiting in some manner.

The plaited flounce in soft material, the lovely crepes and chiffons that form fluttering borders, or the ironed-out frill of the more crisp tulles and gauzes are seen on some of the latest Paris models. The tint-plaited ruffles sewn in rows around the skirt of a dance frock are immensely popular among the younger women.

Some charming dresses for the debutante element are made of tulle, with full-gathered skirts that are trimmed with many rows of narrow plaiting, applied in straight lines, festooned or pointed.

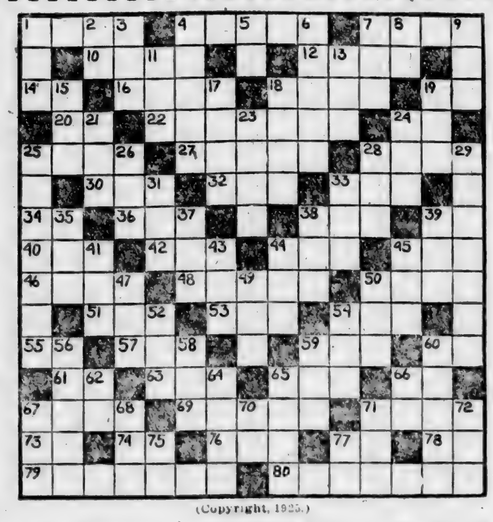
Will Be Reproduced.

One of the most beautiful evening gowns brought over this season will have many reproductions because of its becomingness. It comes from the Chanel atelier, a two-piece dress that has the effect of being all in one, of white chiffon and crystal beads. The sleeveless low-cut bodice is trimmed lengthwise with stripes of the crystal passementerie, and the skirt below the hips is a succession of ruffles of the chiffon, each of which is edged with loops and drops of crystal, like a sparkling cascade.

Madeline Vionnet has created a stunning evening gown of white crepe satin, which is altogether covered with white silk fringe applied in diagonal lines to form points in front and back.

Callot does some of the most adorable ball dresses seen this year. One youthful model which is especially charming for one of slender figure is of tulle, the skirt beruffled from belt to hem with the same goods. Other intriguing models are trimmed in deep points of passementerie. One, of ivory satin, with plain very low-fitted bodice which shows a decided tendency toward the "pinched" waistline has the crossed straps of the satin. Attached to the bodice is the circular skirt which is embroidered with diagonal lines of silver and crystal beads, forming a diamond-shaped pattern. The bottom of the flaring skirt is cut in points and edged with the beads.

CROSS-WORD PUZZLE



(Copyright, 1925.)

Horizontal.

1—A division of a chain
4—Auguries
7—A suggestion
10—Lubricates
12—A son of Adam
14—To travel
16—An appendage
18—Brings forth
19—Above
20—A river in Italy
22—Uncannily
24—A conjunction
25—To interpret
27—A red powder
28—Panic (slang)

HOW TO SOLVE A CROSS-WORD PUZZLE

When the correct letters are placed in the white spaces this puzzle will spell words both vertically and horizontally. The first letter in each word is indicated by a number, which refers to the definition listed below the puzzle. Thus No. 1 under the column headed "horizontal" defines a word which will fill the white spaces up to the first black square to the right, and a number under "vertical" defines a word which will fill the white squares to the next black one below. No letters go in the black spaces. All words used are dictionary words, except proper names. Abbreviations, slang, initials, technical terms and obsolete forms are indicated in the definitions.

CURIOSITY WAS NOT HIS STRONG POINT

A resident of the Rumpus Ridge neighborhood was plodding along the big road when he was amazed to observe, as he was about to pass by, the very remarkable behavior of the barn of Gap Johnson. A board flew off from one side, a door burst off from its hinges, a barrel came shooting out of the doorway, a peck-measure followed, a saw-buck came after, more boards flew from the sides of the building, a section of the roof flopped up and down, and there were sounds from within as if clubs and axes were being used to demolish the structure.

"If it's a fair question," asked the bypasser of a gent sitting on a stump near by and watching closely, "what in roaring, sizzling blazes is coming off in there? Is Johnson whaling his wife, or trying to punish one of the children, or have a bunch of incles got loose and gone to raising the devil inside?"

"I hain't the slightest idy," replied the sitter. "I've only been yur about—p'tu—half an hour."—Kansas City Star.

Nelson "Hero of Nile"

Horatio Nelson, the celebrated English admiral, is called the "Hero of the Nile" for his destruction on August 2 and 3, 1798, of the French fleet that lay at anchor in the harbor of Abukir.

Volcanic Country

The Central American republic of Salvador possesses more volcanoes that have been active within historic times than any other country. Nowhere is one out of sight of at least one volcano, and usually several are within range of vision.

Using Plaster of Paris

If you use vinegar instead of water when mixing plaster of paris you will not have the annoyance of it hardening while you are applying it.

HAD SMALL REGARD FOR VETS FEELINGS

National Adjutant Crevision of the American Legion said in Indianapolis the other day:

"If there is one man in the world we ought to pity and help, it is the mutilated veteran. I shudder when I recall how wretchedly the mutilated vetrans of the Civil war were treated in my boyhood.

"General Funston used to tell a story about a Civil war veteran with one leg who went to Sea Bright for a holiday. His bedroom in his Sea Bright boarding house was clean, but the bed was most uncomfortable. So he said mildly to his landlady in the morning.

"I couldn't sleep last night, ma'am. My room was spotlessly clean, but the bed was more uncomfortable than the rocky fields I used to rest in during my campaigns. The bed is most unsteady, ma'am. The fact is, it's only got three legs!'

"The landlady turned red with anger.

"'Well, you old grouchcr, that's two more'n what you've got!'"

Mexican Desert Reclamation

Once a desert waste, a tract of 1,900,000 acres in Mexico has been developed by irrigation until today it is the largest cotton-producing district of that country.

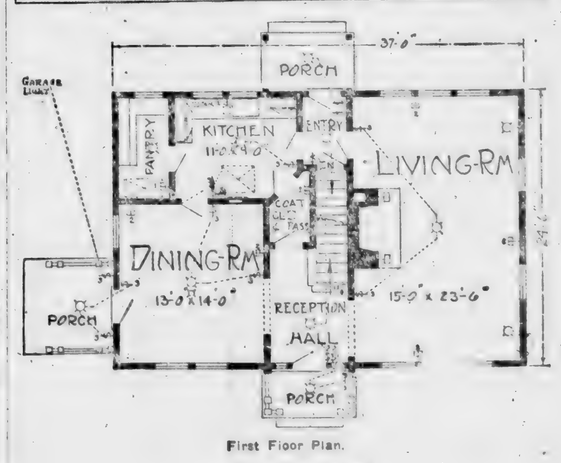
Currency Paper Expensive

The Treasury department says the government pays 51¾ cents per pound for 100 per cent linen paper on which currency is engraved. There are 12⅓ pounds to a thousand sheets, which are 7½ by 13¼ inches. Four bills are made from one sheet.

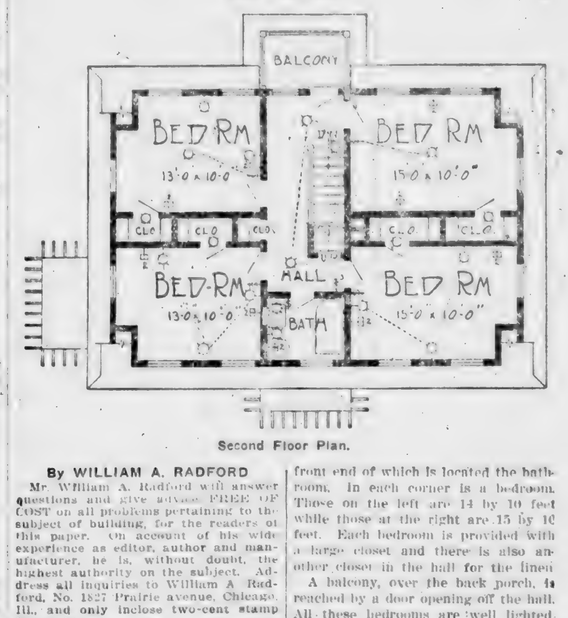
Salt Kills Cereal Pest

Crushed rock salt is the best chemical to use in killing the common barberry, which spreads the black stem rust of cereals.—Science Service.

Seven-Room Dutch Colonial House Utilizes All the Available Space



First Floor Plan.



Second Floor Plan.

By WILLIAM A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all problems pertaining to the subject of building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on the subject. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

When it comes to getting the greatest possible space in the new home there is nothing better than the Dutch colonial house with its gambrel roof and square, or nearly square, floor plan. Not only does such a house afford much space but it also lends itself admirably to building of an attractive small or medium-sized house with simple dignified lines.

The house shown is finished entirely in shingles. Monotony of appearance is avoided by laying the shingles of the side walls wide to the weather while the symmetrical placing of windows also aids. The foundation is low, basement windows set in areaways at the front and the shingled walls carried almost to the ground level.

Two small porches, one at the front entrance and the other leading from the driveway to a side entrance into the dining room, are built of concrete and brick and are approached by two low steps. Down spouts at each end of the front elevation are used to break the wall expanse and serve an ornamental as well as a practical purpose. Shrubbery planted all along the front breaks the line of foundation.

The interior arrangement is simple. The front entrance opens into a central reception hall which contains the stairs leading to the second floor and, at the rear, the basement stairs. At one side of this hall is a large living room, 23½ by 15 feet, which occupies the whole side of the house and is well lighted by windows on three sides. A big fireplace is placed at one side of this room and is served by an inside chimney. This type of chimney means economy in building, as compared with a decorative outside chimney, and is also made for fuel economy by retaining much heat that is dissipated by the outside chimney.

On the opposite side of the hall is the dining room with a small but ample kitchen behind it. The kitchen is provided with a pantry containing built-in cupboards for food supplies. This kitchen also opens onto an entry which gives access to the basement stairs and the back porch. A coat closet off the central hall is also reached by means of a door from the kitchen.

The upper floor, like that below stairs, is divided by a hall, at the front end of which is located the bathroom. In each corner is a bedroom. Those on the left are 14 by 10 feet while those at the right are 15 by 10 feet. Each bedroom is provided with a large closet and there is also another closet in the hall for the linen.

A balcony, over the back porch, is reached by a door opening off the hall. All these bedrooms are well lighted, having windows on two sides, and still retain ample wall space for the placing of all the usual pieces of bedroom furniture.

One feature of the yard is a garage, almost an essential part of the modern home. This garage is designed to harmonize with the house and is finished with the same style of shingled walls. This latter is a detail which is too often overlooked. Any garage or other small auxiliary building should be carefully designed in order that it shall harmonize with the house or otherwise it may completely spoil the appearance of the home group.

Prevent Irregular Growth of Trees

In the care of one's yard caution should be taken against irregular growth of trees and means adopted to rectify any fault in the tree's growth at the start. Many trees are inclined to lean in a certain direction through being forced into that position by prevailing winds from the opposite point, and, unless braced while young, it will be impossible for them to grow upright as they should. It is well that a sufficient space be spaded up around the tree, and the ground kept worked and properly fertilized.

Comfort First

Comfort and convenience are usually worth much more than they cost. The eyestrain avoided by properly placed lights; the satisfaction resulting from well-located switches, and the comfort and usefulness cannot be calculated in dollars and cents. In daily housework, the practical utility of complete wiring is a constant help to the housewife.

Coal Chute

A coal chute the frame and bottom of which are pressed out of one piece of heavy "copper steel" is a modern improvement which protects the building from damage and defacement.

Utility Motor

A general utility motor to run various kinds of farm machines was recently developed at the University of Wisconsin.

Obituary

Margaret Malissa Dermott, daughter of James and Margret Hart, was born one mile south and one half west of Coburn's Corners on September 23 1858. She died at her son, Olon's, in St. Joe, August 10, 1925, aged 66 years, 10 months and 27 days.

On October 14, 1880 she was united in marriage to J. M. Dermott, to this union was born one son, Olon, who resides in St. Joe.

Under the ministry of J. O. Rose she united with the Church of Christ at Coburn's Corners, where she held her membership until death.

She leaves to mourn her departure her husband, her son and wife, three grand children, one great grand child, five brothers and four sisters

Funeral service was held at the home of her son last Wednesday afternoon, Rev. J. O. Rose of Angola assisted by Rev. J. N. Scholes. E. R. Kinsey, funeral director. Burial in Alton cemetery.

Card of Thanks

We wish to thank the kind friends of Coburn's Corners and St. Joe who so kindly assisted us during the sickness and death of the deceased.

J. M. Dermott,
Mr. and Mrs. Olen Dermott.

To Re-Dedicate Church Basement

The repairing and remodelling of the Lutheran church basement has been completed. This was sponsored by the Ladies Aid Society and approximately $300 00 has been expended to make the improvements.

Careful plans are being made to serve a large crowd in a satisfactory manner at both dinner and supper on Home Coming Day. The ladies will appreciate your patronage and you will enjoy resting and eating in such a clean, airy dining room with food prepared in such a modern and convenient kitchen.

To Receive Bids For School Hacks

Notice is hereby given, that on Tuesday, September 1st., I will receive bids for drivers for the five hack routes in Concord Township, also for one private car for Hay's school route. All bids must be in by 1 o'clock, when contracts will be open.

F. L. Milliman.

Do you believe Bill Harman when he says, "Last Saturday we sold 200 pounds of Hamburger." It's a fact, and we were surprised ourselves. Cleaned up the market completely by Saturday night. Bill has faith in advertising in the St. Joe News, in spite of him being the only market, yet it pays him to have his shop mentioned in every issue. Just ask Mr. Harman if you doubt this statement.

Auto Accident Sunday Evening

A very serious accident occurred Sunday evening at about 10 o'clock to a large Buick car enroute to Butler, filled with six actors of the Ginnivan Co., who are billed to show at Butler this week.

One lady and one gentleman were very badly hurt. The lady received a large cut on her left cheek and the gentleman received a cut on his left arm so deep the bone could be seen, severing the arteries.

The accident occurred about a half mile south of Bair's bridge at the bridge near the Vanzile farm. The car was driven by a lady. At this place the road had been widened during the week and the fill was soft, being a stranger over the road, and at night, she drove too near the edge and the car turned over completely wrecking the car besides injuring some of the occupants.

Help was secured by the passers-by and the injured taken to Spencerville and later to a Fort Wayne hospital.

The car was removed, after a number of men and a wrecking car had worked for several hours.

The Vanishing Men

BY

RICHARD WASHBURN CHILD

COPYRIGHT BY E. P. DUTTON & CO.

WNU Service.

SYNOPSIS

Out of uniform, at the end of the World war, with the rank of major, Peter DeWolfe, young American of wealth and family, is urged by an English comrade in arms, Everby Benham, to visit the Benham home and meet the Englishman's mother and sister, and, incidentally, Brena Selcoss, young woman about whom there is an air of mystery. Muriel Benham, Everaby's sister, becomes infatuated with Peter, but he is interested only in the mysterious Brena Selcoss, of whom he has had only a glimpse. Muriel urges him to forget her, warning him that if she (Brena) should like him he is in danger of "vanishing—like the others." Peter gets a phone message from Brena to meet her. Peter meets Brena in a tea room and the meeting results in the formation of a strong bond of friendship.

CHAPTER IV—Continued

"Yes, dear, I understand. I can resist you, Peter. It would be hard, but I could do it. I do not want to do it. The promise was for your sake, Peter. Not for mine alone."

"I've asked you nothing—no questions," he said, putting his hands upon each of her shoulders and holding her at arm's length.

"No, Peter, none."

"Because I did not care," said he.

"No matter what might come?"

"No matter what might come."

He drew her toward him and took a breath of the unperfumed fragrance of Brena Selcoss. And then, with eager, hungry yearning, expressed only through the restraints of tenderness and profound respect, as if indeed he had some ancient deity in his arms, he kissed her lips, he pressed his cheek into her hair, he touched the back of her neck with his fingers.

"I love you," he said. "Can you understand all I mean by those plain words—I love you?"

"I love you, Peter."

"You must never leave me now."

She sprang back, tearing herself from him as if he had treacherously plunged a knife into her.

"Not that, Peter. Not that! I thought you knew. I thought this was—good-by."

Like one in great pain which must be borne in silence, she threw back her head and stood quivering and tense.

"You can't have misunderstood!" she said in a breaking voice. "Is this my punishment—that you have misunderstood?"

"I want you, Brena—forever. I could have sworn I never would want anyone—like this."

"Peter, it cannot be."

She seized his hand and, leaning over, pressed her wet cheek upon his wrist.

"It cannot be, Peter. It happened when I was no more myself—the one you know—than I am Muriel Benham. It happened when I was less than eighteen—seven years ago. I am married."

"Married?" he gasped, putting his other hand lightly upon her cheek. "Where, then, is he? How long ago did he—"

"Go?"

"Yes."

"Three years. I loathed him. I loathed his eternal fright."

"And where is he now?" he asked.

"I do not know."

She shuddered.

"He—"

"Vanished."

Peter was white. Breathing hard, he said, "You—Brena—will you tell me everything?"

"Yes, Peter—before I go. I will tell you everything. It will show you why I am afraid—for you."

CHAPTER V

Brena Selcoss had been born on American soil.

One of her most vivid memories was that of her father, an austere man, who all his life long had carried about in the great and muscular body with its slow movements and its suggestion of latent giant power, a restless soul, ever seeking to find its way hither and thither like a strong giant ant of unceasing activity looking for new work.

She could remember dimly that her mother, whose hair never lost the red-gold Celtic glory until she and her second child died together when she was forty-two, had referred with whispered awe to the turbulent career of her husband, Demetrius. There were vague recollections of the mother's pride in the fact that he had risked and lost his career, begun so early in life and so brilliantly in chemical research and in a professorship in Athens, that he had tossed aside all consideration for himself to labor for a constitutional Greece and to risk his life in a conspiracy for freedom.

Mary Vaughn, as her name had been before her marriage, knew something of insurrection herself; she had had the ill fortune to be the daughter of the famous Tom Vaughn who was forced to flee Ireland with his family after the unsuccessful and forgotten "Secession Plot" of the '50s. Mary, from the time she was a child, sang like a bird. She might have become a famous contralto, for her voice had that same warm, rich quality inherited by her bewitched daughter, but like a bird her true home was upon the open moors with their free spaces and the shadows of the clouds passing over the grass; New York, of adamant and rectangles, was as good for the joy of her voice as it would have been for that of a wild nightingale. She never spoke harshly of that "turrible Babylon," however, without adding, "But 'twas there I met your father, Brena, and I'll speak no ill of it."

So, with some of her sparkling self dimmed, she gave all her expression of loyalty to her husband; her flight upon gauzy, unsubstantial wings was always a circle about his head, as if she were a brilliant moth hovering about the top of a grim mountain which always quivered, threatening volcanic disasters. Something had died within her when they took her from the moors and the open places, and that which was left was an Irish beauty and a bottomless well of affection for her man and her Brena.

"It is from her that I have a legacy," said Brena. "It is a storehouse of unspent passion and tenderness. And it is still mine—to do with as I please."

She did not go on to say that those to whom it would be opened might enter to be destroyed.

Brena could not recall the details of her mother's accounts of the part her father had played in the disturbed period of Greece. There were vague impressions of a secret organization under the "Council of Twelve," to which he had sworn devotion, of a problem of honor which he had decided by following a course of conduct that had brought down upon him the penalty of assassination. A sharply defined portrait of this young patriot, a member of the Salamis deputation of 1862 informing King Otho, the last of the Bavarian alien monarchs, that the throne of Greece was vacant, remained in Brena's mind. She confessed to a thrill of pride that upon an occasion, historic and momentous, her father, then only twenty-eight, had been present in a major role. This had been the top moment of his life; those whom he had aided turned upon him. The strength of a powerful secret organization, gradually falling into unscrupulous hands after its true functions were over, had been turned against him. His name became a traditional center of oaths of vengeance; with knife wounds upon his great arms and thighs and an unremoved bullet in his shoulder, he came to America. He was a man who had lived one life, and expected the world to recognize him as an important being. It saw in him only a silent, learned man, inventing a thousand ambitions and from them choosing no fixed purpose, disregarding money in a land where money, for the time, was the fetish, careless of poverty but humiliated periodically by debt, discoursing upon biological chemistry years before the scientific world had the imagination to listen—a giant, with dark haunting eyes, long Homeric hair and beard, always brushed back as if he were eternally facing a hurricane, and a voice and presence as mysteriously impressive as that of some Elijah. Even Brena remembered his affection for her, profound as it was, as being like the affection of some god of mythology directed down upon a beautiful but mortal child.

Between the frivolous sunlight of her mother and the magnificent shadow of her father, Brena grew, acquiring from one a whimsical humor and from the other a calm of high cliffs and of a Parthenon.

According to Brena's own phrase, she "had no childhood and all childhood." She had none because her father, after a month or two of concentrated application of his mind upon studies of similarities in the architecture of ancient Mexico and prehistoric Greece, would find the butcher, landlord and grocer at his door, and then, as if awakened, he would take his little family and board the train for some minor university where he would teach himself out of debt and into a period of bitterness of heart because neither his learning nor his important place in history were given recognition. With a great sigh from his expansive chest, he would move on again in pursuit of some inquiry, some research, some new application of his heroic, impractical head. In consequence, the little girl, red of cheeks, with spindling legs and great wondering brown eyes, never stayed long enough anywhere for acquaintance with children and for play. Tutored by her mother and by the booming, terrifying voice of Demetrius Selcoss when he, as he said, could spare time for it, she learned a taste for books and consumed them, according to her own story, "like a hungry little pig regardless of the wisdom of a diet and eating all that was within reach." The books served to give her a fake veneer of experience and maturity.

This outer covering was fake because it failed to represent the truth that Brena had reached sixteen, with physical attributes which made men turn as she passed but without any consciousness of having approached womanhood. Without contacts with childhood, ever on the move, living in hotels, in boarding houses, in suburban cottages, ever dependent upon one rickety patched old trunk and her two parents, she had acquired the habits of childlike dependence. Like a child she found that life was shaped without intervention of her own. She allowed herself to be dragged along with her mixed load of conceptions drawn from a helter-skelter reading. Among other conceptions was that eternal fiction of the gallant and perfect fairy story prince whose bride she would one day be. To be a bride meant little more in terms of real life than to become an angel.

"If I ever have a daughter," said Brena Selcoss, "I will never allow her to have this dangerous dream of a Prince Charming. It is the common foundation upon which girls throw sensible judgment to the four winds and come to critical moments without a thought of the flowing years of real life which are to come. It might have wrecked me when I was seventeen."

While Brena was seventeen, indeed, many landmarks had been set up in her development. Her mother had died quietly in bed the year before without a gasp of warning, without a murmur, a smile upon her engaging lips. Brena had been asleep in the next room, and Demetrius, having one of his spells of insomnia, sat almost all

"Yes, Dear, I Understand. I Can Resist You, Peter. It Would Be Hard, but I Could Do It."

night long on the porch of their cottage in Dallas, Texas, in a rocker which squeaked a little as his bulk moved. He had come up at dawn to find his wife, with the first rays of summer sun thrown through the shutters and onto the happy, lifeless figure in bars of gold. It shimmered on her lovely hair; in all the red-gold mass there was not one strand of gray.

"This is the time for great calm," he had said to Brena, as he woke her with his giant's hand upon her shoulder. "The life has gone from your mother's beautiful body, my daughter, but she will live always with us because she was a brave and tender soul which endures forever."

"I thought that she had endless life," he said after a pause, burying his bearded face in his sun-browned hands. "It is the way with me always—I am unprepared—always unprepared."

This was the only flinching brought out in him by the death of the Irish girl he had adored so completely, to whose songs he had listened while his life went askew and in whose smiles he had warmed the chills of bitterness and whose arms had stilled the restlessness behind his great dark glowing eyes. He went on his way unchanged, but no doubt making new attempts to reach across the chasm which separated him from the yearning heart of his daughter.

These attempts were failures. Beside each other, when he was home, they were as persons alone; the one reminiscent, living in a past where great figures of history stalked majestically; the other expectant, with the eyes of youth turned away from the shadows and toward the glints of the future.

For three or more years before Mary Vaughn Selcoss had died, she had been alarmed by a new characteristic of her husband. In Dallas when he, who once had known the tang of great deeds done in a setting of romantic grandeur, came out through the hot streets on a common electric car and walked up a suburban avenue with its cheap bungalows and its phonographs, its lawn sprinklers trying to raise the sun-baked grass from the dead, and its concrete sidewalks, Brena's mother had noticed a look in his eyes of a haunting fear.

"I wonder what would become of you and Brena if anything happened to me," he had said in explanation.

"Nothing will happen to you," Brena's mother had gayly answered. "Come into the house. I've something to show you."

"To show me?"

"Yes—a happy little home with the rent all paid up till last February. Nothing will happen to you."

But the fear was written upon his countenance deeper and deeper, like a tracing often repeated. He said to his wife on one occasion, "You say this fear is new. No, dearest; I have carried it about for many, many years."

Long after her mother had gone Brena had seen that look in her father's eyes.

"Perhaps he is afraid he will lose his place with the oil company," she had said to herself many times.

Opportunity enough was given her in those days to speak for herself. She had gone beyond any school training not only in independence but in learning; nevertheless she remained a child—a lonely, sensitive child in the heart of her ripening womanhood. Her father's austerity and her own peculiar shyness made the pair appear to the Texan neighbors aloof, strange, like persons over whom some shadow hung. And her father considered alone? He too, even to her, was in spite of all his giant desire for tenderness, also aloof, strange, and over him some shadow also cast its menacing shape.

Perhaps this shadow was explained when Demetrius, the learned and impractical, the heroic and the humbled exiled gentleman of Athens, stepped in front of a moving train one evening as he was trying to cross the tracks which run through the Dallas streets, and then lay staring up at the sky, his hair and beard brushed back as if he faced a tempest.

It was the doctor who carried the news to Brena. He stood beside the engraving of the Acropolis in its frame battered with many packings and unpackings and many hangings and removals and many journeys in the bottoms of trunks.

"You do not weep?" he inquired.

"No," said Brena, looking at him with her blanched face.

The doctor was a little dried up southerner, whose manner straddled between his Kentucky birthright and the Prussian medical schools where he had acquired his education.

"He was a noble man," he said, "He was a haunted man, as well."

Brena said nothing.

"If he had lived another six months, he would have been totally blind. Only I knew that. He would tell no one. And what would have supported you both then, eh? The public funds, I reckon."

The woman, who was still a child, shivered.

"He was sorely tempted—your father," said Doctor Gregory. "He had insured his life and he would have killed himself to provide for you. Yes, that was his plan. He asked me about it. Such a man! Hesitating to blow his brains out because of what? Honor. Not to defraud a soulless corporation, eh? Not doing it, either. Too virtuous! Too just! Splendid! Magnificent! Like his own forehead—noble, classic!"

Brena covered her face with her hands.

"Ah, well," said the doctor, "it was well to know such a man. You must be brave—a good girl, eh? Your father may have been killed in answer to his prayers. One cannot grope his way in front of a moving train.

"Did he die—without—a word?" she asked.

"No; I was going to speak of that," said Gregory, chewing harder than ever on his ever-present toothpick. "He was conscious for a time—quite conscious. He said that you never knew how much he loved you—some awkwardness, he said, prevented. He asked me to tell you that something would protect you from danger. He didn't say what. Something would. He said that you must not be afraid."

The doctor sighed and looked about the room with its few books, pictures, ornaments—the shabby remnants of a life of discriminating taste, high purposes and poverty.

"There isn't much for you to begin on," he said, reflectively. "Five hundred life insurance. The rest had gone because he didn't pay the premiums. Too honest to take it by blowing his brains out—a noble man—the timbers of a noble human craft deserving better of life's sea!"

He was proud of that phrase.

"I think you will find that Mrs. Wilkie on the corner will take you in for a while," he suggested. "You will find work."

Yes, Brena would find work. The granddaughter of the proud and intellectual Tom Vaughn, the daughter of the man who in America called himself Demetrius Selcoss, once the teacher of chemistry in the National Institution of Greece, who had the right to wear royal decoration and who bore on his body the marks of battles for liberty—she was now merely a girl alone in the world, without friends, money, background, training, experience. A great democracy had leveled her. Possessed only of that sun-ripened beauty of fruit coming into its prime with untouched bloom upon it, to which was added the charm and the dangers of immaturity and innocence, her assets were a hazard. Her mind and its capacities and its rich supply of academic learning were not currency which passed as legal tender among the persons she would know. Her father, who had said that he always met life unprepared, might well have added that he left it without provision.

Brena went to live with Mrs. Wilkie. She remembered that lady as an intensely practical woman who was always in a hurry. On haste, she had grown almost unpleasantly stout, and one of the disagreeable memories of Brena's tragic storehouse is the picture of this woman's absurdly small mouth, which would not stay fixed in one spot between her fat cheeks and her fat chin, but moved about, appearing to be located first here and then there, like a newly punched orifice. It never moved so unpleasantly as when she was talking of her ancestry, her relatives who had great wealth and her husband's injustice and brutality in making her give up society. Her husband had given up her society; he had gone to parts unknown. She brooded upon her fancy that she could have been a kind of dowager grandess if she had been born under a luckier star or had rejected Sam Wilkie.

She would not have been of any particular importance in the life of Brena Selcoss had it not been for two facts. One of them was that, lacking other distinction, she could have that of giving refuge at so much and so much for room and board per week to the most alluring young creature that, for the moment, was known to the male eyes of Dallas as an unsolved riddle. The other fact was that she was the half-sister of the mother of Jim Hennepin of Virginia.

Jim Hennepin, who liked to attach to his name the words "of Virginia," was the last of a line which had been brought to American soil by a refugee Huguenot connected distantly with the great explorer of the headwaters of the Mississippi. There are those who remember him in his escapades in Danville, and felt relief when his father, who had himself dissipated the small remainder of the Hennepin wealth and tobacco lands in futile speculations through a Washington broker, said to Jim, "You can go down to your mother's sister in Texas. She will put you up and I have a job all ready for you with a cotton buying and commission house in Dallas. There is nothing left in my own pockets. The only genius you have is for getting into trouble; your only talent is for figures. As time goes on the accountant is playing an ever-growing part in American business, just as the drunkard is playing a lesser part. Do you get my meaning, son?"

This accounted for the presence of Jim Hennepin in Texas. He had been there two years. Compton Parmalee & Co. had found nothing to criticize in his bookkeeping. In fact, it had qualities of genius which sometimes make bookkeeping not only a cold record, but a vitalized inspiration of business. Hennepin was a useful addition to Compton Parmalee's small staff. He drank at the club, but with a moderation considering his resistance to the effect of alcohol. He was a popular young man in Dallas, and the fact that so many men in that Texas city have now forgotten that they ever heard of this youth is only a commentary upon the truth that the impressions most of us make are not even fine scratches when time's roller has passed once or twice over men's memory and today has become so much more important than yesterday and that which is in sight covers that which is gone like new strata in a geological period.

It would be untrue to deny that Jim Hennepin was an attractive figure. If he had craft and viciousness, as some have said he had, it was belied by the Hennepin smile—an inviting smile, invoking the cheer of the moment like a smile of a boy. Furthermore, he was tall and graceful, like an oarsman in an English college eight. He was more like the bad son of an earl than a bookkeeper, and persons often inquired who he was, especially before they had heard him speak in his carefree modern American slang figures, and were surprised to find that he was older than he looked, had fought his education for several wasted years at the University of Virginia and was earning forty-three dollars a week and spending fifty-nine when he was over thirty.

(TO BE CONTINUED.)

Wild Creatures Die Fast When Captives

The average person who visits a zoo for study and enjoyment often fails to realize the expert care and heavy expenditure demanded in its upkeep. Death takes a frequent toll among the animals and the birth rate cannot begin to make replacement. The four corners of the earth must be scoured or many an empty cage would confront visitors, says the New York Times.

Every month a proportion of the familiar animals die, and rare beasts and birds with strange names also succumb. Every month purchases are made that may range from 25 cents for a box tortoise to $900 for a pair of Geiada baboons.

Usually the highest mortality is among the birds. Next come the mammals, the severest financial loss. Reptile casualties are lowest. A report of the Bronx zoological park shows the death of twelve mammals, including a bonnet macaque and a white-faced sapajou, of three reptiles, crocodile and two tortoises and fifty birds in a single month. However, the increasing skill of curators and keepers in the handling of wild animals is keeping the death rate within bounds.

Spent Six Years on Novel

Gustave Flaubert, leader of the French realistic school of writers, spent six years in writing his novel "Madame Bovery." Its publication in 1857 laid him open to accusations of immorality, from which he was cleared.

WELL ONE DAY IN BED THREE

That Was the Life of Mrs. Hollister Until she Began Taking Lydia E. Pinkham's Vegetable Compound

Wyandotte, Michigan. — "After my baby was born I did not do my own work for six months and could hardly take care of my own baby. I always had a pain in my right side and it was so bad I was getting round shoulders. I would feel well one day and then feel so bad for three or four days that I would be in bed. One Sunday my mother came to see how I was, and she said a friend told her to tell me to try Lydia E. Pinkham's Vegetable Compound. So the next day I got a bottle and before it was half taken I got relief. After I was well again I went to the doctor and he asked me how I was getting along. I told him I was taking Lydia E. Pinkham's Vegetable Compound, and he said it did not hurt any one to take it. I am always recommending the Vegetable Compound to others and I always have a bottle of it on hand."—Mrs. HENRY HOLLISTER, R. F. D. No. 1, Box 7, Wyandotte, Mich.

RADIO

The basket-weave method of winding coils is becoming increasingly popular with the amateur who makes his own coils, especially for short-wave work where a coil should be practically self-supporting so as to include a minimum of dielectric in its field, writes a correspondent in Radio News.

Construction.

The writer, requiring a coil of this description for a Tropadyne adaptor, made up a special former for the job, which has since proved exceedingly

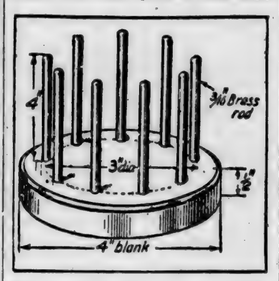

Fig. 1. Illustrating Base and Arrangement of Spokes.

useful whenever a coil has been wanted.

It should be mentioned here that the former described needs a 2 and a 4B.A. tap and die and the appropriate drills for its construction, but for the benefit of those who do not possess these tools an alternative method will be given at the end of this article.

The base is made of one-half inch brass, a blank four inches in diameter being obtained from one of the large metal merchants, though it could probably have been only three-eighths of an inch or one-quarter of an inch thick without detriment to the finished former—which is shown in Fig 1. The center of the blank was found and a

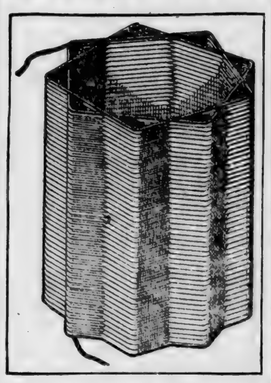

Fig. 2. Appearance of Single-Weave Coil Wound on Former Described.

three-inch circle scribed on one surface. This circle was divided into nine equal parts and a center punch mark made at each division line. The division of the circumference into any number of equal parts is easily done by multiplying the diameter by 22-7 and dividing the resulting figure by the number of divisions required. This figure will not be quite accurate, but any slight inaccuracy can easily be corrected by "trial and error."

Brass Rods.

A hole was drilled at each of the punch marks, a 2B.A. tapping drill being used. After this the holes were tapped out 2B.A., and the complete base was filed smooth and polished with sandpaper. The top edge had a groove cut in it on a friend's lathe just to finish it off and a coat of lacquer applied.

Next a length of 3-16 brass rod was obtained and nine 4-inch lengths cut from it. One end of each of these lengths was rounded off with a file and a little over one-quarter of an inch of the other end was screwed with a 2B.A. die. It was now merely necessary to screw the rods into place in order to be able to make basket-weave coils. The single-weave coil is the most usual and is shown in Fig. 2. But double and triple-weave coils can be made if desired, and form interesting variations from an experimental

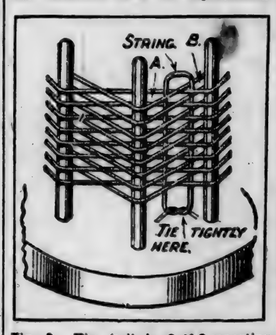

Fig. 3. The Coil Is Self-Supporting and Secured With String.

point of view, as well as allowing more turns of wire to be accommodated on a winding of given length.

It was also intended to wind special chokes for 15-meter reception; these, of course, need to be much smaller than those generally used, and so another circle, one inch in diameter, was scribed inside the first one. This was divided into seven parts and 4B.A. tapping holes were drilled, the pegs were made, of course, from 4B.A. rod. These pegs were made only two inches long but the same amount was screwed at one end of each. The chokes made on this former consisted of 30 turns of No. 24 S.W.G. D.C.C. copper wire.

The method of making these basket-weave coils self-supporting is shown in Fig. 3. First lift the coil so as to leave a space of one-half to one inch between the bottom of the coil and the base of the former. This can be done with a strip of metal beveled off at one end and inserted between the base and the bottom turn, or by means of a special lifting plate shown in Fig. 5. Next a piece of thin string or twine is slipped down the space, as shown at A, on one side of the crossing of the wires between the pegs and the other end slipped down the space B on the other side. The ends of the twine are now tightly tied to pull the winding together, and then knotted. After the crossings have thus been tied, it will be found that the coil can be slipped off the former as a unit, and will be quite self-supporting.

Mounting.

There are various methods of mounting these coils, but what is probably the simplest is shown in Fig. 4. A piece of wood or ebonite cut down to slip into one of the spaces of the coil, as at B. About one-half inch is

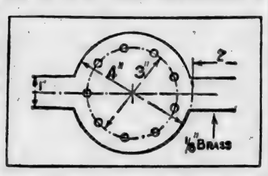

Fig. 5. The "Lifter" for Raising Coil Off Base Before Fastening.

allowed at either end, by which the piece of wood or ebonite can be fixed to either the panel, some instrument or the baseboard of the receiver.

Coils made on this former will be found to be very efficient and give a good tuning range on account of their low self-capacity, while for low-loss tuners they are undoubtedly one of the best types to use on short-wave work.

If the constructor does not happen to have the necessary tools for drilling and tapping the base and threading the ends of the brass pegs, another means of making the former is as follows: Drill the nine holes required in an inch-thick hardwood base with a drill which is a trifle smaller than the brass rod used for the pegs, and having cut these, drive them into the holes with a hammer until they are quite firm. As long as fairly light gauge wire is used in winding the coils, and

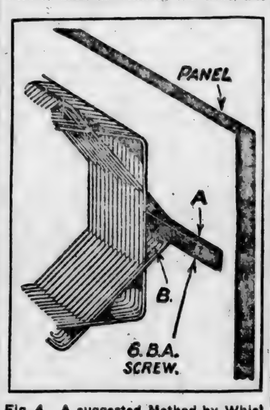

Fig. 4. A suggested Method by Which Coil May Be Mounted.

undue tension is not put on the wire while winding, this will prove quite a satisfactory alternative. If too great a tension is applied to the wire the tops of the pegs will be pulled out of the vertical, and not only will the coils be conical, but after several turns have been wound the pegs will tend to become loose in their holes.

Produces 3.8 Meter Wave; Said to Be Low Record

The Union College Radio club of Schenectady, N. Y., has announced the development for what is said to be the first time of a radio wave length of only 3.8 meters. The lowest recorded wave length previously was said to be seven meters.

It is said the new low wave length was produced through the use of standard equipment. Coils and inductors were eliminated from a radio set and two 50-watt tubes were employed. These were attached to flexible leads and the wave length was obtained by extending or decreasing the distance between the tubes. Elimination of tube bases, it was said, probably would reduce the wave length still more.

Cushion the Set

Use of four small air cushion feet, such as are used on typewriter machines, is an improvement to any set. Placing them under the receiving cabinet will stop undesired ringing noises from microphonic pickup action and also prevent audio sound feedback through the table carrying the set and the loud speaker. The cushion feet can be attached without the use of screws.

THE KITCHEN CABINET

(©, 1925, Western Newspaper Union.)

Rest is not idleness, and to lie sometimes on the grass under the trees on a summer's day, listening to the murmur of the water, or watching the clouds float across the sky, is by no means waste of time.—Lord Avebury.

APPETIZING DISHES

When preparing mush for a supper of mush and milk make plenty and mold in bread pans, stirring into it any chopped meat while warm. This when sliced and fried makes a good, substantial dish.

Fruit Salad.—Mix together one cupful of chopped nutmeats and one-half cupful of seeded grapes, cut into halves. For the dressing beat an egg, add an eighth of a cupful each of lemon and orange juice, one tablespoonful of pineapple juice, one-half cupful of sugar, then cook in a double boiler until it thickens, stirring all the time. Serve on crisp lettuce leaves.

Stringless Beans.—With the advance in cultivation we have arrived at the tender stringless bean. Wash and trim and cut into half-inch slices diagonally, which permits more cut surface to reach the heat. When tender, dress with salt, pepper and butter or part butter and part olive oil, with a dash of vinegar.

Creole Tongue.—Boil a fresh beef tongue and after skinning and trimming it, serve with the following sauce poured over it: Into a double boiler put a glass of currant jelly, a cupful of orange juice and one-fourth cupful of lemon juice, one tablespoonful of butter, a fourth pound each of raisins, citron, currants, and chopped almonds; soak in the fruit juice and serve with the tongue, after the sauce has been heated, but not boiled.

Fig Omelet.—Cut small pieces of figs in pieces and stew them in a little sugar sirup until tender. Beat the yolks of four eggs until thick, adding a tablespoonful of cold water for each egg; fold in the stiffly beaten whites and pour into a hot well-buttered omelet pan. Sprinkle the figs over the top, fold and serve with the sirup.

Cheese Omelet.—Take a cupful of cheese, a cupful of cream, two tablespoonfuls of melted butter and an egg beaten light, season with salt and pepper and put into a buttered baking dish to bake. Serve as a luncheon or supper dish.

Macaroni and Eggs.—Cook until tender one cupful of macaroni broken into inch pieces. Put a layer into a buttered baking dish, cover with a layer of hard cooked eggs, cut into eighths, sprinkle with a little grated cheese, cover with a thick white sauce, repeat and top with buttered crumbs. Put into the oven and heat until thoroughly hot and the crumbs are well browned. Serve from the dish.

For Luncheon or Tea.

A tasty dish for luncheon or supper is calf's heart. Cut the heart into thin slices and fry in a little butter, seasoning well with salt and pepper.

Spanish Eggs.—Take one-half can of tomato, pour off nearly all the liquid or use two or three fresh ripe tomatoes, heat in a saucepan, add salt and cayenne with a little scrapped onion and cook ten minutes. Then break in four eggs and stir with a fork until the eggs are cooked. Serve on buttered toast.

On a hot night for supper serve iced grain cereal. It is a drink that the children can have and will enjoy.

Cherry Bread Pudding.—Spread stale bread with butter and place in layers in a baking dish, cover with cherries well sweetened, using some of the juice. Repeat until enough of the bread and cherries are used, pour over more juice and bake or leave in a cold place to chill.

Tapioca Delight.—Dissolve three-fourths of a cupful of sugar and one-half teaspoonful of salt in four cupfuls of coffee which has been strained. Add one cupful of minute tapioca and cook over hot water until perfectly transparent. Add one-half cupful of chopped nutmeats, and one-half teaspoonful of vanilla. Chill and serve with cream.

Rhubarb, currants, raspberries, blueberries or any kind of fruit may be served in this way.

Save the leftover griddle cake batter and use it for dipping fritters, thus saving the work of preparing fritter batter.

Grape Sandwiches.—These sandwiches will be enjoyed by the children for their luncheon: Butter twelve slices of bread and spread with grape marmalade, chopped apple and chopped nuts, using four tablespoonfuls of the grape marmalade, two tablespoonfuls of nuts and two of apple.

A delicious sauce to serve with fruit or frozen puddings is this: Beat until thick the yolks of two fresh eggs, then add the beaten white of one, and two tablespoonfuls of confectioner's sugar. Place in a double boiler and cook, stirring until thick. Pour into a cool bowl and beat with a wooden spoon until cold, then add one cupful of whipped cream. If to be used with puddings add one-half teaspoonful of vanilla; if fruit use the same amount of almond extract.

Ancients Had More Than Fair Idea of Surgery

Evidence that skull surgery was successfully practiced by prehistoric people in Michigan has been presented to the American Association for the Advancement of Science by Prof. E. F. Greenman of the University of Michigan. Pointing out that Michigan has been greatly neglected as a field for archeological investigation, he said:

"In Alpena county, Michigan, several trephined skulls—that is, skulls into which holes were drilled during the life of the patient, have been reported. One of them is in the University of Michigan museum and careful examination by anatomists of repute shows that a healing had begun after the operation and therefore the area of the practice of skull trephining must be extended far beyond Mexico."

Cuticura for Sore Hands.

Soak hands on retiring in the hot suds of Cuticura Soap, dry and rub in Cuticura Ointment. Remove surplus Ointment with tissue paper. This is only one of the things Cuticura will do if Soap, Ointment and Talcum are used for all toilet purposes.—Advertisement.

Story of Zoroaster

Zoroaster was one of the great teachers of the East and founder of what may be called the national religion of the Perso-Iranian people, that is, speaking generally, the Persians. When he lived and taught is not exactly known, but it is held that it was between the years 1000 B. C. and 600 B. C. He taught a dualism of power, one good and the other evil. Light represented the former and darkness the latter. As corruption grew up the sun became worshiped as the great source of light and, therefore, of all good.

For true blue, use Red Cross Ball Blue. Snowy-white clothes will be sure to result. Try it and you will always use it. All good grocers have it.—Advertisement.

Some Fish!

First Customer (describing a catch)—The trout was so long—I tell you I never saw such a fish!

Second Customer—No. I don't suppose you did.—Good Hardware.

Chlorine does not kill off germs in milk as it does in water, probably because the chlorine cannot penetrate the fat globules in milk.

Crow Traps Tried Out

In British Columbia, where crows have been damaging crops to a considerable extent, an effort is being made to exterminate them by the use of crow traps. The crows have also been found to prey to an alarming extent on young game birds.

WHY SHOULD ANYONE SUFFER WITH INDIGESTION OR ANY STOMACH MISERY?

If you want to fix up your dyspeptic, out of order stomach so that you can relish what you eat with not the least bit of after distress, do what tens of thousands of people have already done.

Getting rid of gas, bloating, belching, heaviness and that feeling of near suffocation isn't such a hard matter as you may think—You've been getting hold of the wrong medicine—that's all.

But better late than never—ask your druggist for a bottle of Dare's Mentha Pepsin—a real stomach medicine and a very pleasant one. For acute indigestion one or two doses is enough, but when the trouble is chronic, two or three bottles may be needed to put your disordered stomach in good healthy condition and make life worth living.

Making a start is the main thing, so why not get one bottle today with the distinct understanding that if it doesn't help you the purchase price will be returned.

In the JUNGLE

With Cheerups and the Quixies

by Grace Bliss Stewart

HER SWEET TOOTH

"I BELIEVE there is a traveling circus coming, boys," cried Cheerups one lazy afternoon. "Here are the acrobats, as sure as I live! Look, Brighteyes; don't you see them?"

"Oh, yes, sir," piped Brighteyes; "and aren't they funny? If they didn't tumble about so, I'd say they were old ladies wearing gray waists and black skirts."

Just at that time two small gray and black animals trotted up in single file, stopped right in front of Cheerups and turned head over heels one after the other. Then they picked themselves up and said coolly, as if nothing unusual had happened, "Good afternoon, Mr.

"Oh, Yes; Mrs. Ratel and I Are Feeling Splendidly."

Cheerups; we rolled over to see you for a few minutes and inquire after your health."

"Now that was nice of you, to be sure," replied Cheerups. "I am quite well, thank you; and you are, too, I should judge, from the exercise you have been taking today."

"Oh, yes; Mrs. Ratel and I are feeling splendidly," said one of the little black and gray visitors. "We did enjoy our tumble through the Jungle. It would have been quite perfect if it hadn't been for one thing which upset Mrs. Ratel a little. I won't go so far as to say it spoiled our day, but it was upsetting."

"So these are the Ratels I have heard about," thought Cherups to himself. "What was it which bothered you on your way over, Mr. Ratel? Do please tell us," then said he cordially. "If it's any kind of adventure, we are just ready, aren't we, Quixie Boys? These are my friends—Brighteyes, Quickear, Softfoot and Sniffsniff."

"Well, you see, sir, Mrs. Ratel is very fond of sweets which those busy creatures called bees have a way of storing up in their nests. Isn't that true, Honey? I call her Honey just as a joke, sir."

"Yes, I must admit my failing," murmured Mrs. Ratel shyly. "But you know that honey is very good, and you like it, too."

"So I do, so I do, my dear," said Mr. Ratel good-naturedly. "Well, as we were coming along, Mrs. Ratel spied a bees' nest and she could hardly get by, she did want that honey so much; but it was a very large nest and I was afraid to have her tear it open. She was sure to be stung and have a swollen nose, and really, sir, a swollen nose when you are going to make a first call isn't the thing at all. I'm sure you will agree with that. A swollen nose, indeed!" spluttered Mr. Ratel indignantly. "So I persuaded her not to touch the bees' nest."

"You just said that I mustn't," replied Honey in a small voice, "if that's what you call persuading."

"So here we are, sir," cried Mr. Ratel, paying no attention to what Honey had said. "But I know that neither of us will be able to resist that nest if we take the same way home. You see what a problem it is, sir."

"But I don't know why you should be afraid of bees," said Cheerups. "You belong to the Badger family, don't you?"

"Oh, yes," chimed the two Ratels in chorus. "We are Badgers and proud of it. There are just two branches of Ratels; one lives in India and the other here in Africa."

"As I was saying, then," resumed Cheerups, "you don't need to be afraid of those bees. There isn't a bee in the world that could sting through three such heavy coats as you have on. First comes your thick coat of fur, then one of loose skin and then a layer of fat. You are really wearing your overcoat, raincoat and sweater all at once."

"Hadn't we better be going, my dear?" gurgled Mrs. Ratel gleefully. "I can hardly wait to be off," and she squirmed with delight at the thought of the sweets that were awaiting her on the way home.

"Good-by, Mr. Cheerups," called Mr. Ratel. "We'll bring you some honey one of these days," and with a parting somersault the two little visitors started down the Winding Way.

"Remember not to hurt the bees, and don't take all the honey," called Cheerups after them.

"We'll try not to," came two faint voices through the warm afternoon air.

Your Health

By ANDREW F. CURRIER, M.D.

DIGESTION

DIGESTIVE ferments are often combined with alcohol for preservative purposes, but this may also destroy the living, vital power of the ferment.

The taste or odor of staleness, or decomposition, in digestive preparations is an indication that they are unfit for use.

Attempts are often made to mask this condition of decomposition by combination with aromatic substances.

To test the quality of a pepsin preparation, it may be put into a test tube with milk.

If the cheese curd in the milk is not digested and promptly liquefied, the conclusion to be drawn from the test is that the pepsin is not a good specimen.

To test a preparation of pancreatin, put some of it in a tube with starch and if this is not promptly digested the specimen may be discarded as not being a good one.

Digestive ferments are also to be obtained from plants, among them being the pineapple, the paw-paw and certain bacteria.

The ferment from the pineapple and paw-paw digests proteins, and hence is suitable for indigestion in the stomach.

The pineapple ferment is not extensively used, but that from the paw-paw is, and many preparations of it are on the market.

They are not of uniform value, though they frequently do good service.

The bacteria used in treating indigestion are the lactic acid bacilli, particularly the Bacillus Bulgaricus.

They are prepared in various forms, liquid and solid, and are frequently added to milk to ferment it.

When the milk which is thus fermented is properly prepared, it is an excellent means for treating some forms of indigestion.

Proprietary preparations of mineral salts, acids and alkalis are also used to assist digestion, but do not prepare foods for absorption as ferments do.

The first essential, in any case of indigestion, is to find out what causes it, or what kind of indigestion it is; and then the question will arise as to the proper form of medicine to be used in treating it.

THE WHY of SUPERSTITIONS

By H. IRVING KING

THE HOG AND WINTER

IN MANY parts of New England when hogs are killed the intestines are carefully examined to find out what sort of a winter it is going to be. The whole intestines represent the coming winter. If the middle portion is thickly covered with fat the middle of the winter will be severe. The same is true of the other parts; a little fat indicating warm weather and much fat cold weather. This superstition in modified forms is general all over the United States and Canada, in some places the divination not being confined to the intestines but extended to other interior parts of the slaughtered animal.

This superstition is a survival of haruspication—the form of divination by which, in ancient times, the future was foretold by the inspection of the entrails of animals offered in sacrifice. The haruspices of ancient Rome were a caste of subordinate priests of lower status than the augurs who, however, performed like duties in this respect. Haruspication is said to have been derived by the Romans from the more ancient Etrurians; but it is evidently of primitive origin primarily, for in various forms it exists today among many savage tribes not yet emerged from a primitive condition.

We inherit the superstition in question directly from the Romans. The Roman haruspex anxiously examining the entrails of a hog sacrificed to Bacchus to ascertain the outcome of war and the New England farmer just as carefully examining the entrails of a like animal to find out what sort of winter it is going to be, are one and the same though nearly two thousand years extend between them.

Planets and Fixed Stars

Fixed stars are heavenly bodies similar to the sun; they are hot and shine by their own light. The planets are similar to the earth; they do not shine, for the most part at least, by their own light, but by reflected sunlight. If you watch the planets from night to night you will see that they move in the sky; the fixed stars do not move noticeably. Of course, strictly speaking, no heavenly body is stationary; they are all moving through space.—Exchange.

Eloise Coburn is ill at her home east of town.

Harry Hursh and wife visited at Spencerville Sunday.

F. D Tope and wife spent Tuesday at VanWert, Ohio.

Mrs. Will Hamilton has been ill since Monday with bronchitis.

Miss Mildred Gee is home from Columbia University, New York City.

Mrs. G. W. Woodcox has been quite ill the past several days with stomach trouble.

Abner Trostel attended the Sewell reunion held Sunday at Circle Park, Hamilton

Roy White and family and Sherman Wolff and wife, spent Sunday at Hogback Lake.

Rev. and Mrs. S. O Redaire of Mishawaka, were Monday dinner guests of Dr. and Mrs. Sheffer.

George Kees and family visited Saturday night and Sunday with Dan Meyers and family at Hicksville.

Persons wishing to enter the sports scheduled for the Home-Coming, will please notify Mrs. Ed Leighty.

Mrs. James Steward of Iowa, is a guest of St. Joe and Spencerville relatives and friends for a couple of weeks.

Mr. and Mrs. Lester and children of Ft. Wayne, spent Saturday and Sunday here guests of Glen Freeburn ann wife.

Mr. and Mrs Ed Leighty motored to Adrian, Michigan, Sunday and say roads are very bad from dust and holes.

Many from here attended the state convention of the American Legion held Sunday, Mond y and Tuesday at Fort Wayne.

Waldo Rosenberry and wife, of north of St. Joe, were Sunday guests of the latter's grandparents, Mr. and Mrs. John Koch.

Mr. and Mrs. Wm Ludwig of Auburn, Earl Moughler and wife Garrett and Frank Baker and wife of Concord, were Sunday guests of Mrs. Anna Dillev.

Charlie Waterbeck and wife of Garrett, moved to St Joe this week. They will live with Roy Kinsey and wife until they find a house.

Wm. Summers returned Monday from Akron, Ohio, where he was called by the death of his mother Mrs. Rolla Moffett of Auburn, was a guest of Mrs. Summers during his absence

Mr and Mrs Ira Willoughby of Edon, Ohio, spent Sunday in the home of Earl Smith and wife. The latter's mother, Mrs. Martha Mendallson of Hamilton, is also a guest for several days in the Smith home

Mr. and Mrs. O K. Shull and children, Will Hamilton and family and Lee O. Tustison and family of Defiance, attended the Houck family reunion held Saturday at Decatur. The Tustison family returned here and remained in the Hamilton home until Sunday evening.

Isn't it wonderful the unconscious influence women have upon men. A fellow was asked to help sing once upon a time and he took a hurried review of the past and he recalled a failure of someone, so he hesitated. He remembered also of a fellow who ate green cucumbers and as a result had a pain, so he refused to eat cucumbers. He remembered of a wreck on the railroad killing scores of passengers, so he refused to ride. He remembered of a pedestrian being run down by an auto so he refuses to walk the highway—Raspberries. Moral be yourself.—Exchange.

Methodist Home-Coming Sept. 6

The St. Joe Methodist Home-Coming is set for Sunday, Sept. 6, in the Erick grove south of town, weather permitting, if not, will be held at the church. Every person having attended at any time is asked to be present. Basket dinner.

Ralph Fry is seriously ill with typhoid fever.

Clayton Wyatt and wife of Fort Wayne spent Sunday here.

For good glasses see Griest at American Building Hicksville, Ohio.

Mrs Rosina Forebush, of Loudenville, Ohio, a cousin of Mrs. M. T. Bishop, is here for a visit.

Miss Lena Ernest, of Jackson, Mich., returned home Tuesday after a couple of weeks visit here with her uncle and aunt, F. D Tope and wife.

The ball game at Butler was well represented Sunday by several St. Joe ball fans. Their favorite team winning by a close game.

The young people's class of the Coburn's Corners Sunday School went to Circle Park, Hamilton Lake, immediately after services Sunday, for a picnic.

Mrs. Ida Philpott and daughter, Mary Philpott returned to their home at McClure., O., after a several days' visit in the F. M. Thornton home. Miss Geraldine Thornton accompanied them home and will remain a week.

Mrs Minnie Circle and daughter of Springfield, Ohio, spent Friday with F M. Monroe and wife. Her brother, Robert Ulm, coming for her in the evening at whose home in Butler she visited until the last of the week.

Elmer Rinehold, wife and little daughter, Maxine, of Fort Wayne, were Saturday night and Sunday guests of Floyd Ridgway and wife. They all visited Argyl Sechler and wife Sunday afternoon at Newville.

H. J. Michael and Mrs. Mary Taylor of Muncie and Mrs. Flora Caffee of Berne, were Saturday dinner guests in the home of their aunt, Mrs. A D. Brunson. They also called on their cousins C. C. Bassett and wife.

Ed Miser and family entertained Friday evening at supper, W. D. Miser of Fayetteville, Ark., Mr. and Mrs M. A. Miser, Mr. and Mrs. Mart Miser and Mrs. Martha Miser of Waterloo and Miss Alma Dunn of Auburn.

Obituary

Alice V. Henderson daughter of Geo. W. and Mary Nuebaum was born near Harlan, Allen County, Indiana, May 7, 1854 and departed August 21, 1925, age 71 years 3 months and 14 days.

She was united in marriage to J. W. Henderson, son of Wm. and Matildia Henderson on July 31st, 1872. To this union four children were born, Charles Denton, William C. and George A., and one who died in infancy.

In 1884 she united with the M. E. church of Spencerville of which she was an ardent supporter.

Those left to mourn her departure are three sons, Charles, of Selma, California, and William and George of Fort Wayne, four grandchildren, Mrs Ruth Vanzile of Selma, Cal., Mary and Esther Henderson of Fort Wayne and Richard Henderson of Fort Wayne, Ind., and one sister, Mrs. Emma Roller of Harlan and a host of relatives and friends.

The funeral was held on Monday morning at 10 o'clock from the Methodist church, Rev. Roy S. Brown officiating, assisted by Rev. S. D. Steffey. Interment was made in White City Cemetery.

Card of Thanks

In the honr of sadness caused by the death of our beloved mother, we extend our thanks to the friends and neighbors for their many kind words and deeds.

The Children.

Culp to Locate In Florida Soon

Ashur Culp of Foraker, Indiana, was in town Tuesday calling on The News and friends. Mr. Culp is having a public sale next week, preparing to move to Tampa, Florida, where he will engage in the lumber business. Mr. Culp left Spencerville to take work as cashier in the Foraker State Bank but his health would not permit him to continue. He has many friends in St. Joe and Spencerville who wish him well in his Florida home. The News will visit the Culp home regularly.

Glorious Gettysburg

ALL those who have visited the battlefield of Gettysburg know its fascination. First, as one drives about the forty square miles of battlefield, his interest is in the monuments, the beautiful markers and statues erected by the various states of the Union in memory of their dead on this battlefield. Then, the extent of the field impresses one and he endeavors to reconstruct the battle lines of the Union and Confederate troops.

A cloud possessed the hollow field;
The gathering battle's smoky shield:
Athwart the gloom the lightning flashed,
And through the cloud some horsemen dashed,
And from the heights the thunder pealed.

Above the bayonets, mixed and crossed,
Men saw a gray gigantic ghost
Receding through the battle cloud,
And heard across the tempest loud
The death cry of a nation lost!

Even better than Will Thompson's famous poem does Bret Harte's "John Burns of Gettysburg" paint the picture of the battle:

And it was terrible. On the right
Raged for hours the heady fight,
Thundered the battery's double bass,
Difficult music for men to face.

While on the left—where now the graves
Undulate like the living waves
That all that day unceasing swept
Up to the pits the "Johnnies" kept—
Round shot plowed the upland glades,
Sown with bullets, reaped with blades;
Shattered fences here and there
Tossed their splinters in the air;
The very trees were stripped and bare.

And then, above the roar of battle, the immortal words, "The brave men, living and dead, who struggled here, have consecrated it far above our poor power to add or detract. The world will little note, nor long remember what we say here, but it can never forget what they did here."

Surely the sight of this battlefield and of Valley Forge, of Lexington, of Ticonderoga, should help in the making of good Americans!

NEWVILLE

Mrs. Olen Fettes and baby of Garrett, were over Sunday guests of her parents Dr and Mrs. Brunson.

John Gillingham and wife spent Sunday at Concord with the latter's daughter.

Harry Brown and wife and Mrs. Miller, were Auburn visitors Thursday.

Omer McCulough and family of Mr. Pleasant, were Newville visitors Sunday afternoon.

Mrs. Bobbie Wyatt and two children of Elkhart, Ind., and Mrs. Dewey Miller and two children of Auburn, spent last Monday with Mr. and Mrs John Miller.

Harry Fuller and family of Garrett, spent Friday at the home of Stanley Davis, south of town.

Maggie and Ann Griest of Hicksville are spending a few weeks in the former's old home and calling on old friends.

Wm. Platter and wife of Butler and their son and wife of Chicago, were Saturday guests of Omo Richmond and family.

Darrell Richmond, the 9 year old son of Omo Richmond and wife is suffering with a broken leg since August 13. The boy went to Garrett with his father and before the car stopped he jumped from the running board and fell with his foot under the machine before Mr. Richmond could stop the wheel run over his leg breaking it below the knee. The boy was taken to the Doctor and the injury cared for before returning home. The little fellow is getting around on crutches at the present time.

St. Joe Locals

Mr. and Mrs. H. M. Widney, Harvey Kimes and Miss Minnie Thompson, attended the hunters reunion at Deshler, Sunday.

Stanley Monroe, wife and daughter, Martha of West Unity, Ohio and Mrs. Wm Holtzberg of Butler, were Thursday guests of F. M. Monroe and wife. Clayton Wise, wife and daughter, Marjorie, of Cleveland, spent a few hours Saturday in the same home.

H. S Bonsib, secretary of National Reform Association, made a splendid talk at the Lutheran church, Monday evening. A fair sized crowd heard him.

A spotted adder was killed by Roy White measuring 5 feet long. The reptile had secreted himself under a large clod and when Roy was dragging, he was unearthed. This specie is rare.

In Society

The marriage of Miss Parley C. Nicholls, 25, daughter of Mr. and Mrs. Robert Nicholls of Orangeville, to Mr. Harvey J. Hull, 25, son of Mr. and Mrs Jos. Hull, of north of St. Joe, took place at the home of the bride's parents Tuesday forenoon at 10:37, the Rev. S. D. Steffey performing the beautiful ring ceremony. Following the ceremony the young couple left for a week's honeymoon at Washington, D. C., and will be at home to their friends at St. Joe after September first.

They have the very best wishes of their many friends.

FREAK AUTOMOBILE OF AEROPLANE PARTS

This freak automobile is designed and owned by a United States army man stationed at Mitchel field, Long Island. It is built entirely of airplane parts and all driving and manipulation of gears is done from the steering wheel.

POLICE SUGGEST NEW ROAD RULES

Recommendations Made for Control of Traffic in Leading Cities.

The conference of international police chiefs, which included delegates from all of the leading cities of the world, before adjourning in New York city unanimously adopted the following recommendations for the control of automobile traffic:

All cars must have left-hand drive.

The use of glaring headlights should be forbidden.

Take Away Licenses.

Licenses of individuals found unfit should be taken away.

Brakes and steering gear of all vehicles must be tested monthly.

The size, shape and color combinations of plates should be standardized.

Physical, mental and moral tests should be imposed on all drivers.

No automobile shall be more than 26 feet long, 8 feet wide and 12 feet high.

The knowledge and fitness of all drivers must be thoroughly tested periodically.

Brakes must be so adjusted that a car making 20 miles an hour can stop within 40 feet.

Fingerprints of drivers should be attached to all licenses and deposited with state bureaus.

Speed should be limited to 25 miles per hour. Villages should not be permitted to restrict speed laws to less than 20 miles an hour.

The following hand signals should be made universal: Arm extended up for right turn; arm extended horizontally for left turn; arm down to signal intention to stop.

Punish Reckless Drivers.

Jail sentences should be given for reckless driving, terms being graduated in accordance with the degree of recklessness shown, such as two years for driving while intoxicated or under the influence of drugs.

The transfer of property titles for automobiles should be regulated by law, so that genuine owners may prove their ownership, so that traffic in stolen automobiles can be discouraged by the impossibility of delivering title.

Likening of Auto Tire to Human Body Helps

The likening of a pneumatic tire to a human body is one of the favorite topics found in manuals circulated by tire manufacturers for the purpose of helping the motorist secure all the mileage that has been built into the tire.

The carcass of the tire corresponds to the bones and muscles of our bodies. The outer rubber covering (tread and side cushions) protect the tire as the skin protects our bodies. Cuts in this rubber must be repaired to prevent infection. Inflated pressure to a tire is what food is to our bodies.

There is another similarity, however, that has not been described—the tire's need of exercise. It is a fact, that a spare tire resists natural ageing much better if it is put into service for a day every month. The reason for this is obscure, but is probably due to what physicists call "molecular rearrangement" in the rubber portions of the tire caused by flexing. Whatever the cause of the deterioration, it is a fact that a spare carried month after month without being "exercised" occasionally does not retain its wearing qualities as well as one that gets an occasional day's use.

Side Sway Is Given as Cause for Rim Cutting

Motorists are often puzzled at the reason for their tires rim-cutting. Especially are they surprised at this when the rims are in good condition. Ordinarily underinflation is held solely to blame. But there is an important contributing cause—side sway. Sudden turning of the car throws an abnormal strain on the side walls of the tires. Occasionally this side sway is sufficient to rupture the fabric. In the majority of cases, the trouble is noticed close to the bead or edge of the tire, where the fabric strands are anchored

Numerous Trivials Make an Automobile Expensive

If your axle is even slightly out of true it will soon wear out your tires by the continual grinding action, wearing to the fabric in a very short time. If you have had an accident of any kind it will pay you to have your wheels examined, to see if they are true.

Often the brakes are not properly adjusted and one wheel stops the entire load. If this is the case, the tire which is receiving the greatest strain will soon be worn to the fabric. One or two violent applications of the brakes on rough ground will take several miles from the service of your tires. See that the brakes are properly adjusted so as to equally distribute the strain on the tires and avoid sudden stops and skidding around corners.

When on the road, never use your brake unless absolutely necessary. The throttle is made to control the engine. There are many drivers who never change their gasoline feed in going down hills, but depend upon the brake altogether. Such a procedure is the worst of folly.

Electric Automobile Is of Most Unique Design

Photo shows Col. H. R. Green, son of Hetty Green, standing beside his new electric automobile. It is one of the largest electrics ever built and was specially designed to afford a maximum of comfort for the Colonel. The doors are six feet high and the body hung extremely low for ease in riding. A folding desk is provided and a drop light as well. The car can make 20 miles an hour and run for 75 miles without recharging. It can seat five people comfortably.

Leakage of Grease Onto Brake Drums Is Harmful

Another condition that is the result of warm weather is the leakage of grease from rear axle interiors and the attendant excessive deposits of that material on the brake drums, especially on the inner periphery against which the emergency or internal brake bands act. This reduces braking efficiency to a considerable degree and wherever such deposits are found, they should be removed by cleaning the parts thoroughly with gasoline, even if this should necessitate removing the wheels to gain access to the brake drum interior. The leakage is usually caused by the thinning out of the grease due to high operating temperatures in the axle interior.—Scientific American.

Old Emery Cloth Cleans Brass Parts of the Car

Some of the brasswork of the car, because of its position and the work it has to perform, is apt to get into a rough state that makes it difficult to keep clean. This applies to the brass strip edging the running-boards and the foot-plates on the door sills. It is difficult to clean these with liquid brass polish, which has the characteristic of staining the surrounding territory, including the rubber foot-board covering. It is better to top using the liquid here and to polish the brass with the finest grade of emery cloth. A piece of this cloth that has been used somewhat elsewhere, and so has lost some of its cut, is best for this work.

INDIANA STATE NEWS

In a message to the people of Indiana, Gov. Ed Jackson has placed his official approval on the Indiana state fair which is to be held the week of September 7.

Natural gas has almost entirely disappeared in Indiana, according to Dr W. N. Logan of the division of geology of the state conservation department at Indianapolis.

George Jeffrey, prosecuting attorney, ordered all theaters in Newcastle closed on Sundays until the test case, resulting from arrest of three motion-picture theater owners, is decided.

George P. Hayward, age seventy-two, prominent attorney, former postmaster of Lafayette, and for many years owner and publisher of the Lafayette Journal, died suddenly at his home.

The state board of tax commissioners at Indianapolis issued final orders of equalization of assessments, approving the action taken by the county boards of review on recommendations made by the state board.

Little hope was held out by attending physicians for recovery of Dr. William W. Parsons, president emeritus of the Indiana State Normal school. It was disclosed at Terre Haute that the veteran educator has suffered a paralytic attack.

Indiana's total available federal-aid fund for the rest of this year and the construction season of 1926 is $7,075,603.52, a statement, prepared for Gov. Ed Jackson by John D. Williams, director of the state highway commission, made public at Indianapolis shows.

The consolidated report on the condition of banks and trust companies of Indiana as of June 30, 1925, made public by the state banking department at Indianapolis shows that in the past year there has been a total increase of resources amounting to $39,440,291.15 and a total increase of deposits of $26,230,088.94.

Several miles of new concrete pavement completed on roads 11 and 37 between Pendleton and Anderson and on No. 11 between Anderson and Alexandria will be opened to traffic about Wednesday, August 19, John D. Williams, state highway director, announced at Indianapolis in the commission's weekly traffic bulletin.

Jacob Fisher, age ninety-one, died at his home in Delphi. Mr. Fisher was a wagon maker by trade and when rural mail delivery was introduced in Indiana, Congressman C. B. Landis of Delphi asked Fisher to make a rural mail wagon. This he did and the wagon was sent to Washington and later congress adopted the model for all the states.

The official program of the 1925 state fair was released at Indianapolis by E. J. Barker, secretary of the state board of agriculture. It provides specially designated days during the week of September 7, beginning with Monday, which is to be observed as Labor day. James J. Davis, secretary of labor, is to be the chief speaker at the Labor day ceremonies.

Organization of the armed guard plan of dealing with bank bandits in Indiana is expected to be completed in a few days, it was announced at Indianapolis by Miss Forba McDaniel, secretary of the Indiana Bankers' association, which is fostering the campaign. By that time an organization in practically every one of the 92 counties of the state will have been completed.

Purchase of 70 acres of dunes property from the Prairie club by the state of Indiana to round out its park in that region may be negotiated soon as a result of a personal investigation being made by Gov. Ed Jackson, it was learned. Governor Jackson, with his family is spending a two weeks' vacation at "Romany Rye," the dunes home of Ninian H. Welch of Chicago, near Chesterton. Mr. Welch is president of the Prairie club.

Lewis A. Barnes, former head of the Gary board of public works, will be paroled from the federal penitentiary at Atlanta, Ga., August 28, after serving four months of a sentence of one year for complicity in the Gary rum ring conspiracy. Three others of the five now serving sentences in the federal prison are expected to be paroled with Barnes. They are Clyde Hunter and Dwight Kinder, former county prosecutors, and Blaz A. Lucas, Gary attorney.

State officials interested in the care of the insane were of the opinion that no definite decision would be reached in regard to the refusal of the Marion county commissioners to include in their budget a request for an appropriation for the maintenance of the Marion County Asylum for the Insane, at Julietta, until the return of Governor Jackson from his vacation. The question of whether the state will assume the care of the 250 patients at Julietta, at the end of the year, presumably will be referred to him for decision.

There are 15,000 more Indiana automobile owners operating vehicles on the highways of the state today than there were a year ago, figures in the office of Richard Bruene, head of the state automobile license department, show.

The two weeks' encampment of Indiana and Kentucky National Guardsmen ended when more than 7,000 Guardsmen comprising the Cyclone division, passed in review before Gov. Ed Jackson, Gov. William Fields of Kentucky and Maj. Gen. R. L. Howze, commander of the First corps area.

IMPROVED UNIFORM INTERNATIONAL Sunday School Lesson

(By REV. P. B. FITZWATER, D.D., Dean of the Evening School, Moody Bible Institute of Chicago.)

(©, 1925, Western Newspaper Union.)

Lesson for August 30

PAUL AND THE PHILIPPIAN JAILER

LESSON TEXT—Acts 16:16-40.

GOLDEN TEXT—"Believe on the Lord Jesus Christ, and thou shalt be saved."—Acts 16:31.

PRIMARY TOPIC—The Story of an Earthquake.

JUNIOR TOPIC—Conversion of the Jailer.

INTERMEDIATE AND SENIOR TOPIC—Conversion of the Jailer.

YOUNG PEOPLE AND ADULT TOPIC—The Gospel in Philippi.

I. Paul and Silas in Jail (vv. 16-26).

1. The Occasion (vv. 16-24).

As the missionaries went out from day to day to the place of prayer they were accosted by a young woman possessed by a spirit of divination. She was owned by a syndicate of men who derived large gains from her soothsaying. This act of the woman became a great annoyance to Paul, who in the name of Jesus Christ commanded the evil spirit to come out. The evil spirit immediately obeyed. When the demon was cast out of the maid, her supernatural power was gone, therefore, the source of revenue was dried up. This was so exasperating to her owners that they had Paul and Silas arraigned before the magistrates on the false charge of changing their customs. This was playing the hypocrite for it was not custom, but illicit gains that had been interfered with. There is always trouble ahead when you interfere with wrong business. Without any chance to defend themselves Paul and Silas were stripped and beaten by the angry mob and then remanded to jail, and were made fast by stocks in the inner prison.

2. Their Behavior in Jail (v. 25).

They were praying and singing hymns to God. It seems quite natural that they should pray under such conditions, but to sing hymns is astonishing to all who have not come into possession of the peace of God through Christ. Even with their backs lacerated and smarting, their feet fast in stocks, compelling a most painful position in the dungeon darkness of that inner prison, and with the morrow filled with extreme uncertainty, their hearts went up to God in gratitude.

3. Their Deliverance (v. 26).

The Lord wrought deliverance by sending a great earthquake which opened the prison doors and removed the chains from all hands. The earthquake was not a mere coincidence, but a miracle. Earthquakes do not throw all bolted doors open, and unclasp the fetters from men's hands.

II. The Conversion of the Jailer (v. 27-34).

The jailer's sympathy did not go out very far for the prisoners, for after they were made secure he went to sleep. The earthquake suddenly aroused him. He was about to kill himself, whereupon Paul assured him that the prisoners were all safe. This was too much for him. What he had heard of their preaching, and now what he experienced, caused him to come as a humble inquirer after salvation. He was convicted of sin and felt the need of a Saviour. Paul clearly pointed out the way to be saved. "Believe on the Lord Jesus Christ." The proof that the jailer was saved is threefold:

1. Transformation From Brutality to Tenderness (v. 33).

He who a little while ago could with impunity lay on the cruel lashes is now disposed to wash and mollify the wounds of the prisoners.

2. Confession of Christ in Baptism (v. 33).

Those who have really been convicted of sin and have experienced the saving grace of God delight to confess their faith in Him under whatever circumstances.

3. He Set Meat Before Them (v. 34).

4. His Whole Household Baptized (v. 33).

III. The Magistrates Humbled (vv. 35-40).

1. Orders to Release the Prisoners (vv. 35-36).

The earthquake brought fear upon the magistrates which moved them to give leave for the prisoners to go.

2. Paul's Refusal to Go (v. 37).

The ground of his refusal was that their rights as Roman citizens had been violated. They demanded public vindication. The magistrates were guilty of serious offense. Paul was willing to suffer for Christ's sake, but he used the occasion to show them that persecuting men who preached the gospel was an offense against the law of God and man.

Grace and Glory

Grace and glory differ but as bud and blossom. What is grace but glory begun? What is glory but grace perfected?—John Mason.

Plan for Every Life

God has a plan for every life; no life can be truly great that is not founded on God.—Selected.

An Act of Goodness

An act of goodness is of itself an act of happiness.—Christian-Evangelist.

Current Wit and Humor

A LOVER OF NATURE

"What we need," said the loudly-dressed woman, "is to get closer to nature. We have too much artificiality. For my part I simply adore nature. That's why I got my husband to buy a country place."

"But you didn't go there last summer?"

"Oh, dear, no; certainly not. We won't be able to go there for two or three years yet. It will require all that time for the landscape gardener to get it in shape for us."

CROSS-WORD PUZZLES

"You say your wife is all the time making irritable remarks you can't understand?"

"Yes—regular cross-word puzzles I can't solve."

We, Too

"A fool and his dough
Are soon parted," said Marr.
"I wish it were so
With the fool and his car."

Literally So

A young Serbian studying in England was asked to translate the following sentence from his native tongue into English: "He gave up his life on the battlefield."

With the help of a dictionary he produced the version: "He relinquished his vitality on the bellicose meadow."—Tit-Bits.

At That It's a Serious Accident

"Why so glum?"

"Just broke three ribs."

"Heavens! You'd better see a doctor!"

Doctor nothing. What I want to see is a man who will lend me enough to buy another umbrella. The ribs I broke were in one I had borrowed."

LOST WHEN THROWN

"Why is he losing ground so in public favor?"

"Isn't he always throwing mud?"

Shed a Tear for Alice

A very lonely lass
Is Alice Bleezer.
She is a lemon and
The boys won't squeeze her.

The Literal Fisherman

"Good morning, Mike. Doing a little fishing?"

"Yes, sir."

"And how are they biting this morning?"

"With their mouths, sir."

"No; I mean how are you pulling them out?"

"Head first, sir."

Tu Quoque

Golf Widow—My husband accused me of doing nothing but chase around to afternoon teas.

Friend—What did you say?

Golf Widow—I reminded him that that was how he spent his own afternoons, chasing from one tee to another.

A Carving Business

"That young woman with all those jewels carved out her own fortune."

"Nonsense. She's an ex-chorus girl. She didn't carve out her own fortune. She married a millionaire."

"Yes, but think how many other chorus girls she had to cut out to

As near as we can get at it, European nations welcome the widest and freest discussion of their American debts so far as the discussion does not extend to the subject of paying the debts.

Rubber's high cost should tend to reduce the number of discarded automobile tires now adorning the landscape and the rubbish heaps.

Everybody knows that a fool and his money are soon parted, and it might be added that a fool and his gunny do not remain together very long.

HOW TO KEEP WELL

DR. FREDERICK R. GREEN
Editor of "HEALTH"

(©, 1925, Western Newspaper Union.)

A SUCCESSFUL MAN'S RULE FOR SUCCESS

EVERY normal person wants to live a long, healthy and successful life. No one knows how to write a formula for longevity, health or success. So we naturally turn to those men and women who have achieved all of these things and ask them how they have secured them. That's the reason why the first question a newspaper reporter asks a very old man, a very healthy man or a markedly successful man is "To what do you attribute your success?" When one man has been successful in all three, his advice is naturally all the more valuable.

Judge Elbert H. Gary is the president of the United States Steel corporation. He is "well up in the seventies." He is healthy, vigorous and active. He carries great responsibilities, yet he works hard every day. Measured by all standards of everyday life he is a markedly successful man. How has he done it?

A newspaper reporter asked him recently for his prescription. Here are his rules:

1. Exercise in the open air every day, but moderately.
2. Breathe deeply as much pure air as possible.
3. Leave alcoholic stimulants alone.
4. Drink pure water.
5. Eat little meat; red meat once a week is enough.
6. Eat little starch, fat or sweet. Eat plenty of vegetables.
7. Follow regular habits.
8. Get plenty of sleep.
9. Work hard, mentally and physically.
10. Lead a good, clean life.
11. Keep an even temper and avoid excitement.
12. Never get angry or indulge in controversy.

These are all good rules to follow. They won't make us all as marked successes as Judge Gary, because the judge has left out the two most important rules of all. These are:

1. Have ancestors that will give you a sound body and a clear mind.
2. Develop the mind and body given you to their greatest possibilities.

We can't all be heads of great corporations. But we can all of us make the best use possible of the physical and mental equipment we have.

MAKING AND INVALID COMFORTABLE

TAKING care of a sick person is something more than giving medicines and food according to the doctor's orders. In any case of illness lasting more than a few days the comfort of the patient is an important factor. A sick child, kept as comfortable as possible in cheery, attractive surroundings, has a much better chance of recovery and much more strength for fighting the disease than a child that is restless and unhappy. In a recent book on "Simplified Nursing," Miss Florence Dakin, inspector of nursing schools for New Jersey, wisely emphasizes the importance of making patients comfortable.

The sick bed and the sick room, she says, are the temporary home of the invalid. The more comfortable and attractive they can be made, the better the chances of recovery of the sick persons.

In hospitals, this is taken care of by those in charge. In private homes, one must make the best use possible of such rooms and materials as are available.

A sick room should be a moderately large one, well lighted, heated and ventilated and situated near the bathroom.

If possible, select a room with plain, light-colored walls. Many invalids have testified to the effect of having to look for weeks at walls with fantastic or elaborate patterns in the paper. The normal, healthy person can stand almost any wall paper for a few hours at a time. To the sick, irritable, perhaps delirious patient, gazing for hours and days at some complicated pattern is tiring and wearisome.

Take out all unnecessary furniture. This gives the nurse more room to work in, leaves fewer places for the accumulation of dust and makes it easier to move the furniture in cleaning.

Keep the room in order. Nothing is so tiresome as to have to spend days or weeks in a mussy, disorderly room.

Take out the carpet or rugs. Bare floors are easier to keep clean. They can be wiped up daily with a damp cloth, without raising any dust to disturb the patient.

Turn the mattress frequently. Constantly lying on any mattress will make it hard and lumpy. Turn it end for end, side for side or over and over every time the bed is made up.

Many people are more sensitive to light when they are ill than when they are well. Arrange the bed so that a strong light will not shine in the patient's eyes. This is especially advisable in cases of measles and scarlet fever.

Shade the light, whether gas lamp or electric, so that it will not shine in the patient's face. Avoid unnecessary noise. Keep visitors away, especially those who annoy the patient. Keep the patient and the sick room clean, comfortable and quiet.

AUGUST

Outing Duds Are Neat-Not Gaudy

The descendants of Diana and the fair followers of Sir Izaak Walton are sometimes overshadowed by the more spectacular feats of the Glennas and the Joyces, the Helens and the Suzannes, yet despite their comparative lack of publicity the cults of rod and gun are numerically greater than ever in the past. Long before then, writes a fashion correspondent in the New York Herald-Tribune, May Sutton went boldly into Wimbledon and brought a championship back with her, long before women were regarded as anything but a decorative background on links and courts, hunting and fishing, riding, canoeing, swimming and camping were regarded as the exclusive hallmarks of the sportswoman. In later years the term has taken on a new connotation to the end that what is now known as the sports dress—intended for golf, tennis and the fair looker-on—bears little relation to the exhilarative life of the wide open spaces and would never be appropriate for the whilom journeys back to nature.

Which, perhaps, is just as well. The nature-loving girl who spends patient hours fighting the speckled trout, who sturdily, paddles her own canoe through the quiet lakes of the great mountains, who pitches her tent wherever nightfall finds her, has ever been truculent under the restraining dicta of the mode. For many years she rejected the frilly decrees of Paris in favor of the conservative and eminently practical costumes of London. Nor could you blame her, for in its earliest versions the Paris rough sports frock completely missed the atmosphere. The thought that even the French couture would dare dictate what she should wear when she hunted or fished or paddled was sufficient in itself to seasonally alienate her from those estimable artists.

Light, however, has come to the maisons of the grande couture. Basing their designs upon the solid foundations of the practical English costume, they have added thereto the chic that is Paris, to the end that the French rough sports costume for the wide open spaces is now sufficiently practical for the most hide-bound Briton, and it incorporates in addition an essentially Parisian smartness. The creators themselves have wisely refrained from adding sensonal improvements solely in the name of style, and what changes do occur from time to time are made, apparently at least, in the name of practicality.

Dispense With the Skirt.

Many fishing costumes entirely dispense with the skirt and consist merely of a knee-length coat and trousers, the former buttoning high at the neck. Corduroy and covert suits frequently feature sleeveless jackets, in which event a cotton crepe shirtwaist is worn underneath. The cotton crepe shirtwaist, incidentally, is an invaluable

Canoeing Dress Developed in Water-Green Jersey and Silk.

adjunct to every rough sports excursion, inasmuch as it does not wrinkle readily, and in addition requires no ironing after it is laundered.

The effect of the camping suit is hardy and it must obviously be carried out in every detail. High-heeled shoes, silk stockings, or vivid waists would hardly harmonize with the roughing-it atmosphere of the tenting-out costume, and must, of course, be carefully avoided. Yet the tendency toward rough clothes can also be easily overdone, and is by many women who spare no efforts in an endeavor to be natural, and achieve instead an unattractive plainness. The ideal outfit is neither incongruously ornate nor severely plain, but it strikes a happy compromise between the two.

English woolens are favored in the Paris-inspired camping clothes, generally in a dark-brown mixture, but the newest fabric idea on this side of the Atlantic is cotton covert cloth. This material has replaced khaki in many quarters and for obvious reasons. It is lighter in weight, far more pliable, and, greater than these, it is more adaptable to laundering. Then, too, it comes in attractive shades of green and rust as well as the characteristic brown range.

The Jacket-Knickers Suit.

The typical smart suit for camping, hiking and similar recreations consists of a jacket, knickers and a wrap-around skirt. In such a costume the jacket is a belted affair, single-breasted and with several patch pockets. The skirt, with its deep plait at the

Lelong Suit for Walking, Hiking or Mountain Climbing.

back, is slightly circular and wraps around the figure to fasten at the side front with three buttons. It is so constructed that it may be worn as a cape—a feature that will be found indispensable during the sudden rainstorm.

Canoeing costumes are divided into two categories—the outfit worn in the quiet seclusion of the mountain lake and that worn for the short paddle from the yacht club. For the first there is a smart plaid wool suit consisting of a tight-fitting jacket and knickers, both developed in a washable woolen material—beige plaidded in green. The jacket, which greatly resembles a wind-breaker, has a knitted band of plain wool around the bottom and the knicker cuffs are trimmed in the same way. The high standing collar is frequently set off by a vivid four-in-hand tie that matches the kerchief headband of the wearer.

The formal canoeing suit is a much more colorful affair and is typically developed in washable flannel. Two styles lead all the rest—the jumper and the one-piece. This costume is always carefully designed to accommodate the large step which the wearer must make in stepping off the pier and into the boat—and the necessary freedom of motion is accomplished by means of skirt plaiting.

The Riding Habit.

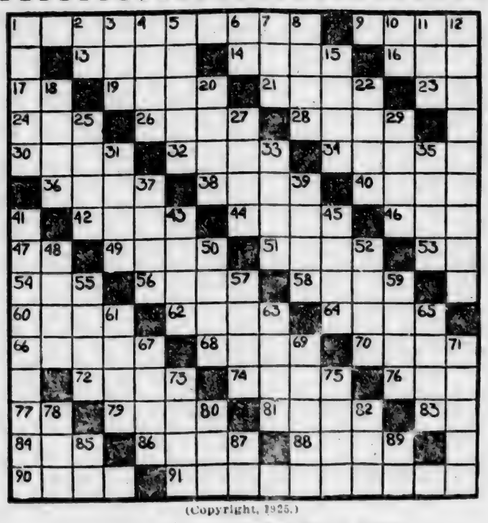
The riding habit offers more diversification and comes nearer the heart of the mode than any other costume of the great outdoors. It has got to be smart, principally because it is frequently worn in urban places, and yet it must studiously avoid overelaboration. Long years ago the dashing figure of the early 1900's was portrayed in her most romantic moments dressed in a riding costume, and while the habit of years has changed the riding ladies have lost none of their ancient appeal.

The first choice of the modern horsewoman is whether she shall emulate the majestic Victorian or whether she shall canter forth in the masculine apparel that has acquired the stamp of modernism. The solution depends entirely upon the individual because both styles are equally in the good graces of the mode. Our personal preference is for the graceful Victorian costume, but the ultimate choice should depend upon type.

The typical riding habit, be it of the genre masculine or feminine, is characteristically cut along slightly fitted lines. The varying of sleeves is limited to the breeches suit—some of these have sleeves and others look equally attractive without. The suit may be developed entirely in a single material or it may utilize two. Among the dual combinations are flannel and linen and gabardine and pongee—gabardine and linen and flannel and pongee are equally acceptable. Melton, whipcord, English woolens and water-repellent tweeds are among other riding costume fabrics.

However, the key to the smart riding habit of 1925 will be found neither in fabric nor type, and not in the silhouette. Instead it will be noted in the opposing themes struck by costume and detail. Lay it at the door of a timorous couture, fearful of bizarre extremes, or the nicely balanced taste of the horsewoman herself, the fact remains that the mannish suit must have its feminizing accessories while the gentler habit requires the severe touch of masculine detail.

CROSS-WORD PUZZLE



(Copyright, 1925.)

Horizontal.

1—Unjust exercise of authority
9—To utter certain sounds
13—School slang for a branch of learning
14—To liberate
16—Split pulse of the pigeon pea
17—A preposition
19—Lows
21—Sharp to the taste
23—Jumbled type
[illegible] bend covering
26—Hard-shelled fruits
28—A leaping tailless amphibian
30—The outer covering
32—Narrated
34—A discharging pipe
36—A thick plate or slice of anything
38—To cry
40—Otherwise
42—A row
44—To secure profit
46—Ever (poetic)
[illegible] public conveyance (abbr.)
49—Placed
51—Booty
[illegible] a prefix indicating separation
54—To consume
56—A ditch around a castle
58—A girl's name
60—A prominent actress
62—A boxlike wagon used in mining
64—An ointment made from matgrass
66—A gait of the horse
70—A kind of fuel
72—Solicitude
74—Ireland
76—Part of the verb "to be"
77—A printer's measure
79—To give way to dejection
81—Complete selves
83—Epistle (abbr.)
84—To fret pertinaciously
86—To weary
88—A kind of cheese
90—Walked
91—A place for selling "smokes"

Vertical.

1—Curses
2—The afternoon and evening
3—To strike against violently
4—An English public school
5—A loud utterance
6—Provided that
7—A scrap of refuse
8—Tidy
10—A small fresh-water fish
11—A short sleep

HOW TO SOLVE A CROSS-WORD PUZZLE

When the correct letters are placed in the white spaces this puzzle will spell words both vertically and horizontally. The first letter in each word is indicated by a number, which refers to the definition listed below the puzzle. Thus No. 1 under the column headed "horizontal" defines a word which will fill the white spaces up to the first black square to the right, and a number under "vertical" defines a word which will fill the white squares to the next black one below. No letters go in the black spaces. All words used are dictionary words, except proper names. Abbreviations, slang, initials, technical terms and obsolete forms are indicated in the definitions.

MADE HIS HOME IN OLD BOILER

Diogenes made his home in a tub; but Capt. John McKenzie of San Francisco has almost equaled the cynical philosopher's record by living 17 years in a big rusty boiler, says the Portland Oregonian.

When the captain's house was destroyed in the great earthquake at San Francisco in 1906 he crawled one night into a big boiler and found it so cozy that he decided to take up his abode in it. He painted the interior white and fitted it up like a ship's cabin.

At least he was safe from earthquakes. His iron house might roll about a bit, but it would not tumble about his ears. Yet even a boiler may meet with accidents, and one day the captain was found in the street with his clothes ablaze. His fittings had caught fire, and the boiler had become too hot for him.

Still, he had only to wait till the boiler was cool and then go home again. The fire will at least save him the trouble of house cleaning. For him the housing problem has no terror.

CHINESE BELIEFS HARD TO OVERCOME

One of the most important problems facing the Christian church in China is that of finding a bridge between Christian beliefs and Chinese customs which run counter to one another. This question received much discussion at the conference of the National Christian Council of China in Shanghai and as a result a committee has been formed to discuss several points of urgency and importance to Christianity in that country. Principal among these is to find a way to conserve the best and most characteristic elements in Chinese civilization in order to find a way by which Chinese Christians may commemorate and show respect to their ancestors. The present system of ancestor worship does not fit in with Christian beliefs and little headway can be made in Christian work while the conflict exists. Another point is the influence of Confucianism. The committee was instructed to study the Christian conceptions of God and the Confucian conceptions of heaven in order to find the points of difference and agreement.

When Something Slipped

They were sitting alone in the moonlight.

"Maud," whispered Ernest, "you know I love you. Will you be mine?"

"Alas, Ernest, I fear it cannot be."

"Ah," gasped Ernest, placing his hand over his breast, "broken at last!"

"What" screamed the girl, throwing her arms about his neck. "I didn't mean it, Ernest. O, speak; tell me what is broken. Is it your heart?"

"No, darling, only my collar stud. I felt it slip."—Philadelphia Inquirer.

Absolutely Safe

Two timid old ladies were boarding a huge ocean liner. "I do hope," said one, "this is a safe boat." The other old lady smiled reassuringly "Don't worry about that," she replied "I selected this boat after I had listened to all the boats coming into the harbor, and I can personally assure you this ship has the loudest whistle of all!"

Burned Officer's Heart

Capt. James Dawson, a young officer in the army of the Young Pretender, was hanged, drawn and quartered and his heart burned July 30, 1746, in London, for treason. His betrothed died after witnessing this barbarity.

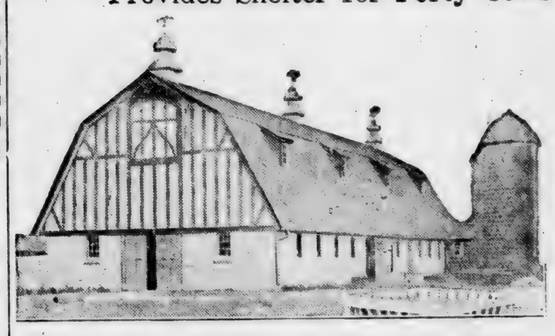
Flies Rout Earwigs

Tachnid flies, which were imported from France to Oregon, are believed to be fulfilling the object of their coming, which is to rid the state of the earwig, the pest that was doing great damage to roses, shrubbery and vegetables.

Poor Policy

Don't wait until the last minute and then try to get a letter of credit on heaven by giving a few dollars to some church.—Washington Star.

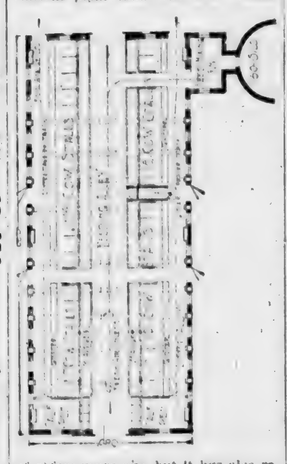
Modern Concrete Dairy Barn That Provides Shelter for Forty Cows



By WILLIAM A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all problems pertaining to the subject of building work on the farm, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on the subject. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

The modern dairy barn is a highly specialized plant which has been the subject of much study to perfect every detail and eliminate all possible manual labor in the care of the dairy herd. Not only has this development of the dairy barn produced a much more efficient plant than was ever dreamt



of a few years ago, but it has also resulted in a far more sightly building which is truly an ornament to the farm group. In the barn pictured here the ornamental idea has been carried even farther than is usual and the gable ends have been made attractive by timbering of the type which is associated with the English cottage home. Also the windows are designed with ornamental brick sills.

This building is a concrete structure with shingled roof and should give satisfactory service over a long period of years. The silo, which is placed at one side close to the end, is of concrete tile construction, as is also the feed-mixing room which connects it with the main body of the barn.

From this feed-mixing room there is a feed-carrier track which runs down the central feed alleys to serve the two rows of stalls which flank this alley. The alley itself extends the entire length of the building with a wide door at each end. Back of each row of stalls, along each side of the building is a litter alley also provided with a carrier track for the disposal of litter. Stalls are of the most modern type and a well drained cement gutter behind them makes it an easy matter to keep them clean at all times.

At the opposite end from the feed-room calf stalls are provided. Part way down the rows of stalls there is a break in each row which provides a passageway between two small side doors, one placed at each side. There are two more small doors on each side also and one of these opens directly at the foot of the stairs which lead to the loft above. This loft is large, affording ample space for all storage which may be required.

The ground floor is well lighted, in keeping with the best practice, for cows require plenty of light and good fresh air in order to produce an abundance of high quality milk. The light is applied by windows which line the walls on both sides. There are also four windows at each side of the loft. These are of the dormer type and add most decidedly to the appearance of the barn.

Foul air vents are placed at each end and in the middle of each side wall and carry off all bad air and odors through three large ventilators in the roof.

Brick Foundations Not to Be Painted

Do not paint the bricks of the foundations of houses. It may add to the appearance to put a coat of red or green on when the rest of the house is being painted, but best painters advise against it, for it means damp cellars.

The temperature of a cellar is seldom the same as that of the outdoor air. In summer the cellar is cooler, in winter warmer. The difference in temperature on either side of the bricks, added to the fact that the larger part of the cellar wall is beneath the ground, makes for dampness within the cellar.

Except for a beating rainstorm, the outside of the bricks will not be damp, because the constant circulation of air outside drys them. Inside, the air is more stagnant. The dampness gathers on the bricks, and, as bricks are porous, soaks into them.

If the bricks are unpainted this dampness is drawn out of the bricks on the outside, and evaporates, with a resulting dry cellar. Paint these bricks and the lead in the paint will fill the pores of the bricks and prevent the dampness from escaping from the bricks to the outside, and that will mean damp walls in the cellar.

It is far better to leave the bricks their natural red and to know the dampness of the cellar has some means of being absorbed into the outer air.

Preliminary Treatment of Floor Important

It is almost impossible to keep oak flooring looking clean and neat if it has not had proper preliminary treatment by the workmen who laid it.

In the first place, the floor should be scrubbed until every speck of dirt has been removed. Be sure there is no dust in the corners. Varnish with a high grade of varnish and let this first coat dry.

When the second coat is dry apply the wax. Rub the wax in well, using plenty of "elbow grease," and you will be assured of a floor with a fine finish.

Cheering Effect

Light colors in the decoration scheme of your home serve to relieve the tension of the stern duties that comprise the day's work for the housewife.

In general, light colors in the rooms make them seem larger and lighter and give an effect of daintiness, cleanliness and cheer. If used to excess, however, the air of barrenness may be produced. Light colors generally respond to artificial light.

On the other hand, dark colors produce that effect of richness, but they will decrease the size of the room in appearance.

Fireplace Plays Big Part in Home

The location of the fireplace in the room is of great importance to its enjoyment. As it is the most ornamental feature of the interior of the house, it should be given a prominent position, but it should not be in the line of travel through the room, near the entrance door, nor where a cross-draft sweeps it.

The far end of the room is one of the best locations. If placed on the broad side of the average room, care should be taken to see that it does not reduce the practicable width of the room and force the rug over the hearth. If placed on an outside wall, it is better not to have large flanking windows, as that would mean facing too much light whenever the fireplace was used during the day.

Use Good Door Locks to Avoid Trouble

Locks are an intricate mechanism and should be the best obtainable. It is not necessary that they be of the highly ornate and expensive type, but whatever type they are they should be the product of a manufacturer known to build first-class trouble-proof equipment.

Magnasite Stucco

Magnasite stucco can be applied in the winter as well as summer. It is not subject to freezing and in the winter when labor is plentiful is an ideal time to use this exterior covering. The owner who rehabilitates his home and does the work in the winter can use this material to advantage and at the same time effect a considerable saving.

Lightens Work

As a result of this unusual combination of desirable floor qualities in linoleum, it has always found ready use in the kitchen, the pantry, the bathroom and the entryways. With a linoleum floor it is easy to clean up spilled water, grease or other liquids. Its resilience makes linoleum a comfortable floor for the housewife.

Water Softeners

Water softeners should eliminate the insanitary cistern from the home by providing a constant supply of clean, fresh water and should do away with hard water scale, so saving coal, plumbing and water heaters.

A Russian Stove

The typical stove in a Russian peasant's home has no chimney, the smoke finding its way out through the door or holes in the roof and walls.

Township Building More Gravel Roads

Concord Township will have another mile and a half of gravel road to be uuder connty supervision, in a short time. Trustee Milliman is now working on the road from Tom White's corners north to Saylor's school house and a half mile west. Six teams and one truck were at work Monday hauling gravel from the Baltz pit, where a dipper is busy at work. The Merritt Sechler and Ira Bone roads have been granted and when completed will make quite an addition to Concord Township roads. Good roads are here to stay. The proper way is for the township to build her roads and then have the c unty to maintain them.

Koch Reunion Held in Ohio

The second annual reunion of the Koch family was held at Fair Grounds, Hicksville, Ohio, Sunday August 16. It was an ideal day for the occasion and about one hundred and thirty were present. In the afternoon a short program was given and officers chosen which resulted in the following election: President, John C. Koch, Spencerville, Ind.; Vice president, Roy Wade, St. Joe, Ind; Sec.-Treas., Bessie Vesper, Hicksville, O.; Program committee, Elmer Volkert, Hicksville; Arrangement committee Roy Koch, St. Joe; Historian, Mrs. Anna Baker, Concord; Reception committee, Mrs. Chas. Koch, Mrs. Myrtle Cole and Elmer Volkert.

The company was much pleased to discover some new relatives in the persons of Mr. and Mrs. Christ Koch, Mrs. Mary Koch and Mr. and Mrs. Henry Koch of Woodburn, Ind, and Rev. and Mrs. Suhr of Chicago, who spent the afternoon in getting acquainted. After singing "God be with you till we meet again," the company was dismissed by prayer by the president.

The Man Who LOOKED

Through spectacle frames without lenses and said he could see fine was not so badly fooled as the person who buys cheap spectacles and injures his eyes trying to see through them.

Take care of your eyes. They are the only eyes you will ever have.

Club Work News

From Concord Boys and Girls

The boys and girls who went to Club Camp "Red Wing" known as Camp Pottawattomie, Lagrange County, owned by Fort Wayne Y. M. C. A, have something to remember while the ones who stayed at home have not.

The camp was a great success and everyone that was there wants to go another year.

The camp was under the management of A A Hansen of Purdue, who handles a group of boys and girls to perfection. Every member present received some helpful instruction along with four days of good time.

The attendance was not what it should be but DeKalb showed that club work was going fine as we had 66 out 124 boys and girls while Noble had 31, Steuben 24 and Lagrange 3.

The camp was first for these four counties but we are sure planning to put over one larger and better next year. All club members who are up to date can attend

"Oh How I Envy You!"

by O. Lawrence Hawthorne

Lying there in all your splendor
Like a prince of other days,
Greeting with a smile so tender
Everyone's adoring gaze—
How contented with your station
Is your happy little heart!
Fretfulness and lamentation
In your program have small part.

Just to lie and kick and wriggle
And to stretch and squirm and roll,
While you grunt and coo and giggle—
Bless your joyous baby soul,
All you ask is rest and quiet
And a mother's loving care;
Yours is such a simple diet:
Water, milk and good fresh air.

How I envy you the pleasures
Of your artless baby ways,
And the many priceless treasures
That enrich your baby days!
I wish I could have them haul me
In a baby cab again—
And could hear sweet voices call me
Things they seldom say to men!

The Vanishing Men

—By—

Richard Washburn Child

(Copyright by E. P. Dutton & Co.) (W. N. U. Service)

SYNOPSIS

Out of uniform, at the end of the World war, with the rank of major, Peter DeWolfe, young American of wealth and family, is urged by an English comrade in arms, Eversby Benham, to visit the Benham home and meet the Englishman's mother and sister, and, incidentally, Brena Selcoss, young woman about whom there is an air of mystery. Muriel Benham, Eversby's sister, becomes infatuated with Peter, but he is interested only in the mysterious Brena Selcoss, of whom he has had only a glimpse. Muriel urges him to forget her, warning him that if she (Brena) should like him he is in danger of "vanishing—like the others." Peter gets a phone message from Brena to meet her. Peter meets Brena in a tea room and the meeting results in the formation of a strong bond of friendship. After a few days' companionship the feeling between Peter and Brena ripens into love. He asks her to marry him, and she confesses that she is married and that her husband has "vanished."

CHAPTER V—Continued

—5—

The first time he ever saw Brena Selcoss was one morning when he had come back from a vacation of several weeks at some ranch among the pecan trees in Coleman. His vacations had become a mystery to other young men who were employed; all that appeared necessary was for Jim to go to Compton Parmalee and tell him when he would be back. It was ascribed to his magic quality of persuasion. Some said that if Hennepin smiled and asked in his inviting, breathless manner there would be no surprise to find that the President of the United States had allowed him to take the whole of Alaska under the Homestead act. And yet, though no one in Dallas then knew it, this was the man of unchecked wild youth, who had beaten a train conductor almost lifeless in the Baltimore station and had killed his riding horse with a stone held in his strong young hand.

Brena was sitting at an early breakfast when he came in. He did not speak to her; he merely stared. After a while, without taking his eyes away from her, he put his gun, his coat and his bag into a chair behind him. He still gazed at her and she, astonished, gazed back. He suggested Apollo; he suggested vaguely the sudden appearance of the fairy prince. He was giving an exhibition of his supreme rudeness—his almost majestic and memorable insolence; but it was also a supreme compliment, the best he knew how to bestow.

"Well," said he at last. "It's springtime."

He spoke as if he had been a messenger from Destiny, as if spring were Brena's time and that time had come.

It was like a sentence of a court.

With a quirk about the corners of his mouth, he walked boldly toward her and looked down into the disk of cereal on the table beneath her eyes.

"Nothing but milk," said he. "No, by G—d, you shan't have milk on your rice! It's an outrage. You are the young queen and I am the captain of the palace guards. And I'm off in a borrowed motorcar to get you the richest, thickest pint of cream in the city, and the speed laws can't stop me."

This absurd young man, with his infant smile, his athlete's body and his elementary hungers, leaped out down the steps, into a new touring car in which he had come, cut out the muffler and was gone.

He came back with cream. His aunt said, "Jim, you are crazy." But he was not crazy. He had an instinct for creating romance; he made the illusion when he wished because he had learned that adventures, particularly those with women, failed or succeeded according to the distance from the humdrum world he could lead on as a guide into the tropical and gaudy-flowered jungle of Change.

He became Brena's knight. He said so himself. He told her that for her to contemplate going to work was absurd—it was an impropriety like feeding American Beauty roses to army mules. Brena laughed and went to work on Monday morning; but Jim Hennepin had struck the right note when he had told her he would be her knight. She said, "I do like knights—not for myself, because I am so healthy."

"Yes, you burst with it," he said, looking at her forehead, her throat, her wrists. "It is my distraction."

"Nevertheless I like knights because they are knights."

"I am the originator of the knight idea," he said. "Somebody has told you it was King Arthur or some one else. Mere plagiarism! Come with me this evening on a ride to Waco."

He took her everywhere and his aunt scowled.

"Jim, she is only seventeen," Mrs. Wilkie said, panting.

"She looks twenty-five," he answered.

"But it leads nowhere," said the aunt. "Nowhere except to scandal."

"Scandal?" replied Hennepin yawning. "Nonsense! Also piffle! A man takes a beautiful girl around for the same reason that you'd wear a diamond tiara if you had one, especially if it had been given you by some broker. It's just a symbol of one's ability to have the right things. It's ego."

"Is that all, Jim?"

"Yes," he said, brins stiltly

"Because you haven't the money to be married, Jim," she said, moving her mouth over so that it looked like a newly punctured pink opening. She liked to live near immorality; it gave her vicarious pleasure. She had a magazine picture of a certain French actress tacked up beside her looking-glass. She would have been sorry if Brena had suffered misfortune from Jim, but also she would have been glad just as one, though sorry to hear of a distant acquaintance dying, has a thrill of interest in finding a familiar name in the obituary notices.

Hennepin was whimsical enough to repeat to Brena, word for word, this conversation.

They were sitting in the motorcar looking out over the undulating Texas prairie. In the hollows the red bud was in bloom and the air of dusk was like the light, velvety.

"It never occurred to her that I might love you," he said.

Brena said nothing.

"Don't you love me a little?" he asked.

"I don't know, Jim—really, I don't know. I don't know what love is. I've only read about it, and it is just like reading about some place you've never been. I wouldn't know when I had arrived there and stood on the very spot."

"My G—d, you're like a new flower, opened up for the first time and wet with dew!"

As if he could not conceal haste, he seized her hand and squeezed it until she said, "Oh, Jim!"

"Well, you're fond of me?"

"Yes, I am, Jim. I'm fond of you."

"Perhaps it's because you have no one else to be fond of," he suggested.

"I don't know," she told him. "I don't know yet."

He looked around at the yellow horizon in the west and shivered.

"We aren't by ourselves," he exclaimed with irritation. "Not here in Dallas. We ought to take a trip."

"A trip!" said Brena. "How could we take a trip?"

"You mean because of money? Well, I'm going to fix that." He smiled craftily. "I've a strangle hold on some money, Brena. I suppose that when I turn up with some real money people will say that I dipped into the till or had a rich uncle die. It will be such a novelty to have a roll. But they'll be wrong. I'll get it my own way. And it's coming."

"Oh, Jim!"

"Money or no money, I want you," he said. "Some day I'll make you say you love me."

Brena lay awake under a hot roof wondering whether she loved Jim Hennepin. There was no one to tell her that she did not.

As the weeks went on she found herself asking where the end would be of day after day of showing perfumed wives of Dallas business men embroidered linens at the Porto Rican store, of walking home, sometimes with men staring at her, of trying to find interest in the chocolate fudge minds of girls who did not like to have her around because she talked like a professor and wore the beauty they wished was theirs. It was not clear that Jim was not the one man of all, the prince who stepped out of nothing and held out his hands to her in some kind of miraculous tableau. No one reminded her that she was only seventeen; she felt that she was as old

"It Never Occurred to Her That I Might Love You," He Said.

as the pyramids, for her reading had made her appear as related to the past. More than anything else some fundamental part of her declared that she was as nothing, that whatever she might do or become there could be no disaster, no loss; that she was created to be given away.

One day Jim came home at the noon hour. He did not usually come then, and evidently he had not come to have lunch there, for he stood outside the door where his aunt's piggy eyes could not see him, and beckoned to Brena mysteriously.

When she had come out onto the porch, he took her hand and led her around the corner of the house. She could always remember the heat of the blazing sun of noon which flattened its burning upon them as if it were some great wrath.

"Look here!" said Jim, with a kind of ferocity in his voice and eyes. "I'm going away. Compton Parmalee won't be in Dallas, and I've an errand to do."

"You're so excited, Jim."

"Yes, I know. But the time has come. I want to know if you love me."

He did not appear to care much what her answer would be.

"I think I do, Jim."

"You're willing to take a trip? Brave enough to go to St. Louis alone? To meet me?"

"You mean you want to marry me, Jim?"

"Why yes, if it turns out all right."

"I'll go."

"Brave enough?"

"I'm not much of a coward, Jim—that least of all."

"Well, then—listen. Here's a hotel. The name is written on that card. Be there on Friday, the twelfth of the month. I'll be there at four o'clock. You better come the day before. Get a room and don't be frightened."

"No, Jim."

"Why do you look at me so?"

"Because I have no money now."

"That's all right. Here, take this. It's plenty, eh? Don't let any one see it. And you won't say—"

"Of course not, Jim—not anything."

"Your hand on that."

She put her hand in his.

"Why are you going away, Jim?"

He looked into her eyes, and if Brena had known the world better, she would have seen something of the brutality of Jim Hennepin at that moment.

"Tell me, Jim."

"I've had a call," he said craftily. "If I can tell you when I come for you in St. Louis you'll say that it is all the strangest— Well, I've had a call."

Brena went to St. Louis. She had not marked the date on her little calendar on the bureau; it was not necessary because she was not ready to forget, and besides some one might ask her a question. Some one might have asked why she went. And she could not have told.

CHAPTER VI

—1—

Brena Selcoss returned from St. Louis on the sixteenth of the month.

The train arrived in Dallas in the early morning when the night prairie wind was still cool, but she spent the last dollar in her purse to be driven to Mrs. Wilkie's in one of the old city station hacks.

"Well!" said the round landlady, exploding the breath from her little mouth to express astonishment, inquiry and disapproval all at once.

"Yes, I came back," Brena replied, lifting her suitcase up the steps wearily.

"I thought I was going to lose all my nice young people," Mrs. Wilkie said, turning on the disk record of her false good nature. "Jim Hennepin went with hardly a thank you. There's been no end of mail for him. I didn't know where he'd gone; he made such a mystery about it, so I sent the letters to his office. They probably know about him—more than I do. He didn't tell you where he went?"

"No," said Brena, "he didn't tell me."

"And not a word from him. Not so much as a picture post card."

Brena was trying to pass around the bulk of the older woman.

"And you went off yourself without much explanation," Mrs. Wilkie complained, putting herself in the way, "and without knowing whether or not you was coming back."

She looked all over the girl from head to foot with an expression in her beady eyes indicating that it would have been better if a legal guardian had been appointed for Brena.

"Well, I'm here."

"So I see. Have you had breakfast?"

"I don't want any," replied Brena.

She went up to her room under the roof where, upon the bedspread were the dust marks made by her suitcase when she had thrown it up to pack six days before. She put it back on those marks as if a round of life had been completed. Then she got up to cross the room to the picture of the Acropolis—her father's picture, the last possession of the family. For a long time, too, she looked at this engraving in its travel-battered frame—a relic of Demetrius Selcoss.

"He said not to be afraid," she told herself. "He said something would come if I were in danger."

Downstairs at about that same moment Mrs. Wilkie was writing in her diary. At one time in her life she had acquired the fancy that the memoirs of women often were important—the original sources of historical facts and the mirror of society of a period—and the diary habit kept its grip upon her long after she had ceased to say to herself, "Think what it would have meant if Madame de Maintenon had kept a diary!" Now she wrote in the same hasty, out-of-breath style with which she conducted all life—leaving out pronouns and writing sentences. "Went shopping. Saw Bertha. Said her husband's teeth kept her awake getting hot water bottle."

She poised her fountain pen and wrote: "Brena Selcoss returned today from St. Louis. Said she had errand there. There is a frightened look in her eyes." A drop of ink fell and spattered out. She blotted it and left the outline of a little black fiend which danced upon the page.

It may have been true that Brena had in her great dark eyes a frightened look, but there was nothing to show panic in her conduct. For a girl who was not yet eighteen she exhibited a great deal of common sense. She went to the Porto Rican shop and asked for her old position. It was given to her and life was renewed again in a pulsing monotony of that slightly soiled middle-class respectable vulgarity which appeared to Brena as infinitely more sordid than the squalor of slums or the crises of passionate crimes. That she was a part of this dull brown cheapness, surrounded by virtuous and smug persons who lived contentedly without ideas or taste in a round of interest in such things as strawberry festivals, new hats, pink celluloid hair receivers, Sunday newspapers, half pounds of chocolates, card

For a Long Time She Looked at This Engraving in Its Travel-Battered Frame—a Relic of Demetrius Selcoss.

games, etiquette, napkin-rings, the domestic lives of actresses and royalty, souvenir spoons, picture postal cards, talking machines, baseball scores, spiritualism, and decorated sentiments or vulgarities framed for the wall, was an anomaly like planting a peony among the cabbages.

But Brena, conscious of this, found herself wondering whether every human being did not have the feeling that he or she was a gem in an inferior setting. Her mother's sense of humor was in her and she saw her escape not by fluttering at the walls but by climbing over them. Even at seventeen, no doubt her face had begun to take on that calm of centuries with its tenderness and patience and wistfulness and understanding as if she carried eternal hopes and bore the sufferings of all mankind; it was only her mother's sense of humor that thrust its light through this mountainous and heroic expression. Later the punctuation of fear, expressed only through her eyes, had become a characteristic interruption.

Mrs. Wilkie often mentioned the journey to St. Louis. She would have given Brena a week's board to know why the girl had gone, but even Mrs. Wilkie sensed some quality in this beautiful child which made her a creature of a different species and filled others with a sense of awe from which only Jim Hennepin had been exempt; she never pressed her questions beyond a point where she found herself looking into the wondering, dark Selcoss eyes. Brena kept her own knowledge without an effort; it was done with a magnificent restraint and with the suggestion that she who until that year had navigated life not at all would hereafter navigate it for a long time without another's hand upon the tiller.

Brena even asked twice whether Hennepin had written. She chose moments when the two other women boarders and the accountant of the Southern Pacific were at the table.

"Written!" said Mrs. Wilkie, puckering her little mouth as if she were going to whistle her sentence. "Written? Not he! But I might expect that; I have never found that I could expect gratitude—from anybody."

She looked at each face at the table severely.

"But that's nothing," she added. "His own father, who is dying of Bright's, hasn't heard from him—not for three months."

"Oh," said Brena as if reflecting and weighing the matter. She left the table, and going into the front room, she played in lively time upon the piano there—a piano with a sheeny red case and with a tone intended to be the startling opposite of the tin-pan attributes of old pianos. This one had tones extravagantly round like the softness of an elocutionist reading poetry. Brena had remembered this piano and described its affectation. It was nothing to her that those who heard her play on it said, "Oh!—She makes it talk," for they were the same persons who said, "What beautiful flowers! They're like wax!"

Brena at the piano that evening felt as she always felt, that she was alone in the world—the friend of certain dogs and cats which lived in houses along the way home from work. She had grown accustomed to this loneliness and was nearly convinced subconsciously that it would go on forever. Within sight there was nothing which might break into it and she had no pangs because of that. She set her face toward tomorrows. She might have been expected, therefore, to be startled when the past broke in upon her.

It came in the form of Compton Parmalee.

Brena had been writing in her hot room under the roof. It was still hot, although the Texas fall had come and Brena, with her sleeves rolled back from her shapely young arms with their cream-colored skin, had been bending over her little table trying to set down in the form of a written drama the story of the one other girl who worked now in the Porto Rican Embroidery store. The story was not as dramatic a story as it may have appeared to Brena at seventeen. Nor could Brena have written a play because she had no knowledge whatever of the craft of writing plays, which she later found out is a matter of skilled carpentry and not inspired, as Brena had conceived it. For all of this she now asks to be forgiven, since everyone, usually in extreme youth, writes a play and nearly everyone, as Brena, startled and surprised at the secret labor, thrusts the manuscript into a drawer when a knock comes.

It was Mrs. Wilkie.

"Well!" she said, exploding her usual astonishment, inquiry and disapproval in one puffed word.

Brena smiled.

"You better put yourself to rights!" said the landlady, holding the edge of the varnished yellow door. "You better dress your best! You've got a caller."

"To see me?"

"Yes, to see you. And such a caller! It's Mr. Parmalee!"

Brena stiffened. She asked: "What does he want to see me for?"

"I don't know," Mrs. Wilkie admitted. "I certainly wish I did. He has oodles of money! He speculated during this year and he's made a fortune!"

"I will go down just as I am," said Brena calmly and firmly. "I do not care about his fortune, Mrs. Wilkie. I want to find out what he wants of me."

Compton Parmalee did not appear at all anxious to say what he wanted. He was a small, wiry man, careful of his dress, who above everything else was self-contained. He thrust his glances. As Brena Selcoss came in the door he thrust a glance at her and then looked up at the ceiling as if his mind was digesting that which his gray eyes had photographed. As she came toward him inquiringly, he rose, thrust another glance at her and looked out the window considering. When she stopped he thrust once more and sat down looking at the carpet. Everyone who ever knew Compton Parmalee will remember the characteristic inspection of that daring speculator.

"Are you Miss Selcoss?" he asked, as if now that he was able to fasten his gaze upon her, he found it improbable that the girl he saw in all her freshness of youth was the girl he had come to see.

"Yes," he said.

Parmalee had come to Texas from the desert country of southern California when he was twenty-six. He knew that country well. In his years in Dallas, acting as a cotton commission man and commodity gambler, he had collected a large and valuable library about the whole historic Southwest, its Indian tribes, the Pueblos, the strange customs and secrets of savage men carrying some of the traits and traditions of prehistoric Aztecs, and the Jesuit missionaries. It was said by some persons that his quiet ways were a veneer put on by some studious years in Berkeley at the university, but rumor had it that Parmalee with his rather pale, young face that made him look thirty instead of forty-three, his small, well-shaped hands, his immaculate linen, his soft voice, had once shot a man across a roulette table which he himself owned and operated.

That he was ever a man of violence is very doubtful. He was an unquivering gambler, but not with his personal safety; his personal safety was his principal concern. He wore gloves on all occasions—to keep the germs off his hands; he had his massive mahogany desk, in the office building across from the new hotel, wiped down every morning with an antiseptic; long years before the practice had become a worthy fashion he had himself examined periodically by specialists. He was always fearing contagion. He gargled. He snuffed. He sprayed. He read medical journals. He feared cancer above all other things. He loved his life so much that he had loved no woman for many years; the monopoly of this devotion excluded competition. He loved his life with an unending passion; he ruined it by fearing to lose it.

(TO BE CONTINUED.)

The present year marks the one hundredth anniversary of the organization of the University of Virginia.

Why Risk Neglect?

Are you lame and achy; weak and nervous? Do you suffer backache, sharp pains, disturbing bladder irregularities? This condition is often due to a slowing up of the kidneys. The kidneys, you know, are constantly filtering the blood. Once they fall behind in their work, poisons accumulate and undermine one's health. Serious troubles may follow. If you have reason to suspect faulty kidney elimination, try *Doan's Pills*. *Doan's* are a tested diuretic, recommended by thousands. *Ask your neighbor!*

An Ohio Case

Mrs. Fred Scheffler, 4 E. Orange St., Chagrin Falls, Ohio, says: "My back ached most of the time and a dull, annoying pain across my kidneys put me in a run-down condition. I tired easily and had no ambition. My kidneys were weak and sluggish. Doan's Pills relieved me of the backache and my kidneys were soon in a healthy condition."

DOAN'S PILLS 60c

STIMULANT DIURETIC TO THE KIDNEYS

Foster-Milburn Co., Mfg. Chem., Buffalo, N. Y.

Are You Ready?

Are you ready to enjoy social duties, sports or recreations? If not try Hostetter's Celebrated Stomach Bitters, for over seventy years noted as a wholesome tonic, appetizer and corrective.

At All Druggists

Comet With Two Tails

It is reported from Germany that photographs taken of the comet Orkisz show that it has now developed a second tail. This tail cannot be seen with a telescope. The primary tail also is, to all intents and purposes, merely a photographic object, only the vaguest indications of it being perceptible in a telescope.

A duplicity, or even a multiplicity, of tails is by no means an uncommon occurrence, although it is not often seen in objects so faint as the present comet.

Terrier Protects Robin

Unusual playmates are to be found at the home of Silas Oberdorf, Danville, Pa., where a robin, protected when it fell out of its nest when it was young, has become the almost inseparable companion of a terrier. Frequently the robin may be seen riding about on the dog's back and the terrier protects the bird from other dogs and from cats.

SUFFERED AFTER BIRTH OF BABY

Trouble Caused by Getting Up Too Soon. Relieved by Taking Lydia E. Pinkham's Vegetable Compound

Talcville, New York.—"I thought it would interest you to know what benefit I have derived from taking your medicine. A few days after the birth of my third child I got up too quick. Then just before my fifth child was born I had inflammation of the bladder and displacement. Seeing your advertisement in a Liverpool (England) paper I began taking Lydia E. Pinkham's Vegetable Compound and that was the best confinement I had. Whenever I feel rundown I always take the Vegetable Compound as a tonic. We have just removed from Brockville (Canada) so I was pleased when the store ordered the medicine for me and I got it today. I would not be without it for any price and I recommend it to ladies around here because I feel so sure it will benefit any woman who takes it."—Mrs. AGNES WIGNALL, Talcville, New York.

Women can depend upon Lydia E. Pinkham's Vegetable Compound to relieve them from ills peculiar to their sex. For sale by druggists everywhere.

English Universal Tongue

Believing that the English language is more widely used in the commercial world than any other, the board of directors of a large automobile firm in France has required all of its employees to begin studying English. A professor in English is now attached to the factory and gives daily lessons to employees.

Gabriel himself will play the last trump in the game of life.

The Schematic Wiring Diagram of the Four-Tube Receiver Showing How Condensers Are Connected to Coils.

By HERBERT E. HAYDEN, in New York Herald-Tribune.

A circuit of general usefulness is the one shown in the diagram, for it will operate fairly well even under most unfavorable conditions and is safe in the hands of the novice. Like the neutrodyne, it has three controls, and the set may be logged—that is, once the settings for a given station are determined they will always be the same unless the aerial is changed.

One of the chief advantages of the neutrodyne is it may be readily adapted for family use. Anyone who "knew the combination" could hear the stations. Normally, this is not true of regenerative sets. There is an element of great uncertainty of setting in the regeneration control dial. To overcome this, yet retain the advantages of regeneration, this circuit was devised. It is a modification of Weagant's X circuit, the so-called divided circuit, and embodies a stage of tuned radio-frequency amplification, tuned detector input, capacitatively coupled regeneration in the detector stage and two steps of transformer coupled audio.

Preventing Radiation.

This circuit has as small a tendency to radiate as any of the regenerative hook-ups, and radiation may be effectively prevented by connecting a midget condenser between the grid and plate posts of the R. F. tube, the one at extreme left. The setting of this condenser is varied until the signal is barely audible, or preferably inaudible when the R. F. tube is barely lit. Then the setting of this small condenser, not shown, is left in that position.

The hook-up in performance is as good at "distance-getting." The presence of regeneration much more than makes up for the absence of an extra tube. This is true absolutely if a good outdoor aerial is used, but if an indoor antenna is employed, or even a plug for the light socket, the circuit still will perform exceedingly well, the distance being cut down somewhat, likewise the volume, but the quantity of sound being all-sufficient for speaker operation. The ground connection may be made to the radiator. Thus the circuit, while primarily working better under the more generally available advantages, will do its duty with fidelity under makeshift conditions, such as used in hotel rooms, on country trips, etc. The set was operated all last winter in a local hotel and during the summer weeks to date, the ground connection being made to a radiator and a plug used in the lighting main for an aerial. Selectivity was splendid, even WHN, less than half a mile away, being tuned out within five degrees of the dial and easily separable from WJZ, an eighth of a mile farther away, both powerful stations. Very few stations outside the metropolitan area were heard, but the receiving conditions, one must admit, are about as bad as in any part of the United States.

Condensers Used.

To facilitate tuning on the low waves it is well to use condensers that are modified so as to cause the dial readings to be wider apart for given stations on higher frequencies. These would be what are termed straight-line wave length, straight-line frequency or like condensers. The usual condenser varies as to capacity, which tends to crowd the stations close together in dial position on the lower divisions, due to the changes in capacity at those points representing so much greater frequency difference. The idea may be popularly expressed by saying that an ounce of capacity at the lower end makes ten times as great a difference in frequency as a pound of capacity at the upper end of the dial.

The condenser used in the set was the Remler Twin Rotor, which, when properly connected, eliminates body capacity effects in tuning. The rotor of the condenser tuning the R. F. stage should go to minus A, the stator of the detector input tuning condenser should go to grid condenser, and the rotor of the feedback condenser should go to plus A.

Constructional Data on Coils.

In choosing the coils for the set one may be guided by his own particular preference in design, or may follow the directions for making the diamond-weave coils shown. These are wound on forms having an odd-numbered group of removable, radiating arms or spokes, 3-16-inch dowel sticks, on a circular hub, 2 inches in diameter. Using No. 22 double silk-covered wire, wind ten turns, halt, then pick up twelve feet of the same kind of wire, and wind this along with the remainder of the other or secondary winding. Leave four inches slack for connections inside the set. Up to this point you will have wound ten plus about eleven, or about twenty-one turns of the secondary, and will have completed the primary, the twelve-foot length. Now continue winding the secondary until thirty more turns are put on, whereupon this winding, too is terminated. Thus you will have finished a coil with an eleven-turn primary and a fifty-one-turn secondary One more turn or less on the secondary will not matter. The secondary is to be tuned by a .0005 mfd variable condenser.

That was L1L2. Now wind L3L4 exactly the same way, except that when you reach the fortieth turn pick up ten feet of the same kind of wire and wind this as if it were a special primary, side by side with the continued secondary, then go it alone with the secondary to the end. Now you have L3L4L5.

The aerial transformer is connected so that the adjacent terminals (hub end of primary and hub end of secondary) go to ground and minus A respectively. The hub side, that is, inside terminal, of L3 goes to B plus 67½ volts, and this B battery should be a separate one for best results, although the set will work well on a common B battery block. The minus of this 67½-volt block, by the way goes to plus A, too.

The terminal of the secondary, L4 that goes to the grid condenser, is the end at the outside diameter, while the outside terminal of L5 goes to plate The circuit diagram shows how the condensers are connected to these coils. The tickler, L5, is not rotable, of course, and that explains why it is possible to chart the regeneration control.

Both audio tubes have grids biased 4½ volts negative. This usually means the three-volt post of a standard C battery will be used as the nearest approach, if the exact 4½ volts aren't accessible. There is a one-volt negative bias imparted by the grid return to minus A (say, six volts at this point), as compared with the five volts at the other side of the rheostat, filament minus, whence all voltage reckoning proceeds. Indeed, the drop in the rheostat may be a little more than a volt. Hence, only three extra or external volts are needed.

In figuring the plate potentials, the common lead, A plus and B minus, must be counted, too, as adding the voltage of the A battery to that of the B battery at the plate. The series connection is obvious—minus six to plus six is six volts, hence with B minus connected here you start off with a premium of six volts. A 22½-volt tap off the B battery would really be 28½ volts. These allowances must be made, especially when using tubes that are critical as to plate voltage, especially the C-300 and UV-200, the most sensitive detector tubes known, though they do draw one whole undisputed ampere.

Audio Hook-Up Is Standard.

The audio hook-up is standard, except for the filament control jack. Those not familiar with its operation will see from the diagram that adjoining springs of the jack are connected respectively to B plus and plate When the plug is inserted it pushes up the springy leaf already connected, as the other one is the very stiff frame. Notice that there is a piece of insulation between the plate spring and the adjoining one above it. This is both the safeguard against short circuit and the lever used to close the filament circuit. It will be seen that the otherwise continuous filament minus lead-in is interrupted by being passed from detector tube to the second spring from top, in F. C. J. The switch S may be used for turning the set on and off as a unit.

As the three amplifier tubes—one radio and two audio—are operated from one control, it should be a power rheostat, if wire-wound, otherwise one of the compression or decompression type. The ordinary run of rheostat, 6 ohms, will heat up under this heavy current.

A double-circuit jack J is used in the first audio output, as this is a good place to listen to DX stations in winter (and in summer, when, if and where possible), and provides sufficient speaker volume from some locals. The change from first to second audio output is made simply by pulling the plug out of the one jack and inserting it in the filament control jack, which lights the last audio tube and taps plate and B plus.

The C-301A and UV-201A tubes are best for this circuit, although any of the dry cell tubes may be used to excellent advantage

Daddy's Evening Fairy Tale

By Mary Graham Bonner

SICK RHINOCEROS

"I feel so sick, I feel so sick," said the Two-Horned Rhinoceros in the zoo.

"What is the matter with you?" asked the other Rhinoceros next door.

"I feel so sick, oh, I feel so sick," repeated the Two-Horned Rhinoceros.

"How do you feel sick?

"Where do you feel sick?

"Why do you feel sick?

"Tell us about it," the other Rhinoceros said.

"Oh, neighbor, and kind Rhinoceros friend," said the Two-Horned Rhinoceros, "when a creature is sick he can't answer questions.

"He doesn't know why he feels sick. He doesn't know much about anything then except that he hurts and is sick all over, and feels as though he couldn't do anything at all.

"Oh, it's horrid to be sick!"

"Poor Two-Horned Rhinoceros," said the other Rhinoceros.

Then the Two-Horned Rhinoceros began to cough, oh, such a cough.

It seemed as though he could not get his breath, he was coughing so hard.

The keeper heard him cough and came hurrying to him.

"You poor Rhinoceros," said the keeper, "you have whooping cough!

"Those terrible Whooping Cough Wretches have come to visit you now, just as they visited those splendid boys John and his baby brother earlier this season.

"It was dreadful when they visited those two nice boys.

"I heard about it.

"And those mean wretches now have come to bother my poor Two-Horned Rhinoceros."

Then, without asking any questions, or fussing with him, the keeper at once gave the Two-Horned Rhinoceros

"You Poor Rhinoceros," Said the Keeper.

some medicine which would help him as much as possible.

Night after night and day after day the Rhinoceros coughed, and every minute which could be spared the keeper was with him looking after him and seeing that he was made as comfortable as he could be made when the Whooping Cough Wretches were visiting him.

There they were, quite uninvited, and yet staying around in a mean way that they have.

They don't care whether they are invited or not.

Peter Gnome was perfectly furious about it. He argued with the Whooping Cough Wretches.

"How mean of you to come and bother a nice animal such as the Two-Horned Rhinoceros," he said.

"Can't you stop these mean ways of yours?"

But the Whooping Cough Wretches did not care. They were so mean they liked to be mean.

How they did act, and how sad was the keeper, and Peter Gnome, and the Two-Horned Rhinoceros.

"Keeper," the Two-Horned Rhinoceros would try to say between coughs, "make me well.

"Please make me well, keeper."

And the keeper would say:

"I will make you well, if my medicine and good care can do so, Rhinoceros."

When the keeper spoke to the Two-Horned Rhinoceros the Rhinoceros seemed to feel more encouraged and more cheerful.

It had been that very way with John and his baby brother. They had felt so much better when their mother or their daddy or their lovely, young grandmother had talked to them and played with them.

After a wretched time of suffering for the Rhinoceros he was made all well, and oh, how he did enjoy being well again!

Never were two visitors less wanted. Never was any one more delighted to see them go than were the Two-Horned Rhinoceros, the keeper and Peter Gnome.

The Two-Horned Rhinoceros enjoyed being well more than he ever had in his life before, for he had known what it was to be ill and the great, great difference between it and being well was truly remarkable.

Would Enjoy His Pie

"Say, mamma," said little five-year old Edwin, "are you goin' to give me another piece of pie?"

"Why do you ask, Edwin?" said his mother; "you haven't eaten that piece yet."

"Because," was the reply, "if you ain't, I'll eat this piece real slow."

Admirers of Dickens True to His Memory

Hall Caine, at a Dickens memorial service, said that after 55 years the novelist is more alive than ever. At this meeting the services of Bertram Matz, founder of the Dickens fellowship, were eulogized. Matz edited a Dickens magazine, published Dickens in many editions and preached him at every turn, answering letters of inquiry from enthusiasts in all parts of the world.

Not long ago in Philadelphia a local "fan" led a stranger up to a picture crowded with characters from the novels. Pointing out an obscure scrawl in a corner, he said: "I have identified every other likeness—please tell me who this is." Such is the true Dickens devotee. To him Copperfield and Micawber, Pickwick and Sairey Gamp and Oliver Twist are more real than the flesh-and-blood of the street today.

Runs and Flies Both

Capable of flying in the air or running on the ground, an airplane-automobile recently was demonstrated in France. It differs from ordinary planes because it has folding wings and four wheels. A propeller shaft runs from the fuselage to a transmission which turns the rubber-tired front wheels with their brakes and steering mechanism. The power to drive the plane on land is furnished by a small auxiliary engine. Its conversion into an "auto" takes less than half an hour.—Popular Mechanics Magazine.

Cuticura Soothes Baby Rashes

That itch and burn, by hot baths of Cuticura Soap followed by gentle anointings of Cuticura Ointment. Nothing better, purer, sweeter, especially if a little of the fragrant Cuticura Talcum is dusted on at the finish. 25c each.—Advertisement.

Country's Manufactures

The last biennial census of manufacturers shows that in 1923 the value of the output of the United States establishments making canned products their primary or secondary business, amounted to $522,763,003. Peas, corn, tomatoes and baked beans are canned in about equal proportion, between 14,000,000 and 15,000,000 cases of each. Peaches head the canned fruits with 4,039,334 cases and raisins, the dried fruits, with 380,068,441 pounds.

Dublin Dock Extension

Alexandra dock at Dublin is to be extended by 150 feet, with a depth of 35 feet to low water. The chairman of the harbor board said that it was very important that the public should know that there was accommodation in the port of Dublin for vessels of the largest draught. The sooner the work was completed the better.—Family Herald.

Trail 100 Years Old

The Santa Fe trail will be one hundred years old this year. The Council oak at Council Grove, Kan., has taken on 100 rings since the day in 1825 that the white men and Indians met there to barter for a new trade route to Spanish New Mexico. The Santa Fe trail was the outgrowth. A centenary program is being arranged at Council Grove.

Greece Fosters Industry

The Greek government is making great efforts to encourage the carpet-weaving industry. In order to avoid the necessity of importing thread, the Greek department of commerce has sought machinery for setting up three spinning mills at Sparta, Caesarea and Kirchehir, the main carpet centers.

Netting Enemy Planes

Huge nets attached to parachutes and shot up in bombs are being tested by the Japanese army as a protection against enemy airplanes.

There is nothing more satisfactory after a day of hard work than a line full of snowy-white clothes. For such results use Red Cross Ball Blue.—Advertisement.

The Store That Does Things----Wayne and Harrison

Local Briefs

Harry Shuff and family have moved back to town.

Lester Pugsley moved the household goods of Rev. C. H. Havens to Muncie Wednesday.

Ed Serell and family of New London, Ohio, spent the week-end as guests of John Hart and family.

Mr. and Mrs. J. P. McGillicuddy of Chicago, were Tuesday dinner guests of Charles Rice and wife.

S D. Gee and wife had as Sunday guests, Milo Provines and family of near Auburn and Foster Gee and family.

Mrs. Sam Trovinger and Mrs Mark Williams spent Monday in the Wid Williams and Mrs. Nan Lysher homes.

Mrs. Princess Klopfenstein and two children of Grabill, were guests of S. S Widney from Friday until Tuesday.

Home Coming Day Sept. 5. Dinner, 35 cents. Supper, 25 cents. Lutheran Church Basement.

Mr. and Mrs. Warren Slater and children of Whitley county, were Monday afternoon guests of Mrs. Slater's grandmother, Mrs. Anna Dilley.

The Loyal Happy Hustlers class of the Christian church very pleasantly surprised Francis Hickman Thursday evening, it being his birthday. Melons were served and a splendid time was enjoyed by all.

George Kinsey and family, Roy Kinsey, wife and daughter, E. R. Kinsey, wife and two sons, Chas. Waterbeck and wife, A. W. Mahony and wife and Donald Kinsey attended the Kinsey family reunion held Sunday at the Auburn Eckhart Park.

Mrs. Charles Rice recently spent a day at Fort Wayne and Decatur.

Ray Reasoner and Sam Mumaw spent Saturday at Hamilton Lake fishing.

Mr. and Mrs. H. S Bowman of Chicago spent a few days here recently.

Picnic Paper Plates and Wax Paper in large rolls now on sale at News office.

Dewey Smith and wife of Hammond, were over Sunday guests of St. Joe relatives.

Asa and Del Crawford of Kunkle, Ohio, spent Sunday with B. F. Terman and wife

Mrs. Clay Coburn, who has been quite ill with spine trouble, is very much improved.

Mrs. F. M. Thornton and children were week-end guests of friends at McComle, Ohio.

Mrs. Mary Shuff spent from Saturday until Monday a guest of John Millin an and wife at Butler.

Miss Sadie Haner and John Carpenter of Bryan, Ohio, spent over Sunday with A. Haner and daughters.

Mrs. Cal Coburn of Hicksville, spent a few days last week with her son and family, also with her sister, Mrs. Vina Fish.

Sunday, August 16, relatives and friends to the number of forty-eight, surprised Martin Peters and wife by coming to their home with well fillled baskets of good things to eat. At the noon hour a bounteous feast was served, to which all did ample justice. In the afternoon all enjoyed a treat of ice cream and cake. Games and music were among the features and at 6 o'clock all departed for their homes expressing themselves as having spent the day very pleasantly.

J. C. F. Abel and Charles Rice spent Saturday at Hamilton Lake fishing.

Crates S. "Fussy,, May, suspected for a long time by local police officers of bootlegging, was arrested Saturday night in Auburn, charged with transporting and selling liquor.

When May's automobile was searched a quart bottle of moonshine was discovered by Chief of Police Charles Davis and Night Patrolman Henry West.

May lives on the Fort Wayne road near the Carnahan hill. His method of disposing of liquor, according to the officers was to drive a prospective customer out into the country where the liquor was 'planted" and then return with the patron to the city limits, letting him out of the car to walk the remainder of the distance to town.

May plead guilty Sunday morning in Mayor Lige's court and was sentenced to six months in the state penal farm and fined $10). Deputy Prosecuting Attorney C. S. Smith represented the state at the hearing.—Monday Evening's Star.

Bird Hunts Snakes

The fanciful resemblance of the long feathers of his crest to a quill pen thrust behind his ear suggested the name "secretary" bird. This bird's habits, says Nature Magazine, are far from literary, as its business in life is hunting snakes and similar animals. It is an African and is one of the largest birds of prey.

Old Mosaic Tradition

According to an old ancient tradition, the laws given to Moses on the mount were inscribed on tablets of sapphire.

Kipling Philosophy

After all, yourself is the only person you can by no possibility get away from in this life and, maybe, in another. It is worth a little pains and money to do good to him.—Kipling.

Language Retains Hold

A thousand years have elapsed since the gypsy began to leave his native Indian plains, yet even to this day Romany bears a striking resemblance to India's modern tongues.

Club of Reformed Women

A unique club in London is the "King's Own," the membership of which is composed wholly of girls who have served prison sentences and now are reformed.

Height All May Achieve

All the possible charities of life ought to be cultivated, and where we can neither be brethren nor friends let us be kind neighbors and pleasant acquaintances.

Catarrhal Deafness

is often caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube is inflamed you have a rumbling sound or Imperfect Hearing. Unless the inflammation can be reduced, your hearing may be destroyed forever.

HALL'S CATARRH MEDICINE will do what we claim for it—rid your system of Catarrh or Deafness caused by Catarrh.

Sold by all druggists for over 40 Years.
F. J. Cheney & Co., Toledo, Ohio.

Rod La Rocque

Handsome Rod La Rocque, the "movie" star, was born November 28, 1898, in Chicago. He was educated in the Chicago and Omaha schools. He is six feet three inches tall, weighs 180 pounds, and has brown hair and black eyes. He began his stage career at the age of seven; later he was with a musical comedy show. He is popular with all who enjoy motion pictures.

"What's in a Name?"
By MILDRED MARSHALL

Facts about your name; its history; meaning; whence it was derived; significance; your lucky day, lucky jewel

CARMEN

THE very Spanish name of Carmen and the more or less English appellative Carmela are identical. Though they are used as distinct names, both signify "vineyard" and come to us through the Italian where Carmen is spelled Carmine.

The source of these two names is bound up in the history of the prophet Elijah whom the Greek translators called Elias. When the Empress Helena visited Palestine she built a church on Mt. Carmel, around which rose a cluster of hermitages.

The order of Carmelites was said to have been founded by the prophet himself, but when the Latins overflowed into Palestine it first came into note and its fame became widespread throughout the West. St. Mary was made its patroness and in Italy she became known as the Madonna di Carmela or the Madonna di Carmine. As a result the two names of Carmela and Carmine gained great popularity among the Italian women. They are still used there and in Spain, where Carmine was turned into Carmen, the name became a national favorite.

The ruby is Carmen's talismanic gem. It is said that she who wears a ruby can dwell without fear in the midst of enemies and will always be shielded from adverse fortune. The gem must be worn, however, on the left side. Tuesday is Carmen's lucky day and 7 her lucky number.

A LINE O' CHEER
By John Kendrick Bangs.

AS TO HUMOR

I'M ON a ship. I sail the sea.
I'm captain and the crew.
The tempest rages noisily,
And every tide besetting me
Is full of trouble's brew.

Yet am I sailing, sailing on,
And speedy is the pace,
And come what may in ports anon,
The goals mine eyes are set upon
Give zest unto the chase.

And if I gain, or if I lose,
If I have won or failed,
'Tis good to vie with other crews,
And purest joy my soul imbues
To know that I have sailed!

Results of Home-Coming Exhibits

The Spencerville Home Coming last Saturday was well attended. A new feature of the program was the exhibit of pigs and poultry by the Boys and Girls Clubs of Spencer Township. Prof. Shanklin of Purdue, judged the pigs and Mrs. H. M. Widney of St. Joe, judged the poultry.

The following club members were winners·

Pigs

Berkshires — Victor McCrory, 1st., Floyd Pflaumer, 2nd.

Chester White — Richard Andrews, 1st., Esther Lake, 2nd.

Duroc Jerseys — Hazel Stiman, 1st., Vernon Stiman, 2nd.

Sweepstakes— Richard Andrews

Poultry

Rhode Island Reds — Virginia Goldsmith 1st, Lucile Miller, 2nd.

White Plymouth Rocks—Harold Goldsmith, 1st.

Sweep stakes — Virginia Goldsmith.

Each first place was awarded a cash prize of $2 50 and each second $1 00

Plans are now underway to provide funds to send the sweep stakes placings in both Poultry and Pigs to the Club Roundup at Purdue next May. It is hoped that funds may be available also to send each first place.

Virginia Goldsmith has her poultry entered at the State Fair for next week.

The pigs belonging to Richard Andrews and Victor McCrory are also on their way to Indianapolis.

A. J. Smith, (Club Leader)

PATTERSON-FLETCHER'S SELL "AN EXTRA" SUIT OR OVERCOAT FOR $1.00

In this issue you will find a very unusual advertisement of Patterson-Fletcher company headed "An Extra Suit or Overcoat for $1.00." You buy the first suit or overcoat for $25, $30, $35, $40, $50, $65 at the regular price, select another garment of equal value and the second garment costs you $1.00.

You can buy two suits—two overcoats, a suit or an overcoat or if you do not need two garments, for your own use, you can take a friend along and divide the costs. In the sale, there will be about 1,000 heavyweight winter overcoats, gaberdines, and lightweight topcoats and almost as many suits—all garments from the best makers, such as Hart, Schaffner & Marx, Goodman & Suss, Hickey Freeman, Woodhull, Goodale & Bull and Michaels Stern & company.

Any man or young man who needs a fall suit, overcoat, topcoat or raincoat, should take advantage of this remarkable offer.

Spencerville Teachers For Year

Mr. A J. Smith will be principal and teach Science and Vocational Agriculture.

Mr. Paul W. Ashby from Indianapolis, will have charge of Music, Art, Latin and English.

Miss Ida Reed will teach Domestic Science, English and History.

Mrs Bernice Wilder, First and Second Grades.

Miss Minnie Walker, Third and Fourth Grades.

Mrs. Ellen Lake Hart, Fifth and Sixth Grades

Mr. W. N. Lake, Seventh and Eighth Grades.

Thought and Labor

It is only by labor that thought can be made healthy, and only by thought that labor can be made happy, and the two cannot be separated with impunity.

IGNITION TIMING VERY IMPORTANT

Gas Must Be Fully Ignited at Instant Crank Pin Passes Center.

Correct ignition timing is very important, says William H. Stewart, Jr., president of the Stewart Automobile school. The charge of gas must be fully ignited at the instant the crank pin passes dead center. When this is done the full expansive force of the explosion is exerted on the piston and the best results are obtained. When the motor is turning over at the rate of 1,000 revolutions a minute the crank pin passes through top center much faster than when the motor is turning over at the rate of 500 revolutions per minute. Since it takes a certain amount of time for the charge of gas to become fully ignited it is necessary to introduce the spark into the cylinder a little in advance in order to fully ignite the charge by the time the crank pin passes dead center.

Volume of Spark.

The faster the motor turns over the more advanced must be the spark. The volume of the spark is not changed by advancing or retarding, but simply the time of the spark in relation to position of the crank pin. When a motor is turning over very fast the spark may be advanced as much as 40 degrees; that is to say, the charge will begin to ignite 40 degrees before the crank pin reaches top center. As the speed of the motor is reduced the advance must be reduced, otherwise the force of the explosion will be exerted on the piston too soon and the tendency will be to reverse the direction of the crank shaft. When the spark is too far advanced a knock is noticeable. This is caused by the piston acting against the explosive force. The momentum of the flywheel carries the piston through the cycle; otherwise it would reverse.

Four Segments.

The ignition distributor has four segments, one for each cylinder. The secondary finger "rotating clockwise" touches the segments in the order of 1, 2, 4, 3, which may be the firing order. Pistons No. 1 and No. 4 will be at top center and pistons No. 2 and No. 3 at bottom center. If piston No. 1 is up on compression and ready for ignition then piston No. 4 has just completed the exhaust and ready for the intake. Likewise piston No. 3 has just completed firing and piston No. 2 the intake.

Body of Automobile Is Injured by Use of Hose

The commonly-used rubber hose is perhaps the best method of cleaning the lower portions of the car, such as wheels, running gear, and mud-guards. But it is positively injurious when used on the body and highly finished surfaces, says a writer in the American Motorist.

The force with which the stream of water impinges on the surface causes the sand and dirt adhering to the body to be driven into the varnish, destroying its brilliancy, and no amount of polishing and rubbing will restore original luster.

The body should be washed with lukewarm soap and water and immediately dried with a soft chamois. Many owners use a mixture of cylinder oil and kerosene which they apply on the body, rubbing it dry afterwards. Another scheme is to use a mixture of boiled linseed oil and turpentine applied sparingly and rubbed absolutely dry. The use of this polish will restore even an old car to a degree of splendor that will please the user.

Knowledge of First Aid by Autoists Is Needed

That every man or woman who drives an auto should understand simple first aid methods, is the firm conviction of Dr. Herman Bundesen, Chicago health commissioner.

"Every year throughout the country thousands of people unnecessarily lose their lives through automobile accidents, because those who could be of aid at the time of accident, become panicky and lose their heads when there is a cut artery," says Doctor Bundesen. "If they understood the simplest rudiments of first aid, a handkerchief and a pencil or ordinary stick of wood could be used as a tourniquet thus stopping hemorrhage until medical help arrived.

"The autoist, especially, is in need of first aid knowledge. Whether in the city or en route, he should be provided with a compact first aid kit.

"The common injuries which occur through automobile accidents are cut arteries, fractures or broken bones cuts and bruises. Many minor injuries which through neglect, prove fatal, occur in taking off spare tires. Every wound, no matter how slight, should immediately be swabbed with iodine. Splints, used in case of fracture, will keep the limb at rest and relieve the patient of much pain until placed in the hands of the physician."

Smallest Automobile in Famous Brooklands Race

Great crowds of bank holiday vacationists witnessed the meeting at the Brooklands autodrome, England. Among the most interesting of the contesting cars was the single-cylinder Jappic, shown above, the smallest car entered. It was second in the 75 m. p. hr. short handicap.

Importance of Magneto Very Often Overlooked

The new car owner often worries about the electrical system of his car and is inclined to believe it is involved and liable to make trouble. As the spark is the life of the engine, he doesn't want anything to go wrong with the mechanism that generates it. Few beginners realize how simple, yet how effective and free from trouble the magneto really is. There is only one wire to each spark plug and one to the switch. There are no "don'ts" and only one "do"—oil it now and then. As the magneto current reverses automatically with every spark, there is no pitting of contact points. No current can be wasted when the engine is not running.

The magneto is dependable under all conditions of operation. Where the engine changes speed rapidly, as on hills, in traffic, or in quick getaways, the magneto takes care of all these changes without a constant "nursing" of the engine being necessary.

BALLOON TIRES WERE USED 25 YEARS AGO

What were probably the forerunners of the modern balloon tires were the tires used on this huge tricycle in 1898. The tricycle traveled nicely in dry weather, propelled by six men on bicycle seats, all pedaling for dear life on a chain gear with one man at the steering wheel. But in wet weather it slid all over the street as nonskid chains were not made large enough to go around the wheels. The two larger wheels were 14 feet in diameter, and the small wheel in front was six feet in diameter. The large wheels took tires 80 i[illegible] diameter.

Seen and Heard In Indiana

The thirteenth annual meeting of the Indiana Baptist assembly was held at Franklin college.

A conference on rural education was held at the Indiana State Normal school at Terre Haute.

Four hundred Spanish-war veterans from the northern part of Indiana held a reunion at Peru.

More than 250 county commissioners attended the twenty-third annual convention at Terre Haute.

The Methodist Protestant state conference held at Marion re-elected Rev. F. W. Lineberry, of Jonesboro, president.

The Indiana yearly meeting of the Society of Friends held its one hundred and fifth annual session in Richmond.

Frank J. Hall, age eighty-one, former lieutenant governor of Indiana, died at the Eastern Star hospital at the Indiana Masonic home in Franklin.

Twenty deputy sheriffs have been sworn in by the Connersville Bankers' association in connection with plans to join in the state-wide war on bank bandits.

Capt. Stuart McGowan, seventy-seven years old, and for many years adjutant at the Soldiers' home, died at his home in Marion after an illness of two years.

Causing the death of Mrs. Katherine Scott, fifty, and destroying several thousand dollars worth of property, a terrific windstorm swept through Merom.

The Indiana conference of the United Brethren Churches in Christ, including 63 churches in the southern half of the state, and a part of Kentucky convened at New Albany.

Appointment of Harry C. Fenton of Indianapolis as secretary of the Republican state committee was announced at Indianapolis by Clyde A. Walb of Lagrange, state chairman.

W. E. Hendricks, Terre Haute, was elected president of the Indiana Elks' association at the annual convention, which was held in Valparaiso. Elkhart was selected as the 1926 convention city.

Col. George D. Freeman, Jr., detailed by the War department as new commanding officer of the Eleventh U. S. Infantry, stationed at Fort Benjamin Harrison, reported for duty with his new unit.

"The common drinking cup is fast disappearing and soon will be as antiquated as the old oaken bucket that hung in the well," says the bulletin issued at Indianapolis by the publicity bureau of the Indiana State Medical association.

The petition asking for the pardon of Warren T. McCray, former governor of Indiana, who now is in the Federal penitentiary at Atlanta, was received at the office of the United States district attorney at Indianapolis. No action will be taken for a few days.

Many "wild" and "headstrong" children, who later become criminals, defying the laws of society, could be saved in their early years through psychological tests, according to Prof. W. F. Book, head of the psychological department of Indiana university at Bloomington.

More than four thousand members of the American Legion and legion auxiliary frolicked, renewed acquaintances at their convention held in Fort Wayne and twice heard Gen. James A. Drain, national commander, deliver potent messages, in which he predicted 2,000,000 legionnaires in five years, and urged untiring aid for the disabled.

A campaign to raise $50,000 from Indiana men and women for the purchase of the wooded tract known as Limberlost, former home of Gene Stratton Porter on the shore of Sylvan lake, in Noble county, will be begun soon under the auspices of the Indiana Federation of Clubs. The intention is to convert the property into a state park.

E. W. Steinhart, who was re-elected president of the Hoosier State Automobile association at Indianapolis, said that the association would be sponsor for a state celebration of the tenth anniversary of the Dixie highway in October, when a great motorcade will pass through the state from South Bend to New Albany, en route from Sault Ste. Marie, Mich., the northern terminus of the highway, to Miami, Fla., the southern end.

Indiana has available more than $7,000,000 in federal highway aid money that can be claimed between August 1, 1925, and the close of the construction season of 1926, according to John D. Williams, director of the Indiana state highway commission at Indianapolis. Mr. Williams' announcement was made after he submitted a statement on federal aid covering nine years to Governor Jackson and was a refutation of the charge that Indiana had exhausted all its available moneys for highway construction.

With the consideration of various aspects of the state road and bridge construction program for 1926 the chief matter for discussion, the members of the state highway commission met at their headquarters at the statehouse, Indianapolis.

The total assessed valuation of all property, real and personal, in Indiana for 1925, will approximate $5,174,344,797, or about 3.5 per cent less than the assessed value of last year, according to a compilation given out at the office of the state board of tax commissioners at Indianapolis.

IMPROVED UNIFORM INTERNATIONAL

Sunday School Lesson

Lesson for September 6

PAUL WRITES TO THE PHILIPPIANS.

LESSON TEXT—Phil. 3:7-16; 4:8.
GOLDEN TEXT—"I can do all things through Christ which strengtheneth me."—Phil. 4:13.
PRIMARY TOPIC—Paul and His Friends.
JUNIOR TOPIC—Paul Pressing Toward the Goal.
INTERMEDIATE AND SENIOR TOPIC—Choosing the Best Things.
YOUNG PEOPLE AND ADULT TOPIC—The Christian's Goal.

The contents of the epistle may be summarized as follows:

1. Salutation (1:1-2).
2. Thanksgiving and prayer in which he shows his loving interest in them (1:3-11.)
3. Triumph of the gospel in spite of opposition (1:12-26).
4. Duties enjoined (1:27-2:18).
5. Paul's promise to send Timothy and Epaphroditus (2:19-30).
6. Exhortations and warnings (3:1-4:1).
7. Renewed appeal for unity (4:2-9).
8. Personal matters (4:10-23).

The essential message of Philippians is a revelation of the mind which should dominate the Christian.

I. All Things Loss for Christ (3:7-9).

The occasion for this remarkable declaration was the claim of the Judaizing teachers for legal righteousness. In chapter 3:4-6 he enumerates the grounds upon which he had a right to base his claims for legal righteousness.

1. "Circumcised the eighth day," in keeping with the demands of the law.
2. "Of the stock of Israel," related by blood and birth.
3. "Tribe of Benjamin," from which the first king was chosen, and which always remained loyal to the nation.
4. "An Hebrew of the Hebrews," in contrast with some of mixed parentage.
5. "Touching the law, a Pharisee," the sect most zealous for the ritual of Judaism.
6. "Concerning zeal, persecuting the church." A passionate effort to crush the church.
7. "Touching the righteousness which is in the law, blameless," as to the condition of life demanded by the law.

All of these, valuable in themselves, when placed alongside of the excellency of the knowledge of Christ were abandoned for a better thing. The vision of Christ gave him the true perspective of values. In this light he saw the utter worthlessness of these things. After some thirty years of such trials and sufferings as perhaps no other human being ever knew, he has no regrets, and still counts them as refuse in comparison with what he had gained in Christ.

II. Paul's Present Desire (vv. 10-11).

1. "That I May Know Him."

Personal acquaintance with the Lord was his supreme desire. To know the saving grace of Christ is good, but to know Christ is infinitely better.

2. "The Power of His Resurrection."

This is an advance thought over personal acquaintance. It is the expression of the life of Christ through the apostle. It is the power you gain to overcome, the mastery over sin and self.

3. "Fellowship of His Sufferings."

Not only identified with Christ in His sufferings by imputation, but that he might fill up that which is behind of the afflictions of Christ (Col. 1:24).

4. "Attain Unto the Resurrection of the Dead" (v. 11).

This will be accomplished when the Lord comes (I Thess. 4:16-17).

III. Pressing Toward the Goal (vv. 12-16).

Paul clearly grasped the meaning of his perfection in Christ, yet he was keenly conscious of his personal limitations. Herein is expressed the true law of progress in the spiritual life.

1. Conscious of Limitations (v. 12).

The first step towards progress is to be profoundly dissatisfied with personal attainments. No intellectual advancement is ever made by those who think they know enough, who are satisfied with what they have.

2. Conscious of a Transcendent Goal (v. 13).

The Christian life is an upward calling.

3. A Resolute Determination to Reach the Goal (v. 14).

He declares, "This one thing I do."

IV. The Right Occupation of the Mind (ch. 4:1-8).

The ideal controls the man. "As a man thinketh in his heart, so is he." When once the mind is guarded and controlled by the peace of God, it will dwell upon spiritual things.

Faith

"Every man may lose the sunshine for a time because of the clouds but happy is he if he still retains his faith."

The Good Shepherd

A good shepherd always looks after his ailing sheep.—Western Christian Advocate.

Teaches Mercy

"The religion of Jesus Christ alone teaches mercy."

Scraps of Humor

IN WASHINGTON

Megaphone Man on Rubberneck Wagon—In front of you is the National Capitol.

Sweet Young Thing—Oh, isn't it angelic?

Mr. Grouch—Angelic? Why, young woman, how can you speak of it as being angelic?

Sweet Young Thing—Well, it has wings, hasn't it?—Florida Times-Union.

MARK OF HEREDITY

Bobbie—Gimme half your cookie. Mine's all et up.

Ethel—I never saw such a greedy boy. I don't believe you were brought by a stork, at all. An ostrich must have brought you.

Couldn't Joke Adam

Whatever troubles Adam had,
No man could make him sore
By saying, when he told a joke,
"I've heard that one before."

According to Plan

Harold—When I asked Dorothy if she would be mine, she fell on my breast and sobbed like a child, but finally she put her arms around my neck and—

Ethel—Oh, yes, I know all about it, I rehearsed it with her.

The Test

"When I put the coat on for the first time and buttoned it up, I burst the seam down the back!"

"Yes, that will show you how well our buttons are sewed on!"

Beat Him to It

His Wife—I hear Mrs. Tripplewed was led to the altar for the third time.

Mr. Pester—Led to the altar? I hear she was there first.

SPEEDING PARTING GUEST

Hostess—Going so soon, Mr. Pstunge?

Mr. Pstunge—No, I'm not going for at least an hour, but I have to begin to start the engine of my second-hand car.

Left With Thorn

Talks about the roses
Where the light is born,
When the darkness closes,
Leaves us with the thorn.

Extra Urn Suggestive

Kriss—So you felt uncanny while courting that little widow?

Kross—You bet. She kept the ashes of her late husband right on the piano.

Kriss—Oh, that isn't so terrible.

Kross—Maybe not. But I didn't like the looks of the extra urn.

Might Have Been Worse

Dobbs—The man in the next apartment isn't such a bad chap, after all.

Hobs—Is that so?

Dobbs—Yes. After he had awakened our baby last night with his saxophone he kept right on playing so I couldn't hear it crying.

Why She Made Him Promise

Mabel—I let Jack kiss me on condition that he wouldn't mention it.

Marie—I suppose you wanted to break the news yourself, eh, dear?

Seasonal

Traveling Man—Do you have hot and cold water in this room?

Bellhop—Yep; hot in summer, cold in winter.

* * *

Valuable feed may be saved by culling the poultry flock this summer. Those hens that molt early, that are old and inactive, are generally boarders and should be sold or put in the pot.

* * *

Cattle need liberal amounts of salt and should have free access to it at all times. They will eat more ground rock salt than unground rock salt and ground evaporated salt than any other kind. The ground rock salt seems to furnish enough for good results.

POINTS ON KEEPING WELL

DR. FREDERICK R. GREEN
Editor of "HEALTH"
(©, 1925, Western Newspaper Union.)

MAKING THE LAME WALK

DURING the last five years, one of the greatest charities of modern times has been developing so quietly that few people in this country know anything about it or have even heard of it.

The Ancient Arabic Order of the Nobles of the Mystic Shrine is one of the side orders of Masonry. It is a social body, made up of successful and well-to-do Masons. Its object is the cultivation of friendship and good-fellowship by banquets and entertainments. It has been said by some one frivolously inclined that its principal object was to give married men an excuse to stay out nights. Certainly its occasional public appearances or the sight of its thousands of red fez-crowned members on their way to and from their annual conventions would never lead one to suppose that it was an especially philanthropic body.

Yet its membership is evidently made up of kind-hearted and far-sighted men who want to share their good fortune with others and to make happier that saddest group of all, the crippled and deformed children.

Five years ago, at its convention in Portland, Oregon, the Shrine voted to assess each member two dollars a year. What for? To have more dinners, to build themselves an imposing building? Not at all. To establish all over the country hospitals for crippled children who needed care and treatment and were unable to get it.

Since that time, hospitals have been built and are now in operation in St. Louis, Shreveport, La.; San Francisco, Philadelphia, Portland, Ore.; Minneapolis and Springfield, Mass. Another is now being built in Chicago.

In the St. Louis hospital, according to a recent article in Nation's Health, there have been admitted in the last year 333 little patients, of whom 242 have been discharged cured. 92 are now under treatment and 98, accepted for admission, are waiting their turn for treatment. An out-patient department for children who need treatment but do not require hospital care has treated 420 children.

And this is only a beginning. The Shrine does not intend to stop until every crippled child in the country who needs care shall have it. The order is spending $1,000,000 a year for this purpose and is caring for 2,000 crippled children each year. Surely thousands of little cripples and their parents will for years to come bless the Nobles of the Mystic Shrine.

PREVENTING SCURVY

SCURVY is a strange disease which used to be regarded as peculiar to sailors. On long voyages, when for weeks and months the crews of slow-sailing vessels, without any means for keeping fresh foods, lived on salt beef, pickled pork and hard crackers, this disease was common. Then the British authorities, finding that any kind of fruit juice would prevent or cure it, passed a law requiring all British vessels to carry a supply of orange, lemon and lime juice. So in the slang of the sea, English sailing vessels were for years known as "lime juicers."

Today, with steamers largely replacing sailing vessels and with refrigerators and storerooms on board, scurvy is a rare disease at sea, except in cases of shipwreck or accident.

But scurvy is by no means confined to sailors. It is also found in poorhouses and other institutions where inmates are confined for months to a diet which does not include enough fresh, raw vegetable food. This is especially true of infants in the first two years of life.

The type of scurvy frequently found twenty years ago among bottle-fed babies was that of a pale, weak, listless child, with soft, swollen, bluish gums, arms and legs swollen and tender, and frequent bleeding from the gums, lip and under the skin. Education of mothers and nurses on the prevalence of this disease has greatly reduced both its frequency and its severity, so that the old plainly-marked cases are now seldom seen. The present form is that of a child that is restless, irritable, with tender arms and legs, which has no appetite, does not gain weight, cries when handled, and has a rapid pulse and respiration. The trouble is never severe in the beginning, but the child fails slowly and generally dies of exhaustion.

But whether on land or sea, the treatment is the same and the recovery is rapid. Any fresh fruit or vegetable or fruit juice, oranges or orange juice, lemon juice, fresh or canned tomatoes, raw milk, potatoes, carrots, turnips, spinach or lettuce, will soon transform the fretful, wretched baby to a happy growing child. In fact, the best authorities on children now hold that all babies from the second month on, should have orange juice every day, not only to cure but to prevent this wretched disease.

Chivalry's Aim

Chivalry, in so far as it means consideration for others, is a development of civilization. It functions as a gentle regard for the weak—a willingness, because of one's strength, to deal generously with minorities, servants, cripples and women. It appears at its best in the willingness to sacrifice self in order to save others.

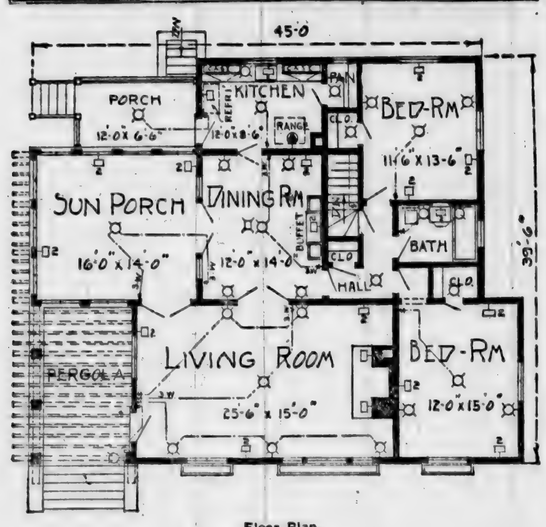
Five-Room Bungalow Provides Home With Individuality and Comfort



Floor Plan.

Mr. William A. Radford will answer questions and give advice FREE OF COST on all problems pertaining to the subject of building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on the subject. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

By WILLIAM A. RADFORD

One of the greatest assets that a house can possess is individuality, and when this individuality expresses the character of the owner it achieves its greatest worth. Not many years ago most houses were monotonous and dreary, they lacked individuality to such an extent that a street of small houses was highly unattractive. Even in the larger residences there was little true individuality. Attempts at variety were made, but these were usually in the nature of elaborate ornamental work, and the result was far from beautiful.

But this has all changed in recent years. Today even the small-home owner may have a house which is individual and at the same time beautiful with the beauty of good design, the first essential of true and lasting beauty.

In the home shown here we find an unusually good example of individuality, and the floor plan incorporates a number of rather novel, but at the same time, good features. The approach is along a beautifully shaded walk at one side of the lot and the steps at the corner of the house lead to a porch structure which extends along the entire side of the house. The forward part of this is simply a front porch of pergola style while the rear part is inclosed to form a sun porch, opening off the dining room. The pergola roof is carried on back over the sun porch to make the structure a complete unit. Just back of the sun porch is the back porch, which is separate and set back slightly from the line.

The house is built of stucco, but is well adapted to being carried out in other materials, shingles or clapboard. The roof is shingled. There is a raised belt about the outer walls, just at the floor line, which makes a pleasing break in the expanse of the walls. Casement windows are used to good effect, and the flower boxes beneath them add greatly to the charm of this home. The low overhanging eaves have been well treated to give a good roof line and even the downspouts have been handled in a way to serve more than the purpose of mere utility.

Large Living Room.

The front entrance leads into one corner of the large living room, which is 25½ by 15 feet, with a large fireplace at one end. Almost the entire front side of this room is in windows which make it a light and cheerful place such as is desirable for the principal room of the home. Other doors lead into the sun porch and the dining room.

The dining room is placed in an interesting manner practically in the center of the building. It actually has no outside windows, though there are windows and a door at one side giving entrance to the inclosed sun porch. At the opposite side is a built-in buffet and a door into a hall which gives access to the two bedrooms and the bathroom. Another room opens directly into the kitchen, which is a small, convenient room, well-equipped with built-in cases and arranged in a manner to reduce the kitchen work to a minimum.

The two bedrooms are in two corners of the house with the bath conveniently placed between them. Both are good-sized rooms with ample space to accommodate the usual bedroom furniture, and each is provided with a good closet. There is also a hall closet for the storage of linen, and a stairway in the hall leads to the basement, where are provisions for heating plant, coal room, laundry and so on. There is also a pantry on the main floor which affords plenty of storage space conveniently off of the kitchen.

Helpful Hints

Combination bathtubs need little space to install and are thoroughly up to date.

• • •

Screen wire stretchers, which stretch the wire and hold it while tacking, are notable time savers.

• • •

Laundry tubs formed from soapstone make an enduring fixture for the substantially built home.

• • •

Wire cloth for screens and other household uses, made of copper or bronze or galvanized zinc, is obtainable.

• • •

Cardboard models of houses, illustrative of the actual completed work, will go far to sell the building idea to interested prospects.

Wood Tiling

One of the most pleasing features of any building is beautiful flooring. Its appearance, upon entering a room, adds richness and cheerfulness, and raises the grade of all the surroundings.

No single feature of a building, especially of a home, adds to its intrinsic value so much as beautiful flooring. As appearance is one characteristic that can be judged by the eye, there is no doubt that wood tile will nearly always be the choice of people artistically inclined, even when in competition with the most expensive marble.

Window Box Is Easily Made by Home Owner

Window boxes, especially in small cottages or bungalows, add at least 100 per cent to the appearance of the place.

Boxes for the windows are easily made, even by one who has only passing skill with hammer and saw. There is, however, more to making a window box in which flowers and plants will grow well, than in just knocking a few boards together.

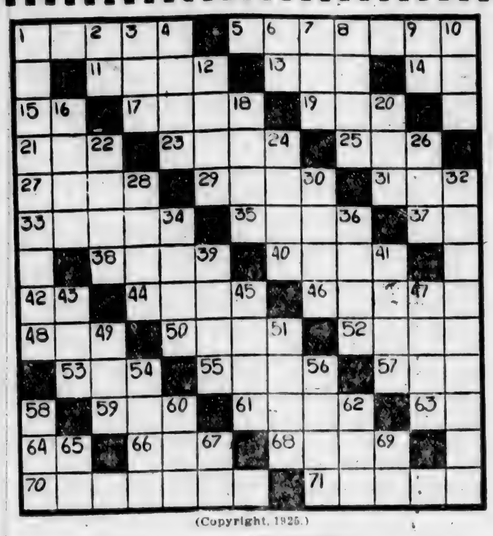
In the first place measure the size of the window. The box to fit and look well should be about one or two inches shorter on each end than the window frame itself. The depth should be about nine or ten inches and the width, of course, depends on what one wishes to grow. Ten or twelve inches has been found ample to take care of most of the window box variety of plants and flowers.

If the worker has the skill, it would make a better box if he were to make a false bottom and then cut a few small holes in the real bottom of the box. A window box, because of its limited possibilities, should have only the best of soil put into it.

Cork for Insulation

No more striking example of the heat insulation value of cork can be found than the cork-lined helmet of the tropics. What cork will do for the white man there it will do for your home here.

CROSS-WORD PUZZLE



(Copyright, 1925.)

Horizontal.

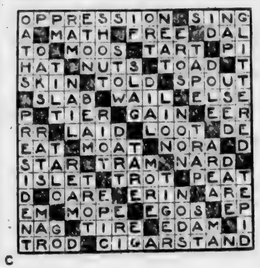
1—To search to the bottom
5—Sources of water
11—Wealthy
13—A means of propelling a boat
14—An exclamation of surprise
15—A printer's measure
17—A dull sound
19—An intoxicating liquid
21—Transgression
23—Native metallic compound (pl.)
25—Sorrowful
27—Covered with a frosting
29—Allows
31—By or through
32—An affectionate term (pl.)
35—A heavy stupid fellow
37—You and I
38—Rodents
40—Unpopular plant in gardens
42—A negative
44—Timber or lumber
46—To wilt or sag
48—A nonprecious metal
50—To knit a certain stitch
52—The language of the Moros
53—To linger
55—To stream
57—A masculine being
59—A kind of vehicle
61—To gond
63—Limited (abbr.)
64—A note in the diatonic scale
66—Crusy
68—Black
70—A modern young woman (slang)
71—Rested on the feet

Vertical.

1—The head of any institution
2—Either
3—A small amount
4—To send back or repeat a sound
6—A river in Italy
7—A tatter
8—A kind of flower
9—To proceed
10—That girl
12—To throw
16—Small rodents
18—An action
20—A short sleep
22—Not far
24—To store away
26—Condensed moisture from the air
28—To sketch
30—A snow vehicle
33—To cease
34—A word
39—A liquid nutriment
41—Fate
43—To lubricate
45—To let fall
47—Spokes
49—To annoy by petty faultfinding
51—To entice
54—A silk fishline strengthened with wire
56—Steals from
58—Not on
60—A mountainous ravine
62—A small spot
65—Popular name for the governor of New York
67—A prefix signifying separation
69—A negative

The solution will appear in next issue

Solution of Last Week's Puzzle.



HOW TO SOLVE A CROSS-WORD PUZZLE

When the correct letters are placed in the white spaces this puzzle will spell words both vertically and horizontally. The first letter in each word is indicated by a number, which refers to the definition listed below the puzzle. Thus No. 1 under the column headed "horizontal" defines a word which will fill the white spaces up to the first black square to the right, and a number under "vertical" defines a word which will fill the white squares to the next black one below. No letters go in the black spaces. All words used are dictionary words, except proper names. Abbreviations, slang, initials, technical terms and obsolete forms are indicated in the definitions.

Sargent Great Painter; Ranks With Van Dyck

One of the close friends of John Sargent said of him when he learned of his death: "He was more than a great painter; he was a great man who chose painting as his means of expression." That was a shrewd appreciation of the man. He had something more than a gift for drawing, or a rare eye for color. He had a strong and keen intelligence, an astonishing power of reading character and rendering it in his pictures, a soul that was at once lofty and simple. Wherever he went men recognized at once a man authentically great.

Mr. Sargent was both American and cosmopolitan. He came of sound New England stock and was always proud of that fact. But he was born and passed much of his youth in Italy, he learned to paint in Paris, he lived during a great part of his mature life in England. Few painters have been so much a man of the world in the good sense of the words. The quality shows in all his work, particularly in his portraits. It is that which has made so many critics compare his portraits with those of Van Dyck. It is that which gives even to the slightest of his sketches the note of distinction. He knew a very great deal besides how to paint pictures. In that he was not unlike another son of New England ancestry who lived much abroad and won world fame as an artist—James A. McNeill Whistler—though in disposition, temperament and methods of painting the two men were far apart.

Mr. Sargent will be remembered chiefly as a portrait painter. His subjects live on the canvas as real people, whose traits of mind and character are—sometimes disconcertingly —revealed to us by the artist. His great mural design in the Boston public library, in which he treated symbolically the history of religion among the races of men, is a stupendous work, often of great ingenuity and beauty, but perhaps better adapted to illustrate other aspects of his remarkable intelligence than his mastery of the painter's art. It is something, however, that no visitor to Boston should miss seeing. It offers you much to admire and to think about.

In London the feeling about Mr. Sargent was expressed in a striking memorial service in Westminster abbey. That means that he is already counted by his contemporaries as one of the immortals of the English-speaking peoples. With that judgment posterity will, we are confident, agree.—Youth's Companion.

Functional Powers

Huxley in his "Origin of Life" says: 'In the lowest organisms all parts are competent to perform all functions and one and the same portion of protoplasm may successfully take on the function of feeding, moving or reproducing. In the highest organisms, on the contrary, a great number of parts combine to perform each function, each part doing its allotted share of the work with great accuracy and efficiency, but being useless for any other purpose."

Highway Crosses Desert

The Wendover cutoff is a highway which has just been completed across the mud flats and salt beds of the Great Salt Lake desert between Salt Lake City and the Nevada line. The completion of the road opens the way for transcontinental and interstate travel between Salt Lake City and northern and central California, and brings to a successful conclusion a five-year effort to bridge the age-old obstacle of the salt desert.

Sailors Use Odd Words

Prof. George T. Flom of the University of Illinois says that the reason sailors use such strange and odd words is traceable to the mystery of the sea and the sailors' fear of the mysterious power of the sea. Uncommon words are employed to cope with the feeling that they are intruders in a realm ruled over by powers more mysterious and terrible than any on earth.

In for It

"Foozled again. That oil stock salesman was so persistent that I bought one share of stock to get rid of him."

"Well?"

"The stock is paying a dividend. I'll never be able to turn him down now."

The Grouch Observes

Many a man who prays for rain would doubtless steal his neighbor's umbrella if his prayers were answered.—Exchange.

Recognize Matron in Latest Modes

The World war of 1914-'18 is responsible for the present trend of the mode toward feminine grace and comparative maturity. Lest this sound overly dogmatic, says a fashion correspondent in the New York Herald-Tribune, we hasten to explain that it is merely a theory, but it is an exceedingly tenable theory, based on close observation.

The premise is patent enough. A cursory glance at models worn at the Ritz in Paris is convincing evidence that flaming youth is no longer the motivating force of fashion. Not that there are any traces of decrepit age on the frocks, but the atmosphere of flapperism has been replaced by a graceful dignity that is infinitely easier on the eyes. Obviously, there must be a reason for the retreat of youth and we append our solution.

The great youth myth of the present decade was unquestionably founded on the liberating influence of the equally great war. Costumes manners and morals were all subjected to radical revision by the debs and subdebs of 1917 and the older generation was powerless to stem the tide. The reason was easily evident. Here was a group of girls, ranging in years from about eighteen to twenty-eight, who, because of the dearth of men, were suddenly thrown into more responsible positions than their Victorian mothers had ever dreamed of. Some were Liberty loan speakers, some were yeomen, actual members of the navy. Some worked tirelessly at canteens and many stepped ably into the niche left vacant by the fighting man. Overnight, almost, they became a power in the land and they proceeded forthwith to make their influence felt.

When Questions Were Asked.

The luxurious locks and the heavily encompassing corset that had flourished through the years were the first to feel the arrogant hand of the new youth, and they were followed by many other costume innovations, not always of proven taste. When mature minds remonstrated, the younger generation serenely heedless, would ask, "What war were you in?" And even San Juan hill and Dewey were insufficient answers to the contemporaries of Foch, Pershing and Haig. Irresistibly the war youth swept on and eventually maturity capitulated and borrowed the manners and costumes of their flappery juniors.

Since the spring of 1924 there has been manifested a counter current to these tides of youth. At each subsequent Paris opening the tendency has gathered greater momentum. Today fashion has acquired a graceful, dignified atmosphere despite its occasional bizarre flare-backs, and it is our opinion that the war girls have taken hold of the situation again and are responsible for the feminine dignity of present fashions.

They're not as young as they once were, these originators of the cult of youth, and on the continent they have seen eleven summers pass since the first blare of the guns. The once pert demoiselles of eighteen to twenty-five are now mature women of twenty-nine to thirty-six, and another generation of youngsters has taken their place. Doubtless they were quiescent and philosophic enough at first and even satisfied to make way a little for the rising young idea. Although they still clung to the straightline simple costume which has been their birthright, gradually they were perceiving that these same costumes seemed far more attractive on their younger sisters.

Other generations had been content under the circumstances to retire quietly from the picture—but not so the war girls. Who were these youngsters that were displacing them? What war—that was it—what war had they ever fought in? It was the same battle cry that had conquered their prim mothers of a decade ago, and it prevailed again against modern youth. The couture, unable to rid itself of the myth of jeunesse, was reluctant at first to change its base, but the war generation was inexorable and the designers commenced gradually to succumb. The flare, the jabot, the gode and hosts of other feminizing details have all entered the lists of fashion and the spirit of the moment is graceful and comparatively mature femininity—thanks, if you concur with this postulate, to the gentle warriors of the last decade.

Whether or not you agree with the reasons, the result is the same—youth as the sine qua non of fashion, has passed.

Velvet in Fashion Picture.

Against the picturesque background of the famous race courses the fashions launched in Paris each summer have an appeal not to be equaled by similar showings anywhere else in the world, and while the costumes worn by mannequins from the leading couture establishments are often a bit too exaggerated and extreme for general acceptance, nevertheless the origin of a style that achieves success frequently may be traced back to its initial appearance at Longchamp, Chantilly or Auteuil.

Showing Popular Mode That Features Straight Lines.

Model Displaying Flare Which Starts at Hip Line.

This year the chic French woman has finally departed from her usual custom of adhering to black, white or her favorite magpie combinations of these tones and has elected to appear in the soft pale tints that have such allure and distinction.

Beige tones are much in vogue and there is evidenced a liking for shades of cobalt, blue-green, rose, amber and the wide range of violine shades. These are chosen for both printed frocks and for the semi-sports models fashioned of light crepes.

The importance of the large hat was definitely established by the numbers which appeared at the races. Many were of crin in lovely light colors, but from a fashion point of view the most noteworthy hats were large capelines of velvet in shades of fuchsia, dahlia, amaranth, bois de rose and cyclamen with the wide brims and small crowns proclaiming their recent origin.

Soft Crowned Velvet Hats.

Considerable interest is manifested in the early opening of milliners who apparently are making a concerted effort to introduce models which will at least equal the vogue of the small felt and velours hats. In practically every collection there are many models fashioned entirely of velvet with soft, pliable crowns. Some are of medium size with a slight upward tilt at the sides and back and are in flattering rather brilliant shades.

Elaborate brocades and velvets of unparalleled richness are also shown at the Paris exposition and because of their unusual beauty it is predicted that they will have an important bearing upon the fashion trend of the autumn season.

Poiret also displays a feeling for graceful wraps modeled of the lines of capes and has designed a reversible cape which is black velvet on one side and apricot on the other. Bands of white fox complete its aspect of luxury.

The necessity for an evening wrap somewhat more substantial than the gossamer affairs of chiffon and georgette crepe that often are an integral part of the evening costume has brought about the introduction of a new version of the shawl. Fashioned of chiffon velvet and bordered with a wide band of fur, or of metal brocade outlined with a deep border of velvet, it is an elongated square in shape and may be draped into lines and folds adapted to each individual wearer.

For evening wear chiffon velvet in pale orchid shades is used by several of the most important couturiers who also employ this fabric in a shade of brilliant green for dinner and evening gowns.

Wanted:—Light house keeping rooms during school term of 1925-26, for lady and gentleman. Notify Trustee Milliman immediately.

It pays to advertise—Mrs. F H. Langley. "Last week we cleared out our entire millinery stock, nothing left this week." Why don't others use The News columns?

Mr. and Mrs. Hiram Reasoner and Wilbur Potter, wife and son of Zion City, made The News office a pleasant call Wednesday morning. They were unable to remain for the Home-Coming.

Decorate your homes, yards and business houses for Saturday. Do it early and thus help the committee carry out plans. If you do it, so will your neighbor.

Mrs. Belle Ridgway has returned home from Hobart, where she has been visiting her daughters. Mr. and Mrs. Sylvester Chandler accompanied her home for a short visit.

Cash paid for false teeth, dental gold, platinum and discarded jewelry. Hoke Smelting & Refining Co, Otsego, Mich.

H. M. Widney returned Tuesday noon from his timber land in southern Indiana, and reports work of cutting and milling the timber as progressing nicely. He landed a large contract for all the wagon timber, and this is big when you consider 240 acres of virgin timber.

In the window at The News office is a sample of Dutch Oats raised by John Koch. Good straw and well headed, makes for a good yield. Jim Rhodenbaugh also has a sample of his new variety "mitten" corn on display. It is a novelty corn and is sure well named. Just stop and see it. The seed was imported from Europe by Jim and he says every ear runs true to name.

September McCall's is now on sale at News office.

Miss Ruth Bowen of Ft Wayne, is here visiting relatives this week.

Born to Mr. and Mrs. Walter Zonker, Thursday night, a baby daughter.

Keith Smith and mother of near Chicago, are here guests of Mrs Wilson Sanders.

The Central Grocery is being painted to be in readiness for the Home-Coming.

Mr. and Mrs. Marshall Andress and Harry Hursh and wife, spent Sunday with Clayton Wyatt and wife.

A real chicken dinner 35c. A good, wholesome supper 25c, by Lutheran Ladies Aid September Fifth

The Misses Mary Edith and Beverly Johns of Garrett, spent Thursday and Friday with Mrs Neva Hursh.

Francis Hickman and family spent Saturday and Sunday with their parents and also attended the Bayliss-Harding reunion held at Bryan, Sunday.

Mrs. C. C. Bassett spent from Wednesday until Friday evening a guest of her mother, Mrs. A. D Brunson, and brother, Tom Brunson and family.

CIDER MAKING—I have started operating my cider mill on Tuesday, Wednesday, Thursday and Friday each week. Also cane in season. Apple Jell and Vinegar. ELI THOMPSON, 5 miles north of Hicksville on Concrete Road.

Hicksville Phone.

The 46th annual reunion of the 44th regiment Indiana Volunteer Infantry, will be held at Waterloo, Indiana, Thursday, September 10. The meeting will be held in the Methodist church. Assemble at 10 a. m., register, get your badge and visit. Have a good time. Dinner will be served in the basement at the church. The afternoon will be devoted to the "boys" of the regiment.

Old Friends

by O. Lawrence Hawthorne

So many of us soon forget
The friends we leave behind.
With earnest vows we part, and yet
They seldom come to mind;
With newfound interests each day
Is fully occupied;
We go serenely on our way
And seem quite satisfied.

In search of greater happiness
We bid old friends good-by—
A parting word, a last caress,
A deep regretful sigh—
Then all too soon, in lands afar,
The welcome that we find
Bids us forget how fond we are
Of those we leave behind.

But sometime in the lives of all,
No matter where we roam,
We'll hear again the faithful call
Of those old friends at home.
And then it is that memory
With tender touch will play
Some old familiar melody—
A song of yesterday.

And with that song to guide our feet
To haunts we used to know
We'll yet find time—perhaps—to greet
Those friends of long ago.
Their cordial smiles will show how well
Their hearts have stood the test
Of our neglect. Then can we tell
Why old-time friends are best!

A nine pound boy, who has been named Harold David, was born Wednesday to George Wilmot and wife.

Mr. and Mrs. Frank Milliman and daughter, Marguerite, have returned home from a week's visit with Michigan relatives.

Mrs. Jessie Rice entertained the following guests Wednesday, Mesdames Helen Benninghoff, Dorothy Reasoner, Melba Wyatt and Goldie Ringle of Fort Wayne an Mrs Neva Hursh and Mrs. Sylva Ginther of this place. Meadames Pauline Jordan and Jean Curie were afternoon guests.

David Moughler spent from Saturday until Monday a guest of Wm. Harman.

J. R. Shilling, who was taken to the Garrett hospital last week, is reported some better.

Mrs. Belle Barney returned home Sunday from a month's stay at Bowling Green, Ohio.

Wilbur Yeiser and family, were Sunday guests of Floyd Snyder and wife at Fort Wayne.

Dr. Minnick attended the funeral of Mrs. Bert Minnick last Wednesday in White county, death being caused by neuralgia of the heart.

Methodist Home-Coming Sept. 6

The St. Joe Methodist Home-Coming is set for Sunday, Sept. 6, in the Erick grove south of town, weather permitting, if not, will be held at the church. Every person having attended at any time is asked to be present. Basket Dinner. All persons with machines will meet at the church at 9:30 so that all who have no means of transportation can be provided for. We want every member present.

Obituary

The death of Alfred Reasoner occurred Friday morning at 8:45 at the home of his daughter, Mrs. John George, in his eighty first year.

Asthma and heart trouble, the immediate causes of his death have contributed to his sickness for a year, although he has been able to be up and about until Thursday morning.

Mr. Reasoner was born in Morrow county, Ohio, and has resided in the home his daughter since the death of his wife in March, 1923, Mr. Reasoner was twice married, his first wife having passed away thirty-four years ago.

The deceased is survived by six children, C. D. Reasoner of Elkhart; Mrs S E Norwood of Goshen; Roy Reasoner, residing near Warsaw; T R Reasoner of Cleveland and O. L Reasoner and Mrs. John George of Auburn. Four brothers, Hiram Reasoner of Zion City, Ill; Willis Reasoner of Butler and Charles and Silas Reasoner of St. Joe, and a sister, Mrs. Harriett Harter of Butler are also surviving immediate relatives.

Mr. Reasoner was a member of the Concord Methodist church. Funeral services were held Monday morning at 10:30 o'clock at the home of Mr. and Mrs George and burial was made in the cemetery at Newville.

Lutheran Notes

The Pastor's vacation is now over and the regular preaching service will be held at Spencerville at 10:30 and at St. Joe at 7:30 next Sunday. Don't fail to be at Sunday School and at church as it is now time to plan for the winter's work. Be sure and go to Sunday School and church next Sunday.

S. D. Steffey, Pastor.

Food for Children

Child specialists inform us that between the ages of four and twelve years a very active child requires double the total calories of a very quiet child, and a moderately active child requires one-third more calories than the quiet child. Because of the demands incident to rapid growth all children require highly nourishing food.

Took Photos From Air

Aerial photographs were used in determining a suitable location for a lighthouse on an inaccessible rock island at the most westerly part of the Hawaiian chain.

ST. JOE NEWS.

VOL. XXXIX | ST. JOE DeKALB COUNTY, INDIANA, THURSDAY SEPT. 10, 1925 | NO. 36

678 REGISTERED!

For the Second Annual Home-Coming Event at St. Joe Last Saturday--Many here who failed to Register--Committee did splendid--Parade was a real success--Larger Plans Necessary for next year.

The second annual St. Joe Home Coming Day is a day to be remembered by young and old for it was a success in every way.

The sucess is directly due to the "get to gether" spirit of St. Joe citizens and the farming community and to the large number of people who responded to the invitation to spend a day in the old home town. Much credit is due tht General Chairman, Ed Miser, the various committees and the town officials.

Early in the day the crowd began to assemble and the decorated streets of our village soon took on the gala appearance of a street fair.

The fact that the concession men all want to return next year is proof that they had a thriving business.

At 9:30 a. m. the program started off with a peppy selection by our Community Welfare Band. The entire program was given as advertised with the exception of one or two numbers. In addition to the regular program Congressman Hogg gave a short address.

The registration was larger than last year, being 678.

The eagerly anticipated parade in the afternoon measured up to the expectation and would have credited a much larger town than St. Joe. One of the speacial features of the parade was the K. of P. Order, gorgeously costumed and riding beautifully decorated horses.

Plans are already being formed for next year's Home Coming Day with the slogan "Bigger and Better in Every Way."

The citizens are enthused over the success of the day and are offering many fine sugegstions for next year.

The parade consisted of 40 different class entries and the judges were Mrs. Jacob Klingele, Hicksville; Mrs. Frank Akins, Orangeville and Rev. C. O. Johnson of Tippecanoe, Indiana. Their decision was as follows:

Best decorated auto, Mrs. Agnes Monroe, $5 00.

Best decorated horse drawn vehicle, Boys and Girls Club, $5 00.

Best Fantastic, Sam Mumaw, $2.50.

Best decorated bicycle, Harold Baker, $1 00.

Best costumed rider and decorated horse, Clifton Draggoo, $2 50

The following is the report of the sport committee as to the winners:

Base ball—St. Joe vs Spencerville. $2 00 going to Spencerville.

Horse shoe game—Maxwell and Limpert, Hicksville, winners, prize $5 00.

Barrel race, Clarence Henley, $1.

Shoe race, John Dilley, $100.

Satchel race, Marcellean Curie, $1.00.

One of the exhibits of special merit was the flower display. The following named furnished the flowers for the booth: Mrs. C. C. Bassett, Mrs. John Ulm, Mrs. Elza Kinsey, Mrs. Fred Leighty, Mrs. Frank Sechler, Mrs. Leon Kees, Mrs. J. P. Buckingham and Mrs Wm. Curie. The judges were Mrs. Charles Bishop of Cleveland, Mrs. H. L. Dunkle of Waterloo and Mrs. Henry Hathaway of Auburn and the prize was awarded to Mrs. Fred Leighty for a basket of Gladioli.

The display of flowers was not so full as desired as the hot, dry weather destroyed them, but those that were exhibited were all very fine. The committee appreciates the efforts of those who brought flowers and thus helped give pleasure to those in attendance.

The Pig Club show was a new feature of the Home-Coming and attracted great attention and interest.

The judging was done by Mr. Rose, County Agent of Albion, who was an able and experienced judge.

In judging these pigs several items entered in which shows what a real breeding gilt should be, namely condition, smoothness, gain, growth, constitution and confirmation. If the pigs had been judged on condition or gain the placing would have been different.

Harry Loucks pig gained from 44 to 204 pounds

Kennent Wasson's from 66 to 229. These being remarkable gains.

The placings were as follows:

1 Cecil Likes, Duroc.
2 Wayne Douglas, Chester White.
3 Harry Loucks, Berkshire.
4 Bruce Koch, Duroc.
5 Kenneth Wasson, Berkshire.
6 Robert Johnson, Poland China.
7 Clifton Draggoo, Poland China.
8 Ellsworth Morr, Duroc.
9 Robert Coburn, Berkshire.

Prizes: Twenty dollar trip to Chicago, $3 and $2.

A fine show but we want a larger one next year and the boys will put it over if the parents and all will help like they have this year.

The county show is October 12 at Garrett. Let's GO.

The boys wish to thank the business men who helped to make it a success.

The girls sewing club display was very good considering the few that took the work this year. There were eight entries. The following receiving the three highest grades.

Marguerite Wilson—92.5.
Margaret Elner Hamilton—91.
Hazel Storer—90.

Under baking there were only two cakes entered.

Angel-food—Della Hoffman, 91.
Dark-cake—Margorie Shear, 81.

The judging was done by Miss Thelma K. Dickinson, domestic science teacher of Butler high school who is very efficient in her work.

Mrs. Chas. Bishop of Cleveland, Ohio, lost two one-dollar bills.

Many requests were made for next year, in that the event be made for two days instead of one. What do you think?

Jim McKinley of Spencerville, known for his action and light-footedness, could hardly hold himself, and in fact his feet got the better of him several times.

Sam Hemory and family of Fremont, arrived early, bringing a nice mess of fish and a couple quarts of luscious strawberries to his old friend, S. S. Widney.

The crowd was much larger than last year as was shown by the registration and too, there were hundreds of people here that the committee could not get.

Geo. J. Murphy of Montana, son of Dr. Murphy of St. Joe, in 1893, left here and had not been back since. While a young chap when he left he had to make himself known to the older ones of his acquaintance. Lusius B. Hart, Garrett, a brother-in-law of Mr. Murphy spent a part of the day here visiting old friends. Mr. Hart being engineer on the Capital Limited out of Chicago, had to leave at noon for her trip

The Vanishing Men

By Richard Washburn Child

(W. N. U. Service)

(Copyright by E. P. Dutton & Co.)

SYNOPSIS

Out of uniform, at the end of the World war, with the rank of major, Peter DeWolfe, young American of wealth and family, is urged by an English comrade in arms, Eversby Benham, to visit the Benham home and meet the Englishman's mother and sister, and, incidentally, Brena Selcoss, young woman about whom there is an air of mystery. Muriel Benham, Eversby's sister, becomes infatuated with Peter, but he is interested only in the mysterious Brena Selcoss, of whom he has had only a glimpse. Muriel urges him to forget her, warning him that if she (Brena) should like him he is in danger of "vanishing—like the others." Peter meets Brena in a tea room. After a few days' companionship the feeling between Peter and Brena ripens into love. Brena confesses that she is married and that her husband has "vanished." Brena's life story is out of the ordinary. Her father had been forced to leave Greece because of revolutionary affiliations, and his death, following quickly upon that of his wife, leaves Brena penniless, at Dallas, Texas. She secures work, and meets Jim Hennepin. He falls in love with her. He urges her to meet him in St. Louis.

CHAPTER VI—Continued

—6—

This was the man who withheld his questions, bided his time and gazed at Brena Selcoss with frank admiration on his absurdly youthful and academic face. He turned away from her, walked to the window and looked out at the night, at the wall of the neighboring house upon which the light of the full moon was bluish white, and then, like an actor who has rehearsed the part of a cool and collected man he walked toward Brena and said clearly and calmly, "I've come for information."

He could not see the slightest quiver in the girl's eyes, though he looked for it.

"Yes," said he. "May I close this door?"

Mrs. Wilkie, who was outside pretending to read the names in the telephone book, saw the front room door gently swing to and heard the latch.

"How old are you?" Parmalee was asking Brena.

"Eighteen this month," she said.

"Well, that's surprising—very, indeed," he said. "You are more of a woman than a girl."

Brena was not pleased by the patronizing manner of this rich cotton man. She said promptly:

"The information you wanted? Was it about me?"

Parmalee looked up with a single sharp thrust of his glance; he adjusted his tie and his opinion of Miss Selcoss at one time. He put upon his unwrinkled, clean-shaven face a typical ingratiating smile. He took his pointed chin, which, combined with his upslanting eyebrows to give him a satanic expression, not unpleasing, in his small, white, cold hand.

He said: "Oh, no; the information I seek is about a certain man."

She glanced around her quickly, as if to be sure that no one else had come with him and was sitting outside the circle of radiance from the gas mantle that made the faces of human beings suddenly turn livid and ghastly as Parmalee's had turned and as she felt her own had turned.

"Yes. You want me to be more specific," he said in a low voice. "I will be. The man is—"

He stopped, simulating perhaps a reluctance to speak the name.

Brena held her breath.

"Jim Hennepin," he said. "An employee—or perhaps a better word is associate."

Without a flutter in her dark eyes, Brena said:

"Oh, then you do not want to see me—you want to see Mr. Hennepin's aunt—Mrs. Wilkie."

Parmalee shook his head from side to side. "Perhaps we'd better sit down," he suggested.

Her face flushed as she told him she would prefer to stand, but he only shrugged his shoulders.

"Has she heard from him?" he asked. "Today?"

"No," said Brena, "she hasn't had a line from him since he left Dallas. There isn't anything—at the office?"

"No, his accounts are all right," replied Parmalee. "It appears that you are anxious on that point—in his behalf. Are you fond of him?"

"Not in the slightest." Brena answered with a voice which showed no emotion whatever: she might have been asked whether she liked cold raw sliced tomatoes.

"Well, that's surprising—very, indeed," he said with a thrust of his glance. "You were friendly?"

"Yes," she said. "I suppose that we were very friendly. I do not know why you are asking me these questions."

"That will appear," he said gravely. "You will see that I am your friend in this, Miss Selcoss. I think you will say that I came here to do you a service."

For just a flick of time something rose from the depths of Compton Parmalee and Brena saw it. It was at least an effluvium of the buried beast in him—the stir of a dying thing trying to come to life. It was half a benevolent love of his fellow man: half the call of an isolated, warped and lonely soul. It was the thing which she saw later and to which she gave in her folly, but now it flickered for a moment on that strange esthetic gambler's face and was gone.

"You telegraphed to Jim Hennepin from St. Louis," he said. "That telegram was opened."

"When?" asked Brena. "When it came? Of course."

He did not deny it. He said: "It was just your message, 'I am waiting,' and it was signed, 'B.' It took a little inquiry for me to know that this telegram was probably sent by you."

"But nearly five months have gone."

"I know."

"And why now do you come to me?"

"You needn't tell me anything you do not wish to tell. I assume that you arranged to meet him in St. Louis."

Brena put her hand up and felt her throat. It was hot—the skin was hot under the cold hand.

"It was a great mistake," she said in a low voice—"a great mistake."

"The idea was marriage?"

"It was my idea—if I had any clear idea."

"You were very young."

"Yes, I think so—looking back."

"You know what was in Jim Hennepin's mind?"

She did not answer.

"The dirty dog!" said Parmalee. "What a smiling face he had!"

Brena shuddered.

"Well, here is the telegram," said the visitor. "I opened it myself. There is no one else who knows it was ever sent."

He wet his thin lips; he said:

"It is a secret—ours," and stretched out his hand with the yellow envelope held daintily in his fingers.

The girl, however, was looking searchingly into his eyes; she was young but not too young to be suspicious of a secret shared by two, when one treats that secret as if it were a kind of asset.

Apparently he read her thoughts, for he said hurriedly, "You needn't feel under any obligation to me for keeping the secret. I have my stains and blights, but they are not of that kind. As I said, all I came for was information."

She took the telegram, which he had held toward her, and nodded.

"Of course, if he were to meet you he probably told you more. He probably told you where he was going, eh—and why?"

He leaned forward as he asked this question and turned one side of his face as if the answer could best be heard by his right ear alone.

"No," she said. "He spoke of making a great sum of money, of getting it from some place."

"He did not say where?"

"No."

Parmalee sighed as if he had gone up a blind alley and had found its end.

"He spoke of some call—some message," said Brena.

The broker's eyes widened until they were in a staring distention.

"Ha! So he did! What did he tell you?"

"Nothing."

Parmalee sat down in a chair and stared at the carpet for a long time.

"It is very peculiar," he said at last. "He left you to meet him in St. Louis. He went on an errand of some strange kind and refused to tell you what it was. Well! Well! And then you waited in St. Louis—in vain."

"How did you know he didn't come?"

"Your telegram."

Brena said: "I waited there three days. I waited. I was frightened. But I grew more in those three days than I have ever grown in three years."

"Yes," said Parmalee with a flicker of tenderness again. "I can understand."

"You have heard no word from him since?"

"No word. And I thought that it might be my duty to tell—"

"No, no, no!" exclaimed the man, jumping up. "If there is any duty in the world it is not to tell. Few would ever understand—as I understand. It would do no good. If I can do nothing, what purpose would it serve you to try? For God's sake think of yourself."

"And I promised him," she said. "What difference does it make that I see clearly now what a man he is—my promise to keep silent."

"Quiet!" commanded Parmalee. "Not so loud. No purpose is served by stirring up a search."

"A search? You mean that you do not know where he is, Mr. Parmalee?"

The broker lowered his voice: "Yes," said he. "Not only have you and Mrs. Wilkie heard nothing and his father heard nothing, but I have heard nothing. Apparently after he had decided to take you away from Dallas this thing described as a call came."

"Yes."

"There is still a balance of a considerable sum to his credit in the office. I will tell you confidentially that he has not claimed it. As far as I can find out, no man, woman or child for nearly half a year has seen Jim Hennepin. No one misses him, to be sure. And for you to sacrifice yourself—that would be utter folly! He has gone—like this!"

Parmalee held up his small clenched fist, opened it suddenly and blew an imaginary speck of dust from its palm into oblivion.

CHAPTER VII

Midwinter had come before Brena saw Compton Parmalee again. He sent for her two days after Christmas; he asked if she could come to his office.

The call had come over the telephone to the store where she was still employed and Brena answered that she would try to leave an hour earlier than usual so that she could come at four.

Winter dusk had begun to settle over the city before she was shown into the broker's office by a stenographer, who, never having seen a woman caller before, raised her eyebrows as she closed the door after the entrance of this beautiful stranger. Through the great plate glass windows of the luxurious office Brena could see the flaming sunset in the west and against it, in dark outline, the figure of Parmalee who had risen as she had come in.

With a gesture of gallantry he took her furs from her and put them across the white papers on his desk, and when she sat down he toughed these furs caressingly for several moments. He might have been thrusting his glances at her, but she could not tell.

"There Are So Many Things You Can Buy With Your Money," She Said.

Dusk had entered the office, too, and he became only a figure of two dimensions, without thickness, from which after a moment there came a voice which Brena scarcely recognized, so weary was it and yet so unrelaxed and tense.

"You are sure that all you told me was accurate," he said.

She needed no explanation; she said at once. "Of course," in a tone of indignation.

"I know," said he. "But there was just one more thing. Did he leave a paper with you?"

"A paper? No, he left no paper. He gave me—"

She hesitated and went on: "He gave me some money, and there was a little scrap of paper in it. I remember, because I did not know whether to keep it or throw it away. He might have wanted it. It had on it an arrow drawn with ink and a lizard drawn beside it and two words underneath, 'This sign.'"

"Well, that was nothing," said Parmalee. "Where is it now?"

"It disappeared. You haven't—"

"No. Not a word. He has gone."

She was silent.

"In fact, it was not because of anything to do with it that I wanted to see you," the man said. "You will say when you know why I sent for you that you have never heard of anything like it in all your life."

Brena sat down.

"Did you ever hear of a man who had made a final killing—who a year ago was juggling riches and insolvency in one hand and success and failure in the other, wanting to talk about himself to an eighteen-year-old orphan?"

"No," she said with a little laugh, "I never heard of that."

"I sent for you to tell you about myself—not about what I have been—but about what I am. I did this after having seen you once and once only. It is because there was a sympathy between us that was most extraordinary—more than you know."

"I think I understand."

"It is not love," said he. "Let me make it plain that I am not deluded that I am not in love with you. You will never hear me talking about the love of youth. I am not old, but the passion and idealism of love have gone—worn out perhaps in taking risks and jarring to pieces within while like a carved marble on the outside. No, I will not make love to you."

"No," said Brena, giving affirmation.

He played with the furs a little more.

"Ten months ago I scraped together all the money I could and I threw it into a final play. That's neither here nor there. I am now worth a little over two million dollars. I am through with business, with trading, with speculation, with this office, and with Dallas, Texas—forever!"

"And now—?" asked Brena.

He laughed. "That is it!—What?" The fur stole on the desk in front of him he smoothed gently with his open hand. Brena made no suggestion as to what he should do with his life, and after a moment he went on, "There is left to me now collecting books, travel, perhaps an opportunity to do some one a kindness now and then and taking good care of my health. I shall buy a painting occasionally. Can you think of anything else?"

To Brena the problem was new; she did not have a ready answer.

"I have burned out," said Parmalee. "I am ashes."

Of this he spoke cheerfully as if he had repeated it over and over to himself until it had lost its blackness and now gave the strange pleasure that all final conclusions of human limitations and disasters give at last when they are accepted.

"You see, I am not a great man," he explained. "It was necessary for me to throw all of myself into the fight—every resource I could summon. I do not smoke. I know as much about smoking as any man alive. I have measured its effect with accuracy. It is a greater devitalizer than alcohol. But I do not drink, either. I have conserved and guarded all my sensations until I have none. All my life—my last twenty years of life—I have promised myself indulgences—indulgences of gigantic and exquisite design, but now that I can have them, this body of mine rejects them all, refuses them all. Fate laughs in my ear and says, 'You're done for. The most sensuous pleasure you shall have will be the flavor of that apple sauce you have eaten for lunch for fifteen years and will eat for lunch for the rest of your days.' Isn't this a grim joke, Miss Selcoss?"

"I do not know," said Brena uneasily.

Even in the dark he sensed her desire to go.

"Don't leave me," he said with a voice which almost broke into a low sob. "You are the only one who can understand."

"All right," she said, astonished that she had become important to anyone. "I'm sorry, Mr. Parmalee."

"Let me tell you something else," he went on. "I have dreamed of a certain prestige—a kind of background of life that I would enjoy when I was ready. To that end I have given liberally to campaign funds. Next year if I wish I can be minister to Portugal. Personally I think this is a grim jest. It is the system, however."

Brena clasped her ungloved hands in her lap and thrust her arms out until it appeared that she was expressing something of the thrill of imagination which the picture of diplomatic life in a European capital had given her.

"But I shall not take the office," said Parmalee.

Brena uttered an exclamation.

"No, I shall not take it. I do not want more brilliance. I want more dim light. I like the dusk. I do not want to see my name in printed letters. I never want to see it again. I do not want men and women to say, 'That is Compton Parmalee.' I want all strangers to neglect me. I want to live in a dim light—like this—now in this office."

He sighed.

"I've made many mistakes," he said. "I want now to become buried, to be unseen—like a ghost."

Brena protested. "There are so many things you can buy with your money," she said.

"Only one," he replied sharply.

"And that—"

"Is you."

She pushed her chair back from the desk with both her hands.

"You need not be alarmed," said his calm voice. "I have stated it purposely at its worst. It is better for you to have this thought presented at first and perhaps we can overcome it later. I put it in the terms the world will use; Dallas will say, 'He bought her.' But, after all, we will not be in Dallas. We will be in Peking or in Bombay or in sight of the Pyramids or in the crags of the Norway coast. I am more than twenty years older than you are. But the varied and interesting and important persons with whom we may dine will only say, 'He has a beautiful young wife with a free mind. Her father was a patriot of Greece.'"

"You know—"

"All that I could about you," said Parmalee.

"But it has been a long time," Brena said, as if cross-examination might bring clarity to displace her puzzled mind. "You did not—"

"Come back?" he asked. "No."

Outside the plate glass window the rising wind tuned mournfully.

"You are very young," he said. "You would not foresee as I foresaw that I could not see you without starting the tongues of scandal. You are penniless young, working. I am rich, worldly, conspicuous. I should have liked to send you extravagant presents. You would not have understood. You would have thought I was an old fool trying to be a lover. I was not that, but the others would have said even worse of me. So I waited, clinging to a single strand that brings us together."

"Us!"

"Yes—sympathy. Because you saw in me the one thing left that you might salvage and find valuable. Not because I am a man and you are a woman, but because I am a human being and you, who can see with a vision of the gods, saw in my ashes one unburned thing."

"You knew!"

"Yes, I knew," he said sadly. "No one else could see. Underneath there is something left—a kind of tenderness for humanity. It is to fan this spark that I want to buy you."

Brena said nothing; he had made good his promise that he would tell her something she had never heard of before.

"I do not want a wife," he said. "That would be the title, but I do not want a wife. It is too late. I want a mother. I want you to make my spirit clean and white as it was when I was ten."

"And yet," said Brena, "you do not think of me."

Suddenly this unhappy man rose to his feet trembling, intense, gesticulating.

"Think of you," he said. "How can you say that I have not thought of you? Is this thing I propose so unnatural as the foolish world has said of it? Is it base of me to want to take a diamond from the mud where no one else has seen it? Is it an ugly thought that I feel repulsion when I see you, who are made of the rarest materials, wasted upon cheap labors and cheap, garish surroundings and being worn down like a fine, wonderful machine, abused by coarse use? Am I a fool to believe that with the only contacts available to you, you will only meet the vulgar men you can never marry? Did I not see that you had a vision as from Olympic heights which was being blinded in this routine of middle-class horrors?"

Brena's face, upon which the last light fell, was white and frightened as if she had seen a ghost. It was enough to tell him that she knew that he spoke truly.

"I do not ask you to give anything to me except your help to make me new again," he said. "I do not ask young love. I have none to give. I cannot take you away or keep you near me without marriage. It would blast us both. But if you marry me you shall be made free whenever the day comes that you wish to go. I ask no promises."

Brena got up and stood looking out the window. The tall office building overlooked not only the old center of the city and the red angular prisms of brick and the square roofs laid out like fields upon level farmland, but also the distant stretches of rolling prairies. There was an impulse to go over that distant horizon: the same strong impulse of youth, adventure, ambition that runs like a current in the blood of animals and men. To be free! To grow! To range! To know! To be emancipated from the sordid round of days!

"Do not answer now," said Parmalee. "I have said all I can. It has taken me several weeks to plan how I should say this. I have said it all in a cold, fair statement. No one could say I had made love to you, Brena."

She took his hand; it was as cold as ice.

"Write me," said he brusquely.

A week later he got her letter: it was on his desk apart from the business envelopes. He tore it open.

"Nothing you said to me can be denied," she wrote. "You have inquired about me; I have no hesitation in telling you that I have inquired about you. I do not feel that I have gained anything by my inquiry, for it is true that there comes to me at strange moments a clear vision and an insight. I think you are, above all, honorable."

(TO BE CONTINUED.)

Hard to Fit

A city man, driving his automobile along a little-used country road, heard something rattle beneath his car, stopped, looked back and saw a bright metal object lying in the road a short distance behind. It was a plowpoint, evidently lost by some farmer.

It was fully half an hour before the next car came along, and its occupant, seeing the first man flat on his back under his vehicle by the roadside, stopped and asked what the trouble was.

The city man emerged and held up the plowpoint.

"This blooming thing dropped off my car," he said, "and I've been hunting for half an hour to find out where it belongs."—Exchange.

Watch as Compass

It is quite an easy matter to use a watch as a compass. Let your watch lie flat in your hand with the hour hand pointing toward the sun, and the point on the circle half way between the hour hand and XII will be directly south in the northern hemisphere and directly north in the southern hemisphere.

AN OPERATION RECOMMENDED

Avoided by Taking Lydia E. Pinkham's Vegetable Compound

Los Angeles, Cal.—"I cannot give too much praise to Lydia E. Pinkham's Vegetable Compound for what it has done for me. My mother gave it to me when I was a girl 14 years old, and since then I have taken it when I feel run down or tired. I took it for three months before my two babies were born for I suffered with my back and had spells as if my heart was affected, and it helped me a lot. The doctors told me at one time that I would have to have an operation. I thought I would try 'Pinkham's,' as I call it, first. In two months I was all right and had no operation. I firmly believe 'Pinkham's' cured me. Everyone who saw me after that remarked that I looked so well. I only have to take medicine occasionally, not but I always keep a couple of bottles by me. I recommend it to women who speak to me about their health. I have also used your Sanative Wash and like it very much." — Mrs. E. GOULD, 4000 East Side Boulevard, Los Angeles, Cal.

Many letters have been received from women who have been restored to health by Lydia E. Pinkham's Vegetable Compound after operations have been advised.

How Money Grows

Mrs. M. Clifton Edson of East Bridgewater, Mass., has a bank book which shows a deposit of $5 by her mother in 1848.

RADIO

By PERCY WARREN, in Radio World.

We all know that a set which is built of expensive materials works very well and is recommended by all experts, but suppose that we haven't the money to purchase the best new parts? By that I do not mean that we mustn't use materials efficient electrically and still expect to get very good results. What I mean is that we can build our own coil at a very small cost and still obtain efficiency.

Of all the sets that give distance and volume there is not one that excels the simple regenerative type. There are many types of regenerative sets, the single circuit, the double circuit and finally the triple circuit. There was even a four-circuit set, with several controls. Of all four types there is no one more popular than the three-circuit tuner. This circuit deserves its popularity because it is selective and gives volume.

The set that I am going to describe is of the three-circuit variety and is a world-beater for volume and distance, even though the inexperienced person can build it.

Construction of the Coil.

The first thing that you want to do before you build this set is to read every piece of data that refers to the successful operation of the receiver. You have probably read the information already. After doing this we are all set to build the coil, which is very simple, but with which a great deal of care should be taken.

Procure a form about four inches in length, three inches in diameter. We will wind the grid coil first, starting about one-fourth of an inch from one end of the form. Before doing this, better drill two holes about three-sixteenths of an inch in diameter and about one-half of an inch away from each other for anchorage. Put binding posts here and mark one G and one F plus. Now drill two holes exactly as the ones drilled on the other end

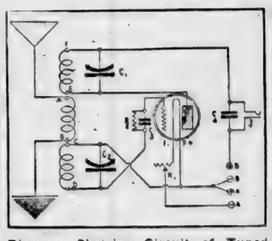

Diagram Showing Circuit of Tuned Plate Regenerative Set.

of the form. Put two binding posts here and mark posts P and B plus. On this same side about two inches away drill two more holes of the same dimensions as the four others. The beginning of the grid coil winding goes to a post marked G and lettered as D on the diagram. Continue winding 50 turns of No. 22 single cotton-covered wire and put the end of the coil to the post marked A plus. Leave half an inch and put the beginning of this new winding to the post marked GR. (B in diagram). Continue winding until 10 turns have been completed, connecting the end to the post marked A plus. (C in diagram). Leave one-fourth inch now and place the beginning of the wire to the post marked P (E in diagram). Continue winding until 35 turns have been made, connecting the end of the wire to the last post, which is marked B plus. (F in diagram). Make sure that all the windings are in the same direction and that all the posts as designated.

Panel Instructions.

Lay aside the coil and take the panel. There are two controls on the front, besides the rheostat, which should be of the 6-ohm type for WD-11 or 12 tube. The panel is 7 by 10 inches and is of hard rubber, which is more efficient for radio than the beautiful-looking bakelite panel. Drill a hole for the variable condenser, 2 5-8 inches away from the end and 3½ inches from the top of the panel. The templates for the condensers are in the cartons. The condenser is the only article which costs any "real money."

The dials are three inches in diameter. The same dimensions apply to the other variable condenser when drilling the holes. For the rheostat drill 1½ inches from the bottom and 1 inches from the end. The other dimensions are given with the rheostat. That is all the drilling that goes on the front of the panel, except the baseboard holes, which are determined by the size of the board that you have (usually an inch-thick board about six inches in length, and having about three holes evenly spaced, 3 1-3 inches space). On the board mount the coil between the two condensers. Don't squeeze it in.

Assembly Directions.

At the extreme end of the board place the terminal strip (the strip which consists of the battery binding posts and the antenna and ground posts). Directly in back of the coil put the socket. If you deem a jack too expensive a pair of binding posts may be put on the terminal strip or on the panel and the tips of the phones put there.

The other materials include C4, .001 mfd., fixed condenser; C3, .00025 mfd. fixed; R2, two or three megohm grid leak.

Now for the wiring of the set. Connect the post marked A in diagram and fo coil to the antenna and the post marked GR to the ground. The F plus (C in diagram) goes to the positive post of the socket and to the plus post of the A battery, which is connected to B minus. The terminal marked G on coil goes to one side of the grid condenser and to the grid leak. The other end of the grid condenser goes to the grid post of the socket. The terminal marked P (in diagram E) goes to the plate post of the socket. The last terminal marked B plus (in diagram F) goes to one end of the .001 condenser, whose other end goes to the B plus. Across the terminals of both the plate and the grid coils connect two .0005 variable condensers, making sure that the rotor plates of the grid condenser go to the A plus and the rotor plates of the condenser which is shunted across the plate coil to the B plus side of the plate coil. All this wiring should be done with No. 18 bell wire or rubber covered telephone wire. Avoid bus bar. That completes the wiring of the set.

Aerial Advice.

Your antenna should be at least 75 feet in length, well soldered, and your lead-in should be put about one foot away from the wall, well insulated. Your ground should be as short as possible and should consist of No 14 rubber-covered wire. The antenna wire should be No. 14 hard-drawn copper wire. The aerial should be at least 20 feet above the level of the ground and at least 10 feet above the level of the roof. But if you have a tin roof, place the antenna as high as 25 feet, which must be done in order to get away from the good grounding qualities of the tin.

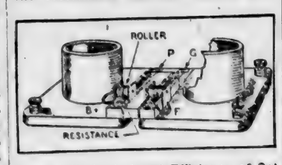
Trouble Hints.

If you are getting noisy reception first push up the prongs of your tube socket, clean the terminals at the end of the tube with sandpaper and test your B battery with a pair of phones. If, when you put the phones across the battery, you hear a lot of rushing noise you can be sure that the battery is no good. Test your by-pass condenser, which is the condenser having a capacity of .001 mfd., as this is often shorted.

Variable Resistances to Take Up Little Room

No two sets operate on the same value of resistance when using the resistance-coupled type of audio-frequency amplification. The resistance should be adapted to the characteristics of the tubes used, the aging of the tubes, and the changing voltage of the B battery.

Variable resistance may be made so as to occupy very little room. Nearly all commercially made variable resistances are so made that it is awkward to mount them. The diagram indicates a room-saving method. Use a base of hard rubber or bakelite 2 by 1¼ by 3-16 inches, which is slit in two places about three-fourths of the length of the block. The resistance element is made by dipping a strip of cardboard in waterproof India ink. The resistances are usually arranged in pairs, one of the resistances making contact with



Leads Eliminated and Efficiency of Set Is Increased.

the plate and B plus supply, the other making a connection from the grid of the amplifying tube to the filament. Sliders are made from sheet brass and electrically connected to the contacts at one end of the resistance by a soldered flexible wire. Be sure that the flexible wires are well insulated. Roller contacts on the India ink resistance insure that the ink will not be scraped off or injured. These rollers are made by mounting about four of the ordinary spacing washers, from commercial variable condensers, on a one-eighth-inch brass bar. Be certain that the pressure of the rollers on the resistance strip is firm and secure.

The figure shows how this unit may be placed between two tube sockets in such a manner as to conserve space, and save wiring all but one lead (to the B plus supply). Long binding post bolts are substituted for the short ones usually found in commercial tube sockets, and the variable resistance unit and the fixed condenser are bound to the socket terminals with the same bolts.—Radio News.

Emery Cloth to Clean Your Rheostat Contacts

Grating and sizzling noises heard in the loud speaker or phones are sometimes due to a defective rheostat contact. Remember that there are two sliding contacts in every wire-wound rheostat. There is one between the contact finger and the resistance wire; and the other is between the rotating shaft and the spring which is connected to the terminal. It is easy enough to test the pressure of the contact on the resistance wire, but the other sliding contact may have become weak or dirty. The remedy for this condition in most forms of rheostats is to take them apart and increase the tension of the spring after cleaning the contact surfaces with emery cloth

THE RACKET ROGUES

Of course there are a great many of them. There have to be a good many of them in order to play the game in the way it should be played.

It is called the racket game.

It is not played with either one racket or many rackets. But there are plenty of players.

The rules of the game are few. In fact there is only one chief rule. If they all obey this chief rule it is all that is expected of them.

The chief rule is that all should make as much noise as possible, and they play many times when no one is certain that they are playing, but when they are certain that there is lots of noise.

Those who play this game are called the Racket Rogues.

They call themselves rogues because they love to be naughty and full of pranks and roguish. They adore mischief and nonsense, but above all they love noise.

They love noise so much that they could never have called themselves anything but Racket Rogues.

When there is about to be any noise anywhere some of the members of the Racket Rogue club are always on hand. They are ever ready for noise.

They hear some noise and some of them rush toward it and without being seen they add a great deal of noise of their own.

They laugh and talk at the tops of their voices. They shriek and yell and scream.

They exclaim and shout and howl. They move things with as much noise as possible. They do everything that they do with all the noise they can.

They walk heavily, they jump heavily.

They hate quiet and stillness and silence.

The reason why only some go to join each noise they hear is that there

They Are Quite Fat.

must always be plenty of others ready to join another racket that is going on.

It would not be right for any racket to be happening without some of the Racket Rogues taking part.

They look like naughty little gnomes and they are quite fat and their feet and hands are quite large. They have wide-open eyes which are very bright and keen blue in color.

They have eyes that aren't going to miss what is going on, and wonderful hearing.

They hear a noisy game being played and without being seen they are about, adding to the general cries with their cries, too.

They hear a lot of commotion and they are on hand, too. They wear invisible suits, which means that the eyes of people cannot see them.

But they can hear them, although they do not always know it is because of the Racket Rogues.

All they know is that they hear a great racket and it seems much noisier than it should be.

It is then that the Racket Rogues are about.

Whenever you hear a great racket you may be sure the Racket Rogues are around adding their part.

Sometimes you will hear people say: "My, what a racket there is!"

When you hear people say that you will know what it means.

When some one says:

"Dear me, what a terrible racket," you will understand why the racket is so great.

When games are being played quietly you will know that the Racket Rogues aren't bothering about these quiet games and that they are waiting for more excitement.

Oh, you can't mistake the Racket Rogues even if you never lay eyes on them.

You will hear them and the Racket Rogues will laugh and shout and cry:

"Come on, every one of us that is here. Show what we can do. For we're the Racket Rogues, we are!"

Her Dress Was Dry

The young lady of the house looked sad and ill at ease.

"What's the matter, Evelyn?" inquired her father.

"Well, dad," she replied, "you might have told me that you had painted the garden seat. Fred and I sat on it last night, and Fred got his coat and trousers in a dreadful mess!"—London Telegraph.

Permanent roads are a good investment —not an expense

One Horse Town, Good-Bye!

Any community whose streets are not durably paved is going to be known as a "one horse town."

When that time arrives, Prosperity says, "Good-bye, old friend. Good-bye!"

People start moving away. Bank deposits fall off. Business in general begins to take a slump, and the place is no longer "on the map."

Contrast all this with the city that is well paved.

It steadily forges ahead over its hard, even streets. Automobiles, busses and delivery trucks, operate efficiently and economically, regardless of season or weather.

Business is good, and keeps getting better. Modern, fire-safe buildings spring up. New industries are attracted to town. Plants and factories are working full time. Trade at the stores is brisk, and everybody's busy.

In short, permanently paved streets and roads are one of the very best investments any community can make. You can enjoy the tonic effect of well paved streets by helping your local authorities to find ways and means to build more of them.

The Pacifist Leader

By JEANNE KIRKLAND

(©, 1926, Western Newspaper Union.)

THE tall stranger was walking through the cemetery of the mid-western city; it was part of seeing the place before removing from his old home. It was early June, and the Memorial day flowers, still fresh, added business of color. Suddenly, rounding a hedge, he paused one incredulous moment and caught himself in time not to say: "I didn't know Lincoln was buried here."

The stranger was swept out of his bitterness, just as, in the past, he had been thrilled by the flag. It had been the long procession, the memory of what the flag meant to his fathers, the flag and the war music—particularly the music—that had swept him into the midst of war. Against his will, too; theoretically, he did not believe in war. He was a pacifist. What of it? Something latent in his being just got him—he enlisted.

Scornfully, he voiced his thought:

"Dead!" he said, with a half gesture toward the unknown graves.

A slight movement drew his attention to an old man, seated quietly on a bench. The old soldier would well know the meaning of the half-expressed mood; he doubtless had seen other disillusioned "patriots."

"Heroes!" the stranger said aloud, challenging the old man, "but—they are dead."

The old soldier nodded in sad agreement and recrossed his thin legs.

"So you were in the Civil war?" the young man asked. "Did you come out of your war bitter? Knowing the real meaning of music and the flag?"

"I was bitter," the old man said.

"You mean you're not bitter now?" cried the stranger.

"No—it's because of my boy. He came while I was away at war. My wife was young and strong. I left her when they called for volunteers—and when I came back, I found him, my son. My wife was gone."

"Well," boomed the stranger—sweeping, despite himself into the commonplace view—"it was bully you had the boy. My boy is all that keeps me going."

"Yes," admitted the veteran, "I had him. But—what for?" he broke off resentfully.

The stranger would visualize the coming of the World war, the sacrifice demanded a second time.

"So your son was killed?"

"No!"—old eyes looked into his. "He came back. He has no voice—no strength. At times he goes from door to door—makes a spectacle of himself that people may not forget—with a little magazine for sale. It's just what I—I went on, . . . ought him up, for that."

"Exactly!" cried the stranger, "and I, glorying in my son, may be preparing him—"

"I wonder," said the old man quietly. He looked wistfully across the cemetery, lovingly at the green grass and shrubbery, at the dashes of color, at the big statue of the great man towering there among the low trees, guarding his dead.

"I wonder," he repeated. "Men are made by stress—look at him—at Lincoln!"

The stranger smiled; he did not say that the making of another American hero was hardly worth a war. "If it made Lincoln," he said, "his talent was not tried out in the trenches."

"We can't choose," the old voice reminded him; then, with seeming irrelevancy, "It's his voice—my son's voice—that gets people. It's that he can't talk—he must whisper, now. He can't make all understand, then he laughs with them good-naturedly; it's as if all the world were deaf. You should hear him trying to make them think he's cheerful . . . And his son, won't be a better American because of that?"

The young man turned from him passionately, not to be swayed by such sweet optimism. That was age's surrender, but the young man had a life to live—a life of revolt.

Suddenly he was ashamed, when the old man rose quietly and walked slowly away. He himself was a fool! Clinging to his conflict, to his twisted soul, taking it through life unsettled; pretending to be a thinker, a radical, denying the gift of his people . . . those who had gone before . . . of his inheritance . . . He who had led the pacifist movement! . . . then the first to volunteer—inconsistency wasn't the name! . . . Impulsively he had done what seemed right. . . . How could he help being made as he was, becoming within himself the characteristics of the line of dead patriots behind him?

He had thought with the old man. He had seen the triumph of the race, had thrilled to it. Suddenly, he was swept with the belief that this was the better side of him—this thing he had fought. Slowly he crossed the turf to the base of the Lincoln statue, his hat in his hand, to give simple thanks for his son, as he knelt in the shadow of the great man. And there in the silence of the late spring day the long conflict passed, and all the while from each unknown soldier's grave the miniature flags waved; and above, the big Lincoln guarded the stranger along with the unknown dead . . . Yes, if they could see him now they might marvel, as they had when he, the pacifist leader, volunteered, the first of the university men . . . It would not matter. Through his mind floated pictures of bands and processions and flags . . . the race triumphant—he—and his son—and his son's sons.

The Gift to the World

By M. and R. M. TERRELL

(©, 1925, Western Newspaper Union.)

IT WAS on a bridge that he had found her one wild black night, crouched behind a post waiting for him to go that she might cast herself, unobserved, into the stream below.

To the little shabby world of the small western town where he had spent the last year he was only Sandro, the Wop, a silent man with tragic eyes.

But to Elsa, the waif, he soon became father and mother and family. He brought her that night into Mrs. Hastings' kitchen as naturally as he brought in other strays, abandoned kittens and dogs and sometimes a bird with an injured wing, and mothery Mrs. Hastings cared for her as she did for them, fed her. The next day in the kitchen Sandro made his proposition in the speech of his life.

"I do not know for why you want to die in the reever, and I do not ask," he told Elsa. "You are pretty girl! It is for some jackass man, I guess that much. For me life no more it matters, but for you, ah, si, it is everything. But you are weak, you need the friend, the shelter, some money. You are leetle bird that have no nest. Me, I am very lonely old man. But understand, with no foolishment! Listen, I take Mrs. Hastings' two front third-floor rooms, the one with the folding keetchen and coupla sleeping places; you, child, be my daughter, cook my meals, mend my clothes."

And so it was arranged.

When Sandro found out that Elsa's ambition was to sing, when he heard her joyous voice she became indeed like a daughter to him.

Elsa was grateful; Sandro was much in her mind. She wondered how old he really was. She knew he had a severe war wound in his chest which bothered him.

Two years went by and then they moved out to San Ramon Rey, in Italian-tinted California. But somehow Sandro became even more solitary. He had a job but no one knew just what it was.

Elsa got work with the Ricardo Grand Opera company, playing temporarily in San Ramon Rey. Role by role she advanced until one night she was one of the stars. A great New York impresario, temporarily in California, had promised Ricardo that he would be present the first night to hear Elsa's Nedda in Pagliacci.

The afternoon of the great day Sandro came home to find Elsa thrown full length on the floor of their kitchen sobbing as though her heart would break.

"What is it, carissima? What is it?" he cried.

"It's that pig of a Barangson," she sobbed, mentioning the tenor of the company. "He's jealous! He refuses to sing with me and Ricardo can't do without Barangson. There is no one else in San Ramon Rey who could sing Canio!"

"Ah," said Sandro speculatively; "we shall see, Elsa mia. There may be a kick in the old mule yet. Hush your tears, dear one, I go meet your Ricardo and tell him a few."

In half an hour Sandro was back. "It is arranged, Elso mia," he said simply. "You will sing Nedda tonight. Come, smile!"

"But the Canio?" she cried.

"Another will sing that role. Don't worry."

At Canio's first line that night a murmur and stir went over the house. Nedda stared at the strange tenor with amazement. Beneath the clown make-up his features had a familiar cast, but she could not place them. She had never heard such a voice nor had such a voice ever sung in the old Spanish-built theater. At the conclusion of her Balatella she noted a smile on the face of Toselli-Toscanni, the impresario, and that he nodded his head delightedly. She had succeeded! But even the music of success in her own heart was drowned by wonder and admiration of the strange tenor, and he would take no bows without her.

As Canio let his knife fall and sobbed out the last words: "The comedy is ended!" the unknown performer collapsed as the curtain fell. He lay still, with a scarlet foam upon his pale lips. As they washed the make-up from his face, Canio's features emerged terribly familiar.

"Sandro!" Elsa cried.

Ricardo brushed her aside as he knelt beside the prostrate figure.

"Basta! Elsa!" he squeaked. "Sandro Zantonelli was once the greatest tenor in all Italia."

"And then he fight like hell-cats for Italia in the war and get shot up and everything," boomed out Toselli-Toscanni, arriving on the scene. "And nevaire let his oldest friends know where he's been hiding himself."

But Sandro, a smile on his blood-flecked lips, motioned them all away but Elsa.

"Sandro! My Sandro!" she sobbed. "Your wound! And yet you sang—because I—you—." Tears choked her words.

"Because I love you," whispered the dying man. "Tonight, it is my gift to you, Elsa mia, and to the world of beauty I love—the gift of your voice. It was your chance."

"Elsa," Sandro suddenly whispered, his look never leaving her: "Do you love me, child, as much as your eyes seem to tell me now?"

"More," she whispered back. "Sandro mio, I could not live without you."

"Santa Maria! Then I won't die," he cried.

And since love is the greatest physician, he didn't.

Local Briefs

H. E. Randall and family spent over Sunday at Lima, O.

Alder Crawford and wife of Sherwood, O., spent Sunday in the B. F. Terman home. Mrs. Tern an is still quite poorly.

Leslie Gee of Kendallville and A. S. Coburn of Hicksville, O., were Saturday night guests of A. M. Baker and wife.

Harley Philips and family of Chicago, came Saturday and visited Mrs. Philips parents, Mr. and Mrs. Ed Lindley, over Labor Day.

Mrs. Hazel Monroe went to St Joseph, Mich., Thursday to bring home her two children, who have been with their father during the summer.

Mr. and Mrs. Calvin Coburn of Hicksville, spent Saturday and Sunday here guests of their son. Earl Coburn and family and Mrs Vina Fish.

Mrs. J L. Steward of Estherville, Iowa, spent over Saturday night a guest of Wm. Randall and wife and attended the M. P. Home Coming Sunday.

Mr. and Mrs. Lige Musser of Bryan, Ohio, were Sunday guests of S. D. Gee and wife, bringing Mrs. Martha Forkner home, who had been their guest for the past two weeks.

Merritt Sechler and mother, Mrs. Jennie Sechler and Carl Perkins, left the first of the week for Indianapolis, where they will attend the State Fair. Mrs. Sechler will visit friends at other points for several days.

Mrs. Alice Copp had as Sunday evening dinner guests, W G Stout and wife of Jackson, Mich., B. V Widney and wife of Columbia City and Jesse Copp, wife and daughter, Vernell of New Haven.

Willys Wilcox, wife and little daughter, of Fort Wayne, attended the Home-Coming here Saturday and remained over Labor Day with Chas. Cochran and wife. Mr. Wilcox is recovering from an operation for the removal of his tonsils.

Mrs. Pearl Grooms of Albuquerque, New Mexico, is here for a week's visit in the homes of her sister, Mrs Monte Storer and brother, Elmer Inlow. Mrs. Grooms left Thursday noon. She is a trained nurse in a tuberculosis camp.

Mrs. Pearl Sherrick of Auburn, spent Friday and Saturday in the W. E. Henley home. Mrs. Howard Williams and Miss Vivian Mony of Fort Wayne were Saturday and Sunday guests, and Ross Mohr and family of Elkhart, were also weekend guests in the same home.

Good News

About the year 2000, says an authority on biometry and vital statistics, the population of the United States will reach its greatest height at 187,274,000. Thereafter it will decline, which is good news if the number of automobiles is going to increase in proportion to the population. —Youth's Companion.

MICKIE SAYS—

Picnic Paper Plates and Wax Paper in large rolls now on sale at News office.

Mr. and Mrs. Howard Northrup have returned from a month's sojourn in Michigan.

Sixty of Garrett's young people will go to college this year, entering 26 different institutions.

Robert and Russell Frank of Auburn were recent guests of their uncle, Meade Baker and wife.

Howard Conine of Hicksville, spent over Sunday with his aunt, Mrs. Adam Shilling and husband.

J. F. Walker of South Bend came Thursday evening for a visit with relatives here and at Hicksville.

Henry Keesler returned home Tuesday evening from Fort Wayne where he has been learning battery rebuilding.

Eugene Harman, who helped his brother here in the Meat Market all summer, has returned to his home at Angola.

Ed Leighty and wife, Geo Kinsey, wife and daughter and Fred Jenkins and wife attended the Johnson reunion held at Concord Sunday.

Mrs Maude Woodcox and two daughters and Mr. Ray McCourtney of Columbus, O., spent Sunday and Monday visiting relatives and friends in and around St. Joe

Last Thursday morning the straw stack on the Geo. Swineford farm caught fire mysteriously, and the wind being favorable and help from St. Joe and community, kept a new stack but 30 feet away and the large barn from burning. How it caught, no one knows.

A charter membership was established for the foundation of the Milliman family reunion Sunday at the Frank Milliman home, to be held in September 1926, time and place to be announced later. The following officers were elected: Frank Milliman, president; Leslie Gee, Kendallville, vice president; Miss Marguerite Milliman, secretreas.; Meade Baker, program. The following were present: Mr. and Mrs. Warren Coburn, Millard Gruber and wife and Adelbert Hercules of Fort Wayne, Leslie Gee of Kendallville, Clifford and George Milliman and the latter's son, Lysle of Fairy, Mich., A S. Coburn of Hicksville, Meade Baker and wife and Marion Milliman. Radio concerts from Chicago and Detroit were enjoyed

Wilbur Yeiser and family visited Avilla relatives Sunday.

Mr. and Mrs. Frank Wilder of Toledo, O., were Sunday guests of J E. Foltz and wife.

Mrs. Hattie Hetker of Ft Wayne visited Mrs. Mary Betz from Saturday until Tuesday.

Miss Ethel Lindley spent Saturday night and Sunday with Chas. Lawson and family of Auburn.

Mrs. Bessie Packer and children of Butler, spent Saturday here with her sister, Mrs. Foster Gee.

The Ladies Aid Society of the M. P. Church meets this (Thursday) afternoon with Mrs Minnie Pepple at 2 o'clock.

Rev. C. O. Johnson and family of Tippecanoe, Ind., were Saturday and Sunday guests at the home of Ye Editor and wife.

Mr. George Wade came home from Garrett, Sunday, for a few days rest, and reports Mrs. Wade as still in a critical condition.

Homer Woodcox of Fort Wayne and Charles Johnson of Albion, spent over Sunday and Monday here with Charles Woodcox and family.

Fred Quance returned to his home at Fort Wayn, Tuesday to resume his school work, after spending part of the summer here with relatives

Mrs. Mary Bowman and son, Ray and Tom Abel and wife, left Tuesday afternoon to spend a few days at the former's cottage at Cold Springs.

John Maurer, wife and children, of Union City, Mich., and Mrs. James Maurer of Coldwater Mich., spent from Friday until Monday with D. D. Burley.

The threatening rain Sunday morning kept many away from the Methodist home coming. The service was held at the church instead of grove as planned. Rev. C. O Johnson made a short talk after the dinner.

Christian Church Notes

Bible School at 9:30, communion service immediately following.

Among the out of town visitors at Bible School Sunday morning were Merle Neer of Warsaw; Mrs Ida Andress of Garrett; Calvin Coburn of Hicksville; Miss Nina Phillips of Chicago and Miss Sadie Haner and John Carpenter of Bryan, Ohio.

See Furnish for Tires.

The work of picking apples at the Leighty apple orchards began Monday morning.

William Fee and wife of Edgerton, O., and Evans Dermptt of Coldwater, Mich., were Saturday dinner guests of J. C. F. Abel and wife.

Mr. and Mrs. Ramsey of Fort Wayne and Donald Ramsey and family of this place, called on Wm. Curie and wife at Cold Springs on Sunday of last week.

About 150 attended the joint farewell reception held one evening last week at the Concord M. P. Church for Rev. Havens and family. A delicious supper was served in the church basement followed by a 30 minute program in the auditorium. The congregations presented Mr. and Mrs. Havens with a dozen each of silver knives, forks, teaspoons, also a sugar shell, butter knife and cream ladle. The Havens family were residents of St. Joe about three years and had many friends here. Mr Havens taught the past year in the St. Joe school. They left last week for their new home at Muncie.

Mr. and Mrs. H. M. Widney entertained at their home Sunday, September 26, Mr. and Mrs. Lee Smith of Portsmouth, Ohio, the mother, Mrs Samuel Davis, who has been sojourning for nearly a year with her daughter at Portsmouth, who now has returned to reside with the Widney's, Mr. and Mrs. Aurthur Flynn of Chicago, Mr. and Mrs. Ray Davis and two children of Auburn, the son, B. V. Widney and wife of Columbia City, Dr. D E. Burns and wife of Bryan, Ohio, Dr. John Graham, wife and daughter of Auburn, Dr. Edwin Snowalter, wife and two sons of Waterloo, Col. Stephen Bowman and wife of Waterloo, Archie Bowman and wife of Chicago, George Rankin of Dayton, O., E. W. Rankin and Mayor George Schlatters of Garrett, Harvey Kimes, Jr., of Spencerville, I. W. Kuhns of Sherwood, O., Merritt Hull and Mr. Smith of St. Joe.

Catarrhal Deafness

is often caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube is inflamed you have a rumbling sound or Imperfect Hearing. Unless the inflammation can be reduced, your hearing may be destroyed forever.

HALL'S CATARRH MEDICINE will do what we claim for it—rid your system of Catarrh or Deafness caused by Catarrh.

Sold by all druggists for over 40 Years.

SPENCERVILLE

J. D. Markle of Detroit, spent the weekend in the Jerry Markle home.

Miss Margaret Lake left Wednesday to assist in the care of her cousin, Mrs. Nellie Heyman at Ft. Wayne.

The Misses Marjorie Hollabaugh and Mabel Rhodes have accepted positions at Wolf & Dessauer's at Fort Wayne.

The C. C. Club was pleasantly entertained Friday afternoon at the home of Mrs Floyd Dean. It was decided at this time not to have a meeting until October 2.

Billy Gene Widdifield died at 6 o'clock Monday morning at the home of his grandparents, Mortie Widdifield and wife, at the age of two years. Billy had been ill for some time. He leaves his parents, grandparents and an aunt. The funeral was held Wednesday afternoon at the Widdifield home at 2 o'clock, Rev. Steffey of the Lutheran church officiating. Interment in White City Cemetery.

James Ree and wife entertained the senior class of 1923 at their home Sunday in the third annual reunion. After a delicious potluck dinner an election of officers was held with the following result: Chairman, Mrs. Ellen Lake Hart; Sec.-Treas., Forest Beams. Those present were: Russell Wade, wife and daughter of St. Joe, Carl Hart and wife, Misses Ida and Vera Reed, Clarice Hahn, Marjorie Hollabaugh, Anna Beerbower, Earl Hodges of Harlan, Esther Henderson of Fort Wayne, Vaugh Allen, Mabel Rhodes, Forest Beams, Ada and Gale Bowser, Marjorie Spitler, Clarence Bice and Florence Beams.

See Furnish for that new Chevrolet.

School opened Monday morning with a fair attendance.

Joel Betz and wife were Saturday guests of John Betz and wife.

Rev. Steffey, wife and daughter, spent last Thursday at McClure and Malinta, Ohio, where eighteen years ago he served the Lutheran church.

The young people of the Lutheran Sunday School held a marsh mallow and weiner roast at the river Friday night in honor of the members who are leaving soon for college.

Mrs. Matilda Oberholtzer and daughter of Harlan, Miss Cozy Oberholtzer of Grabill, Jerry Markle, Serge Smith, Richard Chapman, Paul Dean, Miss Kathryn Hursh and E. A. Roush, the latter of Fort Wayne, were Sunday guests in the B. F. Markle home.

CIDER MAKING—I have started operating my cider mill on Tuesday, Wednesday, Thursday and Friday each week. Also cane in season. Apple Jell and Vinegar. ELI THOMPSON, 5 miles north of Hicksville on Concrete Road. Hicksville Phone.

BOWSER & REED

NEWVILLE

Miss Audry Rex of Fort Wayne spent Sunday here with her parents Wm. Rex and wife.

Mrs Bessie Shaffer has bought property in Butler and moved to that place Saturday in order that her 14 year old son might attend the Butler high school.

Harry Fuller, wife and daughter Maxine of Garrett, Mrs. Thomas Mays and two children of Willard, Ohio, and Carl Clark and wife of Fort Wayne, were Sunday evening callers in the John Miller home. Earl McDonald of Greencastle college, also called on his grandparents the same evening.

Miss Mary Nicholls of Chicago, spent a few days including Sunday with her mother, Mrs. Catherine Nichols Robert Nicholls and family of Orangeville and Wm. Hablewets and two children were also Sunday guests. Mrs. John Miller and other friends from Hopewell were afternoon callers.

Mrs Iven Smith is making her parents an indefinite visit south of Hicksville.

The Newville school opened Monday but a number of the small pupils remained at home in the afternoon on account of not having books

Guy Smith and wife are spending their vacation with relatives at Toledo. Alfred Smith and sons Iven and Howard are taking care of the store during the absence of the proprietor.

The remains of Mrs. Hollister were brought to Newville last Friday for interment Deceased was known here a number of years ago as Mrs Saylor. She died the first of last week at the home of her son Guy Saylor in Montana. Funeral services were held at the home of a relative.

Reward in Well-Doing

He that does good to another man does also good to himself not only in the consequence but in the very act of doing it, for the conscience of well-doing is an ample reward.

SOMETHING TO THINK ABOUT

By F. A. WALKER

GIVE ENCOURAGEMENT

A WORD of encouragement in the dark hour is often followed by a ray of sunshine that fights up a human soul until the end of time!

And how little does the helpful word cost the giver!

Look at the burden-bearers passing you, dust-covered, sad-eyed and weary, trudging through the cold and the heat, conscious only of their aching backs, tired feet and breaking hearts.

Give them a smile as you meet them. See their countenance brighten and their feet step more lightly as they catch the meaning of your lips and know it is meant for them.

Encouragement makes people believe in immortality because it opens up new visions that reveal vistas and sensations never before seen or experienced.

It stirs new emotions, strikes new chords of music, give new hue to the sky, and awakens thoughts which have been lying dormant in discouraged hearts since they first began to beat.

Instead of censuring the being who has made a mistake, give him or her a kindly word of cheer. Treat him or her as you would like to be treated when your soul is filled with doubt and sorrowing.

Forget the great weighty sermons, the thread-worn parable of advice and coujure up a dainty little posy of encouragement and note how eagerly it will be accepted, sometimes with a twitching of the lips, a trembling, grateful hand and a happy tear.

Try it today on some of the human wrecks you may meet, scuffling along, groping in a dismal world of whose horrors you know nothing and habitually shun as you would a pestilence.

And after you have tried it, look into your own soul and see the new light that has been born there to cheer you in the silent night when you are alone.

A little more friendly intimacy with one another, a few more benevolent smiles, a trifling bit of consolation and a few small words of encouragement scattered here and there as you go along the beaten pathway would in a generation lighten sorrowing hearts, make the world brighter and better and possibly move it closer to heaven!

(© by McClure Newspaper Syndicate.)

THE YOUNG LADY ACROSS THE WAY

The young lady across the way says she wonders why they call as healthy old gentleman as Doctor Lorens, "the bloodless surgeon," but any way that's a good deal better than heartless.

SUCCESS OR FAILURE?

By DOUGLAS MALLOCH

IF YOU have made the weary smile,
If you have made the lonely glad,
If someone's loud that someone had
Seemed lighter for a little while,
If someone walked an easier mile,
Or someone better bore a grief
For words of comfort and relief
That you have said to help the sad—
Although you never found the gold
Of which you dreamed in dreams of old,
Will you the gods of luck assail
And call it failure when you fail?

Or, if the dreams you dreamed come true,
The dreams of wealth, the thoughts of pow'r,
Your name the subject of the hour,
Your house the privilege of the few,
Whatever greatness comes to you,
It none a kindness can recall,
The ones who need it most of all,
If you have brought no grave a flow'r,
No attic fire, no table food,
If you your goal alone pursued
Along a path of selfishness,
And then you won, is that success?

(© 1925, McClure Newspaper Syndicate.)

Mother's Cook Book

What we call luck,
Is simply pluck,
And doing things over and over;
Courage and will
Perserverance and skill
Are the four leaves of luck's clover.

EVERYDAY GOOD THINGS

IN SMALL families a roast of any size lasts for several meals and becomes rather monotonous, for no one likes to throw away good food. The best plan is invite one's friends to help eat the large roast. A few ways of serving appetizing roast beef may be helpful. There is no meat more enjoyed than thinly sliced roast beef, so one may serve it one day for luncheon or supper. A nice well-seasoned tomato sauce may be served with thinly sliced meat heated well in the sauce; then to finish up the rougher portions, put it through the meat grinder and prepare croquettes, or stuff green peppers and bake them.

Buttered Turnips.

Wash and pare turnips and cut into half inch slices, then into half-inch cubes; there should be three cupfuls. Cook in boiling salted water until soft. Drain and add one-third of a cupful of butter. Season with salt, pepper, turn into a hot vegetable dish, sprinkle with a half tablespoonful of parsley and serve.

Emergency Dessert.

Take pieces of stale cake and let them soak in any fruit juice like cherry, strawberry, plum or pineapple. If none of these is at hand use orange juice with a little of the grated rind. Arrange the soaked cake in a pretty dish and pour over a custard using a pint of milk, two beaten eggs, four tablespoonfuls of sugar, a pinch of salt and any flavoring which combines with the fruit juice used. Serve with whipped cream or cover with a meringue and brown lightly.

Prune Ice Cream.

Cover a cupful of well-washed prunes with cold water and let stand overnight. Cook in the same water until soft, remove the stones and put the pulp through a sieve. Add a cupful of sugar, four tablespoonfuls of lemon juice, a pinch of salt and one and one-fourth cupfuls of heavy cream beaten stiff. Freeze as usual.

Nellie Maxwell

Among the NOTABLES

SILAS CLARKE HERRING

IF A modern burglar or "safe cracker" could see some of the safes invented by Silas Herring, he would probably have a good laugh. For a "modern" safe blower must be a bit of a scientist with a large knowledge of explosives; an old-fashioned safe would be easy for him to get into.

Herring was born September 7, 1803, in Shrewsbury, Vt., and began his career as a grocery clerk. Tiring of this after some six years, he went into the lottery business, saved $10,000 and started a wholesale grocery concern in New York city. A fire and a panic ruined his business, so he obtained the agency for safes. He got the right to manufacture them later, and kept on improving them each year. He once put a thousand dollars in the drawer of one, sent it to the World's fair and offered the money to anyone who could get into the safe and get it. No one got it.

But nowadays big banks and trust companies would laugh at these old square safes. The "burglar-proof" safe today is round like a ball, and has a door that screws in, leaving no cracks for explosives. Even if any were poured into the hinges, the explosion would only drive the door more firmly into the casing of the safe.

Herring died in 1881.

CRIPPLE SELLS GAS AND OIL FOR LIVING

Although Charles Beber has been a cripple since childhood, he is not dependent upon anybody. He manages to earn a living selling gas and oil from his filling station at 118 Fifth street, Woodside, Long Island. He uses a hand-propelled truck to get around. Photograph shows him filling the gas tank of one of his customers.

CLEAN DRIVEWAYS FOR OIL STATION

Accumulated Oil Drippings From Cars Often Become an Eyesore.

Oil station driveways frequently become an eyesore because of the accumulated oil drippings from cars being serviced. And because many of these stations occupy prominent locations and are designed for attractiveness, smutty driveways lower the general appearance of the station.

Applied to Hard Surface.

Standard Oil stations in New Jersey have adopted a successful and simple means of keeping their driveways spotless which may be applied equally well to paved surfaces.

All excess oil is piped off the surface or is scrubbed quite clean with kerosene or gasoline to cut the oily deposits. A little vigorous scrubbing with a stiff brush will remove most of this oil. The surface is then flushed with a hose stream of clean water and while the pavement is still moist a little portland cement is dusted over it.

Keep Surface Spotless.

In the New Jersey stations, the men in charge report that two applications each week are sufficient to keep the surface spotless. If dry cement is applied to the moist surface of the pavement, it is swept over the surface with a broom. On drying this leaves the surface white and covers up the stains left by the oil drippings. One Middle West station reports that the best results are obtained by dusing the pavement just after closing time at night. In this case the cement hardens before opening time the next morning.

Whatever the particular method of application may be, the use of portland cement keeps the surface in neat shape with a desirable light color.

Owners of private driveways, garage floors and automobile showrooms having hard floors also report the method simple and effective.

Replace Brake Linings Is Not Difficult Task

To replace a brake lining, the bands or shoes are taken off, the axle is placed in a vise, while the rivets are knocked off with a cold chisel or hammer. New strips of the lining fabric are cut to size. Beginning then at one end of the strip, two or three rivet holes are located with a blue pencil and cut with a punch, after which the fabric is put in position on the shoe.

Medium hard rivets, to prevent scoring of the drums, are passed through the holes and are then headed down securely at the back of the band. They must be sunk well into the fabric lining, so that no projections are left. With the strip held tightly to prevent wrinkling, and with the band at its original curvature, the next hole is marked, punched and riveted in the same way.

The operator simply keeps on around until the entire strip of lining is riveted down into place on the shoe. The braking systems of our modern cars are efficient enough under ordinary circumstances, but they are not powerful enough to allow a margin for slack maintenance. They must be kept right up to the mark, and systematic inspections and repairs when needed are dictated by common sense.

When Putting in Tubes Tighten the Bridge Nut

Many cases of tire trouble are due simply to the fact that the tube has not been properly inserted. The first thing to do when putting in a tube is to give the bridge nut at the base of the valve stem above the metal plate a tightening twist with a pair of pliers. When the tube is inside the casing, jar the tire a few times to seat it firmly. After the tire is mounted and fully inflated, fasten securely the rim nut, which works around the valve stem above the rim. Care in fitting the tube will save many a pinch and flat later on.

Lubricating Oil Pumped Into Combustion Space

Complaints are often heard that the action of the piston in an automobile cylinder tends to pump the lubricating oil up into the combustion space. A simple remedy for this condition, which is said to be satisfactory, is to round off very slightly the upper outside corner of the upper piston ring, and the lower corner of the lower ring. This does not affect the compression in the least, and the action is to permit the upper ring to pass the oil on the cylinder walls on the up stroke, instead of scraping it up to the top of the cylinder; while on the down stroke the surplus oil is scraped back. On the other hand, the up stroke of the lower ring tends to carry the necessary oil for lubrication up the cylinder wall, while on the down stroke the rounded lower corner of the ring would pass over the oil thus distributed and leave it behind. The intermediate rings should have both upper and lower corners eased so as to disturb the oil as little as possible, allowing it to remain and perform its function as a lubricant.

Veteran Inventor Kiser Sees Success in Sight

Louis C. Kiser, seventy-seven, veteran inventor of Decatur, Ill., has for many years been experimenting with an automobile driven by compressed air. Apparently he has succeeded as he has already received an offer of $10 royalty from one automobile company for every car equipped with the new type of power.

Kiser removes the entire gasoline line, cylinder head, water-cooling system and starter, replacing these with a solid head, without spark plug holes, a compressed air container and a simple valve throttle. The only fuel expense is the cost of lubricating oil. Kiser claims that his invention will revolutionize the whole theory of mechanics.

Bent Rims Are Given as Cause of Casing Trouble

Bent rims are a direct cause of rim cuts, of tires blowing from the rim and of the breaking of the tire cables at the base of the tire. Oftentimes motorists cannot understand why tires should blow out when they are driving slowly. The facts of the case are that the overstrained carcass has reached the limit of its endurance from previous abuse and has given way.

Many motorists, were they to examine the wheels on their cars, would be surprised to notice that their rims are bent along the edges. These bent rim flanges are ordinarily little thought of, yet they are responsible for a goodly percentage of tire grief.

When the wheel hits a frog or a switch of a street car track, or a hole in the road, there is a tendency to flatten the rim, especially if the tire is underinflated. The rim's support, however, is essential to the life of a tire. If it is bent so that it does not fit the tire and allows the sidewalls to bulge, the driver may know that trouble is to be expected unless he takes immediate precautions.

Hoosier State Happenings

Governor Jackson closed his vacation spent in the Dunes by attending a dinner given by the Gary and Lake County Historical societies.

A test case to determine the status of barbecue stands is in prospect at Crawfordsville with the arrest of Herbert Holman, by Will Campbell of Darlington, pure food inspector representing the state board.

The Indiana Real Estate association, in convention at Anderson, elected J. C. Shaffer of Anderson president. Fort Wayne was chosen as the place of holding the 1926 convention. Gary won the attendance cup.

Dr. J. Howard Stoutemyer, for ten year in the education and psychology department of Nebraska State Teachers' college, will head the department of education at Franklin college next year, repincing Dr. Jesse Adams.

Approval of plans for a $500,000 city hall to be erected as the first unit of Gary's proposed $25,000,000 "gateway" and civic center, was voted by a group of municipal commissioners called into conference by Mayor W. J. Fulton.

Overloading police officers with regulatory laws to enforce is one of the reasons for the crime wave in America, Arthur L. Gilliom, attorney general, declared at the annual meeting of the Indiana Municipal league held at Gary.

The will of Wilfred Sellers, a manufacturer of Elwood, who died recently, was admitted to probate in the Madison Circuit court. It disclosed that the estate was valued at $650,000, of which $500,000 is personal property.

In order to protect both bus drivers and passengers in busses, the public service commission announced at Indianapolis a new rule regulating the driving hours for bus drivers. Drivers will not be permitted on duty more than nine hours in any twenty-four-hour period. In addition, the driver cannot drive more than six hours continuously without rest unless in the case of extreme emergency.

Dr. Albert John Irwin, age sixty-eight, for 40 years a prominent practicing physician of Goshen, and Republican nominee for mayor, was drowned in Lake Wawasee when the boat in which he was fishing off the sunken island opposite Ideal beach turned over in a storm. Miss Helen Irwin of New York, upon her arrival in Goshen, posted an offer of $500 for recovery of the body of her father.

During the month of August the amount of federal-aid money which the state highway commission received as the government's share of the cost of federal-aid road undertakings in Indiana reached $712,494, it was announced at Indianapolis by John D. Williams, director of the highway commission. Of this amount approximately $64,000 was received to the commission's credit in the state auditor's office.

With the purpose of bettering the industrial condition of Indiana and bringing more industries to this state through the co-operation of Indianapolis and state organizations, two meetings will be held in Indianapolis in September or October under the auspices of the Indiana State Chamber of Commerce and the Indiana Commercial Secretaries' association, at which an extensive program will be discussed and planned.

More exhibits of every kind will be on display at the Indiana state fair, September 7 to 12, than at any previous fair, E. J. Barker, secretary of the state board of agriculture, announced at Indianapolis after he had canvassed the completed entry lists of all departments. For the first time the total list of exhibitors has exceeded 1,000, there being 1,061 exhibitors in all classes as compared with 796 exhibitors last year.

A movement to build a tomb for the late Thomas R. Marshall, former vice president of the United States, was discussed at the Mayflower hotel in Washington, D. C., by a few of Mr. Marshall's close friends. Meredith Nicholson, the author, an intimate friend of the late vice president, was among those present. "Mr. Marshall had a horror of being buried in the ground," said Mr. Nicholson; "more than once, he expressed a deep-seated aversion to having his body rest in the earth."

Indiana's new state park in the heart of Lake Michigan's dunes—a dream of ten years—became in part a reality when Governor Ed Jackson, representing the state, received a deed for 120 acres of the proposed 2,000. The presentation, made by Everett L. Gardner of Monticello, chairman of the state conservation commission, took place on the summit of Mt. Green, one of the popular peaks in the dunes. The deed was for a part of land formerly owned by John O. Bowers, a pioneer Gary attorney.

The forty-third annual reunion of the Thirty-fourth Indiana veterans, volunteer infantry, known as the Morton Rifles, will be held at Marion September 10.

Records of the office of M. Bert Thurman, collector of internal revenue at Indianapolis, on income taxes were opened for public inspection and publicity in compliance with orders of the congress in a room on the fourth floor of the federal building. The income tax records contain the names of more than 180,000 persons and corporations

Wit and Humor

GUARANTEED

It was the third time the hawker had descended the area steps, and Matilda, the kitchen maid, had half consented to buy a watch.

"But," she said, "my young man says I ought to have a guarantee with it."

Not a whit dismayed, he wrote out a guarantee to keep the watch in repair for one year.

"Sign it," he commanded.

She did so!—London Tit-Bits.

RUNNING

"I hear your son has gone in for track work at college."

"I don't know, but he certainly is running an awful hole in my bank account."

Brake Was Missing

Lies slumbering here
One William Lake;
He heard the bell,
But had no brake.

In

A stranger entered the outer office of a pretentious suite and inquired: "Is the boss in?"

"I will see, sir," said a courteous clerk.

Returning he reported: "Yes, the boss is in about $40. If you will give me your card I think he would welcome the chance to leave the game."

No Nonsense

Sailor's Wife—So you'll be back in four years, will you?

Sailor—Aye, but I may be a bit late on this trip.

Sailor's Wife—Well, if you are, don't let's 'ave any of your old excuses about the ship going down an' 'aving to walk 'ome.

PAY DIRT

Reporter—Would you marry for money?

Actress—Not me. There's a heap more in settling breach of promise cases.

Tried to Pass

Down in the creek
Sleeps Jerry Bass;
The bridge was narrow
He tried to pass.

Quarrel Brewing

Jones—Sorry, old man, that my hen got loose and scratched up your garden.

Smith—That's all right. My dog ate your hen.

Jones—Fine! I just ran over your dog and killed him.

The Proper Care of Husbands

"So you let your husband carry a latchkey?"

"Oh, just to humor him. He likes to show it to his friends to let them see how independent he is—but it doesn't fit the door!"—The Passing Show (London).

A Bald Affair?

"How was the barbers' ball last night?"

"Well, I stayed until a fellow committed herpicide, and then I decided the party was getting too dondruff."

Terrible This

"Bill has fishing on the brain."

"Fishing tackle, you mean. I have seen him when his brain reeled."

Awkward

Black—Can you tell me how to get rid of a mole?

Green—Hit it on the head with a hammer, or something. Have you tried poison?

Black—No. The mole I'm speaking of is on the end of my nose.

Two of a Kind

Beggar—Got a few cents, mister? I ain't had a bite all day.

Angler (returning from trip)—Shake, old man! Neither have I.

POINTS ON KEEPING WELL

DR. FREDERICK R. GREEN
Editor of "HEALTH"

(©, 1925, Western Newspaper Union.)

PUTTING SUNSHINE IN FOOD

LIGHT is life. Darkness is death. The ancient philosophers knew this. Men for centuries have known that sunlight was necessary for health and life. Gardeners and florists have long known that plants, to be healthy and strong, must have sunlight, and that plants grown in cellars or caves are pale, weak and unhealthy.

We have long known these facts. We are only just beginning to know why. Scientific men have learned more about light in the last fifty years than had been learned in all the long centuries preceding. We know today that all light is the same, that all forms of light come originally from the sun, which is the source of all light and of all life as well, and that when God said "Let there be light" He also said "Let there be life."

For a number of years it has been known that sunlight was especially valuable in the treatment of two diseases, both of them largely diseases of infancy: tuberculosis, which some of the best authorities claim is always contracted in early life, no matter when it may become apparent, and rickets, which always occurs in the first year or two of life. This is the reason for the puzzling fact that poor children in the slums who play outdoors in ragged clothes are often freer from these two diseases than pampered children of wealthy families, reared in hothouses and always overdressed and wrapped up. Poverty has its inconveniences, but the poor child gets more sunlight on his skin than does the son of the millionaire.

Then it was found that certain kinds of electric lamps, the carbon and the mercury-vapor lamps, gave off ultra-violet rays that had the same effect as the sunlight. About a year ago Professor Steenbock of the University of Wisconsin and Dr. Alfred Hess of New York found that linseed or cottonseed oil, exposed to the sunlight or to the mercury light, absorbed these ultra-violet rays and were just as valuable and much better tasting than the cod liver oil that has for years been used in the treatment of tuberculosis and rickets. Then they found that flour, dried milk, vegetables and other foods, exposed to the light, absorbed these rays, and if fed to the child would prevent rickets. This is due to the fact that either the animal or the vegetable cell absorbs the ultra-violet rays and holds them, later giving them off to the body. These rays, taken into the body, stimulate the body cells, just as sunlight does, and so make the body stronger and healthier and better able to resist disease.

WELL-FED CHILDREN

WHILE the amount of tuberculosis has been greatly cut down in the last 25 years, this dreaded disease is far too common and still deserves its name as "the great white plague." Beside reducing it to almost one-half of its former amount, we also know a great deal more about it, and so know better where and how to attack it.

Our grandfathers and grandmothers thought that consumption was hereditary, that certain persons were marked for it from birth, and that it was useless for such unfortunates to try to escape their doom. We know now that tuberculosis is not hereditary, but that, far too often, healthy children contract it from living in close contact with infected parents; that no matter at what age the disease may show itself, the infection is generally contracted in childhood. We also know that there is no drug or serum that will protect any one, and that children who are improperly fed or poorly nourished are more likely to become infected than those who are well fed and who have a high degree of bodily resistance.

So that one of the most hopeful methods of reducing this dread disease is to see to it that children, so far as possible, are well fed, especially during the period of active growth.

In a recent article in Outdoor Life, Dr. Henry A. Chadwick of the Massachusetts department of public health, discusses the relation of malnutrition and tuberculosis in children. A well-nourished child, he says, stands erect, is alert and has a slightly moist skin of good color. Its bones and muscles are well developed, and its weight is up to the average of a normal child of the same age. An undernourished child is dull, nervous and fidgety. He has a rounded back and stooping shoulders, pale, dry skin, flabby muscles through which the bones show plainly. He is below the other children in weight and height. He is nervous, tires easily, sweats constantly, has a poor appetite, and has frequent colds. Such children, are more susceptible to tuberculosis than are normal children. They need simple, nourishing food and plenty of it, outdoor air and sunshine and plenty of sleep, if they are to overcome their natural tendency to consumption.

Many Varieties of Plums

Asia is supposed to be the original home of the plum tree, which later came into Italy by way of Syria and Greece. There are now several hundred varieties of this luscious stone fruit, many of which are historic.

Lesson for September 13

PAUL IN THESSALONICA AND BEREA

LESSON TEXT—Acts 17:1-15.

GOLDEN TEXT—"Prove all things; hold fast that which is good."—I Thess. 5:21.

PRIMARY TOPIC — Loving God's Word.

JUNIOR TOPIC — Studying God's Word.

INTERMEDIATE AND SENIOR TOPIC—Two Kinds of Hearers.

YOUNG PEOPLE AND ADULT TOPIC—Searching the Scriptures.

I. Paul Preaching in Thessalonica (vv. 1-4).

1. His Method (vv. 1-2).

He observed the divine order, to the Jews first wherever he went (Acts 1:8; Rom. 2:9-10). He was exceedingly anxious for his kinsmen in the flesh, but whenever they proved themselves unworthy, he turned to the Gentiles. His own kinsmen first should be the method of every missionary, but should not stop there. He went out on the Sabbath day so as to find them assembled together.

2. His Message (v. 3).

His message was always and ever the same, viz., that Jesus is the Christ. To the Jew the essential thing was to be convinced from the Scriptures. So Paul expounded to them the Scriptures. This is the business of all ministers, to expound the Scriptures, to prove their positions by the Word. Concerning the Christ, he set forth three propositions:

(1) The Scriptures prove that Christ must be a sufferer (v. 3). "It behooved Christ to suffer." No plainer reference need be made than Isaiah 53, but it seems that the rabbis of that time had explained away the fact of a suffering Messiah so that the Jewish people were only looking for a glorious and powerful king to come; therefore they rejected Christ because of His lowly appearance. The same method of exegesis is employed by many Bible teachers and preachers today. Only the emphasis is placed upon the literal suffering of the Messiah, while they spiritualize and allegorize the teaching of the glorious coming of the Messiah to judge His enemies and to reign upon the earth (II Sam. 7:8-16; Isa. 53; Jer. 23:5-8; Zech. 9:14; Luke 1:1-43; Acts 15:14-17).

(2) That Christ Must Rise Again From the Dead (v. 3).

This he proved by the Scriptures. The resurrection of Christ, and the bodily resurrection of believers, needs sound and practical exposition in our churches today.

(3) That the Historic Jesus Whom He Proclaimed Did Suffer and Rise From the Dead; Therefore, He Is That Christ, the Predicted Messiah (v. 3).

II. The Attitude of the Jews (vv. 4-10a).

While some Jews believed and many Greeks, the envy of certain Jews was so aroused at Paul's success that they gathered together the worthless fellows of the town and set on foot a riot. They assaulted the house of Jason and dragged him before the rulers, having failed to get the missionaries. In their indictment of the missionaries they uttered unwittingly some great truths. They said: "These that have turned the world upside down." It is true that the gospel is revolutionary, but it is not treason to right government. The real truth, however, is that the world is now upside down. The work of the gospel is to set it right side up. They turned the preaching of Paul into a specious lie. He did preach the kingship of Jesus (see verse 7), but not as they endeavored to make it appear. Jesus is most assuredly coming to reign on this earth (Ps. 2). Let all men acknowledge Him in humble submission.

III. Paul Preaching in Berea (vv. 10b-15).

1. His Method (v. 10).

He entered the Jewish synagogue and preached Jesus unto them.

2. The Reception of the Gospel by the Bereans (vv. 11-12).

It was with gladness of heart. The message was just as new to these Jews and just as counter to their way of thinking as it was to the Thessalonian Jews, but they had a more noble disposition. The success of the gospel depends altogther on the disposition of the hearers. Two things are said of them:

(1) They received the message gladly.

(2) They searched the Scriptures daily for the truthfulness of the preaching. For this worthy act Paul says they were more noble than those at Thessalonica.

Human Welfare

The utilization of the forces of earth for human welfare can only be achieved by brotherhood and co-operation.—Lily Dougal.

Peace

There is no peace, now or hereafter, for him who rejects the Prince of Peace.

A Holy Purpose

A holy purpose is better than a great fortune.—Christian-Evangelist

0297

Ornamentation Is Feature of Gowns

That the trimming makes the gown was never more evident than it is this season, declares a fashion writer in the New York Times. The slogan of simplicity has applied in many way to many costumes. But the very reverse has been illustrated by the number of impressive and elaborate models that emanate from the masters of the art at Paris. Lines, composition, the silhouette remain consistently simple and free from any suggestion of fussy detail, but the attention of those who create and those who wear the gowns of the present mode is centered on the "type" of its ornamentation.

With a plain background it is possible to work magic with beautiful trimmings—the laces, the needlework and the printed patterns now in style. The extremes in vogue offer the broadest opportunity, and the manner in which artists are establishing these is interesting. Quality, artistic design, poetry and beauty in form and in color are illustrated in many of the latest gowns, wraps and accessories coming from Paris, as well as in those designed by artists on this side. Rare lace is being used lavishly. Needlework that goes into the composition of afternoon and evening costumes, even sports clothes, reflects the days of court society and the fashions of great ladies.

Even the suggestion, now and then, of the mid-Victorian, for which there is somewhat of a "craze" at the moment, has in it a dignity and touch of elegance. In the search for inspiration the makers of fabrics have found their answer in museums of fine art, in the treasures of the ancients. Old portraits, murals, even the details of architectural ironwork, as in the Ferronier prints, have caught the eye of men of imagination, and are now reproduced in the materials of which many of the newest models are made.

Creation of New Styles.

It is interesting to see how by degrees a new style is created. How, once the rigidity of any mode is relayed, one feature after another is developed, often in something quite the opposite of the original. The uniformity which has characterized the fashions of the past few years is being varied in the up-to-date models in many attractive ways. Relief from monotony is always grateful, and modistes are introducing panels, sections, borders of one kind of dress goods upon another, giving an entirely new effect.

In many of the printed silks the dominating color is used to edge the plaitings and flounces now so fashionable. A Ferronier printed crepe in beige and blue with a fine line of scarlet running through the pattern

Old Black Lace Borders a Dress of Heavy Flesh Satin.

is made in the usual one-piece frock, with the very latest mode of trimming, a plaited flounce, at the bottom. On the hem of this is a narrow band of navy blue silk. The slit neckline with narrow rever has also a touch of the dark blue in the tie ends, and the same bit of color is used at the wrists of the long plain sleeves.

A similar scheme is illustrated in another of these Brandt prints in the mellow shades of brown and beige, with the same trick of the handsomest design in this model from a prominent Parisian couturier, thus honoring the American industry, three plaited ruffles of the figured goods are added to the skirt, all the way around. Each of these is finished with a two-inch band of brown grosgrain ribbon, which is added to the jabot on the bodice and to the bottom of the long, semi-circular, flaring sleeves.

Another Innovation.

So much for the border of color which emphasizes the harmony in the assembling of colors. Another innovation is the combining of materials of different kinds. The band which is shown in some of the latest costumes, has in others widened to the knee, and even to the line of the hip, showing a long bodice of figured goods and a skirt of plain. The contrast is carried through the costume to give this effect of two materials. A geometric or floral pattern, stripe, check, or one of the bold plaids that are having such a vogue, is combined with

Dress, Trimming in Back, Made of Golden Pheasant Satin.

plain goods to emphasize the dominating tint in the design. The manner in which this idea is established is an individual problem, being worked out with originality and success by style creators, Paris leading the way.

The two-material plan is expressed in more than design merely, for, in addition to these, there are shown some particularly interesting costumes in which worsted and silk are put together, plain cloth with mixed wool, satin with wool, and, most prominently of all, velvet with either silk or woolen fabrics.

While it is unsafe to make conclusive statements about the coming mode, and futile to prophesy too far ahead, the straws that blow in the wind of the Rue de la Paix point to velvet as the material par excellence for early autumn. In feeling their way Parisian designers are illustrating the beauty and the flattering appeal of velvet in millinery and in various incidental trimmings. Many of the newest hats are made wholly of velvet, or have a velvet crown with brim of straw, horsehair, leghorn, maline or lace.

Semi-Sports Hat of Velvet.

A semi-sports hat of velvet with draped crown is a charming bit of millinery that is going "like hot cakes." It responds to almost every informal occasion and is suitable for all times and places, for day time, town or country. It is literally a chic top note with sports costume, with a more conventional tailored outfit or with a frock of the foulard type of dress.

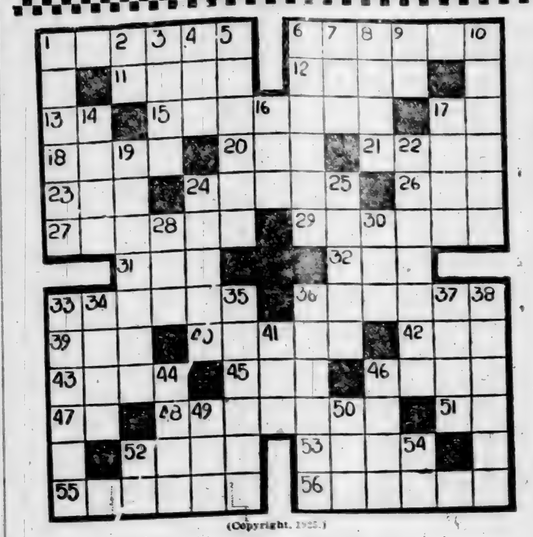
Conspicuous among the evening gowns are some of diaphanous materials, the tulles, marquisettes and chiffons, on which either the fluttering ends of a velvet sash are shown or a large velvet flower is added, to point up the costume. These last accessories are to be had in glorious big roses in the natural shades, from the latest "tea" to deep crimson; in flaming poppies, mammoth in size; in white calla lilies with long, slender leaves and willowy stems. All of these are fashioned by skilled craftsmen of the finest materials, and give to a frock of delicate fabric the most enchanting effect. One or two, singly or cluster, is usual.

But in some delightful dancing frocks of tulle with many ruffles or plaitings the flowers are added in a different arrangement. On one model from a prominent designer the very bouffant tulle skirt has a deep flounce, caught at intervals straight around with a large, flat velvet rose. In this ensemble the material of the dress is lightly traced with silver thread, and a line of silver gives a glint here and there to the flower motif.

The velvet hat has intrigued creators to give a touch of richness to the gown by using velvet for sashes and for the edge of frills. Most of the summer gowns have a little tie at the neck, or a length of velvet ribbon introduced in some manner. As a distinctive trimming, or mode of embellishing a frock, velvet and velvet ribbons are in a way taking the place of the narrow band of fur that has smartened many costumes from Paris houses.

A checked coat has nearly always the lining and the accompanying frock in plain fabric and vice versa. These frocks are frequently composed of a blouse and skirt, or a jacket and skirt.

CROSS-WORD PUZZLE



(Copyright, 1925.)

Horizontal.

1—Any of the various elected governing bodies of the Russian republic recently
6—Preserving
11—A kind of singing voice
12—A row or rank
13—Road (abbr.)
15—Means of ascent
17—Tantalum (symbol)
18—River islands
20—To pass away
21—A kind of gull
23—Through or by
24—Heated
26—Meshed twine
27—One of the vast level treeless tracts in Europe or Asia
29—A sequence
31—To be ill
32—A dirty animal
33—A girl's nickname
36—Made less bright
39—A female sheep
40—To walk
42—A black bird of the cuckoo family
43—Name of a famous American singer
45—Masculine beings
46—A continent
47—Doctor of Science (initials)
48—Bearer
51—Deputy lieutenant (initials)
52—A group of related persons
53—Every individual or group considered separately from the rest
55—To cancel
56—Went quickly

Vertical.

1—Strips of leather used in flogging
2—A Southern state (abbr.)
3—Ailments
4—A Greek letter
5—To walk with short tottering steps
6—Soaks in a liquid
7—To ventilate
8—An article of men's clothing
9—Irish (abbr.)
10—Permits
14—A course of eating
16—To pass away
17—A woody perennial plant
19—Handled
22—To divide lengthwise
24—Lukewarm
25—A hole in the ground
30—Edge or brim
33—Furnished with a head
34—Carpenter's tools
35—A kind of fur
36—Peril
37—A girl's name
38—Measured with a dial
41—Even (poetic)
44—Capable
46—Parts of circles
49—A rodent
50—Water (French)
52—150 (Roman numerals)
54—Hogshead (abbr.)

Solution will appear in next issue.

Solution of Last Week's Puzzle.

HOW TO SOLVE A CROSS-WORD PUZZLE

When the correct letters are placed in the white spaces this puzzle will spell words both vertically and horizontally. The first letter in each word is indicated by a number, which refers to the definition listed below the puzzle. Thus No. 1 under the column headed "horizontal" defines a word which will fill the white spaces up to the first black square to the right, and a number under "vertical" defines a word which will fill the white squares to the next black one below. No letters go in the black spaces. All words used are dictionary words, except proper names. Abbreviations, slang, initials, technical terms and obsolete forms are indicated in the definitions.

Claim Bacon Did Not Originate Telescope

Not satisfied that credit for the invention of the telescope had been properly placed, the subject has been gone into recently at Oxford, England, with the result that a claim is made that the instrument was invented at Oxford by an Englishman and that the only question to be decided is whether the Englishman was Roger Bacon or the Elizabethan philosopher, Leonard Digges.

Supporters of the Oxford claim credit Galileo with being the "greatest advertiser" of the telescope, but insist that he did not invent it, nor did the Dutch spectacle makers, who are accorded credit as the first who made the telescope an article of commerce.

In favor of the Oxford claim it is pointed out that in the Thirteenth century Roger Bacon wrote: "Glasses or diaphanous bodies may be so formed that the most remote objects may appear just at hand, and the contrary, so that we may read the smallest letters at an incredible distance, and may number things, though ever so small, and may make the stars also appear as near as we please."

However, it is admitted that at this time it is impossible to know whether Bacon actually invented a telescope or merely worked out the theory upon which all magnifying glasses are based.

As to the possibility of Digges, an Oxford man, being the inventor, it is said that in the middle of the Sixteenth century he found Bacon's ideas in a Bacon manuscript, now lost, and went to work to produce glasses in accordance with them.

Digges died young with his work unfinished and it remained for his son Thomas to assert the father's claim as an inventor. The son is quoted as saying his father often demonstrated his glasses by reading from a distance the numbers and letters on coins thrown by friends on open fields.

Says Brother Williams

I b'leves dat married folks inherits dey troubles, and dat ole Adam had ter tiptoe home in de dark o' de moon an' wus feared dat de dog would bark an' give him away as he climbed over de gyarden fence!—Atlanta Constitution.

Franklin on Learning

Learning, whether speculative or practical, is, in popular or mixed governments, the natural source of wealth and honor.—Benjamin Franklin.

Then the Trap Snapped

"I just stopped in to tell you," began the man at the complaint desk of the gas company, "that my gas stove blew up yesterday."

"Tell your troubles to a plumber," growled the surly clerk. "That's no fault of ours—you got no kick here."

"Oh, I'm not kicking," replied the customer cheerfully, as he opened the door. "Only I thought I'd tell you that your blamed old slot meter backfired at the same time, and I haven't been doing anything but picking up silver quarters all over the cellar ever since. Good day."—American Legion Weekly.

Not Knocking, of Course

"What kind of a place is your rival hamlet of Tywoppity?" inquired a recent arrival in Peeweecuddyhump. "Kind of a place?" repeated the proprietor of the Bee Hive store. "Come here! See them buzzards sailing around, 'way out yonder at the edge of the sky? Well, they're over Tywoppity. That's the kind of a place it is—plumb dead!"—Kansas City Star.

Cunning and Wisdom

We take cunning for a sinister or crooked wisdom, and certainly there is a great difference between a cunning man and a wise man, not only in point of honesty, but in point of ability.—Bacon.

Reward Worth While

Life is troublesome, full of care, disappointment and bitterness for those that carry responsibility and realize their shortcomings. But it has its reward as great as its worries.

Wasted Energy

Few men suspect how much mere talk fritters away spiritual energy—that which should be spent in action spends itself in words.—F. W. Robertson.

Dairy Barn and Machinery Shed Carefully Planned for Small Farm

Mr. William A. Radford will answer questions and give advice FREE OF COST on all problems pertaining to the subject of building work on the farm, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on the subject. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

By WILLIAM A. RADFORD.

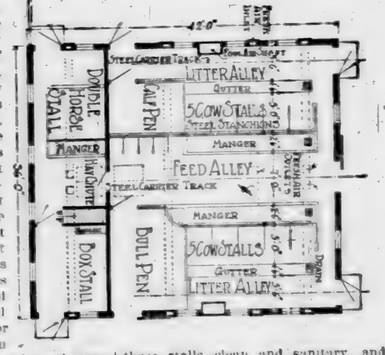
Not every farm needs, or can afford, a large and elaborate dairy barn and a number of auxiliary buildings. Sometimes the dairy end of the farm is small, and then, too, there is a limit to the investment which is justified at different stages in the development of the farm. But no matter what the size of the farm it should have well built barns with first-class equipment, and barns and machinery should be well cared for at all times. Well-cared for equipment is the sign of good management and good management means the greatest profits. You can always judge a farmer by the way he takes care of his equipment.

Room for Ten Cows.

The plant shown in the illustration is a small dairy barn, providing for ten cows, and a machinery shed. The machinery shed is 36 feet long and 24 feet deep and will provide a place where all the farm machinery can be kept completely protected from the weather so that it will have a long life of useful service. Three sliding doors form the front of this building and there is another, broad, sliding door at the back. Windows at the rear and one end provide light. The whole building is of wood with a composition roof.

The barn also is of wood with a shingled roof. It is well lighted by windows all around and there are doors at each of the four corners and on the sides as well as a wide sliding door at the rear. The two doors at the forward corners open into a section of the barn where is found a double horse stall and a box stall. Between these is the stairs to the loft and the hay chute, from which a door opens into the main body of the building.

From the hay chute a steel carrier track extends through the door and down the center of the feed alley, supplying a row of cow stalls at either side. Before coming to these cow stalls, however, there are two pens, one for calves and the other a bull pen. There are five stalls in each row and the litter alleys behind them, as well as the mangers, are well drained so that they are easily kept clean. Steel carrier tracks are also provided in the litter alleys behind the stalls to aid in the task of keeping



these stalls clean and sanitary, and the tracks extend out of the building through two of the corner doors.

Ample fresh air shafts are provided and there is a large shaft at each side for carrying off foul air and odors. This, together with the ample lighting provided by numerous windows, is one of the essential points in a sanitary dairy barn producing a high quality and quantity of milk. The air shafts have their outlet through a modern ventilator placed on top of the building.

This barn is small, only 42 by 30 feet but is well planned in every feature and equipped for high-grade production. Above the main body of the building is an ample loft for the storage of sufficient feed for the number of animals which are housed. This loft is lighted by two windows at each end and is served by an efficient modern hoisting equipment.

Cause of Wood Decay Mostly Due to Climate

Wood does not naturally decay. The rotting so often seen where wooden surfaces are left unprotected is caused by a process in which oxidation plays a necessary part. Aided by the presence of oxygen, little plant-like growths or fungi, the destructive agents in the process, feed upon the starch and other materials in the wood cells. Gradually, as the cell structure is broken down, only the familiar dust or powder remains. It is then we say that the wood is rotted.

It is practically impossible in most climates to avoid the presence of fungus spores or cells. Thrown off by the billion from various fungus growths, these tiny cells are carried almost everywhere by the wind, by the birds, by insects and in many other ways. The air is often laden with spores and bacteria of every kind. At first thought, therefore, it might appear difficult to prevent rot.

Fortunately, however, rot can only take place when four distinct conditions are fulfilled. There must be heat and moisture as well as oxygen and fungus spores. The absence of any one of these elements will be sufficient to prevent the growth of fungi and the accompanying rot. This is why even unprotected wood will last for centuries in a desert climate where there is practically no moisture in the air.

The condition generally known as "dry" rot is not actually dry. It starts in moist wood and continues only as long as the moist condition persists. This moist condition is not always readily apparent, which is probably why the term "dry" rot originated.

Under conditions usually favorable to rot, paint is probably the most effective means of eliminating one or more of the factors necessary to decay.

Proper Heating

The proper heating plant may cost you a little more to install, but it will save you many dollars in doctors' bills every winter.

Well Finished Floor Adds to Beauty of the Home

There is nothing more pleasing to the eye on going through a home than well-kept floors. No matter how fine your rugs may be, it takes a well-finished floor to bring out its beauty. Floors must have more attention than any other interior finish, as they are constantly exposed to hard usage. They must be finished with a varnish that is scratchproof and waterproof.

It is not a hard job to finish the ordinary hardwood floor. Simply see that it is absolutely clean and free from all grease and spots. This can be done by washing with warm water and washing powder and then thoroughly cleaning with clean water.

After the floor is thoroughly dry, sand lightly with 00 sandpaper and remove all dust.

If there are any greasy spots, these should be wiped out with a cloth saturated with turpentine or benzine.

Then apply varnish as received in can, two coats to insure a satisfactory job, allowing from 24 to 36 hours between coats.

Refinishing floors once a year is advised unless they are subjected to continued hard usage, when a coat every six months should be applied.

Built-in Devices Save Space in Small Home

The modern bedroom should be an example of compactness.

If one desires, he may have much of the furniture built in, such as the wardrobe equipment, comprising hanging closets with shelf, hanger rod and shoe rack; dressing tables with front and side mirrors and disappearing chairs.

Stairs, clothes closets, telephone table and chair, writing desk, benches and radiator inclosures are up-to-date built-in-features in reception halls.

The sun parlor is this age's contribution to home-building design. Like the dining alcove, it is furnished artistically, containing flower boxes, special furniture to harmonize with colorful drapes and tile floor, french doors and casement windows.

SEPTEMBER

PUBLIC SALE!

The undersigned will sell at Public Sale at the J. W. Henderson residence, 1-2 mile west of Spencerville

Friday, September 11, 1925.

Commencing at 1 o'clock, the following:

Top Buggy, Light Express Wagon, 2 set single harness, Cream Separator good as new, Corn sheller, and Garden plow.

Household Goods:

Hard coal stove as good as new, 2 Round Oak heating stoves, Garland Range, Table, Chairs, Sideboard, Bookcase, Beds, Dressers, Commodes, Stands, Rockers, Couch, Rugs, Carpets, Sewing Machine, Davenport, Pedestal, Kitchen Cabinet, Tubs, Wringers, Fruit Jars and numerous other articles, all of which are in good condition.

Terms Made Known on Day of Sale

HENDERSON BROS.

Rhodenbaugh & McNamara, Auctioneers.

Home Coming Notes

(Continued from Page 1)

Joe Sechler did sure enjoy the day, and especially the parade. In its passing a swell colored lady threw Joe a kiss. He has been trying to find out who she was ever since Saturday.

Hot! Well there was plenty of heat. Mrs. Diadenn Bone, feeling the heat a little more than the slender people, fluttering her hands, said, "Gosh, I am so hot that I don't know who I am."

Peters Bros., the German Concertina players were a jolly pair and their music was pleasing to their great audience. They kept the program on the move. The committee used good judgment in securing this attraction for the day. Their play was a real novelty.

George Haifley and wife of Detroit were here. They have both been laid up for the summer as the result of a street car wreck, in which Mrs. Haifley had her hips broken besides several ribs and George was seriously injured. He will soon be able to go to work.

Mahlon Baker, Auburn, was about the first on the ground and consequently was drafted in on some of the work about the street. It being such an uncommon thing to see him work that practically everyone who saw him, remarked about it. Mahlon said that at Auburn he could work his fool head off and not a soul would say a word. St. Joe appreciated Mahlon.

The parade was delayed a few minutes as the horses representing the K. of P. Lodge were hard to manage. As they were starting east on Main street, one was bound to keep out of line and Frank Meese stepped up and proceeded to tap him into line and the horse kicked him in the left side, knocking him about 10 feet. A machine picked Frank up and took him home, where Dr. Mapick was called. A close call. Being close to the horse saved his life.

J. B. Draggoo of Auburn, claimed to be the oldest person present, having been born in Concord township on Sept. 14, 1842, making him 83 years old next Monday, he was born just a few rods east of the Saylor school house, 2 miles north of town and the only land mark remaining is 2 apple trees along the road. On next Sunday Mr. and Mrs. Draggoo will be found about noon sitting in the shade of the old apple tree, eating their dinner, and he will be telling her of the incidents of his boy hood days. Any old friends will be welcome.

The following is the list of persons who registered, living outside of DeKalb County, as taken from the book of the association:—

Keith K. Smith, Evanston, Ill. Sylvester Chandler and wife, Hobart, Ind. L. W. Yeiser and family, South Whitley, Ind. J. F. Walker, South Bend, Ind. C. H. Bishop and family, Cleveland, Ohio; E. W. Hart and family, Napoleon, Ohio; Frank Leighty, Angola, Leslie Gee, Kendallville, Sylvester J. Hartswick, Kendallville; Frank Philley, wife and daughter, Huntington; Ross Mohr and family, Elkhart; Carmen Barnes, Toledo; Janet Barnes, Toledo; P. M. Barnes; Toledo; Ella Rabe, Ft. Wayne; Jesse Copp and family, New Haven, Ind. J. Harvy, Bryan, O. Virgil O. Tressler, Ossio, Michigan. Mrs. H. E. Gooms, Albuquerque, N. M. Ray Moore, Hatrford City, Ind. Guy Calkin, Evansport, O. Virgil Pence Lima, O.

N. H. Knouse, Antwerp, Ohio; Helen Bartholomew, Antwerp; Mrs. A. H. Milliman, Fremont, Ind. Samuel Henry and wife, Fremont; Ellen E. Henry Fremont; George Milliman and son, Shelby, Mich. LOOK OUT FOR YOUR EYES

If you want them to look out for you. You may be far sighted and see well at a distance and not good close up you may be near sighted and see good close up and not be able to recognize people across the street or you may be astigmatic and not see right either near or far, also one eye may be good and the other poor and you may not know it unless you try each eye separately. Have your eyes tested and find out the conditions.

FEDERAL RESERVE HELPS FARMERS

How Its Aid to England's Return to a Gold Standard Benefits American Agriculture.

By M. A. TRAYLOR
Second Vice President American Bankers Association.

There has been no more important event for the American farmer and stock man since the Armistice than the recent return of Great Britain to a gold standard. It seems a long distance from the Montana farm to the gold vaults of the Bank of England, but the price the farmer gets for his wheat and cattle depends not a little on that gold.

M. A. Traylor

The farmer sells his wheat to the elevator man and yet the real buyer, in many cases, is an Englishman, a Frenchman, a German, or an Italian. About one-third of the wheat crop is usually sold abroad and this part is a large factor in fixing the price of the entire crop. Between the farmer and the foreign buyer there are many steps. In recent years the most important step has been that at which the foreign buyer has to pay the American exporter, for the international mechanism of payment has been badly out of order because Europe was off the gold standard. It was just as though an English buyer drove up to your farm house, bargained for your wheat and drew up the contract. But when you discussed payment, he said: "I'm sorry I haven't any good United States money to pay you with; I'll have to pay you in my English paper money, which isn't worth its face value in gold. I don't know what it may be worth next week, but that is your risk."

A Deadly Foe of Trade

How many would be willing to sign contracts on this basis? Yet that is the way most of the world's trade has had to be carried on since the Armistice. In practically all countries except the United States the currencies have had no fixed value in gold, but have changed in value from day to day. Whenever one country sold anything to another country, somebody had to take the risk of loss because the value of the money might change before payment was made. Such uncertainty of payment is a deadly foe of trade, and people were afraid to do any larger international business than they had to.

Exports of food stuffs from the United States fell from two and a half billion dollars in 1919 to eight hundred millions in 1923, and the difficulties of European buyers in making satisfactory payment for American farm products was one of the large factors in the drop in the prices of farm products. But now the recent action of Great Britain in declaring that it will again redeem its paper money in gold means that British buyers of American products can pay for them with money which is accepted the world over at its face value in gold. With the return of Great Britain to the gold standard, a majority of the countries of Europe have paper currencies equal to gold.

How Reserve Banks Helped

American bankers have assisted in the British return to the gold standard by giving a $100,000,000 credit to the British government. But more important than this was the action of the Federal Reserve Banks in granting the Bank of England material co-operation. They placed $200,000,000 gold at the disposal of the Bank of England for two years, to be used by it, if necessary, in maintaining the gold standard. The readiness of the Reserve Banks thus to co-operate was an important influence in the willingness of the British to take this all important step.

This action of the Reserve Banks was a most constructive step in aid of American farmers and producers who will benefit greatly by the removal of this element of uncertainty from their export transactions. If all the sins of omission and commission charged against the Federal Reserve System by banker, business man, live stock man or political blatherskite in the last five years were true, and practically none of them are, the service rendered commerce and industry by the System in connection with the restoration of the gold standard in so large a part of the world would far outweigh any mistakes that those in charge of the System may have made. No banker, business man or farmer should permit any self serving declaration by favor seeking demagogue to swerve him from a determination to see that the System is maintained for the future welfare of the country.

Fundamentally conditions are very sound and we are doing a very large volume of business, no little part of which is due to the equalizing and stabilizing effect exercised by the Federal Reserve System on the credits of the country. Throughout all the stress of the last five years there have been no times of either stringency or plethora of bank credit. Rates have run along on a rather level keel and in my judgment have had much to do with the stable volume of business which we have enjoyed, and which is quite contrary to the old experience of the aftermath of panics. With a credit structure such as only the Federal Reserve System can guarantee, I feel we need have no apprehension but on the contrary sound optimism for the future.

LOCAL ITEMS.

Schools Now In Progress

Monday morning the schools opened for business. Only the assignment of books was made during the forenoon and the children were then dismissed to get their supplies for the term. The rest of the day was used by the teachers in preparing their class schedules. The teachers are:

R. E. Maxwell—Latin, Science, Mathematics.

Merl C. Neer—English, History, Mathematics.

H. J. Renner—Agriculture and Science.

Ima Bray—Domestic Science, English, Music.

Faye E Bangs—History, Mathematics, English, Music.

Marguerite Milliman—English, Typewriting, Domestic Science

Portia Hadsell—Primary.

Pauline Wasson—3rd. and 4th.

Lois Murphy—5th and 6th.

Samuel Kees—Janitor.

Election Notice

Notice is hereby given to the qualified voters of the Town of St. Joe, Indiana, that on the 3rd day of November, there will be the regular election of town officers as follows:

One Trustee for 3rd Ward.
One Treasurer.
One Clerk.

Such election will be held in the usual voting places.

B. S Sheffer. Town Clerk.

VOL. XXXIX | ST. JOE DeKALB COUNTY, INDIANA, THURSDAY SEPT. 17, 1925 | NO. 37

Frank G. Baker Instantly Killed Monday

Crushed beneath the wheels of a string of dump cars which were being switched in the yards of the Indiana Service corporation's power plant, on Spy Run avenue, at 9:50 a. m. Monday, Frank G. Baker, aged 43, yard foreman, living at 2405 Florida drive, was instantly killed.

Two cars passed over Baker's body, severing his right hand and severing his body at the shoulders.

No witnesses of the accident could be found by Motorcycle Officer McCormick, Patrol Driver Oliver Lee or Deputy Coroner Berghoff. Frank Helbig, of Ossian, was conductor of the electric-driven switch train, while Barry Shipman was engineer. Neither saw Baker until workmen in the yards yelled to Shipman that a man was under the wheels.

Baker is survived by his wife, his parents, Mr. and Mrs. Mahlon Baker, of Auburn, and a sister, Mrs. Charles Bishop, of Cleveland, Ohio.

Mr. Baker was born in St. Joe and had lived in Fort Wayne for the last sixteen years, being employed during that time by the traction company. He was a member of the Masonic lodge.

The funeral will be held from the home Thursday afternoon at 1:30 with burial at Riverside Cemetery, St. Joe, at about 3:30.

County Council Of Sunday Schools

Sunday School workers from twelve townships in DeKalb county, with more than one hundred present, held their semi-annual session under the auspices of the DeKalb Council of Religious Education, Sunday afternoon at the First M. E. Church in Auburn Following this meeting was one for the DeKalb County Young People's council.

E. C. Gerig, of Fort Wayne, president of the Fort Wayne Council of Religious Education, was the principal speaker at the afternoon session, addressing the workers on "Our Responsibility in Leadership." Samuel High of Jackson township gave a resume of the activities of the DeKalb Sunday School association during the past fifty years.

A number of things pertaining to the association, were presented the workers.

Contracts Awarded School Hack Drivers

Six school hacks are circulating out of St. Joe this year. Contracts were let a few days ago as follows:

Concord route, A Haner, $4.00 a day.

Saylor route, Mr. Webb, $2 25 a day.

Hay's route, Jay Snyder, auto, $1.98 a day.

Yeiser route, Jay Penland, auto, $2.90 a day.

Orangeville route, Silas Reasoner $2.90 a day.

Cheesetown route, Ella Wilmot, $3.00 a day.

Special safety precautions are being taken in crossing railroads, by sending some of the older children ahead to signal across.

Local Condition That Needs Your Help

House-to-house canvassing or gate merchandising as some have seen fit to call it, is growing to be a serious problem all over the country, even in St. Joe and Spencerville, so much so, in fact, that merchants in many sections have found it necessary to co-operate in an effort to stamp it out.

More and more producers of kitchen utensils, toilet preparations, hosiery and other articles of clothing are pushing their wares through itinerant merchandise solicitors—ordinary peddlers, as we called them before they coined the word "solicitor." Today, it is said by those who have gone carefully into the problem, forty percent of household furnishing sales in some localities are door-yard trades.

We feel that we cannot insist too strongly or too often upon citizens of this community giving this matter serious thought. The out-of town concern selling by peddler and delivering by parcels post does not protect the customer either in price or quality and his "guarantees" are meaningless. The price argument is not sound, because the agent's commission often exceeds the total mark-up of the local dealer. The out-of-town dealer does not contribute to the taxes of the county or the town. The firm the solicitor represents has never done anything to help build up this community, and to make a sale the solicitor, or peddler, attacks our entire system of home co-operation. If goods are not as represented by him there is no chance of a personal appeal for justice. In other words, he is here today and gone tomorrow. Dismiss the next canvasser with a smile—and tell him that you believe in buying what you need from your friends right here in St Joe and Spencerville.

Court Reporter Resigns to Enter Law

James R. Nyce of Auburn, reporter of the DeKalb and Steuben circuit courts, has submitted his resignation to Judge W. P. Endicott in order to enter the practice of law at Elkhart.

The resignation will become effective September 19 and Mr. Nyce will begin his work at Elkhart two days later. He has accepted an offer to become associated with Vern Crowley, a well known attorney in that city.

Mr. Nyce began the practice of law at Angola. He served two terms as prosecuting attorney of the DeKalb Steuben circuit, being elected on the democratic ticket. He moved to Auburn twelve years ago and has been acting as court reporter for the last five years, succeeding Glenn VanAuken, now a resident of Indianapolis.

The successor to Mr. Nyce as court reporter has not yet been named.

School Enrollment Is 205 To-Date

The following is the complete enrollment of the St. Joe Schools up to today, and a probable increase will result in the next few days.

	Boys	Girls	Total
Grade 1	16	7

The Vanishing Men

—By—

Richard Washburn Child

(Copyright by E. P. Dutton & Co.)
(W. N. U. Service)

SYNOPSIS

Out of uniform, at the end of the World war, with the rank of major, Peter DeWolfe, young American of wealth and family, is urged by an English comrade in arms, Eversby Benham, to visit the Benham home and meet the Englishman's mother and sister, and, incidentally, Brena Selcoss, young woman about whom there is an air of mystery. Muriel Benham, Eversby's sister, becomes infatuated with Peter, but he is interested only in the mysterious Brena Selcoss, of whom he has had only a glimpse. Muriel urges him to forget her, warning him that if she (Brena) should like him he is in danger of "vanishing—like the others." Peter meets Brena in a tea room. After a few days' companionship the feeling between Peter and Brena ripens into love. Brena confesses that she is married and that her husband has "vanished." Brena's life story is out of the ordinary. Her father had been forced to leave Greece because of revolutionary affiliations, and his death, following quickly upon that of his wife, leaves Brena penniless, at Dallas, Texas. She secures work, and meets Jim Hennepin. He falls in love with her. He urges her to meet him in St. Louis. Brena returns to Dallas alone. Compton Parmalee, Hennepin's employer, middle-aged and wealthy, visits her, seeking news of Jim, who has disappeared. Parmalee tells Brena Hennepin's intentions toward her were dishonorable, which she had suspected. Some months later Parmalee makes Brena an offer of marriage, admitting that he seeks only her companionship, and promising her freedom.

CHAPTER VII—Continued

—7—

Parmalee must have uttered an exclamation of triumph; he alone knew that she was wrong.

"I want to make my life of greater service than it can be here. I am impatient for a richer soil in which to grow. I am willing to help you, too, if I can. It seems a little vague to me how I can do this and yet, though I am very young, I can live in you—I can feel all that you feel and I can see the better part of you."

He probably thrust a glance at the letter and looked up with that satanic chin and upslanting eyes turned toward the ceiling. He read on.

"Therefore I assent to your plan as you stated it. Always yours, Brena Selcoss."

Parmalee, no doubt, said to himself that this was no ordinary letter from the hand of a girl not older than eighteen, the brevity and the calm of it were symbolized somewhat by the direct and graceful handwriting which, with breadth of line and easy flow, none the less stood architecturally upon the page.

They were married one evening at eight o'clock in the same room in which he had first seen her. Mrs. Wilkie was glad to have her "home" as she called it the center of an unscheduled social event which would start all the tongues when it was in the News the next morning. This was the nearest she could come to the adventure of a duchess and she was willing to have the flurry in her life. It would be she who would give out the interviews and explain grandly over the telephone. They—the two—would be on their way to that fairy world of money and travel and airs and graces which had opened its arms to this fated young beauty. The girl would leave all her old life and its worn dresses and cheap shoes behind—all but one thing perhaps, and that would be the picture of the Acropolis in its battered frame. The fortune that had befallen Brena had been the very reality of all of Mrs. Wilkie's lifelong dreams, but she considered that for herself, there would be certain crumbs fallen from the table. She caught her breath: she had almost lost it when she learned from Parmalee that he was giving the bride a check for one hundred thousand dollars.

Not fifteen minutes had elapsed after the marriage before there came into the lives of the two a new element.

They had been whirled to the station and were strolling up and down as casually as if he were dictating to a young secretary the last memoranda of a deal in cotton.

Little by little his conversation fell away; he muttered a few last absent-minded words and it was gone altogether. He walked on; she kept pace with him. He walked on in silence.

Not until she heard a strange whistling noise as a sudden sucking in of breath of one who has fainted did she turn.

"You are as white as linen," she said, trembling.

He wet his lips and looked at her almost snarling.

"What is this fate that follows you?" he asked.

"Fate?"

"Something."

"Why, what do you feel?" she asked in a frightened whisper.

"I feel fear," he said, his upper lip fluttering, "a horrible, unaccountable terror."

CHAPTER VIII

The extraordinary transition in Dempton Parmalee began with his marriage.

Apparently an inexplicable fear had seized him within a few minutes; inexplicable fear little by little took possession of his life and made him a source of the contagion of unreasoning dread

There was a six-month period after the departure of the strange bride from Dallas wherein, whatever emotions of apprehension he may have felt, a struggle was made to conceal them and to fulfill his bargain to give Brena Selcoss the variety, content and luxury that he had said should be hers. He, who never had more than touched her hand with his own cold, refined fingers, sometimes burst forth with all the zealous energy he had put into his speculations and with all the assurance in his own mystic powers of foresight which had made him a great gambler.

"You are my speculation now!" he would claim. "I have bought a future in you!"

Brena would stare back at him, her great dark eyes questioning and full of doubt.

"You think I have done badly? No. It was my one great inspiration. You have the body and the health of one among thousands. You are so beautiful with the beauty of eternal things that even I who will not touch your cheek can feel the same thrill of pleasure that one may feel gazing upon a Praxitelea."

She had said, "Not Phidias, then?"

"Yes, Phidias—a work of Phidias! Because there is not only your carved limbs and neck and hands but something sublime as well. Beneath your warm and velvety surface like the texture of flower petals there is a wonderful mind, and a spirit which has come down through eternities with immortal life."

"You are an eloquent man," the young girl had said, with a quirk upon her lips suggestive of her mother. "Your tongue is as silvery as those of my Irish ancestors."

"Do you think I shall regret that I have played a part in your growth?" he had asked, with one of his short laughs. "I shall not be more to you than I am now. How can I use you, eh? How could I use my money? I deluded myself once. I thought I wanted it for myself. But you? I do not want you for myself. I only want your capacity as a woman to be filled to the brim!"

He lived two lives; not at the same time, but alternately. The one was in her; the other in himself. When he could put his own life into hers he forgot his own. He became that being whose warmth and light she had seen beneath the cold steel shell of an unremitting fighter and plunger, whose singleness of purpose and will had found dynamic concentration in his spare body and had expressed themselves in a mask of cruelty and craft upon a face otherwise esthetic and sensitive. At these times his countenance wore that abnormal youth of feature which was his most marked personal characteristic. It was only upon rare occasions that it was twisted up as if in a cramp of anxiety; as if some distant but menacing forecast had pointed a finger at him from afar. For a moment he forgot her; for a moment he had been immersed in his self.

For more than half a year, in Budapest, in Petrograd, in London, this one of the two lives of Compton Parmalee was dominant. Something of the youth and the calm of Brena's eyes, looking out upon a world which opened all its doors to her expectant inquiry, was reflected in his own.

By manipulation of acquaintance and, when necessary, by lavish expenditure, he procured her entry into rare social circumferences. In that first year Brena, considered by all strangers to be several years older than she, in fact, was, and of whom no one would have believed it if it had been told them that she had been plucked out of that kitchen garden of Wilkie's boarding house, the Porto Rican shop, the movies, and a sordid sickly-brown provincialism, had dined with foreign ambassadors, hunted with Lady Tremayn Nash, been courted over, through and under her disgust, by a cousin of the ex-king of the Portuguese, occupied a villa in the Italian lakes and voyaged in a luxurious yacht around the Baltic in midsummer with the family of Stockholm's largest banker. With the credit of admiration that her natural poise, her beauty, her talent as a linguist, her mother's wit and her father's love of learning had brought her everywhere, she was not dazzled in the slightest degree.

When Parmalee, in Berlin, said to her forgivably exulting, "Thus we work our miracle! In November you were taking your laundry to the Chinaman's in Harvey street; in March you wear thirty thousand dollars' worth of emeralds to contrast with that crown of red-gold hair at a ball in the Chateau de Pontemori," she said:

"The leap is no great one. There is a hair's breadth of difference between the frauds of this world and the pretenses of that. I rather think I am the same Brena."

"But growing!" said he, as a horticulturist would speak.

"Yes, growing," said Brena with a sigh.

Other men, sensing subconsciously her ungiven and unused affections, brought all their sophistication to their aid in making love to her. She combined the classic beauty of the Greek goddess with the illusive shimmering charm of her Irish blood; dozens of men in various capitals noting it, as Peter DeWolfe marked it down later, gave amusement to the Dallas broker and annoyance to her. She said that she might have been thrilled by these idolatries were it not for the fact that they always came either from these whose attentions to women were quite general and successive or from those whose imagination could conceive only a very plain driveway from the thoroughfare of formal society to the sequestered dwelling place of a woman's heart.

"You are rather tired," Parmalee said to her once.

"At first my breath was taken away as if I were an aviator up alone for the first time. But now the flight is rather monotonous. It is as if it were done only for spectators. It has no destination."

He thrust a glance at her and looked up at the ceiling of the railway carriage, reflecting. As usual, he understood.

"You rather want to produce something?"

She nodded. "But I do not want to appear ungrateful," she added, speaking as one might speak to an impresario rather than as one speaks to a husband.

"Not at all," said he, hitting out squarely with his pungent frankness. "That's all right. I've been stupid. You are too big to be satisfied with this low-neck nonsense. It is not enough to be the wearer of a gleaming skin in the magnificence of authorized exposure. You want—"

He stopped.

"What do I want?"

"Either love, man, children or else labor, output, self-assertion, a product, a separate personality standing on its two legs alone."

Brena said, "I have an idea that no woman quite knows whether she wants both or can have both or can choose or stick to either. Whatever happens there is always the haunting desire for more of the other thing."

"I know," said he, looking at her with brimming eyes. "It is the tragedy of big women."

Not only because of his words, but equally because of the self-effacement, the sympathy, that he at moments could cast down from some calm eminence which his spirit had learned to

"You Are as White as Linen," She Said, Trembling.

climb, Brena always remembered this moment as that which marked the best in him, as that which justified the bargain she had made to salvage that better part.

The contest between that better part and the other—the well-known Compton Parmalee with his ruthless daring instinct for hazards and his almost frantic interest in self-preservation—was a losing fight for Brena. She knew as he knew, that her power lay in no words, but only in the threads of understanding, conduct and high aims that she could weave with him into his life. Moments had come when she had even believed that if she had won she might have loved him. The things worth saving in him were so rare! She would have thrown herself into a new labor—the reclamation of his youth.

It was not to be. Perhaps he himself knew this as he felt slipping from him the power to resist the habits of mind of years of fierce avarice and the passionate love of his own welfare and his own life. He spoke no word of this realization to Brena. After all, the two were far apart, and the girl only sensed, as one who hears a low murmur of a coming tempest, the menace which hung over them.

"There are times when you look at me as if I were the bearer of some evil," she said.

"It is absurd," he told her, but his face had shown the sudden twist of fear.

"You have some knowledge that I have not," she asserted accusingly.

"None," he answered. For a long time he looked at her and then said, "Your father was interested in Aztec architecture?"

"Yes." Her eyes had opened in amazeemnt.

"He went to Mexico more than once," said Parmalee. "He considered that the civilization of the Mayas was far more extraordinary than even experts like Thompson and Nightingale have represented it. He believed that they had developed forces quite unknown to modern life."

"How did you know this?" she asked sharply.

Parmalee was quite nonchalant; he said, "You forget that my library is full of documents and books and monographs which your father asked permission to consult. I am sorry I did not meet your father."

"You would have found him a man quite incapable of believing in the supernatural whether it be a thing of today or attributed to an ancient people."

"He thrust a glance at her. "You speak with some heat," he said.

"I suppose so," Brena answered. "It is because I have no patience with unrealities."

"You would say more?" he asked, with his uncanny ability to read her thought.

"Yes. I think that you have some purpose in creating this atmosphere of strange and unreal things."

He started to speak, stopped himself and after a long pause exclaimed sharply, "I agree with you."

They rode on foward Cherbourg without speaking, but now and then glancing up as if each weighed the motives and challenged the other.

"You spoke of a piece of paper given to you in a roll of bills," he said at last, with a marked absence of his usual assurance. "It fluttered out. You saved it—"

Brena drew back as if the subject were odious. She said, with unwonted sharpness, "I have cause to remember. You are always speaking—"

"I've spoken of it only twice," he said. "This time I—"

He appeared frightened.

"I think you said, there was a drawing of an arrow and a lizard."

Brena, regretting her moment of temper, said, "I said lizard. I don't see what difference it makes. It wasn't exactly a lizard."

With great promptness he thrust toward her an envelope and a pencil.

"Draw it," he said.

"I told you I had almost forgotten," the girl replied. "I lost the scrap—the figures and the words."

"Draw it," he repeated, "the best you can."

Brena looked out of the car window at the flashes of green and gray of farms and farm buildings as if she were searching in her memory for a photographic impress. Then suddenly, with the quick precision that gave her hand and mind so many undeveloped talents, she outlined a strange figure on paper.

Parmalee snatched it eagerly and stared; he saw a figure, half snake and half bird.

"That?" said he in a voice which sounded muffled. "Well, do you know what it is?"

Brena raised the arch of her brows.

"It is the Kuk-ul-can," said Parmalee.

"The Kuk-ul-can," she said, repeating it.

"The symbol of the Mayan—the Aztec culture. The supreme object of reverence. The fools who go about the Southwest driving their oil wells, and laying their railroad ties and eating their prepared breakfast foods forget that this symbol is to be found among the present-day Zuni and other Pueblo tribes, the degenerate fringes of a civilization which flourished before Rome was suckled by a wolf. They forget that a thousand years ago it was carved on rude adobe walls in memory of a lost grandeur and lost practices, dead these six thousand years."

Brena possessed two laughs, both quite natural and sincere. And now it was her merry Irish laugh. "What of all this?" said she. "I will blush for their ignorance, but what more than that can I do on a sunny Thursday? I am not interested, old fellow, in that which is dead. I—"

She stopped suddenly, sobered by a recollection.

"The Kuk-ul-can," said Parmalee. "You've never seen that scrap of paper again, have you?"

This was the last time he ever spoke of it.

CHAPTER IX

Winter had come again when the Parmalees had settled into a quieter life in New York. Brena had turned the back of her interest upon dining out and the amusement of new acquaintances.

"There is a manner of savoir faire to be acquired in it, Compton," she admitted to her husband. "I have acquired it a little, no doubt—a kind of veneer of ease which is like a glass-covered surface of troubled waters. It makes the pool of personality appear calm down to the bottom."

"Yours is," said he. "Yours has shown me the difference between the old deep streams and the new torrents."

"You know how they say that contact makes breadth," Brena went on. "They mean that touching the elbow of a statesman or an artist at dinner provides the glib phrases of foreign relations or allows one to mention casually the newest Spanish painter. But it is all surface. For instance there's Mrs. Balmer-Roseboro in London. Her kind is covered with feathers plucked from every magnificent bird that migrates into England. But her mind is really only cotton-wool stuffing. She is only one stage higher than the persons who draw their intellectual reputation from reading book reviews, or weeklies printed on uncoated paper which appear authoritative because they are without illustrations. It is being a second-hand dealer—in ideas."

Compton nodded. As if suddenly he had been reminded of a duty, he laughed outright with the artificial laugh which had come with long periods of absent-minded loss of sense of environment during times when, as if in a daze, he stared far away.

"You want to cease [illegible] people?" he asked.

"I want to learn something—some art or profession, and learn it well. I want to tread upon a solid ground," said Brena.

"Good!" Parmalee said. "I cannot tell you how glad I am to be free from seeing so many people."

There appeared again in his face that weariness from some tensity which would not relax, an expression that increased as the weeks went by and the lives of the two drew more apart.

Less and less did he appear inclined to go out of their apartment; less and less did he go anywhere alone.

"There is a book auction—the Odin collection with two volumes of illuminated MSS. from the old monastery at El Mayaquez," he said one day in March. "Will you go with me, Brena?"

"Of course," she said, but his request marked sharply the moment of her realization that unless he were behind the closed doors of his library, he always wanted somebody with him. She tried to remember the various occasions when he had found trivial excuses to take the butler or the chauffeur on some short excursion beyond the pretentious entrance of the apartment house; she concluded that he did not ask her to accompany him for the pleasure of companionship. He seldom conversed with her as he had once done; if there was a choice between going with her or in the limousine with Paul, he chose the silent and cynical chauffeur.

Nor was this all. She began to notice frequent repetitions of the fear that had seized him within so short a time of their odd marriage. He never spoke of this, but she saw over and over again his face, which had become less youthful now, contort, the color leave it, his eyes grow restless and fill with terror. She had observed him in a theater, even at a moment when a tense dramatic situation was being enacted on the stage, turn around as one turns who feels eyes from behind, and search the faces of those who sat in rows farther back. She had known him to pause at the doorway of a brilliantly lighted cafe and, without paying attention to the beckoning head waiter, who perhaps was impressed by the distinction and beauty and carriage of Brena, costumed as always with colorings that no other woman of her tints of hair would dare to essay, look searchingly at every party at the tables before giving his hat to the check girl. She had seen him walk from end to end of a limited train gazing from left to right at those in the drawing-room chairs, just as one does to discover an acquaintance, but with his countenance smeared over with grotesque apprehension. He was forever trying to scrutinize the faces flicking by, whether the afternoon sun shone on them on Fifth avenue or they peered out in white patches from under the black of jostling umbrellas in a rainy evening on Broadway. Even Brena began to look apprehensively into the world's stream of faces.

He who had once consulted doctors about his precious health; who, when she first had known him, followed the trail of other rich men who amuse themselves with their physical condition but with that passionate love of his own well being and life which was a characteristic developed in him as in no other; who was steamed and rubbed, manipulated, illuminated by various rays and baths of light to add days to his number, now had lost all interest in health. Some external menace had swallowed the fears of those internal. He brooded alone. He consulted no one.

Brena felt it her duty to interrogate him; she was met by the first burst of rage he had ever projected at her.

"Let me alone!" he said evilly, as he thrust a vicious glance at her. "I have problems that are my own. Keep your hands off!"

"You forget that whatever it is that is making you so strange affects my life also," said Brena. "Little by little it is isolating us both from normal human beings. You glare into people's faces as if you expected to have the next one fasten his or her teeth in your throat."

"So you are thinking at last of yourself?"

"Of course I am," she answered walking around the living-room table and touching the books there with her finger-tips. "I might say that I was above thinking of myself. But they who say it always excite my suspicion. I'm trying to think of both of us—as an average human being should."

(TO BE CONTINUED.)

Wife Was His Memory

"Your story of the absent-minded minister," writes a contributor to the Youth's Companion, "reminds me of a minister whom I knew in a little Wisconsin town many years ago. He had a wretched memory, but for all that he was nothing less than a saint.

"His absent-mindedness was chronic. He seldom could remember his text, and, being averse to notes, he depended on his good wife to come to his rescue. He would lean over the pulpit and say, 'What was my text for today, my dear?'

"She would tell him, and he would then proceed to preach a fine sermon from it.

"One Sunday after the singing of the second hymn he opened his Bible and, leaning down, made the usual request: 'My text for today, my dear?'

"'I don't know, I'm sure,' composedly replied his wife. 'You forgot to tell me!'"

Watch Your Kidneys!

Your health depends upon your kidneys. When your kidneys are inactive, blood and nerves are poisoned and many mysterious ills result. You feel dull and drowsy; get up often at night and suffer annoying kidney irregularities. Your back aches; you have headaches and dizzy spells; your nerves are constantly on edge and you are always tired. If your kidneys are sluggish, help them with *Doan's Pills*. *Doan's* act on the kidneys only. Are recommended the world over. *Ask your neighbor!*

An Ohio Case

Barney Wiedeman, retired farmer, 549 S. Water St., Kent, Ohio, says: "My back ached and was lame. If I stooped, it was almost impossible to straighten. I also had sharp pains through my kidneys and it was hard to pass the kidney secretions. After using three boxes of Doan's Pills I was rid of the trouble."

GASTRITIS IS DANGEROUS STOP IT QUICK

When your stomach is bloated—when it is so distended with gas that pressure on the heart almost suffocates you

What are you going to do?

Take a chance or get rid of the gas quick?

The one big selling stomach medicine today is Dare's Mentha Pepsin and its mighty power to relieve terrible gastritis, acute or chronic is a blessing to tens of thousands of people who have been unable to get help from any other source.

It's splendid for any stomach trouble—is Dare's Mentha Pepsin.

So when your food won't digest or gas, bloating or shortness of breath cause you to become nervous or dizzy or have a headache always remember that you can get one bottle—of Dare's Mentha Pepsin from your druggist and if it doesn't help your disordered stomach—your money will be returned.

RADIO

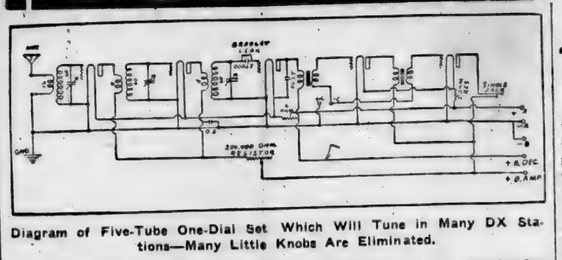

Diagram of Five-Tube One-Dial Set Which Will Tune in Many DX Stations—Many Little Knobs Are Eliminated.

In an effort to give the radio fan a set that will do almost everything that can reasonably be asked, Capt. H. H. Kramm, of Woodlynne, N. J., has designed a five-tube radio-frequency set that, from all indications, has every other set of its size backed off the map. All the principal tuning is done with one dial, and it truly can be called a one-dial set. There are many sets claimed to be one-dial sets, but they have a lot of little knobs that all figure largely in the tuning. With Captain Kramm's set the tuning is done with one dial. On the distant stations there are two verniers on the condenser that enable the listener-in to clear up the sounds.

The set is extremely sharp, and Captain Kramm says that at his laboratory at Woodlynne, three miles by air line from Station WLIT, he was able to tune in WTAM, Cleveland, 395 meters, and WHAS, Louisville, 400 meters, and completely cut out the powerful local station. When WOO is on the air he can cut out this station and get WMC, Memphis, which operates at 500 meters.

One of the things that will interest the fan who desires to build his own set is that Captain Kramm has been getting the Pacific Coast consistently during the summer. He has had KFI, KNJ, both of Los Angeles; CKCK, Regina, and KGO, Oakland, Calif. He has also tuned in Honolulu (KVO), a number of times. The fan must not expect to get this last-named station around 10 or 11 o'clock at night, as there is a difference of five and one-half hours between Philadelphia and Honolulu.

The last time Captain Kramm tuned in this station he had them on the air for about one hour. It was about 5 o'clock our time when he tuned in Honolulu. He got 42 distant stations in two nights.

Readings Can Be Calibrated.

Another important feature about this set is that the dial readings can be calibrated. The only thing that will necessitate a change in the numbers logged is the use of another antenna.

The condenser used is a special type, just being put on the market. It is three condensers in one, with two verniers. The rotor plates are on the main shaft and all move at one time. The vernier on one side moves the stator plates of the first condenser, while the vernier on the other side moves the stator plates of the second condenser. The stator of the third condenser is immovable.

The coils are of the duo-lateral type. This is absolutely necessary, as Captain Kramm has used other types of windings and found the results not as good as when the duo-lateral windings were used. The best thing the average set builder can do is to buy three 75-turn duo-lateral coils on 2½-inch forms. Take 15 turns off each coil, part of which is to be used for the primary winding. The 60 turns remaining on the coil form the secondary. Cover the secondary with two layers of varnished cambric, and then add the necessary number of turns to form the primary windings, as shown in the diagram prepared by Captain Kramm.

The base board is 17 inches long, 8½ inches deep, and all the parts are to be mounted on the top of the board. No subbase is used.

List of Parts Needed.

The parts needed for the construction of this set, excepting tubes, which should be the 201A or 301A, batteries and loud speaker, are as follows:

1 Scientific compensated multiple condenser.
5 Scientific sockets.
1 Bradley leak.
1 Bradley condenser, .00025.
1 6-ohm rheostat.
1 2-ohm register.
1 200,000-ohm DX register.
1 0.5 N. Y. coil condenser.
1 .0025 N. Y. coil condenser.
1 Solderless single jack.
1 Dongan transformer 6 to 1.
1 Dongan transformer 3½ to 1.
7 Binding posts.
1 Panel 10 by 7 inches.
10 Lengths celacite.
1 Radio-frequency coil, 60 turns secondary, 10 turns primary.
2 Radio-frequency coils, 60 turns secondary, 8 turns primary.

The parts above are those used by Captain Kramm. He states that other makes can be used efficiently in most instances, but that it is absolutely necessary that the set builder follow the specifications as to the number of turns on coils and the size of transformers and fixed condensers and resistors to get the desired results.—Philadelphia Record.

Neat and Efficient Radio Battery Cabinet

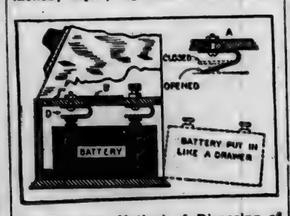
This novel radio "B" battery cabinet is designed for the set owner who desires neatness and efficiency.

It is constructed to eliminate unsightly wires and makes the removal and replacement of "B" batteries a very simple matter, somewhat similar to the changing of the batteries in a flashlight.

The battery is inserted from the rear and pushed all the way in, contact being made by spring brass clips.

A connection is made for the 22½-volt in the front of the cabinet and is brought to the rear by a brass strip. Connections can be made by bus bar to the set from these posts. The cabinet shown in the sketch is designed to take a 7 by 18 panel, but a larger one can be made.

The interior measurements for the battery compartments are as follows: Length of each compartment, 8¼ inches; depth, 6½ inches, and height, 4 inches. Spring contacts are 3 by 1 inch, bent in the center. Perfect connections can be made and the danger of short circuits and improper hooking up of the batteries is entirely eliminated.—Radio News.



An Excellent Method of Disposing of "B" Batteries.

Use a Voltmeter

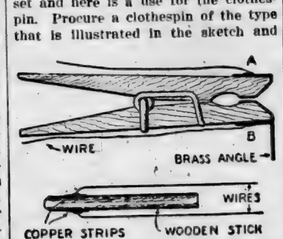
Brilliancy of the tubes is a poor index of their operating point. Its use as a guide is apt to result in the tubes being burned too high. Either use a voltmeter across the terminals of the tube or turn down the rheostat to the point where it begins to cut the signal strength. Nothing is gained by having it any higher.

A Good Ground

A wire from the front of the house to a pipe in the rear will not make so good a ground as a wire down the side of the house attached at a place where the water pipe enters the house.

Closed-Circuit Jack and Plug Easily Made

Nearly every object around the house has more or less use in a radio set and here is a use for the clothespin. Procure a clothespin of the type that is illustrated in the sketch and



Jack and Plug Should Prove of Value to Experimenter.

bend around the ends A and B strips of thin copper for contacts. As the jaws of the pin are normally in a closed position, these contacts will normally be closed. Lead wires are soldered at the points A and B. The plug is made from a wooden rod that fits snugly between the jaws of the clothespin. On this rod are fastened two contacts to which are soldered the phone leads. This jack and plug are easy to construct and should prove of value to the experimenter.—Radio News.

May Reduce Static by Burying Your Antenna

Try this type of antenna with your own receiving equipment.

Use a single piece of No. 14 rubber-covered wire, such as is found in house wiring. The end to be put farthest from the house is stuck in the open end of a shotgun shell or can, and the shell filled with sealing wax to keep the wire from corroding after contact with damp earth.

The antenna wire is buried one foot underground, the end that is to be used as a lead-in being brought to the surface directly beneath the window, near which the set is located.

A piece of lead tubing is slipped over the lead-in, completely shielding it from the antenna binding post of the set to a point just beneath the ground. This shield is grounded to the water pipe, like the ground wire proper.

This keeps the exposed part of the antenna from picking up energy from the air.

HOW TO KEEP WELL

Dr. Frederick R. Green, Editor of "Health."

(©, 1925, Western Newspaper Union.)

WHY WE BATHE

DURING the reign of one of the dissolute kings of the old French monarchy, a great fete and pageant was planned to amuse and entertain the king and his courtiers. In one of the tableaux, it was necessary to have a child represent a golden cupid. So the child of one of the court attendants was selected for the part. He was covered from head to foot with gold leaf. The spectacle was a grand success and the little golden boy was greatly admired. But unfortunately he died a few hours later, as a result of having his skin covered for hours with an air-tight, waterproof covering.

We all know that if we wear a rubber coat in the rain, when we take it off it is apt to be as wet inside as it is outside. Many a waterproof coat has thus fallen under suspicion of not being what the makers or the dealers guaranteed it to be. Yet it was truly waterproof and so kept moisture from getting out as well as getting in.

The skin is something more than a covering for the body. It is also a heat regulator and an important excretory organ. If given a fair chance, it keeps the body at the same temperature, winter and summer. It also excretes a large amount of water from the body. If the pores of the skin are choked up, then double work is thrown on the kidneys and if this goes on for any long period of time, the kidneys are overworked and may break down or be irritated so as to greatly interfere with their work.

In the summer when we sweat freely, most of the surplus water in our bodies is excreted by the skin, so that the excretion from the kidney is small in amount, highly concentrated and dark in color. In the winter, when we perspire less, the kidney excretions are large in amount, greatly diluted and pale straw color. These variations, due to natural causes and entirely normal, have caused many people much uneasiness.

Why do we bathe? To remove the dirt and dried perspiration that would otherwise clog our pores. We have learned from race-old experience that when the skin is kept clean we are not as much affected by changes of temperature. We are cooler in summer and warmer in winter and we are less subject to chilling by sudden change of temperature. The nearer man lives to nature the less he needs to bathe. The more artificial our lives, the more artificial means we have to use to keep our skins working.

SUMMER COMPLAINT

EVERY mother and every nurse knows that the first summer of a baby's life is a critical period. Babies in the first year of life stand heat badly. Even if the weather is comparatively cool, many of them fall victims to those stomach and bowel disturbances generally known as "summer complaint."

Some form of bowel trouble is responsible for one out of every five deaths among infants. Diarrhea causes more deaths than measles, scarlet fever, whooping cough, typhoid and diphtheria all put together. It kills more babies in the first two years of life than those other five diseases do at all ages. In Illinois, for instance, the state health department finds that in the last six years measles, scarlet fever, whooping cough, typhoid and diphtheria killed 15,696 babies while diarrhea killed 19,580 babies under two years. One-half of these deaths occurred in July, August, September and October. The number of deaths in August was three times the number in December.

Why do these stomach and bowel disturbances occur in such large number in the summer? Dr. L. Emmet Holt of New York, one of the leading authorities on children's diseases, says that it is due to two causes: impure milk and heat and that it is not the outdoor heat so much as the stifling heat of the house that kills the baby.

Artificial feeding is another important cause, according to Holt. Only five per cent, or one out of twenty babies which die of summer complaint, are breast fed. So the baby nursed by its mother has five times as good a chance of escaping this disease as one that is bottle fed or given some prepared food.

Next to mother's milk, Holt considers cleanliness, fresh air and quiet as important. The baby must be kept clean. A bath every day and in very hot weather twice a day, morning and evening, is necessary. The baby must be kept cool. Just as little clothing as possible and as much outdoor air as possible will help to protect him from sickness.

Protect the baby from flies. Give him plenty of cool air and sunshine. Keep him clean and keep everything around him clean. Feed him breast milk or if he must be given artificial food, clean milk pasteurized or boiled and kept clean and cool until feeding time. Give him plenty of water and a cool airy sleeping place at night and his chances for escaping summer complaint will be greatly increased.

Can't Class Flapper as Modern Product

A point of controversy rises about Becky Sharp. Some women critics say that she was all mercenary; that she strove for worldly position alone, and is therefore ruled out of the circle of young women whose main object is to charm for charm's sake. But Becky is certainly among the flappers by very reason of the fact that she employed her green eyes and her demure charms to her own great personal satisfaction. She placed her little nets everywhere, and was always gratified when a bumbling male fell in.

Amelia Sedley, though the chaste heroine, was by no means devoid of the cunning of Hanoverian girlhood. Her eyes were constantly cast down, but she could see as far through her eyelashes. She was, if anything, the more dangerous flapper of the two, as her modest allure never frightened off her admirers. She was "a good little thing." There are still a lot of good little flappers who conquer by seeming self-effacing.—Book Notes.

They Bother Them Now

The coal crisis in England served to recall the methods employed by the miners in bringing their grievances to public attention more than a century ago—in 1815. At that time the workers made their protest in person. They dragged loads of coal to London and demanded to see the prince regent. But the magistrate sent for them, told them they must not bother London's august personages, and bade them go back to their work. And they went back home, carrying their loads behind them.

Cuba to Honor Washington

A committee headed by Dr. Oswald D. Guerrero, newspaper man and politician, is raising funds for the erection of a statue of George Washington at Havana, Cuba.

It is proposed to place the statue a short distance from the Maine monument.

To insure glistening-white table linens, use Red Cross Ball Blue in your laundry. It never disappoints. At all good grocers.—Advertisement.

SOME MIDDLE-AGED WOMEN ARE AILING ALL THE TIME

Mrs. Ackerman and Mrs. Mayer Tell Women How Lydia E. Pinkham's Vegetable Compound Helped Them at This Trying Period

MRS. ELSIE ACKERMAN
CONVOY, OHIO

Convoy, Ohio.—"During the Change of Life I was weak and run-down and could hardly do my work. By reading your advertisements I found out about Lydia E. Pinkham's Vegetable Compound and it has straightened me right out and made me feel like a new woman. By the time I had taken eight bottles I was well and could do my housework on the farm without trouble. I recommended it to my daughter-in-law after her second baby was born and it did her a wonderful lot of good. I told her to try it and if it didn't help her I would pay for it, and before she had taken one bottle she said to me, 'You won't have to pay for it! It is helping me wonderfully!' And she took three bottles of it. You can use my testimonial if you wish."—Mrs. ELSIE ACKERMAN, Convoy, Ohio.

Mrs. Mayer's Experience

Litchfield, Conn.—"I have given your medicine a fair trial (I am on my fifth bottle) and can truthfully say that it has helped me. I am at the Change of Life and was not able to sleep nights, had indigestion, palpitation of the heart, pains in my right and left sides (more so if I hurried), had a rapid beating in my left ear and dreaded to see night come. I felt smothered if I lay on my left side, I had gas dreadfully, at times felt as if some one had me by the throat, had hot waves through me and sometimes I would shake in spells of nervousness. I am taking Lydia E. Pinkham's Vegetable Compound and I cannot praise it enough. I can say it does all it claims to do and I can recommend it to my friends. I can sleep much better, the pains in my sides are gone, I am not so nervous, my digestion is much better, and I very seldom have the hot waves. I must say that the Vegetable Compound is the best medicine for women's ills and I will answer letters from women asking about it."—Mrs. JOSEPH MAYER, Sr., Box 86, Litchfield, Connecticut.

Mexican Milk Regulation

A law enacted recently in Mexico regulates all the details of production, transportation, storage and sale of milk and sets up standards for the various grades of milk, especially that to be used for children.

Overhead

Johnnie—What's overhead expenses, Pa?

Pa—Your mother's hats, dear.

Human cordiality will not stand too much of a strain.

CHILDREN CRY FOR

Fletcher's CASTORIA

MOTHER:— Fletcher's Castoria is a pleasant, harmless Substitute for Castor Oil, Paregoric, Teething Drops and Soothing Syrups, especially prepared for Infants in arms and Children all ages.

To avoid imitations, always look for the signature of Chas. H. Fletcher. Proven directions on each package. Physicians everywhere recommend it.

The SANDMAN STORY

WAYNNE IN DWARFLAND

IN A far-off land, inside a high mountain, there once was a country of the dwarfs. There they had a big diamond-like stone fixed in a big rocky sky for their sun and a pearl for their moon.

Little twinkly jewels were their stars, which were scattered all over the rocky sky. You see, this land of the dwarfs was so hidden from the big sky outside that they had to make a sky of the overhanging rocks.

But one night a dwarf crept out from this rocky country and happened to look up and see our moon, and he told the other dwarfs about it and they all came out to look, and right away they wanted it.

They stayed so long looking at the moon that the first thing they knew

Waynne, a Poor Shepherd Boy, Watching His Goats.

there was a beautiful big golden sun in the sky, handsomer than theirs, and they wanted that, too.

Now there lived not far away from the home of the dwarfs a lovely little princess named Alfrida, and one day she wanted a butterfly that flew through the palace garden, and ran away from her nurse trying to catch it.

She ran so far away that she reached the land of the dwarfs, and because they had never seen so beautiful a creature as the princess they wanted to have her live with them.

It was such a strange place that Princess Alfrida soon forgot her own home and began to amuse herself looking at the big stone they called the sun and all the other queer sights.

After a while she told the dwarfs that she wanted the sun to play with, just as they had wanted the real sun they had seen, and because they did not give it to her she began to cry.

At the foot of the mountain was a poor shepherd boy watching his goats. His name was Waynne, and he was very poor. A little hut and his goats were the only things he owned.

The little men quickly surrounded Waynne and began to pull his clothes, trying to drag him with them; but though there were many of the dwarfs Waynne was big and strong.

"What do you want?" he asked.

"Listen," answered the dwarfs.

Waynne listened and heard the screams of the runaway princess who was crying for the sun of dwarfland.

Inside the rocky home of the dwarfs he found the princess still screaming.

The princess was so surprised that she stopped crying.

"Are you the king's daughter?" asked Waynne. "Your father's servants are looking everywhere for you. Come, I will take you home at once." And before the princess could say any more Waynne picked her up and placed her on his shoulder and ran down the mountain.

When he arrived at the palace the king and queen ran to meet him.

"What shall we give you to reward you for finding our child?" asked the king. "You shall be made rich and given a palace if you wish it."

But Waynne said no, he did not wish for a palace. "I will ask for the mountain yonder where I found the princess as my reward. It belongs to your kingdom and if you care to reward me give me the mountain and the land around it a mile in width."

It did not take the king long to write the deed of gift and Waynne thanked him and departed.

The dwarfs were willing to do anything for Waynne that he asked, and when he told them they could live there and have the big sun and moon they had seen in the big sky outside their land, they willingly let Waynne take out all the gold he found and precious stones.

Of course Waynne became a rich man and he took care of the dwarfs as long as they lived, but he was never able to learn where they came from.

To the king and queen Waynne gave the largest of the jewels for their crowns and to Princess Alfrida he gave the very moon she had cried for. Which goes to show that sometimes those who cry for things do get them in the end; but it would not be a good plan to cry too long so you had better not try it.

"What's in a Name?"

By MILDRED MARSHALL

Facts about your name; its history; meaning; whence it was derived; significance; your lucky day, lucky jewel

JACQUELINE

THE most piquant name in the lexicon of feminine appellatives is Jacqueline. Her origin dates far back in Biblical days when one of the twin sons of Isaac and Rebecca was called Jacob and the mother predicted that he would supplant the other. Thus his name came to signify "the supplanter" and Jacqueline, which is derived from this source, has same significance.

As the derivatives of Jacob spread throughout Europe, France adopted Jacques. The great church of St. Jacques at Liege spread the love of the name in Flanders and it was when the English and French were mingled together in the camps of the Black Prince and Henry V that the name spread into England.

The feminine Jacqueline had already arisen. Henry V called the wild Jacqueline of Hainault, Dame Jack. She, like his Flemish sister-in-law, Jacquette of Luxemburg, was named in honor of the saint of Liege. The nurse of Edward VI, whom Holbein drew by the soubriquet of Mother Jack, was called Jacquette. Jacquelines in France are very numerous and the name is extremely popular in this country where its ready diminutive, Jack, sounds good to Yankee ears.

Jade is Jacqueline's talismanic stone. It is said to bring her all-around good luck and wearing it she will find her heart's desire. Friday is her lucky day and 3 her lucky number.

THE WHY of SUPERSTITIONS

By H. IRVING KING

THE EVIL EYE

A GREAT many people believe, or half believe, that to watch a friend out of sight when he departs on a journey brings him bad luck. This is merely a phase of the superstition of the evil eye—a precautionary measure. For you may have the evil eye and not be aware of it, and so cast a malign spell upon your friend without wishing to.

Plutarch, writing in the first century, says that relatives and fathers sometimes cast a spell on their own children without knowing it.

In fact this appears to be the opinion of all the old writers on the evil eye. And starting out upon a journey, or any sort of an expedition, has always been looked upon as a time when the evil eye was particularly liable to get in its malevolent work. Also there is no knowing how far the influence of the evil eye will carry. Nicolo Valletta of Naples, a firm believer in the evil eye, offered, in 1787, a reward of ten scudi for a satisfactory answer to this question—and twelve others—concerning the "jettatma", as the Italians call it. So you will see that you can't be too careful. If, perchance, you have the evil eye let your friend get away from its influence before he is fairly set out on his journey—don't follow him up with your glance. As to the superstition of the evil eye in general it has a whole literature of its own—ancient and modern.

Italy Lays Claim to World's Largest Tree

"The largest tree in the world," says Jean Henri Fabre in "The Wonder Book of Plant Life," "is the chestnut tree that grows on the slopes of Etna in Sicily. It is known as the Chestnut Tree of One Hundred Horses, because Joan, queen of Aragon, having come to see the volcano was surprised by a sudden storm, and took shelter beneath the tree with the hundred horsemen who formed her escort.

"Beneath its foliage, a forest in itself, both men and horses found abundant shelter. Thirty men, holding hands, would not quite succeed in surrounding this giant; the circumference of its trunk is more than 160 feet. In the matter of bulk, the trunk of this mighty tree is something more than a trunk; it is a tower, a veritable fortress."

Alice Lake

Handsome Alice Lake, the "movie" star, is shown in one of her most recent pictures. The emotional force displayed by Miss Lake has placed her in the front rank of screen stars. She has been seen to advantage in a number of the popular motion pictures.

Your Health

By ANDREW F. CURRIER, M.D.

SCABIES

THE skin disease caused by the itch mite, like certain other parasitic diseases, is especially prevalent in time of war and among soldiers.

It is not only contagious; it is inflammatory, and accompanied by very annoying itching, which is worse at night when one is in bed.

There are cases in which there is no itching, but this is not the rule.

The eruption is located, in the majority of cases, between the fingers and on the anterior or palmar surface of the wrists and elbows.

But it is not limited to these locations and may be present in the armpits, the groins, the legs, and other portions of the body.

The eruption takes the form of blisters or vesicles. The parasite secretes a substance which irritates the skin and provokes scratching.

This intensifies the eruption which may become pustular and present the appearance of urticaria, or eczema, together with a quantity of crusts or scabs.

Thickening of the nails and loss of hair may result from the irritation of the eruption when the matrix of the nails or the hair follicles are involved.

Both male and female itch mites or acari are to be found in this disease, the females being the larger and more numerous.

The male acarus lives under the scales of the outer layer of the skin. The female burrows deeply into this outer layer, her course being indicated by a distinct scratch mark.

In the burrow she lives and lays her eggs from 6 to 30 in number, her duration of life being two to three months.

A few days after the eggs are laid she dies, the eggs mature, the larvae come to the surface; become sexually active; the females are impregnated, burrow, lay their eggs, and die like their predecessors, thus carrying out the round of life.

It is not difficult to get rid of this parasite, for sulphur is a deadly poison to it.

This may be used in the form of an ointment, a soap, or a vapor bath. A single thorough sulphur bath is usually curative; if not it should be repeated.

Other substances which are also destructive are tincture of benzoin, betanaphthol, tobacco, soap, and menthol.

Zinc and its different preparations are of no particular value in this disease; they are not sufficiently parasiticidal.

A LINE O' CHEER

By John Kendrick Bangs

PLENTY OF ROOM

THERE'S plenty of room at the top,
There's plenty of room below.
Indeed wherever you chance to stop
There's plenty of room, you know.

Plenty of room for goodly cheer,
For joy, and the laughing song
That eases the heart beset by fear,
Or suffering sense of wrong.

Above and beneath, on every side,
In regions of mirth or gloom,
Wherever the legions of Love abide
There's never a lack of room.

A flourishing leather manufacturing industry has been built up in Egypt as the result of teaching leather work to children in the schools.

SOMETHING TO THINK ABOUT

By F. A. WALKER

FINDING FAULT

IT IS a lamentable evidence of weakness in mortals when they deliberately shift the blame for their own shortcomings upon the shoulders of others.

This not uncommon infirmity exhibits what is smallest and worst in character with ugly, repulsive colors such as strong, honorable men studiously avoid.

The human who is always making flimsy excuses, shunning responsibility, seeking consolation for his delinquencies by shifting his faults to where they do not belong, is not destined to sit in the high places or take prominent parts in making a brighter and better world.

He disbelieves in the doctrine of excellence and accepts without any qualm of conscience the dogma of Luck, and then in his sublime foolishness sits in his easy chair and grumbles because Luck fails to bring him the exalted position in society to which he imagines himself justly entitled.

Instead of taking off his coat, rolling up his sleeves, and doing his best, he folds his puny, insufficient arms and thus, without realizing it, openly admits his impotence to cope with the essential things of life, intended by the wise Creator to develop his character and take him to pleasant pastures.

To deal openly, to accept defeat and admit that no one else is to blame for the miscarriage of his cherished plans, is the manly thing to do, even though he may experience a shameful sense of humiliation.

Behavior of this kind makes better men and women. It gives all of us a clearer insight into our frailties, and if we have within us the right spirit, we can soon pull ourselves from the shadows and step with assurance into the glorious sunshine.

The man or woman who habitually blames others, misses the lovable and beautiful in life, and loses the lofty, soul-stirring inspiration which comes and carries him or her to certain victory.

To be honest, successful, good-hearted, steer your ship far away from the treacherous shoals of fault-finding, upon which are wrecked every year thousands of lives.

It is the fault-finder that fills the divorce courts with sobs and tears, crushes loving hearts by robbing them of their sweetest joys and intimacies, while going up and down the world like a roaring lion.

(© 1925, McClure Newspaper Syndicate.)

Mother's Cook Book

The road to laughter beckons me,
The road to all that's best;
The home road where I nightly see
The castle of my rest;
The path where all is fine and fair,
And little children run,
For love and joy are waiting there
As soon as day is done.

—Edgar Guest.

SUMMER PIES

A GOOD rich pastry is much easier digested than one which lacks shortening and is tough. Pastry should be quickly made, handled as little as possible, and baked in a hot oven. Take one cupful of shortening to three cupfuls of flour, a half teaspoonful of salt, and just enough ice water to hold the mixture together. Cut the fat into the flour using two knives; when it is like meal, add the water, roll out and line the pastry tin. The one-crust pie is the most wholesome and popular for warm weather.

Currant Pie.

Take two cupfuls of ripe currants, crush them and add one cupful of sugar, the yolks of two eggs slightly beaten, and a tablespoonful of flour mixed with four tablespoonfuls of water. Bake the shell and fill with the above mixture which has been cooked five minutes. Cover with a meringue, using the egg whites, a fourth of a teaspoonful of baking powder and four tablespoonfuls of sugar, the two last ingredients stirred in at the last. Brown slightly in a moderate oven.

Blueberry Meringue Pie.

Take one cupful of sugar, one tablespoonful of flour and the yolks of two eggs. Beat together and add three cupfuls of blueberries. Bake with one crust and cover with a meringue after the pie is baked, using the whites of the eggs, four tablespoonfuls of sugar and any flavoring liked. Less sugar may be used and half a dozen marshmallows, cut into halves placed about on the top of the meringue before baking.

Strawberry Pie.

Bake a deep shell and cool, fill with crushed berries well sweetened. Top with whipped cream and garnish with halves of fine ripe berries.

Bananas may be served in the same way, adding a bit of lemon juice to them, with the sugar. Cover with a meringue or with whipped cream.

A new "comb type" of moving stairway is to be placed in London at stations of the Underground Railway company.

The Breath of Scandal

By J. A. WALDRON

(Copyright.)

"I SEE Welland has gone cruising again on his yacht," remarked one woman in the social swim to an intimate met at a fashionable shop on Fifth avenue.

"Yes," the other woman rejoined. "There was but a line about it in the Social News, yet the Scarletts are again with him.

"Aren't they almost always with him? They seem inevitable companions on his yacht. They visit him in town and at his place on Long Island!"

"What will come of it all?"

"What always comes, of course. Wait! How can Scarlett be so blind?"

"Blind! It isn't that. Welland is simply rolling in money. He added millions to millions during the war. Scarlett must know. I hear there is a third person on The Witch for this cruise—a Mrs. Ashton. Somebody said the affair had become so glaring that something had to be done. Mrs. Ashton is called a chaperon. Oh, la-la!"

"But who is she?"

"A widow from somewhere north. I met her at the Wyntons' dinner. Why, she is only a girl. Chaperon, indeed! And she's stunning—handsome enough to make her way in other circumstances. Not exactly a fine position for even a young widow, to my mind! But is there anything money can't do these days?"

And these delightful women gossiped on, sometimes in half-whispers.

On The Witch, as well as on his private premises, Welland escaped immediate contact with the gossips and those who retailed the gossips' wares, as well as the mothers and daughters to whose fortunes the mothers were devoted. And Welland chose his own company—an exercise of taste that is always resented by the aspiring who are ignored.

Hugh Scarlett was Welland's closest friend. Both natives of Nova Scotia, they had been college mates and their friendship had waxed with their years. But the gossips based their close associations upon other grounds. Mrs. Scarlett was a very handsome woman. The gossips had erected a triangle and beat upon it with their hammers monotonously. If Welland and Scarlett heard the sound they gave no sign. The few among the gossips who knew that Scarlett was an executive of one of Welland's enterprises tortured that fact to fit their pet situation.

But on board The Witch Welland and his guests were enjoying life. The yacht was bound for Halifax, where it was to find a winter harbor. At dinner the second day out Welland turned to Scarlett, who sat beside him, Mrs. Scarlett and Mrs. Ashton being opposite, with:

"Well, Hugh, we seem to be in for a happy cruise, cool as the weather is."

"Yes, and I like the sport much better than in mild weather. It's ripping! Lord, how it blows!"

"Let it blow. The Witch is staunch. I shall be delighted to go about Halifax again and renew pleasing memories. Of course you remember the first summer I visited you there, going with you from college?"

"I remember all your visits, of course."

"Let's see! We were about twenty then—almost exactly of an age. And we were both full of the joy of life—you particularly!"

"I know I was!"

"Why not? Even then you were courting the lady over there, young as you both were!" His eyes caught Mrs. Scarlett's with a twinkle. "And you monopolized more of the time than one college boy entertaining another should. You left me to my own devices!"

"Guilty!" Scarlett threw a kiss at his wife.

"While I was alone I had but one wish."

"What wish was that?"

"That I had a sweetheart of your sweetheart's age and as handsome as Mrs. Scarlett was—and still is!"

"Isn't this becoming a little personal?" Mrs. Scarlett asked, with a smile in which there was no implication of rebuke.

"It's perfectly honest," continued Welland. "But I fell in love just the same. There was a girl about—then not much more than a child—thirteen, I think she was—a little dark beauty, with curls hanging down her back. She was my fate, but it has been my secret until tonight."

"Is that why you have remained a bachelor?" asked Scarlett.

"That is why I haven't married. My memory of that girl has always remained my most vivid association with woman. You know I went to South America—to Argentina—"

"And none of the beauties there canceled the memory?" interrupted Mrs. Scarlett.

"Not a beauty! I was away several years. And finally I heard the charming girl, who of course had grown up, had married.

Mrs. Ashton seemed nervous. She flushed and started to rise.

"What a tribute you pay to youthful love!" said Mrs. Scarlett rising. "Come, dear, let's go on deck and look at the full moon! An appropriate object at the moment!" This to Mrs. Ashton, who moved quickly, her face aflame.

When they had gone Scarlett, lighting a cigar, remarked: "I say, old man, do you mean my sister, Mrs. Ashton? I've had suspicions for days."

"A clever guess," replied Welland, "and I shall propose to her this evening."

Local Briefs

October McCall's is now on sale at News office.

The first P. T. A. meeting of the year will be held Friday evening, October 16th.

Your subscription may be due and we would appreciate you sending us the money.

For Sale: 3 Wilson Heaters used only one season.
37tf Bowser & Reed.

Mrs. Anna Dilley spent the week end in the homes of George Simanton and wife and Mrs. Miranda Maurer.

Miss Cleota Morr commenced her school Monday morning at the Yoder school in Allen county, south of Fort Wayne.

If you are wanting to subscribe for any magazine by the year or single copy, see The News first. We can save you money and trouble.

Ora Wilmot and wife entertained the Friendly Bible class of the Methodist church, and their families, at their home south of Spencerville, Sunday.

W. E. Henley and family and Mrs. Vina Fish, attended the Thornburg family reunion held Sunday at the home of Louis Robinson near the state line.

Archie Erickson and family of Garrett, Robert Ulm and family and Miss Phyllis Rickett of Butler were Sunday afternoon guests in the Frank Scholes home.

Miss Latha Dermott is confined to the house with inflammatory rheumatism in her left foot. She has been suffering for the past two weeks and is not improved.

Mr. and Mrs. Ed Storer had as Sunday guests, Rev. I. Konkle and family of Butler, Meade Baker, Wid Williams and wife, Mrs. Wilbur Yeiser and Sam Keesler, wife and daughter, Jane.

Four car loads of fertilizer have been sold by Wm. Curie for the fall sowing of wheat and is now being unloaded. For 31 years he has sold the Bradley Fertilizer and as evidenced by four cars sold this fall it must give satisfaction.

That DeKalb county will have a health nurse is an assured fact, as the county council voted last week to pay the salary of a county nurse. The council also voted $10,000 for the maintenance of DeKalb patients at the Irene Byron Hospital.

The News printed a very neat 24 page program for the Ladies Literary Club of St. Joe for the coming year. Mrs. G. M. Barney is president and the first meeting was held at her home on September 16. This is the thirtieth year for this organization.

The Misses Edna Jackson and Juanita Kinsey and Donald Davidson were among the excursionists to Niagara Falls Friday night. Mrs. Howard Williams of Fort Wayne joined her brother and Miss Alice Timmerman of Spencerville joined the St. Joe girls.

Mrs. C. Heckelman and daughter, Miss Louise and Miss Vera Thornton of Fort Wayne, were Sunday evening dinner guests in the F. M. Thornton home. Afternoon callers in the same home were: Mr. and Mrs. E. M. Dunton of Fort Wayne and Mr. and Mrs. Ora Baker and daughter; also, Mr. and Mrs. F. M. Hoffman and daughters and Mrs. Karl Hoffman and son, of Hicksville.

Jim Draggoo and wife did not eat their birthday dinner Sunday at his birth place, just east of Saylor's school house, but instead their Auburn home was visited by many friends and relatives. The visitors were John Brown and wife, Kent Provines and family, Art Coyle and family, Lloyd Draggoo and family, Mrs. Dema Hull, Mrs. Marie Palmer, Ern Johnson and wife, John Baker and wife, Mrs. Ellen Baker, Chas. Freeburn and wife and Orm Widney of Kansas. Mrs. Dema Hull furnished the cake containing 83 candles. A number of presents were left.

R U Bowser and family took Sunday dinner with his son, Roy Bowser and wife at St Joe.

Miss Bertha Thornburg of Anderson, Indiana, spent a couple of days last week with M s. Fred High.

Garnett and Forest Beams, left Sunday for Springfield, Ohio, where they will attend Wittenberg college this term

The Annual Fall Missionary Campaign will be held on October 7th at the Methodist church by the Auburn Group. An interesting program is promised.

Mrs. Emma Smith very pleasantly entertained the Woman's Home Missionary Society of the M. E. Church Thursday afternoon. The next meeting will be held at the home of Mrs. Lois Smith.

Mr. and Mrs. Edwin Guthrie returned last Tuesday from the State Fair. They were accompanied by Richard Andrews and Victor McCrory who had their club pigs on exhibition. Victor won second prize on Berkshires and Richard placed ninth with his Chester White gilt. Spencer township has cause to be proud of the excellent showing these boys made with their pigs at Indianapolis.

See Furnish for Tires.

Harry Laux was a Sunday evening supper guest of Henry Markle

John Scott of Auburn, was a guest of Mr. and Mrs. Milton Chaney several days last week.

On next Sunday evening the members of the Methodist church will hold a reception at the church for the officers and teachers of the Sunday School.

Herman Reasoner and wife visited the former's parents, Mr. and Mrs. Charles Reasoner, of north of St. Joe, Sunday. Other guests were Mr. and Mrs. Wade Jarvis of Waynesville, Ohio, Ray Reasoner and wife and Charles Collins and wife of St. Joe.

Joel Betz and wife attended the Betz family reunion held at Harlan Sunday. There were about 85 members of the family present to enjoy the occasion. The officers elected for next year are: President, Homer Houck; Vice president, William Boger and sec.-treas. Walter Horn.

The Home Bureau Club met on Wednesday afternoon at the home of Mrs. Lina Odle. At this time they elected officers for the year beginning in January 1926, as follows: President, Mrs Lina Odle; Vice President, Mrs. Estella Goldsmith; Secretary, Mrs. Beulah Vallieu; Assistant, Mrs Mettie Furnish; Treasurer, Mrs. Winnie Shook and assistant, Mrs. Mettie Furnish.

PUBLIC SALE

The undersigned will sell at Public Sale at their farm residence, located 2 miles south of Spencerville, 1 mile west of Wise school house, 1 mile east of Horn school house, 2 miles north of Springfield Center road on the Shook farm, commencing at 10:30 the following stock, on

Tuesday, Sept. 22nd

7 HEAD OF CATTLE 7

Roan Durham cow 8-yr. old, fresh by day of sale; Large cow 6-yr. old, fresh by day of sale; Durham heifer 3-yr. old, fresh by day of sale; Holstein-Jersey cow 7-yr. old, giving good flow milk and bred to freshen in January; Registered Short Horn Bull 3-yr. old, very quiet and gentle, papers go with him. All the above cattle are tuburcular tested.

4 Brood Sows to Farrow in Sept. and October, 50 to 60 head shoats weighing about 70 pounds. Corn in Shock.

Terms: Sums of $5 and under, Cash. 9 months time given note amounts drawing 6% from date. 4% discount for cash.

B. O. Shook AND SON

Rhodenbaugh & McNamara, Aucts. W. G. ERICK, Clerk

Raymond Randall, wife and baby, are visiting the former's parents at Muncie.

Ray Farver and wife entertained the Farver reunion Sunday at their home. There were about 130 members present.

Cash paid for false teeth, dental gold, platinum and discarded jewelry. Hoke Smelting & Refining Co, Otsego, Mich.

ST. JOE.

St. Joe Locals

Picnic Paper Plates and Wax Paper in large rolls now on sale at News office.

H. M. Widney has quite a pile of gravel dipped, also Wm. Baltz. Harry Kees is going to start dipping in a few days.

Mr. and Mrs. Wm. Randall and grandchildren, were Sunday afternoon guests of Mr. and Mrs. John Beard at Waterloo.

THE KITCHEN CABINET

(©, 1925, Western Newspaper Union.)

What is so rare as a day in June?
Then if ever come perfect days
And heaven tries earth if she be in tune
And over her softly her warm ear lays.
And whether we look or whether we listen,
We hear life murmur or see it glisten.

ICY FOODS

There is no dessert that makes such strong appeal to the palate during the warm months as frozen dishes.

Frozen Custard.—Scald a quart of milk in a double boiler: add one-half cupful of sugar, one-fourth teaspoonful of salt; pour this over two well-beaten eggs, return to the fire and cook until the mixture coats the spoon. Flavor with vanilla when cool, freeze.

Prune Ice Cream.—Wash and soak over night one pound of prunes, then cook slowly in the same water in which they were soaked until tender. Add the juice of a lemon, one and one-half cupfuls of sugar; simmer ten minutes, then strain the juice. Remove the pits from the prunes and put the pulp through a ricer. Add three cupfuls of rich milk, one cupful of cream and one-half teaspoonful of salt. Cool and freeze.

Velvet Cream.—Take one quart of rich milk, add one cupful of sugar and the juice of three lemons. Mix well and freeze. The mixture will curdle but when frozen will be smooth and velvety.

Golden Cream.—Boil together for five minutes two cupfuls of sugar and one cupful of hot water. Add one cupful of grated pineapple, a quart can of apricots, and the juice and pulp of two oranges. Scald two quarts of milk, add a tablespoonful of flour mixed with two tablespoonfuls of cold milk. Cook together five minutes, add the fruit all finely mixed, cool and freeze. This makes one gallon of cream.

Peach Cream Sherbet.—Take two cupfuls of fresh ripe peaches, mash with a cupful of sugar and let stand three hours. Fold in a cupful of cream whipped until stiff then freeze. Garnish with chopped cherries and flavor with almond if it is liked.

Grape Juice Cream.—Take a pint of sweetened grape juice, a pint of cream and a tablespoonful of lemon juice. Freeze as usual. The color of this frozen dish is one of its attractions.

THE PENCIL MAKES A FARM PAY BETTER

Farm Accounting Reveals Losing Methods and Points Way to Bigger Profits.

(From Banker-Farmer)

A farm cannot properly be called successful unless it pays a fair rate of interest on the investment and returns fair wages for the farmer's labor. Agriculture is considered by all odds the most important industry in the world, and yet in no other industry is the business end so neglected.

It is common to find a farmer with an investment of fifteen to twenty thousand dollars, yet does he keep books? Perhaps he may jot down a note now and then of an important deal, but this is of no value in an analysis of his business as a whole. No other industry, however small, is carried on without books of some sort.

Farming is a business and to be successful must be conducted in a businesslike way. The business man's mind should have indelibly printed upon it two questions: What profit is my business making? How can that profit be increased? To know the latter, one must find out the former; and to find out about profits requires the keeping of books.

It is not necessary for a farmer to have a course in bookkeeping. Almost every agricultural college in the country has issued a simplified farm accounting book which it sells at cost, and only a few minutes are required each day to jot down the day's happenings.

Accounts Increase Profits.

Instances number a thousandfold where farmers have profited by knowing their business. Accounts kept by nineteen farmers in Illinois led them to improve the organization and operation of their farms in ways that added approximately $650 to their average net income in 1922, the seventh year they had kept accounts.

An Iowa farmer found at the end of the first year he kept books that crops fed to livestock brought more money than when sold outright. His figures showed that his cows were poor: compared with other farms in the state, he found the number of acres cultivated per man on his farm, as well as the number of acres per horse, were below average. He rented more land and replanned his fields, so that the crop areas per man and horse were increased. He sold some of his scrubs and bought good cows. The second year his income from the farm, after paying all expenses and interest on the money invested, had been increased over $350.

Costs Can Be Regulated

"I have discovered," says one farm bookkeeper, "that the kind of man you have on a job, as well as the particular team, often makes quite a variation in the cost of performing certain tasks. I have learned from the pages of my book that if I could have increased the yield of my wheat field by two bushels and my corn by five bushels I would have realized a substantial profit from them."

While the farmers may not be able to fix prices on their products, they do have a voice in determining the costs of production. To reduce this cost they must first know what the costs are.

The number of farmers who are keeping books on their business has increased remarkably in recent years, but the number of businesslike farmers is woefully small when listed alongside the sum total of the farmers in the country.

Inventory Is Indispensable

The basis of any system of farm accounting is the annual property list or inventory. It is the starting point of the farm records. One must take into consideration decreases or increases in the value of all property owned to gauge the progress of the business. Lacking facts as to the value of his property, no business man can form an accurate estimate of how he stands financially. Increased cash may be due to property which was sold, or increased debts may be due to improvements made. If a farmer is falling behind, the inventory will emphasize this fact. Often when a man is discouraged and thinks he is making no progress, his inventories will tell him that he is better off than he thought.

At the end of each year a financial statement is drawn off. This is the farmer's rating and no farmer with a good financial statement need fear walking into a bank and asking for a loan.

BANKERS HELP

A bank in Monrovia, Ind., tests seed corn for farmers. A basement room was fitted out last season for the purpose and 25,000 ears were tested for fifty-six farmers. One-fourth of the seed tested last year was unfit for seed. This year the percentage will run even higher. The work is done under the supervision of the high school agricultural teacher. He reports that the community will have a surplus of seed corn this year.

The banks of Conway, Ark., have offered prizes for the most marketable sweet potatoes produced on one acre of land. A first prize of $150 is offered, along with three district prizes of $50 each. The county agent and the banks are working out the details.

The County Bankers Association will help to employ a full time county leader this year for boys' and girls' club work in Calhoun, Cherokee and Buena Vista counties, Iowa.

NEWVILLE

Don Washler and wife spent Sunday at Auburn guests of Dewey Miller and family.

Rev. Strickler, wife and daughter, Helen, were Sunday dinner guests in the John Miller family.

Mrs. Bessie Shaffer and two sons Carl and Russell, of Butler, and Mrs. Ethel McCulough of Mt Pleasant, were Sunday guests of Willie Miller and wife.

Henry Berree, the son of Adrian Berree and wife, is very ill and not expected to recover. His brother, who has been very ill, is now able to be up. These young men are suffering with tuberculosis.

Rev. P. A. Hubbart was assigned the Newville circuit for the coming year. Rev. Hubbart is no stranger here as he served on this charge in 1921 and 1922. We are glad to welcome Rev Hubbart. Rev. Strickler expects to move this week to Marion county as he was given no work in DeKalb. We are sorry to have these people leave us so soon and our good wishes follow them.

Good Manners

Our manners express our degree of refinement and our own poise as well. Good manners are not superficial, for they are the kindly consideration of the people about us. Good manners always mean a good example, and so we make things smoother for others as well as for ourselves.

Explaining Dew

Three concurrent sources of dew are recognized: the condensation of the moisture of the atmosphere (when dew may be said to fall); the condensation of watery vapor arising from the earth (when dew rises), and the moisture exhaled by plants.

Obituary

Billy Gene Widdifield was born September 28, 1923 in Fort Wayne and died September 7, 1925 at the age of 1 year, 11 months and 9 days. He leaves to mourn their loss, father, mother, grand parents, three great grandfathers, a great grandmother, one aunt and numerous other relatives and friends.

Billy was a sweet, lovable child and his departure will be deeply felt by those who loved him best.

The funeral was conducted by Rev. S. D. Steffey at the home of the grandparents on Wednesday at 2 P M. Burial at Spencerville.

God holds the key to all unknown
And I am glad
For, if another held the key
Or, He entrusted it to me
I might be sad.

Card of Thanks

We desire to express our heartfelt thanks to those who so kindly assisted us in our sad bereavement also for the beautiful floral offerings.

Mr. and Mrs. C. E. Widdifield.
Mr. and Mrs. M. Widdifield.
Mr. and Mrs. B Graves.

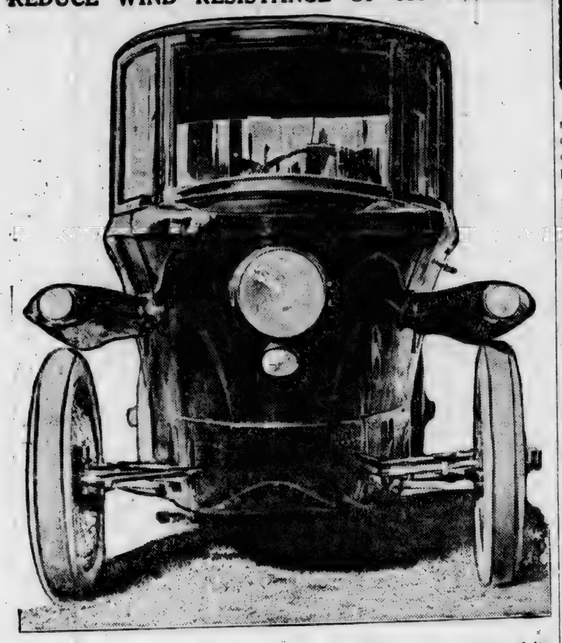
REDUCE WIND RESISTANCE OF AUTOMOBILE



A radical among cars; the rumpler "drop-auto," so called because of its alleged resemblance to a falling rain drop, seen from the front, showing the lines by which wind resistance is reduced.

EYES NEED CARE AFTER CAR TRIP

Of Great Concern to Every Member of Family if Trip is Long One.

There is no reason why the eyes will have too much vacation if they are given a little attention this summer.

Motoring in the warm mid-day breezes or cool morning air is of great concern to the eyes of every member of the family, especially if the ride lasts several days and is taken in an open car. According to the Wisconsin department of home economics, a knowledge of how to care for the eyes on such occasions and in emergencies is invaluable to the older members of the group.

Weak Eyes Need Care.

Weak eyes may be soothed by the use of boric acid solution which may be purchased already prepared or may be made at home before the trip and bottled. The home-made solution may be made by adding one tablespoonful of boric acid to one pint of boiling water. Allow to cool and bottle. Apply to the eyes by means of an eye cup which may be purchased for a small sum. If the eyes are red and inflamed from the wind, they may be washed at morning and at night with the solution. Care should be taken to see that the boric acid crystals are thoroughly dissolved in order that they may not irritate the eyes. Solutions other than boric acid should not be used for the eyes unless a doctor has been consulted.

When that occasional cinder falls in the eye, there is every reason why it should be removed as quickly as possible. One of the easiest ways to remove it is to bring the top lid down over the bottom lid. This may remove the cinder if it has adhered to the inside of the upper lid, as is often the case. Never rub the eyes, as this is very irritating.

Tears Remove Cinders.

Another method to use is to hold the lids open so that the tears will have a chance to wash the cinder out. Closing the eyelids and rubbing them force the cinder against the eye ball and make it pain more than ever. If it cannot be washed out with tears, it is well to seek the help of a physician.

Most people prefer to wear goggles or glasses when taking a long motor trip. Smoked or amber glass is a protection against the strong light.

Avoid Excess Amount of Cement in Fixing Hole

The other day we undertook to patch a small hole in one of our inner tubes, using the small gasoline vulcanizer that has been in the garage for a long time. There is nothing whatever the matter with the device, but after following the directions carefully we found, on removing the vulcanizer and examining our handiwork, that the tube was stuck together. In trying to separate the two sides, we tore the rubber, doing a great deal more damage to the tube than we did good. After considering the matter for some time, we discovered that, in applying the preliminary cement to the hole, before putting on the rubber patch which we later vulcanized to the tube, we had carelessly used an excess of cement, which found its way inside the tube. Consequently, when clamping the tube in the vulcanizer and applying the heat, we not only vulcanized the new rubber patch to the outside of the tube, but also vulcanized the two inner walls of the tube together. It is important to remember this in doing any tube vulcanizing, for care must be taken to use just the right amount of cement to care for the patch, being sure that none works its way inside the tube itself.

Storage Battery Cannot Corrode if Kept Clean

The corrosion of metal parts on or about a storage battery is often attributed to a leaky or defective battery. This is usually due to the spilling or overflowing of battery solution and the neglect of the motorist to keep the exterior of the battery well cleaned.

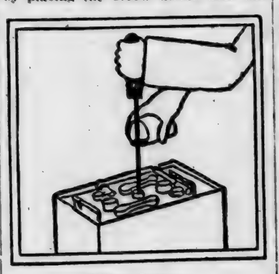
The corrosion of metal parts about a battery, indicated by a white lead sulphate coating, is caused by the action of escaped battery solution which eats into the metal.

Under ordinary driving conditions the charging of the battery by the generator causes more or less battery solution to vaporize through the vent holes in the filler caps of the battery cells. This vapor condenses on the battery and to prevent corrosion of the handles, hold-downs and other metal parts, and damage of the battery box, it is essential that the exterior of the battery be cleaned off regularly so that the acid cannot get in its work. This should be done with a clean, moist sponge whenever the battery is inspected or distilled water is added, and if the motorist will take a few moments occasionally to do this there should be little trouble with corrosion.

At the same time it is well to see that the hold-downs are tight to prevent unnecessary vibration. A thin coating of vaseline on all metal parts not lead coated will also help, acting with vaseline.

Screw Driver as Funnel

When a funnel is not available an easy way to fill the storage battery is by placing the screw driver over the



Filling Battery.

hole and pouring the water slowly along the shank. The tool will direct the water into the battery without spilling.

"Traction Wave" Causes Tires to Roll Up Hill

A curious thing about tires is that they continually roll up hill. This is due to what is scientifically termed "traction wave," but what is popularly called "bulge." Both terms mean the expansion of that portion of the elastic carcass of the tire which by weight and forward pull is forced just ahead of road contact.

In motion the tire is continually attempting to run over this traction wave, which, always just ahead, eludes it. Incidentally under-inflation increases the wave.

On a plain tread the wave runs round and round the tire, but a tread design with a backbone ribbed or cogged has been found effective in dividing and in throwing it off each side. Some treads are corrugated, some are smooth, some indented; but a purpose of all of them is to provide maximum traction to overcome this wave.

The tread must provide also for minimum road resistance, for minimum injury to the carcass underneath and for maximum road wear. Like the soles of shoes, a tread must absorb direct wear. Different kinds of service have their individual effects. Scuffing, skidding, spinning, tearing effects of rough roads—all these have a tendency to promote rapid wear.

When a tread is torn or badly worn it should be taken to a competent tire surgeon.

Seen and Heard In Indiana

Dr. J. M. Sample, Connersville physician, is in the Jefferson county jail, charged with plotting to take the life of his father-in-law, James C. Reed, by poisoning.

John Miller Lilly, age sixty-nine, a Hoosier since his early boyhood, died unexpectedly at his home in Weston, Mass., according to word received in Indianapolis.

Seven mines in the Clinton coal field served by the C. & E. I. railroad are idle as the result of a strike of the miners in protest against the recent rise in the price of train tickets.

W. H. Kennedy, of Tell City, is to be the right-hand man of E. C. Yellowley, prohibition administrator of the Chicago district, of which Indiana is a part, says a Washington dispatch.

The police of Fort Wayne have no clew that may lead to the identity of the firebug who set fire to the airplane of J. O. Marlow, which was destroyed by fire at Flight B landing field. Marlow's loss is placed at $1,200.

Mrs. Clara Fortner, age thirty, wife of Elmer Fortner, plunged to her death from an automobile on a road northwest of Clinton. She was riding in the rear seat with their two children, who saw their mother's fatal leap.

Nearly a dozen persons, including several children, were injured when the bleachers erected in front of the grandstand at the Montgomery county fair ground at Crawfordsville collapsed while a display of fireworks was in progress.

Oscar Raymond Luhring of Evansville, named as assistant United States attorney, is known as one of the most brilliant attorneys at the Evansville bar. He served two years in the state legislature before he was elected prosecutor of Vanderburg county.

The funeral of Edward Thistlethwaite, seventy-four, millionaire of Hamilton county, was held at the home of his daughter in Sheridan. Burial was at Sheridan. His holdings were in banks in central Indiana and 30,000 acres of Louisiana timber land.

The first legal step toward preventing enforcement of the state tax board's order for a horizontal raise in Decatur county was taken at Greensburg when Samuel N. Patterson and others filed a complaint for injunction against the county officials.

Eben H. Wolcott, state bank commissioner, submitted his resignation to Gov. Ed Jackson at Indianapolis, effective October 1. The governor has not indicated his choice for a new commissioner. Mr. Wolcott said he was resigning his post on the advice of his physician, who, he said, has recommended he seek a milder climate.

The scar of a tornado left across the southern half of Princeton after the catastrophe of last March 18 virtually has disappeared. Most of the homes wrecked or damaged by the wind have been rebuilt or repaired and the two industrial plants, the pickling plant and the railroad shops of the Southern railway, have been restored.

Displaying a generous coat of tan, Gov. Ed Jackson is back at his desk in the statehouse at Indianapolis, after a vacation trip of more than three weeks in the Dunes region, bordering Lake Michigan in northern Indiana. The governor was profuse in his praise of the Dunes region and said that his enthusiasm for the project to buy the 2,000-acre state park in that region was greater than ever.

Bert C. Morgan, acting deputy administrator for the prohibition enforcement division of Indiana, Illinois and Wisconsin, with headquarters in Indianapolis, was in conference with his employees, working out the new organization. Mr. Morgan believes it possible that the twenty-six agents and nine stenographers under his supervision will be retained under the new system.

Members of the board of trustees of the Indiana World War Memorial decided, at a meeting held in Indianapolis that action of the Plaza architects, Walker & Weeks, in drafting the original specifications to include a kind of steel in which the architects were interested, was "unethical;" that the use of their steel in the Plaza was "unlawful," and that a supervising engineer should be employed to check the revised specifications for the main building of the Plaza.

Newman T. Miller, state fire marshal, and John D. Cramer, his first deputy, said at Indianapolis they are seriously considering issuing an order prohibiting gasoline retail dealers from filling visible type pumps except at the time of sales. The contemplated steps to minimize the fire hazard, which these officials say is caused by the visible type tank, were discussed following a study of the report of an investigation of the recent explosion of one of these tanks at Richmond, which resulted in the death of Elmer Hakkins, and the injuries of others.

Resumption of bituminous coal mining on an increased scale in southwestern Indiana is seen by coal operators as a result of the blanket strike of anthracite miners who walked out in a body on September 1.

A petition for a revision of the freight rates on coal from the Hoosier mines to the Chicago switching district was filed with the public service commission at Indianapolis by the Indiana Bituminous Coal Operators' association of Terre Haute. The petition alleges the railroads are charging unlawful rates on Indiana coal.

IMPROVED UNIFORM INTERNATIONAL

Sunday School Lesson

(©, 1925, Western Newspaper Union.)

Lesson for September 20

PAUL WRITES TO THE THESSALONIANS

LESSON TEXT—I Thess. 2:1-13.

GOLDEN TEXT—"In everything give thanks."—I Thess. 5:18.

PRIMARY TOPIC—Paul's Love for His Friends.

JUNIOR TOPIC—How Paul Worked in Thessalonica.

INTERMEDIATE AND SENIOR TOPIC—Paul's Devotion to His Work.

YOUNG PEOPLE AND ADULT TOPIC—The Spirit and Method of Paul's Work.

While the lesson committee has selected this brief passage in the second chapter for printing, the intention was to present the message of the entire epistle. It was on Paul's second missionary journey that the church at Thessalonica was founded as seen in the last lesson. After crossing into Macedonia he preached the Gospel at Philippi, where he was imprisoned. From Philippi he went to Thessalonica. The people there were largely Gentiles.

I. The Salutation (ch. 1:1).

Timothy and Silas were associated with Paul in this missionary journey, and they are associates of Paul in this message.

II. Paul's Thanksgiving (1:2-10).

1. For Their Faith, Love and Hope (v. 2-4).

This triad of graces testified of their election of God.

2. How They Received the Gospel (v. 5.)

It was in the power of the Holy Spirit.

3. Joyful Obedience (v. 6).
4. Exemplary Lives (v. 7).
5. Missionary activities (v. 8.)
6. Turned From Idols (vv. 9-10).

III. Character of Paul's Ministry (2:1:12).

It would seem from this defense that some of the Jews had called into question his ministry. He defends himself by showing the character of his ministry:

1. It Was Courageous (vv. 1-2).

His persistence in spite of shameful persecution proved his devotion to the Lord and His work.

2. Honest and Guileless (vv. 3-4).

As one sent of God, he faithfully ministered unto them, not courting man's favor.

3. Without Flattering Words (v. 5).
4. Without a Cloak of Covetousness (v. 5.)
5. Did Not Seek Glory From Man (v. 6).
6. Gentle and Affectionate (vv. 7-8).

So vitally did he enter into the lives of the people that he displayed a gentleness even as a nursing mother with her children.

7. Unselfish (v. 9.)

In order that his motive be not questioned, he labored night and day for his support.

8. Irreproachable and Blameless (v. 10.)

He did not claim to be faultless, but he challenged them as to his blamelessness.

9. His Lofty Aim (vv. 11-12).

That they would walk worthy of God in keeping with their high calling.

IV. How the Gospel Was Received (2:13-16).

As the very Word of God.

V. Paul's Desire for the Thessalonians (2:17:3-13).

1. He Endeavored to See Them Face to Face, but Was Hindered by Satan (2:17-18).
2. He Declared Them to Be His Crown of Rejoicing (2:19-20).

His hope of meeting his converts at Christ's second coming was his crown of rejoicing.

3. Timothy Sent to Them (3:1-10).

It was his report that furnished the information concerning this church.

4. He Prayed for Them (3:11-13).

VI. Sins Rebuked (4:1-12).

1. Unchastity (vv. 1-5.)
2. Dishonesty (vv. 6-8).
3. Lack of Brotherly Love (vv. 9-10).
4. For Being Busybodies (v. 11).
5. Idleness (v. 11).

VII. Doctrinal Errors Corrected (4:13; 5:11).

1. Not to Sorrow Unduly (v. 13).

It was because of their misunderstanding of the meaning of the coming of the Lord that they were indulging in excessive sorrow.

2. The Reason Assigned (vv. 13-18).

(1) The departed saints will come back when Jesus comes (v. 14).

(2) Living Believers Will Be Caught Up With Them (v. 17).

3. The Time of the Lord's Coming Unknown (5:1-11).

The exhortation is "be ready," watch.

VIII. Concluding Exhortations (5: 12-28.)

Sin, Grace, Humility

No sin is so offensive to God, and so injurious to the soul as pride. No grace is so commended, both by precept and example, as humility.—Ryle.

Truth

Truth is not of man's making, but of God's revelation. Hear it in the house of God.—American Lutheran.

To Be Thankful

To be thankful is to be especially Christlike.—Russell H. Conwell.

Scraps of Humor

HIS THOUGHTS

Bride—And you think of nothing but me?

Groom—Nothing but you, my dear, nothing but you.

Bride—And what at this very moment?

Groom—Why, I was thinking that you might be thinking that I was thinking it must be near dinner time, my love.—Chicago Daily News.

Her Last Employment

"Where were you employed last?" asked the manager of the fair applicant.

"In a doll factory, sir."

"And what were your duties there?"

"Making eyes."

"Very well. You are engaged; but please don't demonstrate your capabilities when my wife is around."

Nothing Wasted

The young wife was in tears when her husband came home from work.

"What is wrong, darling?"

"Oh, that maid! She smashes everything she touches."

"Good! Send her over next door at once. Mrs. Spuggs wants some one to help her move her victrola."

Competent Source

Mrs. Muddle—Well, John, I have heard both sides of the story of the trouble between Mrs. Nagg and her husband.

Mr. Muddle—And from whom did you hear both sides of the story?

Mrs. Muddle—Why, from Mrs. Nagg, of course.

TO KEEP AWAY FROM HIM

"How did you come to decide to buy a six-cylinder car?"

"Well, I heard the collector for this automobile concern drove a four-cylinder."

Shingle Facts

East and West have never met,
Their ways have never mingled;
So Chinamen will never get
Their pigtails bobbed or shingled.

His Income

She—If I ever marry it will be a man whose income has at least four ciphers in it.

He—That's good, dear. My income is all ciphers—as many as you like.—The Progressive Grocer.

Word Meaning Trouble

"Dad," said Clarence, "what's a three-letter word meaning trouble?"

"Yes," growled his father, who was wishing he had been struck dumb the day he proposed.

MILKING ENERGY

"It's said the hand-shaking done by a noted politician in Washington before election would milk every cow in the country twice."

"You don't say! And just to think he has to use all that energy in order to milk the government."

Struck Out

He struck a match to gaze
Upon his gasoline—
No more he'll travel
On the village green.

A Noneconomist

"Blowitt has a rather novel philosophy."

"What is it?"

"He says when a man works hard to get money, why impose upon himself the further hardship of trying to save it?"

Of Course

"Why were the Middle Ages known as the dark ages?"

"Because there were so many knights."—Washington Star.

The KITCHEN CABINET

(©, 1925, Western Newspaper Union.)

Remembrance is the sweetest flower
Of all this world's perfuming;
Memory guards it, sun or shower;
Friendship keeps it blooming.

SOUR CREAM DISHES

When one has a cupful or two of sour cream it is nice to know several ways of using it.

Deviled Eggs.—Cook six eggs in the shell until hard. Cut into halves lengthwise, remove the yolks and mash with a fork, adding enough thick sour cream to moisten. Add mustard, salt and a little red pepper. If the cream is too sweet add a dash of lemon juice and put the mixture back into the whites.

Sour Cream Pie.—To one cupful of sour cream add two-thirds of a cupful of raisins chopped, one and one-half tablespoonfuls of vinegar, one tablespoonful of flour, one teaspoonful of cinnamon, the yolks of the two eggs, and a little salt. Bake in one crust and use the whites of the eggs for a meringue.

Hermits.—Take a cupful of thick sour cream, two cupfuls of brown sugar, one cupful of chopped raisins, two-thirds of a cupful of butter, two well-beaten eggs, one teaspoonful each of cinnamon, cloves and nutmeg, with flour to make a dough as stiff as can be stirred. Drop by teaspoonfuls on a well-greased pan, leaving plenty of room to spread. A raisin or nut may be added to each to garnish.

Quick Cream Cookies.—To one cupful of sour cream add one cupful of sugar, one egg, two and one-half cupfuls of flour, one teaspoonful of soda, with salt and flavoring to taste. Drop by spoonfuls on well-greased pans, pat out and sprinkle with sugar, adding a nut or a raisin. Bake in a quick oven.

Sweet Potato Pie.—Take a cupful of sour cream, one cupful of sugar, one pint of mashed sweet potato, the yolks of four eggs, one teaspoonful of cinnamon, one-half a nutmeg; salt all well mixed together. Bake in one crust and spread with strained honey while hot.

Graham Muffins.—Take one cupful of sour cream, one cupful of graham flour, one teaspoonful of soda and one tablespoonful of sugar, a beaten egg, all well mixed. Bake in buttered gem pans.

Sour Cream Dressing.—Take a cupful of sour cream, add a bit of salt, sugar and cayenne, and mix well. Pour over sliced cucumbers or shredded cabbage.

Cream soups, which are so nourishing, may all be made with skim milk, adding a little more butter to the flour when binding.

Everyday Dishes.

Fried salt pork has gone out of style, except in farm homes, where it is served at its best. A few slices of good fat—and a steak of lean (pork) cut into half-inch slices and fried in its own fat until crisp and brown, then the gravy thickened with flour and well-browned—a cupful or more of milk added and the gravy is ready to serve with the pork and nicely baked potatoes. Such a dinner will be found appetizing and agreeable once in a while on a cool day. A coleslaw will be good to serve with such a dinner. Shred the cabbage and serve with a hot boiled dressing poured over it.

Popovers.—Beat two eggs until very light, add gradually seven-eighths of a cupful of milk, a cupful of flour, a half-teaspoonful of salt; beat all together ten minutes with an egg beater, then add half a teaspoonful of melted butter. If skim milk is used add a teaspoonful of butter.

Cream of Tomato Soup.—Melt three tablespoonfuls of butter, add three and a half tablespoonfuls of flour and stir until smooth; add a teaspoonful of salt, a teaspoonful of chopped onion, then a pint of canned tomatoes, mixing all. Add soda and onion, using a fourth of a teaspoonful of soda. Reheat, then strain and pour this, after slightly cooling, into a cupful and a half of milk. Reheat and serve hot. Do not let the soup boil.

Coffee Cup.—To a pint of strong coffee, strained through a cloth, add one-third of a teaspoonful of almond flavoring and heat to the boiling point in a double boiler. Add two beaten egg yolks, two tablespoonfuls of cream and two tablespoonfuls of sugar. Stir until it thickens to a custard, remove and cool, pour into a serving pitcher with a pint of sweetened ice-cold whipped cream, a quart bottle of charged water and a pint of shaved ice. Serve in tall glasses, place a little shaved ice in each, then some coffee, then twice the quantity of charged water, and on top the whipped cream.

Mintade.—To two cupfuls of water add one bunch of mint cut very fine and the juice of six lemons. Let stand one hour. Strain, chill and add sugar sirup to sweeten, and two quarts of ginger ale. Serve at once with cracked ice.

Diced pineapple added to chopped or shredded cabbage, with a good salad dressing, makes a most delightful combination.

Waistline Normal Again in England

Surprises are not common in the study of styles, but they do happen, says a fashion writer in the New York Times. All the while the fashion creators at Paris and their confreres on the other side of the water have been debating the return to the normal waistline one has only to set foot in London to find it has arrived. The question has remained for months a matter of conjecture; but British decisions are deliberate, and the belt is once again placed at the natural line. Prominent designers in London are not giving special emphasis to the fact, reluctant, perhaps, to take a too radical step before Paris has given her sanction.

To the English woman of fashion Paris is still the center of styles creation, however loyal she may be to her own country's ideals and productions. This year there has been a broadening of horizon, a more sympathetic feeling, largely the result of the Exposition des Arts Decoratifs, beneficial to both London and Paris. This does not mean that English women accept unconditionally the decrees of Paris or any other authority. Individuality is still their precious possession, and an Englishwoman will wear what she chooses with the complacent assurance that it is she who is setting the style. At least it is the fashion as it should be, whether or not the rest of the world follows. This may, in a sense, account for the revival of the normal waistline. Leading London modistes do not admit wholly that the long waist and straight silhouette are passe, for they are still the lines upon which some of the handsomer models are built by both English and French creators.

Center of Fashion.

There is always a certain satisfaction in dealing with "headquarters," and in London one finds oneself at the very center of fashion in sports dress. We have long looked to England for authority in tailored clothes, in coats, in overgarments of different sorts. We have referred to fabrics as "English" material when a more specific name is lacking. London sports togs, famous the world over, are the joy of an American sportswoman's heart. They have simplicity and dignity through rapidly changing styles. Novelties may come and fads may go, but a mannish tailleur of Scotch tweed or Irish homespun has an honest-to-goodness look not to be ignored.

There are kashas and cloths of different weaves and weights, but the first thing the smart tailor offers you is a conventional two-piece suit of wool mixture, diagonal, or woven all in one color. In an unusually gay sports season fashionable women are wearing the simplest of these tailored suits, in the rougher finish materials, for golf and tennis, for motoring, hiking and shooting. The plain wrap-around or kilted skirt, with box coat,

Frock That Is Done in Beige Jersey Cloth, With Attached Cape.

short or hip length, a plain polo shirt or overblouse is almost a uniform among English sportswomen. The coat has plenty of pockets. When a shirt is worn there is also a belt to define the normal waistline. In an outfit of this description a woman is comfortably and fully equipped for any country sports and has a look of correctness.

A variant of this regulation sports suit is a sweater or jumper instead of the coat. There are many kinds, colors and patterns of sweaters—some to match the skirt, some in gay, bizarre patterns and in endless unexpected combinations. The topcoat with this arrangement is longer and more voluminous.

One of the ultra-smart jackets offered by a well-known London designer is made of leather. It recalls the old-fashioned shooting jackets men used to wear but in its feminine version it is a trim and shapely affair.

A shooting costume from a London-Paris house of high standing has a kilted skirt of black-and-white kasha in a large block pattern. With this is the ordinary shirt of white silk broadcloth belted with black leather. The short, double-breasted coat is of black kid with four square pockets and wide revers, and is lined with the black-and-white cloth.

The Shepherd's Plaid.

An engaging little suit was made of woolen material in shepherd's plaid with jacket of bright red leather lined with the plaid. Scotch plaids in the different tartans are seen a lot in the lining of these leather coats. One of black kid, made seven-eighths length, is stunning lined with a gay tartan. The fancy for leather is illustrated in leather trimmings, in bands and cut-out patterns to be appliqued as borders and pipings on cloth, as well as in the thousand and one fascinating accessories.

A picturesque model in a sports suit is that made of Scotch plaid. English

Jumper Dress That Is Hit of London Season in Sports Wear.

tailors know better than any others how to introduce the tartans in women's dress. They do it with precision and decorative effect. It is acknowledged to be a sentimental tribute to that much-loved Scotswoman, the duchess of York, whose popularity appears to have done much to stimulate interest in the Scotch fabrics. The tartans are used in wools, in silk, for a kilted skirt, a hat; as a lining, trimming, sash.

A parasol covered with Scotch plaid taffeta carried with an all-white semi-sports dress at the Eton-Harrow cricket match was most effective. An other uncommon costume had a kilted skirt of a MacKenzie tartan with soft white peasant blouse and a bolero of black velvet.

The conspicuous success of the London season in fashions is the two piece jumper dress. It is the final word in style, comfort and utility. As Reville, past master of the art of sports dress of the conventional and refined type, presents the jumper dress it is done in a fine quality of wool silk and wool, all silk or cotton jersey or stockinette. It consists of a simple skirt plain or kilted, and an overblouse of the same material, made with high neck and long sleeves, and is in all ways like any overblouse or slip-on sweater as we know it. Beige, bois de rose, tan and yellow are the popular shades used, with very few dark colors offered.

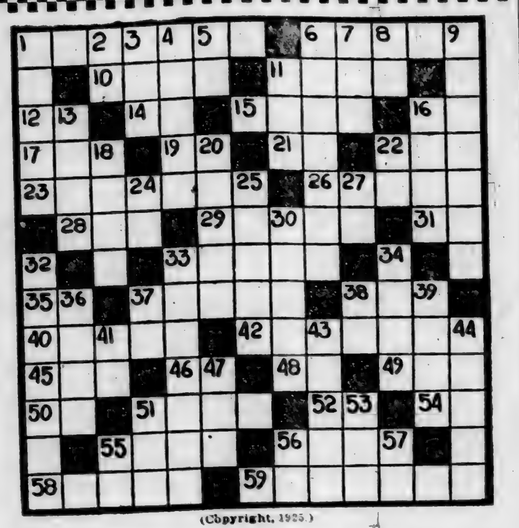
A real achievement of Reville is one of these jumper frocks especially designed for tennis. The wrap-around skirt ingeniously conceals a pair of trousers of the same material, made all in one with the costume, yet with perfect convenience and grace. A sash of silk, knotted at one side, gives an artistic touch.

Another, in yellow-and-tan stockinette, has a short, straight skirt, with overblouse giving a tailored appearance, open at the neck, with small revers and a cravat tie, and a pocket on each side below the belt. Of the short sleeve or sleeveless middy there is not a trace, and all of the jumper suits have long sleeves with snug wristband. The kilted skirt to be worn with separate jumper or sweater is very popular and has the virtue of being youthful.

Home of the Knitted Dress.

London is the home of the knitted dress and its shops this year offer a large and attractive assortment of knitted frocks, jackets, sweaters, accessories and occasional garments of more or less formality. The best are, of course, hand made, intensely interesting as examples of knitting and crocheting in artistic and sometimes elaborate patterns. It is evident that a revival of this type of dress will boom the knitting industry and give opportunity to many handworkers. Plain patterns are usual, but some of the more elaborate things are done in clever reproductions of the old patterns of the days when knitting was considered a gentle accomplishment.

CROSS-WORD PUZZLE



(Copyright, 1925.)

Horizontal.

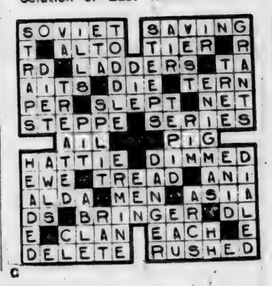
1—One who loves his country
6—Cupolas
10—A solemn affirmation
11—A conservative
13—You and me 14—You and I
15— A kind of root
16—A parent
17—Signifying the maiden name of a married woman
18—Another form of "I"
21—To exist 22—A conjunction
23—To lay away
26—To pass off something counterfeit as genuine 28—Noise
30—To hesitate 31—That man
32—To drive back
33—Behold!
37—A city in France
38—A small mass of butter
40—Covered with ivy 42—Harms
45—A fastening implement
46—That thing
48—In such a manner
49—To consume
50—Paid (abbr.)
51—A mark left by a wound
52—To perform
54—Egyptian sun god
55—Officer of a college or university
56—To close up 58—To revolt
59—Articles of men's clothing
20—A large sea duck
22—A prefix meaning "two"
24—Upon 25—Lake warm
27—Either 29—Terraces
32—A shoe
33—Violently progressive
34—Salary 36—A Latin poet
37—A letter in the Greek alphabet
38—A parent 39—To rip
41—Within 43—A pattern
44—Remains 47—A color
51—To behold
53—To lubricate
55—Daybook (abbr.)
56—Company (abbr.)
57—A Southern state (abbr.)

Solution will appear in next issue.

Vertical.

1—A certain weight
2—A preposition 3—Uncooked
4—Particulars in an enumeration
5—An exclamation of surprise
6—Sorrowful 7—A sphere
8—Belonging to me 9—To strew
11—A large container for water
13—To sow
16—Meal boiled in water
18—A kind of poem

Solution of Last Week's Puzzle.



HOW TO SOLVE A CROSS-WORD PUZZLE

When the correct letters are placed in the white spaces this puzzle will spell words both vertically and horizontally. The first letter in each word is indicated by a number, which refers to the definition listed below the puzzle. Thus No. 1 under the column headed "horizontal" defines a word which will fill the white spaces up to the first black square to the right, and a number under "vertical" defines a word which will fill the white squares to the next black one below. No letters go in the black spaces. All words used are dictionary words, except proper names. Abbreviations, slang, initials, technical terms and obsolete forms are indicated in the definitions.

VIOLET LIGHT WILL NOT CURE RICKETS

Ultra violet light is not given off from substance such as cod liver oil, which contain the rickets preventing vitamin D, when they are oxidized by exposure to the air or use in the body. Under such conditions they have the power of fogging a photographic plate, but this is due to the "Russell effect," a chemical phenomenon, and not to invisible radiation. This is announced by Prof. I. Newton Kugelmass and Dr. Irvine McQuarrie of the department of pediatrics of Yale university.

In a previous preliminary investigation Professor Kugelmass and Doctor McQuarrie came to the conclusion that the effect was one of ultra-violet radiation, because the plate was fogged even when covered by a quarts screen. A piece of glass, however, protected the plate, and since ultra violet light passes through quarts, but glass stops it, they supposed that these rays were given off by the cod liver oil. Now they find that it is due to other causes.

Many metals and other substances have the power of fogging photographic plates and they are all alike in that they have the property of absorbing oxygen.

First Use of Purse Credited to Romans

Only in the advanced stages of civilization among Gauls and Anglos was the purse used, for payment was mostly in kind or service. But the Roman invasions having introduced coinage and new methods of trade, money bags soon became necessary. These among both peoples were of leather with strings of varied lengths, by which they were closed at the mouth or attached to the girdle. By the Anglo-Saxons, they were styled bygirdlum, being, perhaps, some reference to the girdle side or to the gift of God.

At the death of Charlemagne, the traditional belief of his people that he would need his purse to pay his way as he traveled toward Paradise led to their entombing with him a gilt traveling pouch which he carried on his journey to Rome.

Not until the Middle Ages are references found to purses made from linen or silk, and their introduction and the general use of purses of all kinds has been attributed by Lacroix almost entirely to the Crusades.

Wild Life Sanctuary

The Yellowstone National park is a sanctuary for wild life of every sort, and hunting, killing, trapping, ensnaring, wounding, capturing or frightening any bird or wild animal in the park, except dangerous animals when it is necessary to prevent them from destroying life or inflicting injury, is prohibited. Fishing, however, is permitted in park waters. No license is necessary, and each person may take 10 fish per day.

Too Costly

"Why don't ye put in a couple o' plate glass windows, Amzi?" asked old 'Squire Peavy. "They'd look powerful peart."

"Can't afford to," replied the proprietor of the Tote Fair store in Tumlinville.

"Can't afford to?—shucks! Why, they wouldn't cost ye more'n $60, put in place."

"The dragon, they wouldn't! I'd no more'n get 'em put in and the frames painted than every durn' flivver car in seven counties that went crazy would head right for here and butt my winders out!"—Kansas City Star.

Mighty London

The population of London equals that of Belgium and exceeds by 2,000,000 that of the whole of Australia. London's streets, if placed end to end, would reach to Constantinople; its telephone wires, similarly treated, would suffice to circle the equator 58 times; its rateable value is nearly $200,000,000, and it is patrolled by 21,000 policemen.

"Fool" as Epithet, Costly

Frederick Padden was called "a fool" publicly by one of his business competitors in London, England, and, highly indignant, he went to court about it. The result was a verdict for $15,000 awarded as damages by the court, which Padden believes is proof that he was not what he was called.

Driver Held in Place

In chariot races of the old Romans the reins were made fast to the driver's belt.

The Old Standby in a New Dress

The New Package

—the same dependable remedy that over a period of more than fifty years has been found so reliable in the treatment of catarrh and diseases of catarrhal nature.

The outside of the package only has been altered. To facilitate packing and reduce breakage in shipping, the paper wrapper which has identified the Pe-ru-na bottle for many years has been displaced by a substantial pasteboard carton.

Pe-ru-na cannot be made any better. Three generations of users testify that Pe-ru-na is the best remedy in the world for catarrh and diseases of catarrhal origin.

The remedy our fathers and grandfathers used with so much satisfaction is still the standby for the ills of everyday in thousands of American homes.

Bracelets of Hair

Elephant-hair bracelets are being worn as luck charms in London.

Let Chin Foliage Go Rather Than Worry

The old man had always worn whiskers. He had a curious friend who one day got courage enough to ask one question that long had puzzled him.

"Say, John," he said, "when night comes, do you sleep with your whiskers under the covers or on top of the covers?"

"Well," replied the whiskered man, "I've never really noticed." So the whiskered man began puzzling in his own mind whether the whiskers were under the covers or on top. That night he placed the whiskers beneath the covers, and that didn't seem right. He put the whiskers on top of the covers, and that didn't seem right.

So he got out of bed, shaved them off and has been without whiskers since.—Indianapolis News.

Wasted

Rev. Lawrence Redfern of Liverpool, who is at present in this country, told his friends the other day that his colleague, Rev. John C. Ballantyne, was unable to come over on account of illness. While he was kept indoors his friends sent him many tokens of their affection. Flowers came in great profusion, so that one day the living room was virtually filled with them. The English maid, passing through, stopped and, with a quirk of her thumb upward, said, "Think of it; and 'im a-livin' yet."—Christian Register.

HART SCHAFFNER & MARX
Men's and Young Men's New Fall
SUITS
$29.50 and $35.00

HART SCHAFFNER & MARX wanted more Fall business---they wanted the merchants selling their clothing to do more business---they knew that "more value" would do it. HART SCHAFFNER & MARX made two special lines of suits and advised their representatives to mark them $33 and $39, feeling that at these prices, men and young men would get more VALUE than they would find elsewhere. We bought heavily of these two special lines and when it came to marking them, we found that the margin of profit that we required would allow us to mark these suits at

$29.50 and $35.00

We want every man and young man who is thinking about a new Fall suit to see these two special lines. They are made from "all wool fabrics"---styled in the newest models for men and young men---the new shades and patterns that are different.

REMEMBER THE TWO PRICES
$29.50 and $35.00

ST. JOE NEWS.

VOL. XXXIX | ST. JOE DeKALB COUNTY, INDIANA, THURSDAY SEPT. 24, 1925 | NO. 38

Ashur Culp Writes From Florida

Tampa, Fla.
Sept. 13, 1925

Mr. Fred B. Leighty
Dear Friend:

We are located at Tampa now. We arrived here Tuesday, Sept. 8. It took us 5½ days to drive thro with the car. We had a fine trip with the exception of having three tire punctures. We had camping equipment and camped at the tourist camps along the road.

This is a nice way to travel as you will find the tourists to be very congenial and every one is your neighbor and friend.

We arrived here on Tuesday, bought a home on Wednesday and moved in on Thursday. I am well pleased in getting settled in such a short time, as a great many people find it difficult to locate here. The tourist camps here are crowded to the limit with people that are trying to locate here. You will find quite a number of people returning to the north as they could not get located satisfactory. Rent here is very high. You cannot rent any house for less than $50.00 per month. Very ordinary homes rent for $100 00 per m nth. One lady here said she was doing us a special favor by offering to let us have one or two of her bed rooms until we got located. She wanted $30 00 per month for one bed room or $50.00 for two. She would not rent them for less than one month at a time.

Our home is located in what is known as Palma Ceia Park. We are about four miles from the court house. We have all city conveniences such as bath room with city water, electric lights, gas, etc. We are just 1½ blocks from Tampa Bay and the same distance from car line. We can go up town on street car for five cents. We are about 3 blocks from school house and 1½ blocks from grocery store and ice plant. Considering everything I am quite well pleased with our location.

It has been quite warm here the last week or so. I have had several people tell me that this was the hottest weather they have had for quite a number of years. We do not seem to mind the heat very much, although we perspire quite freely.

Our address is Tampa, R. R 5, Box No. 850. So you will please send the St. Joe News to that address.

I am well pleased with Florida as the climate here relieves me of the asthmatic condition that I have been bother d with in Indiana. The soil in Florida is very poor. About all they can raise here is fruit such as oranges, lemons, grape fruit, water melons, etc. If it were not for the ideal climate they have here I would certainly prefer to live in Northern Indiana. I will always have a fond remembrance of Northern Indiana and the people of Spencerville and St. Joe.

Sincerely,
Ashur Culp.

The Vanishing Men

BY

RICHARD WASHBURN CHILD

COPYRIGHT BY E. P. DUTTON & CO.

WNU Service.

SYNOPSIS

Out of uniform, at the end of the World war, with the rank of major, Peter DeWolfe, young American of wealth and family, is urged by an English comrade in arms, Eversby Benham, to visit the Benham home and meet the Englishman's mother and sister, and, incidentally, Brena Selcosa, young woman about whom there is an air of mystery. Muriel Benham, Eversby's sister, becomes infatuated with Peter, but he is interested only in the mysterious Brena Selcosa. The feeling between Peter and Brena ripens into love. Brena confesses that she is married and that her husband has "vanished." Brena's life story is out of the ordinary. Her father had been forced to leave Greece because of revolutionary affiliations, and his death, following quickly upon that of his wife, leaves Brena penniless, at Dallas, Texas. She secures work, and meets Jim Hennepin. He falls in love with her. He urges her to meet him in St. Louis. Brena returns to Dallas alone. Compton Parmalee, Hennepin's employer, tells Brena Hennepin's intentions toward her were dishonorable. Parmalee makes Brena an offer of marriage. After reflection, she accepts the offer. They are married. At the railroad station, immediately following the ceremony, Parmalee is seized with apparently uncontrollable fear.

CHAPTER IX—Continued

—8—

He said, "You forget!" He was in a towering anger.

"No, I don't," Brena replied quietly. "You bought me."

She picked up a novel, read its title and dropped it suddenly, as she said, "Yes, you bought me—the bargain of giving me a life for growth and in return I was to be your companion. You asked for no more than that and to have me help you come back to some sweetness of spirit for which you longed. Well, I've given you nothing more than you bought. And nothing less. For I've tried."

He looked up quickly, turned his ear toward her and then, having listened, stared at the ceiling.

"I was wrong," he said. "A brutish moment. I only meant that there is something, of course—my nerves, no doubt—a decay."

"It would be unfair for me not to say more," said Brena.

He folded his small, cold hands upon the open book in his lap and stared.

"You do not mean that some man—"

"No."

"I couldn't tell, of course. A bargain is a bargain. The truth is that I would be joyful if you were made happy. I expect that. But I couldn't know its approach. Your circles and mine are no longer the same. You are ripening still—a wonderful miracle!"

"You have no circle," said Brena.

"No," said he, "I have no circle."

"There are times when I wonder whether this new turn in our lives is not connected in some way with me."

"New turn?"

"Yes!" She was vehement. "This thing which hangs over us like a guillotine blade. This thing which makes you go about wrapped in your chills of fear. This thing which makes your eyes flicker from side to side as if every street corner were an ambush. The thing which makes you afraid to be alone."

He sprang up.

"What if it were?" he said. "It is possible, isn't it? It is possible that a person might carry around in their trail some strange destiny. There might be some extraordinary forces behind you, mightn't there? It is possible that some tragic end awaits all men who bind their lives with yours."

Brena opened wide her dark eyes.

"That is enough," she said.

"What are you going to do?"

"I'm going to leave you, Compton," she said.

If she had spoken these lines in the theatrical emphasis with which they are spoken by several hundred women in each thousand sooner or later, as wise a man as Compton Parmalee would have laughed in her face. It was only necessary to know Brena to know that if she said these words it would be with a calm, a sureness, a regretful sorrow all combined in the tone of her voice and the expression in her eyes that would carry conviction. Compton was convinced.

The idea knocked him onto his knees. He came half crawling, stumbling, struggling up toward her.

"No, no! No, no, Brena—for God's sake!" he whimpered. "For the love of Christ don't leave me!"

At her feet he shampooed his hair as in an imaginary basin until its sparse growth had been rumpled under the palms of his clutching, twitching hands.

"Well, then never speak of any mystery trailing upon my heels," she had said. "Never bring this insinuation that a curse follows me. You have had your chance to be free of it and instead of wanting me to go you want me to stay. I loathe dramatics, Compton. This is the Twentieth and not the Twelfth century and those who now attempt to raise superstitions will fare badly if others believe as I do. Get up!"

He stood. With his eyes indicating humiliation through the terror which still lingered in his face, he arose and walked toward the door.

"Very well," he said at last in cold, hard syllables. "You shall not hear of it again. Forget it. Call it a mad and foolish thing. My lips are sealed. But the time will come. There are stranger things in the world than you know."

He closed the door and left her alone, somewhat shaken; and in spite of all that she had said, somewhat eager to ask him more. If she had, he would have pressed his thin lips tight and said nothing. He did this on later occasions, he had made up his mind to wrestle with his fears, whatever they might be, alone. His physician told Brena confidentially that Compton Parmalee was suffering only from a mild form of neurasthenia in which dread had attached itself to some particular chain of morbid thoughts.

In March Parmalee conceived the idea that he was being followed. He spoke of it several times and Brena laughed.

"Why should any one follow you?" she inquired scornfully. "You tell me that you understand why I am followed sometimes on my way home from the studio, but I cannot offer the same explanation for you. Come, Compton, let's me sensible."

He was not amused.

"Then report it to the police," she said.

"The police?"

"Yes."

"What a suggestion!"

She heard no more, however, of his morbid suspicion; no one was following him she was convinced. And yet the unknown terror, of which he would now say nothing, infected her so that the cloth of each day had woven into it some threads of fear, in a crazy, senseless, indistict pattern.

A crisis came on one of those warm evenings which descend suddenly upon the chill of the winter and tell of an impatient, hasty, headlong spring, which has crept up through the open country and comes at dusk to the gates of the cities. Some musical performance, long since forgotten by Brena, took the pair out until nearly eleven and Parmalee wanted to walk home through the moonlight. A sleepy elevator man took them up in a chaste, white and gold car to their apartment door.

"Good-night," said Brena. "Good-night, Compton. You seemed to-night more like yourself."

He laughed and waved to her as she went down the corridor to her chambers. She switched on the wall lights of her dressing room, bedroom and bath, and undressed leisurely before the long mirror, looking about her as her memory took her back to the hot room under the roof at Mrs. Wilkie's with its yellow varnished woodwork and its plaster walls, stained a hideous thermic orange, its little red ants that no eradicator ever eradicated and the screams of the baby coming out of a window in the next house. Nothing in the luxurious quarters she now occupied could remind one of Mrs. Wilkie's unless it were the picture of the Acropolis that had belonged to Brena's father, still in its battered frame and hanging above her bed. And yet she stopped braiding her red-bronze hair as one of those strange calls of wistful longing for the past, even for the tragic or the sordid past, that comes to all of us, came to her.

No one would credit her with remembering some few years afterward the exact contents of her thoughts at this moment, were it not a fact that the thought itself had been interrupted and therefore engraved by three quick successive pistol shots.

They came and went as revolver cracks do behind heavy closed doors with a muffled thudding; she knew what they were. They were followed by a little crash as of a vase falling.

Her first thought was that Parmalee had killed himself. Perhaps if her mind had been less active she would have screamed, flung open the door and rushed out, expecting the horrors of a suicide; she remembered, however, that there had been three shots, more than the number usually fired by one who seeks destruction. Brena concluded that whatever the menace her husband had feared, it now had proved its reality. She has said since that, for the moment, she at least believed, and even in her startled breathing she formed the words, "It is some fault of mine."

The turning out of her own lights disclosed the fact that the corridor beyond the crack under her own door was dark also. From it came no sound, except for the distant purr of the elevator taking up some yawning after-theater homecomers. Brena could only hear her own heart.

Without the dangerous background of light behind her, she opened the door cautiously and the moon's rays on the carpet beneath her feet went forward across the carpet in the corridor like sliding fingers.

"Stand back, Brena. Don't get between me and him. He's at the end of the hall." It was the voice of her husband. "Look out. I'm going to turn on the lights!"

A sudden rush of illumination filled the corridor.

"You are a fool!" said Brena.

"I?"

"You have shot the glass out of this picture." She pointed to the large photographic print of "The Man With the Glove" that had been the one wedding present sent after them from Dallas by a Jewish cotton broker, once one of Parmalee's bitter rivals. It had been the subject of Brena's comment that the donor gave it in celebration of Parmalee's retirement from business rather than of his marriage, and she, disliking pictures on general principles, had hung it where it would be seen the least.

"I thought it was him," said Parmalee, coming forward with the revolver still in his hand.

"Him?" asked Brena. "Who, then?"

"Why, a burglar," he said, still quivering with excitement.

"You saw only your own moving reflection on the glass mixed into this figure which you've decorated with three bullet holes," she said.

A knocking and ringing had begun at the elevator door of the apartment.

"Anything wrong, sir?" asked a voice outside.

"No, no," Parmalee answered, feeling his way back till he could lean against the wall.

"Very good, sir."

Brena, who probably appeared more like a Grecian goddess than ever in the white drapery of her night attire, walked to Parmalee with deliberation and took the revolver from his hand.

"Where did this come from?" she asked.

"I bought it."

"When?"

"A month ago."

"A month ago? Why?"

"I don't know. There are always intruders."

"Compton, you are a sick man," she said. "You are a sick and unnerved man. You are living a miserable life. You are making me live one. There is nothing worse than fear. It is more horrible than the thing it dreads."

"I've often thought that—yes, I have!" he said. "I've often thought I'd be driven to find out."

"Tell me," she commanded.

He shut tight his thin lips.

She came closer and put her hands upon his shoulders as if she were a mother about to give a child a good shaking.

"The city is bad for you, Compton," she said. "You are quivering yourself

"No, No! No, No, Brena—for God's Sake!" He Whimpered.

to pieces over some absurd apprehension. We must go outside somewhere—a house, a garden—quiet."

He appeared as if he were about to fall apart. He almost blubbered. He said, "Thank God you've said that, Brena. We must go where I can escape, if there is a chance to escape. You're right. It's got my nerve."

"What?"

"Yes, what?" he whimpered. "That's it. But we must go—where you said. I'll pull myself together. And Brena—"

"Yes."

"If anything does happen to me—"

"Yes."

"—you're not to blame—not in the sense that it's your own will. Do you understand? I'm trying to be a man. Can't you see. In the morning—"

She looked at him in disgust; for the first time she felt a pang of hate.

Within thirty days he had purchased a great gloomy house up the Hudson. It had been built in the seventies by some affluent banker with a taste for squares. The house was square, the rooms in it were spacious, lofty, hollow-sounding cubes, and the garden was square in a square area which contained itself and the house within a high brick wall painted a slate gray to match the house and with a great decorated iron gate which could be closed at night. The upper windows looked out in summer upon the tossing branches of old trees growing out of vast, damp bald spots on the lawn and in winter upon the stark boughs and the silver of the Hudson river. The place was in a slight hollow in a hill top, isolated, glowering, without the flavor of old places lived in richly and warmly, but suggesting questionings as to which room the family had used to die in, and forecasting nights when the wind would howl around the corners of the French roof.

Parmalee had a coping of concrete, filled with broken glass, built all around the top of the wall. He had ordered iron bars for the lower windows, and a bill for an elaborate electric burglar-alarm system was on his desk the morning that he disclosed to Brena that he had bought her a house.

"At last you have a home," said he.

CHAPTER X

The retreat into the walled estate which perched like a great cube of gray gloom among the twisted old trees overlooking the Hudson river gave little relief to the secret fears of Compton Parmalee.

For a few months, to be sure, he showed lively interest in the rehabilitation of the place. Brena, who after a long struggle with her conscience had made up her mind to stand by her extraordinary husband, found herself wondering often enough whether his interest was not like her own, a sham erected out a sense of duty by one to deceive the other. During this first period of their terrible existence there she built up a slender tottering hope that she might, as she had agreed, reclaim him. She had formulated a policy and to this policy she would cling with all the tenacity of which she was capable.

Her policy had been formed with full knowledge of the fact that it would be hard to follow. Her own nature revolted against mysteries and superstitions and fears of unrealities. Her husband had not ever given her grounds to assert that these were the basis for his morbid panics, but he had, by malice or inadvertence, created a dim picture of some menace, some secret human conspiracy, some strange force, which pursued to the death any man unlucky enough to have meddled with her destiny. At times it was difficult for her to escape, by the exercise of common sense, a haunting idea that there was some foundation for this apparent absurdity. As she said: "It is just so with all things. The confidence of knowledge isn't half as much because a person has possession of the facts as because one has freedom at last from the fear that there is so much that one doesn't know." But she disliked herself for her own uncertainties.

A choice was open to her between turning her back upon Parmalee's fears and setting out by systematic and persistent observation and cross questioning to uncover them. It was not because the latter course was difficult that she rejected it; it was not because, little by little, he had built a wall around his own thoughts which not only unfitted him for social contact but excluded her from his inner life; it was not because of his increasing irritability when questioned, nor finally was it because he always, in the end, made her feel that he was trying to spare her from some dreadful knowledge, and some overhanging curse that was upon her. She chose to neglect the terror that had seized him because she felt that if sufficient neglect were heaped upon it, it would gradually die. Often enough in years that were to follow she wished with all her being that she had not allowed herself to remain in the dark.

She wished often enough after the end came that she had at least kept her eyes open, but there were incidents which drew her attention by the very force of their being extraordinary or bizarre.

Evenings spent in the high studded chambers of this austere abode that none of her decorative skill, given free play by Parmalee's money, could rescue from their brooding gloom were far from cheerful. The temper of her husband forbade entertainment and, try as he did, there was no comfort for him in his efforts to converse with Brena—efforts which like the squeezing of the juice from a sour fruit produced less the more the pressure had been applied. Within a year he had developed an insatiable appetite for his studies of the history of the Southwest, his collecting of books and manuscripts bearing upon the ancient civilization and tribes of Central America, Mexico and the tangent region of the United States where the painted deserts are, and his compilation of data that bore in any way upon the comparison of the Inca, the Aztec and the Yucatan civilizations with those of Egypt, Greece and Persia. There is still in existence, covered with dust, a pile of manuscript in his own handwriting which, it appears, was the beginning of a work upon a subject that only his interest qualified him to attempt. A speculator, gambler, cotton broker and commission agent, as Brena has said, does not bring to a pretentious scientific work the orderly mind, the ease of expression nor the realization of its magnitude that one might expect in a professor, for instance. He might better have spent his time in furnishing to his beautiful young wife a companionship of some kind, no matter how inadequate, but he had closed himself in a ghastly shell of his own. Sometimes for days she did not see him at all and only knew of his presence in his library by his fit of coughing.

Brena, committed to waiting for the conclusive end to this distorted existence, which something within told her destiny would bring, found refreshment only in her days. When morning came there was an escape; she could go by train or motor to the city. Though she found among the persons she met and those who worked with her in the Forest pottery, founded with her own money, that she (a grim joke) was looked upon distantly as a young, rich, contented wife, she drank down long drafts of the pleasures of creative labor and of the patronage she was able to give to young women whose talents deserved development. Her activity would have been sufficient, however, if it had served only to submerge the memories of nights alone in her two great rooms when the wind played mournful melodies as if on the bars of moonlight that fell through the gates of Parmalee's estate and across the damp lawn from which, winter and summer, there arose the odors of decay and death.

If the idea that she was wasting her rare youth, her marked beauty and the full capacities of her womanhood sometimes oppressed her, she at least kept her peace. Something of firmness, not there before, began to appear upon her face. Probably no mirror could have shown her as clearly the woman she was throwing away as the portrait of her painted during this period by young Sydenham, who had just come over from England.

"At Present There Is No Price, Mr. Parmalee," He Said.

He succeeded, it was said, in expressing in his colors and bold method that extraordinary combination in Brena which gave her the atmosphere of the permanence of a temple and yet the shimmer of a golden moment, come and gone in a warm transitory glow beneath her cream-colored skin, a glimmer of light from her golden-red hair, or some almost imperceptible flexure of her sensitive lips.

Parmalee, urged by his wife, saw this portrait when young Sydenham had finished it. He thrust his glances at it in his usual way and several times turned one ear toward the picture as if inviting words from it.

"A person!" he said. "And most of her is there—a good deal of her soul. A glorious piece of color—a massive glow, and yet her eyes—they are the masters of the canvas. That is astonishing—"

Of course Sydenham beamed. He fed upon admiration—as much, perhaps, upon that which came to him because he was one of those men who may be called a beautiful youth and had been petted by the idle rich and their daughters, as upon the praises for his extraordinary art.

"Well, I shall buy it," Parmalee had said with a sudden unannounced determination for which Brena was unprepared. She showed it by the astonishment in her eyes.

Sydenham smiled. He said: "But, Mr. Parmalee, it was the understanding with Mrs. Parmalee that I was to exhibit the picture. All things considered, it is the best thing I have ever done. I have planned to exhibit my things rather widely in America. Shall I say that I am going on tour across the country? After exhibiting—why then—of course—"

Parmalee's face contorted. He wet his lips.

"You have a price," he snapped out.

Sydenham, the self-confident, the whimsical, the theatrical youth, waved his pale hand.

"At present there is no price, Mr. Parmalee," he said.

The cotton broker pulled at his collar rim as if he had need of air.

"What have you proposed as the title of this picture?"

"Why—the—name—Mrs. Parmalee—"

"That's foolish, Sydenham," Compton said. "I'm prejudiced in favor of the name Parmalee, but even I know better than to exhibit a picture under the title Mrs. Smith Jones or even Mrs. Parmalee."

(TO BE CONTINUED.)

Famous "Dunmow Flitch"

In the town of Dunmow, Essex, England, Robert Fitz-Walter offered, in 1244, to present a flitch of bacon to married couples who would take oath that they had never once during the year wished themselves unmarried and had avoided a quarrel. It was not until 1445 that the flitch was awarded for the first time.

WRIGLEY'S

WEAK, RUN-DOWN NERVOUS, DIZZY

Mrs. Lee Suffered From All These Troubles, but Lydia E. Pinkham's Vegetable Compound Made Her Well

Terre Haute, Indiana.—"I was weak and run-down and in such a nervous condition that I could hardly do my work. I was tired all the time and dizzy, had no appetite and could not sleep. I tried different medicines for a year but they did not help me. Then my husband saw the ad. for Lydia E. Pinkham's Vegetable Compound in the newspapers and had me take it. I regained my strength and never felt better in my life. It completely restored me to health. I had practically no suffering when my baby boy was born and he is very strong and healthy. I know that the Vegetable Compound is the best medicine a woman can take before and after childbirth for health and strength. I would be willing to answer letters from women asking about the Vegetable Compound."—Mrs. WM. J. LEE, Route E, Box 648, Terre Haute, Indiana.

Lydia E. Pinkham's Vegetable Compound is a dependable medicine for all these troubles.

For sale by druggists everywhere.

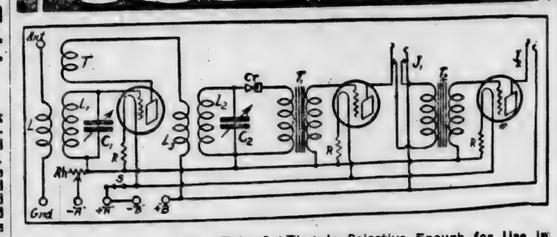
RADIO



Wiring Diagram of a Three-Tube Set That Is Selective Enough for Use in Metropolitan Areas and Which Gives Fine Quality of Signals.

By J. E. ANDERSON,
In Radio World.

The three-tube set shown in the diagram is a stand-by that brings in all the local stations with loud speaker volume of moderate intensity but wonderful quality. Utmost simplicity of operation consistent with satisfactory selectivity, greatest purity of tone obtainable with standard parts, and strictest economy of operation were the objects sought.

To obtain simplicity of operation a double condenser was used for the two tuned circuits. For selectivity a low-loss tuning coil was used in the radio-frequency amplifier and this stage was made regenerative. A crystal detector and two high-grade audio-frequency transformers were selected. For economy of operation dry-cell tubes were employed.

Winding the Coils.

The coils L0, L1, T are the three winding of a standard three-circuit tuner. It may be any of a number of low-loss coils on the market. L2 and L3 constitute a home-made radio-frequency transformer. The core is a 1-inch diameter birch dowel 1 inch long. This is made into a spool by cementing two insulating washers 1¼ inches in diameter to the two ends. The primary winding L3 is wound next to the core and it consists of 20 turns of No. 36 double cotton-covered wire. This winding is covered with several layers of heavy wrapping paper. Then on top of this is wound the secondary L2, consisting of 93 turns of the same kind of wire. The secondary is wound in two layers since the wire used winds about 78 turns to the inch. The two layers were separated from each other in the same manner as were the two windings. A protective layer of mending tape was put over the secondary. The terminals of the two windings were brought out to small wood screws fastened in the ends of the wooden core and these were tinned for soldering connections. The transformer L2, L3 may be wound with heavier wire, or it may even be a low-loss RF tuning unit. In that case more room will be needed on the front cover.

Coil Adjustment.

It will be necessary to adjust the two coils so that the two tuned circuits L1 and L2 are in resonance with the same wave at some setting of the double condenser. This is best done by putting more turns on L2 than necessary and then removing a turn at a time until a given signal is loudest. In the present set the final adjustment left 93 turns on L2.

How Panel Is Arranged.

At the lower left corner of the panel are the two binding posts for antenna and ground. Symmetrically placed in the right-hand corner are the two jacks. The single main control is in the center, which actuates the rotor of the double condenser. On the left of the main control is the knob controlling the tickler and on the right of it is the rheostat. Directly under the main control is the filament switch. The panel is 7 by 18 inches. The set was mounted in a cabinet 7 by 18 by 10¼ inches. A deep cabinet was selected so that all the batteries could be mounted back of the baseboard. Three No. 6 dry cells and two upright 22½-volt plate batteries are used, and these are securely held to the back of the cabinet by two brass strips.

Uses Crystal Detector.

The crystal employed is the new type carborundum fixed detector. This is stable in operation and very sensitive as compared with the usual fixed crystal detectors. However, it must be handled with reasonable care or the sensitive carborundum point, which rests against a burnished steel plate, may become crushed, which destroys the sensitivity.

The two audio-frequency transformers used are Federal 65 (first AF) and 65A (second AF). These were selected because they have a very satisfactory quality characteristic and will maintain the good quality delivered by the crystal.

There are two jacks, J1 for listening in on the first stage of audio and J2 for the last stage. The last should preferably be a filament-control jack which closes the filament circuit of the last tube when the plug is inserted in it. Otherwise put a switch in the FX lead of the last tube.

A single rheostat Rh is used to control the current in all the tubes. This is used mainly to take up the excess A battery voltage when the cells are new over the "discharge" voltage. A 6 to 10-ohm rheostat is sufficient. Most of the excess filament battery voltage is taken up in the resistances R. Each of these is of such magnitude that the voltage drop is about .8 volt, and this drop is used as the bias on the grids of the amplifiers. These resistances are small coils of nichrome wire. Amperites of the proper type may be used in place of these resistances, and in that case the single rheostat may be dispensed with, or it may be inserted in series with the filament of the first tube only.

List of Parts.

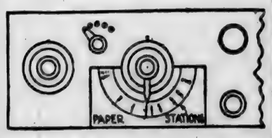
Parts required for the construction of the set are:

One low-loss three-circuit tuning coil (L0, L1, T).
One RF tuning coil (L3, L2).
One double condenser with vernier dial, .0005 mfd. (National).
Two audio-frequency transformers.
One fixed carborundum crystal (Cr).
One double-circuit jack and one single-circuit jack (J1, J2).
Three sockets.
Three ballast resistances or Amperites (R).
One rheostat, six to ten ohms (Rh).
One filament switch (S).
Six binding posts.
One small knob for tickler control.
One panel 7 by 18 inches and one baseboard to match.

Dial Chart That Will Aid Inexperienced Fan

Here is an easy way to have a less informed member of the family tune in any station desired. To avoid lengthy charts do not tune to numbers and meters but to the station direct. It may not work so good on other sets but it could not work better on a Cockaday set.

Take a partly stiff paper and cut it to fit below dial 2 so it will slip under the dial, as most dials are a little away from the panel. Cut a tin or cardboard pointer and glue if exactly in the center of the blank space opposite the graduations on the dial space opposite the graduations on the dial. The pointer should project one inch over the dial, forming quite a circle on the



Use of the Tin or Cardboard Pointer.

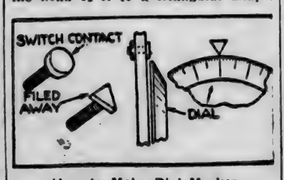
paper. Draw a line along the paper forming an arc along which the tip of the pointer moves. This dial should be the wavelength dial and it will be found very accurate and stations will always be located at the same place. When each new station is brought in mark down the call letters of the station opposite the pointer setting. If your receiver also has a tap switch cutting in more or less turns mark the number of the tap used after the call letters. Thus if an inexperienced member of the family wishes to tune in it only will be necessary to set the pointer and the tap switch and pull out the battery switch.—Radio Digest.

Best Set Will Go Bad With Careless Handling

Although a receiving set is constructed with the greatest care and strongest materials obtainable, it will not withstand hard usage or continue to give efficient results. Many operators will twirl dials, poke into the works and jab in the phone or loud-speaker plugs with unthinking violence—and then wonder why their set does not remain perfect forever. A radio set will stand up under a great deal of abuse, but eventually, if continuously subjected to harsh treatment, something will give way or loosen, and effectiveness will be reduced. The delicate wiring, adjustments and connections must be regarded with the same care that a person would exercise toward the timing gears, carburetor adjustment or valves of a car. The best engine in the world will go bad under abusive usage—and so will the best radio set.

To Make Dial Marker From Old Switch Point

A very good dial marker can be made from an old switch point by filing the head of it to a triangular shape.



How to Make Dial Marker.

If the point is too long and interferes with the condenser plates it may easily be filed down until it just goes through the panel far enough to allow a nut to be put on.—Radio Digest.

Adrift With Humor

GETTING SERIOUS

"Look here," commanded the traffic cop, "if you're the driver of the car that knocked down this old lady, you're under arrest."

"Wot's the matter?" asked the hardened motorist, in surprise. "Ain't it all right?"

"Oh, sure; but you parked too long after the accident."—American Legion Weekly.

Had Things Mixed

A city man called upon another and, after a glance around the establishment, inquired:

"How's your new office boy getting along?"

"Fine!" was the reply. "He's got things so mixed up that I can't get along without him."

THE LARGEST EXPENSE

Business Partner—Jim, your expenses are immense. You ought to cut off the largest of them.

Jim—Sam, are you advising me to get a divorce?

Cowcatcher as a Churn

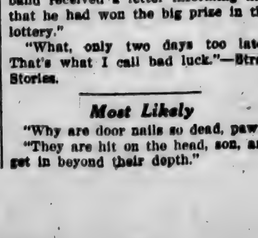
The cow stood on the railroad track
A-looking at the sky.
Down the track came the limited;
Oh, see the pretty butterfly.

In Spirit Only

Co—Don't you think Connie looks spirituelle in that gown?

Edna—Well, I'll admit there is not much of the material about her.—DePauw Yellow Crab.

AN EARNEST STUDENT



"Yes, sir, the more I study about this great universe of ours the less I know!"

"You must be an earnest student indeed."

Too Much to Expect

An epitaph must not include
A trace of criticism rude.
So who shall lead a life by half
Deserving of his epitaph?

More Retractions

Mary—I took your advice, mum, and wrote to tell him I didn't mean what I said in my last letter.

Mistress—What did you say in your last letter?

Mary—That I didn't mean what I said in the one before.

Had Been Hardened

Mistress—So you are leaving me to go and work at an asylum, Jane. Do you think you'll be able to stand the strain?

Maid—Well, madam, I've been here for two years.

Thus Shutting Him Up

First Deaf Mute—What's the matter with Dumboy's hand?

The Other One—An accident he had at the club last night. Broke two fingers telling dialect stories.

His Pride

Mrs. Brewer—Mrs. O'Sly says she has never caught her husband in a lie.

Mr. Brewer—Yes, and O'Sly goes around blowing about it.

Wasn't It Sad!

"Would you believe it, we had only been married two days when my husband received a letter informing him that he had won the big prize in the lottery."

"What, only two days too late? That's what I call bad luck."—Stray Stories.

Most Likely

"Why are door nails so dead, paw?"

"They are hit on the head, son, and get in beyond their depth."

Permanent roads are a good investment —not an expense

How Much Are Poor Roads Costing You?

5,000,000 of America's 18,000,000 motor vehicles are recognized as an economic necessity on the farm.

Is your car giving the full efficiency of which it is capable—and at the lowest cost per mile possible?

Not if you are jolting over bumps and ruts. Not if you get stuck in the mud.

In addition to the time you thus lose along the way, you also pay from one to four cents a mile more in gasoline, tire and repair bills than you would pay on permanently paved highways.

Think, too, how many so-called improved roads have gone to pieces within the past few years, thereby piling up huge maintenance and rebuilding costs.

Contrast all this with the record of Concrete Roads—the roads that have repair built out and maintenance built in. Firm, rigid and unyielding, free of bumps, ruts, holes, mud and dust, they are, in every way, the most economical roads.

Tell your highway officials you want more Concrete Roads. Such an investment will pay you big dividends year after year.

• • •

Let us give you all the facts about Concrete Roads, including the experience of other communities. Ask for our free booklet, R-3.

Susceptible and Sympathetic

By J. A. WALDRON

(Copyright.)

IF A candle were tied in the middle, suspended horizontally, and lighted at both ends it would not, figuratively speaking, consume much more quickly than Reggie burned his candle.

Before he had time to realize much of anything but initial good fortune, a honeymoon, and something characteristic of "amusement" on the side, Reggie was dead. The life picture he painted was all foreground, confused by glaring colors and high lights. He never even dreamed what perspective means.

After the obsequies, as his mundane affairs were being adjusted, Constance, his charming widow—charming in spite of the life he had led her, for vital youth was hers—found that she would probably be left with little or nothing. But lacking forethought, she did not worry. Their fine country place was legally in the hands of mortgagees, though she was permitted to stay on for a time. But residence there was distasteful because creditors or their representatives were intruding to make inventories related to their claims. Reggie had roved in a motor car, with which Constance was absolutely in love; and this she wished, if possible, to keep for her very own—or, if she could not keep it, to sell it for a stunning price.

"I'll ask James about it," she said to herself one morning as she waited for him to drive her out. James was her chauffeur.

Thrilled by the speed James negotiated with skill as they struck the smooth, broad boulevard, Constance gained courage. "You must have noticed, James," she said, "that I am becoming quite poverty-stricken—that I am losing almost everything I have."

"Yes, ma'am," was James' reply.

"But one thing I hope to retain in some way—this dear car."

James slowed down and turned to observe her. "But you know, ma'am, I've got to have my wages—six months, now—a tidy sum, ma'am."

"Of course! You can get your wages out of something on the place. File a lien, I believe, or something."

"Thank you, ma'am, I'm going to. And I was thinking, ma'am, of leaving when my month is up—Saturday week that'll be."

"Oh, well! Then I shall have to get another chauffeur. And I'm so fond of you, James! It's too bad!"

James was uneasy. "But, ma'am, I've decided to lay a claim on this car!"

"Oh, James! James! How could you do it?"

"But some one else would claim the car, ma'am. You shouldn't worry. There may be some way out of it. You know Merryman, the rich fellow who lives in that fine place?" James pointed at a great roof that rose out of the distance.

"I've seen the gentleman, James, as you know."

"Well, ma'am, whenever we've passed Merryman he has eyed this car with an envy you'd never think of a rich man."

"Yes, James, I've noticed him."

"And one day I met him alone, and he asked me the price of it."

"Indeed! And what did you tell him?"

"I told him I didn't know, though I did."

"Stop here, James. We shall wait for him to come up."

Merryman cantered up and stopped. "Anything the matter? Can I render any assistance?" he asked.

"I really would like to talk with you a moment, sir," said Constance. "Would you mind coming back with us?"

"Not at all! In fact, I should be delighted. But we haven't been very neighborly, you know. Why not keep right on to my place?"

Constance thought a moment. "Why, yes. Why not? We haven't been very neighborly!"

So Merryman turned about and cantered alongside to his stately seat.

"You can wait a few minutes, James. I shall not be long," said Constance. Merryman had dismounted and handed his horse over to a groom who had seen the return, helped her out with courtly grace and walked with her up a broad avenue.

They were admitted by a butler who had the benign face of a bishop meditating on the beatitudes.

Constance told Merryman of things which were perfectly plain to him. She had wanted so much, she said, to keep her dear car, but James was about to attach it for wages, and now she would like to dispose of it to some gentleman who knew its real value. And then she cried gently. Merryman was both susceptible and sympathetic. He was a widower.

"James tells me he has noticed that you have always looked at the car as though you wanted it," said Constance with half a sob.

"My dear young woman," replied Merryman, taking her hand, "I have had an idea all along that you loved that car. Really you should keep it."

"But I, also, have noticed that you regarded the car with a longing expression." She sobbed again. "Didn't you really desire . . . ?"

Merryman patted her hand. "It was not the car I was always admiring as we passed."

Maharajah Racing Magnate

The maharajah of Mysore, ruler of the second largest state in India, has a famous racing stable.

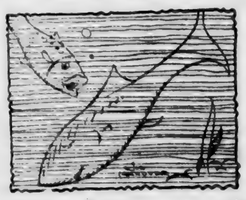
Machine Devised to Make Paper Barrels

A new paper-barrel machine is claimed to offer great possibilities in the production of containers. Though made of paper, its product is light, strong and durable, and can be made rapidly in a great variety of shapes. The machine consists essentially of a cylinder in two parts, which can be separated to produce barrels of different shapes and the two halves are rotated together on a horizontal axis, the Montreal Herald explains.

Tough "chip-board" paper from a roll, passing through tension rollers and an adhesive coating device, is wound tightly on the cylinder in a predetermined number of layers. The depth of the barrel is adjusted by the separation of the cylinder halves. When the required thickness has been laid on, a slitting wheel divides the paper into two equal portions, which are drawn apart, and the middle receives an additional winding to form the bilge. It is stated that the usual form can be produced at the rate of a barrel a minute.

Water glass, or silicate of soda, which sets so quickly that the barrels are ready for immediate use, is the usual adhesive; and for liquids a special neutral coating is applied inside to prevent corrosion. Wooden heads are commonly provided.

Just the Thing



Shark—I'm thinking of going into some kind of business.

Fish—Why don't you go in the real estate game?

Pathos in Pawnshop

"No, we can't afford to have much sentiment in this business," declared the pawnbroker. "Ordinarily the things that come in are just so much merchandise. Here's the only thing I take much of a personal interest in," and walking to the rear of the shop he pointed out, back in a corner, a worn and battered baby's highchair. "Had it here four years. He didn't talk much, just wanted to know how long we would keep it, and then went out. He's always kept the interest payments up. I've got money from him all over the country; once even from Montevideo. He has been in here once about two years ago—said he was just passing through Detroit. He went back, looked at the chair, rubbed his hand over its trayboard and walked out without saying anything more."—Detroit News.

Where He Was Lacking

Not only has American slang invaded England, but the American sense of humor is making great advances in the tight little isle.

"I say, old top," said one clubman to another, "that professor you introduced me to lawst Chuesday has terribly bad manners, ye know."

"What happened, Bertie?"

"We hadn't been together hawf an hour, you know, before he called me a dom fool."

"Hawf an hour, did you say? The professor's intellect is all right, but he seems shy on speed."

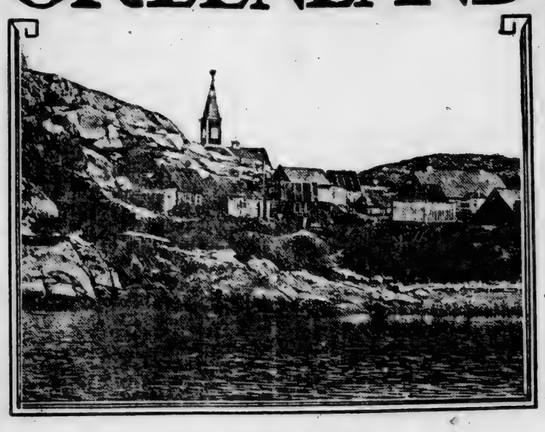
Cat Stampeded Antelopes

A herd of 36 young antelope being kept in Reno by S. R. Sans, assistant biologist of the United States biological survey, until they are sufficiently old to stand trips to various national parks, were stampeded by a house cat. One of the kids was killed in the frantic plunge of the animals against the wire inclosure. The antelope were a part of what is said to be the largest herd of the animals in the world, which graze in northern Nevada.—Sacramento Bee.

Cost of War Training

It has been estimated that it costs the government about $10,000 to put a cadet through the four-year course at the United States Military academy at West Point. This includes the pro rata cost of the officers and instructors maintained at West Point to train the cadets and the yearly pay of the cadets, which is $780 a year plus 80 cents a day allowance for food.—The Mentor Magazine.

GREENLAND



View of Godthaab, Greenland.

(Prepared by the National Geographic Society, Washington, D. C.)

GREENLAND replaces Spitsbergen in the public's interest since the summer exploration of the North Polar regions is being conducted from that bleak continental island. The MacMillan expedition under the auspices of the National Geographic society not only has its chief base in Greenland, at the far northern Eskimo village of Etah, but the navy planes which are accompanying the party will fly over and map large areas of the interior of the island, and in addition studies will be made on the ground of Greenland's old Norse ruins.

Greenland is an interesting region in itself apart from the scientific activities being conducted there this summer. It is the largest island in the world (if Australia be classed as a continent), has the land reaching closest to the North pole, is the country harboring the northernmost civilized community, and is the one land mass where conditions of the great ice age are now dominant.

Mercator of map fame has unwittingly confused the mind of the world in regard to Greenland. Because the sphere is flattened out on many maps as though its surface were stretched, Greenland, vast as it is, is made to appear many times larger. It is as though the island were reflected in one of the mirrors set up at country fairs to make the thin appear fat.

But viewed properly, the great northern island bulks large enough to command respect. If its northernmost point were placed at the Canadian border in North Dakota, its southernmost point would reach to the mouth of the Rio Grande, the southern extremity of Texas. Its greatest width is approximately equal to the distance from New York to Chicago.

But though the island is almost continental in size, having an area of about 800,000 square miles, it has only 15,000 inhabitants, the daily population of a single huge office building in lower New York city. The reason for this sparse population is not alone the far northern position of the country, for the lower half of the island is in approximately the same latitude as the Scandinavian peninsula with its 8,000,000 souls. But while Scandinavia is bathed by the warm Gulf stream, and Iceland, too, is benefited by it, Greenland lies far from its influence and is washed only by icy Arctic currents.

Buried Under Snow and Ice.

Exposed to the full effects of the frosts of the Arctic, the great island which at one time in geologic history had the climate and verdure of California, has been changed into a frozen desert. The once green country has been buried under a sheet of snow and ice.

Greenland's mountains are "icy" as the missionary song has it. All mountains that are high enough are icy even under the Equator. But the song missed the real point: Greenland's valleys are icy—filled solidly full of ice, in fact. It is doubtful if anywhere else in the world such a tremendous ice sheet exists as in Greenland. The snows of perhaps a dozen or more millenniums have built up a crystal blanket that in places is six or seven thousand feet thick. It has buried valleys, hills and mountains alike, making central Greenland into a huge snow and ice plateau, a single tremendous glacier with countless tentacles that extend down into the coast fiords, ever feeding icebergs to the ocean.

Only a narrow fringe along a part of the coast is free from the ice cap, and even this ground is frozen in winter and covered with snow. It is along the fiords of these narrow ice-free sections of the coast that the few thousand Eskimos and the handful of Danes that make up the population of Greenland find a precarious livelihood.

During the short summer the interior of Greenland presents phenomena to be found nowhere else in the world; but the frozen wastes are inaccessible and only a few eyes have beheld the changes that take place there when the sun swings to the north. Great lakes are formed; mighty rivers flow between blue crystal banks, their waters never touching a stone nor a fragment of soil until they finally plunge down some chasm in the ice. Glaciers push out of the countless fiords, some discharging ice into the sea at the rate of 50 to 100 feet a day.

Mosses and lichens and a few flowers and shrubs spring to sudden life in the summer along the ice-free fringes of the coast, but few vegetables except radishes, turnips and lettuce can be grown. The people of Greenland are almost entirely dependent for food on the sea and on supplies brought from outside.

West Coast Settlements.

Greenland's history has been a history of its west coast. The east coast, although nearest Iceland and Europe, is inaccessible. It has been dubbed "the most inhospitable shore in the world." A broad stream of icebergs and smaller fragments of ice is constantly moving southward along the coast, forming a barrier that is impenetrable by ships for a large part of the year. Angmagsalik is the only permanent settlement on the east coast. Its population consists of several hundred Eskimos and a mere handful of Danes—trader, missionary, doctor and a few minor officials. In the summer a considerable volume of water flows out from glacial rivers centering at Angmagsalik, which tends to make an opening in the drifting offshore ice. It is then that Angmagsalik counts on its annual contact with the outside world.

Along the fiords of the west coast are the remains of one of the most interesting colonies the world has known, the settlement built up on the edge of America by Erik the Red and his followers and conducted as a Christian community 500 years before Columbus crossed the Atlantic. On the narrow ice-free strip of coast, several thousand men of Norwegian blood maintained this colony, and another farther north for several centuries.

Because of the inaccessibility of the east coast, the first immigrants from Europe to the Western Hemisphere rounded the southern end of Greenland and landed on the southwestern shore which is ice-free during the summer. They settled in two districts: the Eastern Settlement (more properly the southeastern) about 100 miles around Cape Farewell, near the present Julianehaab; and the Western Settlement (more properly the northwestern), nearly 300 miles farther up the west coast near the present Godthaab.

Soon after the year 1000 these settlements with their 2,000 or more inhabitants were rated Christian communities. Twelve churches were built in the Eastern Settlement and four in the Western. About 1110 a bishop of Greenland was appointed and there is a fairly complete record of bishops to the end of the Forteenth century. A monastery and a nunnery even were maintained in the Greenland colonies.

The Norse settlements in Greenland were at their best in the Eleventh and Twelfth and during the Thirteenth centuries. After 1300 they seem to have started to decline.

What happened to the Norse colonists cut adrift in Greenland has long been a mystery. Some traditions have it that they were destroyed by the Eskimos, others that the went westward to other land. It is in the hope of finding evidence to support this latter tradition that the MacMillan expedition is making investigations this summer.

Now Ruled by Denmark.

Although the early settlers of Greenland were Norwegians, the country later came under Danish control. This occurred when Norway was combined for a time with Denmark. A Danish missionary who reached the southwest shores of Greenland in 1721 was the first to renew Scandinavian settlement of the country. Other settlers followed and Denmark established a paternal government over the Eskimos of the south.

Northwest Greenland was discovered, explored and occupied as a base for Polar expeditions by Americans during the Nineteenth century—notably by Peary and Greely. When the United States purchased the Danish West Indies in 1917, as part of the purchase consideration it relinquished all claim to any part of Greenland. Since then the Danish government has extended its authority to the sparsely-settled northwest coast, and to all other inhabited sections of the island.

The towns of Greenland are few and unimportant. Godhaven of Godthaab, the capital of the northern inspectorate, is the chief settlement and yet has only a few hundred inhabitants. Upernivik, near latiture 73 degrees, is the northernmost "town" in the world, while Etah is the northernmost settlement. Julianehaab, near the southwest point of the island, is close to the site of the settlement of Erik the Red, and in the vicinity are still to be seen ruins of the stone houses and churches built in this isolated corner of America in the days of the early Crusades.

Laments Spoiling of Beauty of Wilderness

After a week-end on the fringe of the wilderness one sees that there are two sides to the good-roads question. The lake hidden away among the hills at the end of a road never made for automobiles has a peace and security to offer those who are willing to brave its rough approach that can never be the attributes of more favorably situated beauty spots, says a writer in the Montreal Herald.

The motor highway probing its smooth ribbon here and there among the Gatineau hills is supposed to make the wilderness easily available to the city dweller. But what it inevitably does is transform the wilderness into the city's back yard. Where a few habitants hacked out a lean and precarious livelihood from the forest and the thin-soiled fields the summer hotel rises. Where lynx and fox prowled the victrola thumps and screams and children shout. The dance pavilion comes and partridge and rabbit depart. Soon the holes where one could be sure of hooking a two-pound bass, with patience, are fished out, and one has to find a new retreat. I am glad that I still know one lake to which the motor road has not penetrated, even though getting there means a four-hour jolting on a buckboard.

Elaborate Device to Thaw Out Frozen Coal

Coal mined in the fields of Pennsylvania and carried over the hills to tidewater is exposed to the elements. In the severe weather of the winter months rain, snow and sleet beat down upon the cars, seep through the coal and freeze.

In the tidewater yards of the Reading company and the Central railroad of New Jersey at Port Reading, N. J., there is an extensive thawing plant which is in operation for about six months in each year. It consists of a huge shed 425 feet long built over four standard tracks.

At both ends of the sheds are heavy rolling doors which are let down over the tracks after the cars have been placed. In the ground between the tracks are ducts through which steam is shot into the sheds continuously until the coal has been thawed.

Worked in His Youth

Everybody who reads the newspapers knows that J. P. Morgan is rich, but perhaps he was never accused of being among the "idle rich" until his last visit to London.

According to a story wafting its way around the Piccadilly clubs, the American banker, while having his nails manicured by a Kensington damsel, waxed talkative about his travels. Finally the stay-at-home young woman began to get a bit bored and asked this question of her client:

"Did you ever work?"

"Oh, yes; but now I make other men work for me," the banker said.

"How nice!" the young manicure remarked.

"But I worked a good deal in my younger days," said the banker as he told her who he was.

Wireless Ship Control

The Italian navy has been conducting experiments in the control of ships by wireless currents. By means of a system recently discovered by Signor Fiamma a submarine chaser was successfully maneuvered up to a distance of ten miles. It is claimed that Signor Fiamma's experiments are infinitely more successful than any hitherto made, and that the control of the ship which is being maneuvered is in no way prejudiced by atmospheric disturbances or interruptions caused by other wireless stations.

Sun Helps Tuberculosis

To study the effect of sunlight in treating tuberculosis children the London county council last summer conducted an experiment in which 35 boys attended an open-air school wearing very little clothing, so as to allow their bodies to be browned by the sun. As a result of a few weeks of treatment the boys appeared to be more alert, more energetic, and happier, according to the report of the head master of the school.—Scientific American.

Ringing

Hubby—Isn't the dinner bell early?

Wife—That's not the dinner bell.

"What is it?"

"Only our daughter tying on her new earrings."

John Smith and His Boss

By WALTER O. MARQUISS

(©, 1925, Western Newspaper Union.)

FOR one thing he had a very common name. Then, he was a rather common man. A very ordinary sort of man.

His name was John Smith. By occupation he was a bookkeeper; in character he was a negative quantity. He was not liked in the offices of the H. F. Stone Manufacturing company, where fellow workers long ago had ceased asking him for five dollar loans. "Tightwad Smith" was his nickname. And it fit.

Smith's disposition was not unknown to H. F. Stone, head of the big manufacturing concern. Stone prided himself upon his knowledge of his men, their traits and habits.

Stone was popular with his men—popular with all save one—John Smith. Smith believed himself entitled to a better position; he believed himself deserving of better pay. . . . and he blamed his employer for his failure to rise in proportion to his self evaluation.

Stone often preached to his workmen . . . and his text was thrift. The thought took root here and there, but in Smith it fell upon barren soil.

"There's nothing I'd discharge a man for quicker," the manufacturer declared one afternoon while discoursing at large upon his pet topic, "than improvidence. A man who can't be trusted to handle his own money properly can't be trusted with responsibility."

The words incensed Smith, and he left his work that day in anger. He was still grumbling as he floundered homeward, in a temper ill designed to meet the request his wife had determined to make.

Mrs. Smith's mind was by no means enslaved by her husband's. She did as she pleased, and in many respects, Smith did as she pleased.

"John," she said, "I'm going to take a basket of food to that poor Carter family tonight. You're going with me to carry it."

Mrs. Smith's persistence in spending his hard-earned money to buy food for improvident families on the river front galled him.

"John," said Mrs. Smith again, "You are going with me!" And he did, ungraciously.

"I don't know how we can thank you," declared Mrs. Carter with tear-brightened eyes, while Mrs. Smith smiled gently.

"Well," growled Smith, "let's be gettin' home."

As they turned to go, the door opened to admit H. F. Stone and his wife. The man carried a large basket over his arm, and set it down and beamed upon the hungry Carters. Smith tried to shrink out of sight in his corner, horrified that his employer should have caught him in this place, of all places, under these conditions, of all conditions.

Stone looked from one to another of the big-eyed children, and his gaze wandered across and caught Smith. His smile faded. Smith interpreted his expression as one of black disapproval.

Stone's glance took in the basket on the table, from which had come the cabbage, cold meat and loaves of bread. He looked back again at Smith, and frowned.

Smith, cowering a little, thought of the many, many times his employer had preached economy. He trembled a bit and his shoulders sagged.

Stone coughed twice. "Mr. Smith," he said, "let me see you a moment."

The embarrassed man followed the other from the room.

Stone coughed again. "Mr. Smith, come into my office as soon as you come down in the morning."

Smith entered the office of the head of the firm. He looked at his employer from under lowered brows, and he was tensely on his guard.

Stone looked up as he entered and nodded. "Sit down, Smith," he invited brusquely, and went on with his work for a moment. Then he turned.

"Smith," he said, "I was much surprised to see you down there last night." Smith gulped.

"My wife—" he began his defense.

"Very surprised," repeated Stone.

"I told my wife—"

"Your salary is rather small," mused Stone. "Rather small. Yet you spend part of it—"

"I didn't want—"

"Yet you spend part of it to help out poor people."

"My wife," Smith tried again.

"Oh I know, I know," interrupted the rich man. "I know. I been looking around, Smith. Since I saw you down there I been looking around." His voice sounded stern and Smith was quaking.

"It wasn't me—" he began. Stone checked his words with a raised hand.

"Smith," he said, "I don't know why I've never noticed you before. I find that I never knew you at all! Smith," said Stone, "I've been combing this city for a man whom I could trust to take charge of my plans to improve conditions among the families of my employees. And now I find the man I want right in my own office!"

Smith's eyes flew open wide. "You don't mean . . . me?" he gasped. Stone nodded.

"The salary," he went on, "will be five times what you've been getting. A man who can do what you've been doing among the poor people and on your salary, certainly will be worth that much to me."

And John Smith had the grace to blush.

SPENCERVILLE

See Furnish for Tires.

Ada Markle was a Monday guest of her sister, Mrs. Lyle Barr at Fort Wayne.

Miss Lillian Koch of near Hicksville, is visiting her sister, Mrs. Henry Walter and husband.

Miss Lois Coolidge of near Hillsdale, Michigan, is visiting at the home of Charles Hahn and family

Miss Margaret Lake, who is working in Fort Wayne, spent Sunday with her parents, W. O Lake and wife.

A reception was held Sunday evening at the Methodist church in honor of the Spencer township school teachers.

Miss Pearl Boots of near Angola and Lloyd Wade and wife, were Sunday guests of Miss Bina Boots and brother.

Paul Furnish and family and Mrs. Sylvia Furnish of Ft. Wayne, spent Sunday with M. H. Howey and family.

Mr. and Mrs Harvey Beam entertained on Sunday, Wm. Hobaugh, Jr., and family, Mrs. John Hobaugh and son, William.

If you are wanting to subscribe for any magazine by the year or single copy, see The News first We can save you money and trouble

W. F. Rhoades, wife and daughter, Doris, and Mrs. Margaret Rhoades, spent Sunday with Jacob Rhoades and family at LaOtto. Mr. Rhoades is quite ill.

Raymond Randall, wife and baby, who were on their way to this place Sunday, had a narrow escape as they were in the wreck on the Indiana Service Corporation Line.

The Glee Club of the high school met Monday afternoon and organized with officers as follows: President, Hilda Volkert; Vice president Gale Bowser and secretary, Howard Beams.

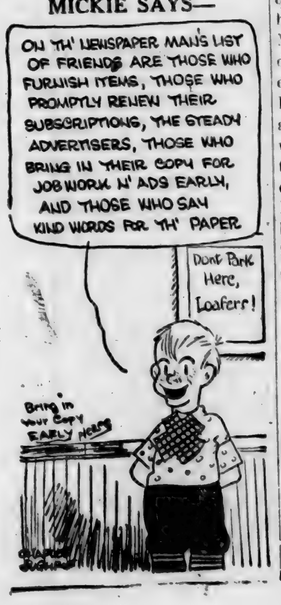
W. E. Oberoltzer, wife and son, William, of Three Rivers, Mich., Mrs Matilda Oberholtzer and daughter, Millie and Mrs. Cozy Oberholtzer of Grabill, were Saturday guests in the B. F. Markle home.

Next Sunday morning the members of the Methodist Sunday School will meet at the church and go in a body to attend Sunday School and quarterly meeting, which will be held under the direction of Rev. W. W. Wiant.

Clesson Miller, wife and daughter, Evelyn June, Joseph Fisher and wife and David Sauers of Ft. Wayne, Frank Wertman and wife and Edward Billman and wife, were Sunday dinner guests at the home of Gerry Wasson and wife.

Roy Bowser and wife of St. Joe and James Reed and wife, were Sunday guests of R. U. Bowser and wife Afternoon and evening callers were Arnold Huhr, wife and son of Napoleon, Ohio, Wesley Bowser and Louis Eckle and wife of Fort Wayne.

MICKIE SAYS—



The Boys' Pig Club

See Furnish for Batteries.

Daniel Bee, wife and babe, of Fort Wayne visited friends at this place Sunday.

Herman Reasoner and wife were Sunday dinner guests of Charles Davis and family of Auburn.

Charles Henderson, who has been visiting here for the past three months, left on Monday for California.

The Sophomore class was entertained at a class party on Friday evening at the home of Miss Arta Bishop.

Mrs. Herman Reasoner left Tuesday to spend a week with her mother, Mrs. J. W. Doyle of Quincy, Michigan.

Carl Fletcher, 22, machinist, Ft. Wayne, and Lucile Rhodes 24, telephone operator, Spencerville. The couple were divorced from each other June 20, 1923.

Cash paid for false teeth, dental gold, platinum and discarded jewelry. Hoke Smelting & Refining Co., Otsego, Mich.

The Junior class held their first class party on Thursday evening at the home of Doris Rhoads. Those present besides the class were: Leona Smith, Howard Beams, Kenneth Vallieu, George Wilmot, Raymond Foltz, Clarence Goings, Prof. Smith, Mr. Ashby and Miss Ida Reed.

NEWVILLE

Henry Berree still remains very low.

Mrs. Willie Miller spent Sunday at Grover Hill, Ohio, visiting relatives of her husband.

Mrs. Plester Richmond, of Chicago, is here for an indefinite visit with her parents, Frank Snellbaker and wife.

Carl Clark, wife, mother and brother, all of Fort Wayne, were Sunday guests in the John Miller home The ladies all went pleasure riding in the afternoon, Mrs. Clark was the driver.

Mrs. Ethel McCulough of Mt. Pleasant and Mrs. Bessie Shaffer and sons, Carl and Russel, of Butler, spent Sunday with their parents, Mr and Mrs. Joe Rhoads. Arther Rhoads of Peoria, Illinois, came last week to take his father home with him to care for him, and Mrs Rhoads was to live with her daughters, alternately, but the plan did not suit all parties, so Mr. Rhoads did not go. These people are getting too feeble to live alone when the weather gets cold and their children are getting anxious concerning their welfare. Mrs. Rhoads has been confined to her bed most of the time for more than four years and Mr. Rhoads has become quite feeble also. This is a sad case of old age.

Adjusting Your Garter

The final test of poise is the ability calmly to adjust a sock supporter in the face of feminine amusement.—Duluth Herald.

Furniture Made From Weed

For many years the natural seedling known as the "bakain" which grows in the Punjab of India was destroyed as a weed, being cut out to protect other growths. Economic development has caused this weed to be used commercially for light furniture, packing cases and shelving.

Jews Plan Monument to Revolutionary Patriot

Polish Jews of America are planing to erect a monument in New York city to the memory of Haym Solomon, the Polish immigrant Jew who devoted himself to the cause of the Colonists in their war for independence and who sacrificed his fortune on the altar of American liberty, according to the Verband, the official organ of the Federation of Polish Jews of America.

According to the Verband, the United States government has thus far failed to pay any official tribute to the memory of the immigrant-patriot, and it is the intention of the Federation of Polish Jews to erect the monument in one of the parks of the metropolis as a belated recognition of the services rendered by Solomon in the dawning of American independence.

Through a letter found among the effects of James Madison, fourth President of the United States, it is indicated that Solomon was sentenced to death by the British for his activity in behalf of the Revolution, and he escaped only after the payment of a large sum in gold.

Swell Diet Shown

"Mary's always boasting about her swell eats."

"Altogether unnecessary—her two hundred pounds show it."

Uncle Sam Busy Coiner

The bulk of the year's work, numerically, at the mint in Philadelphia, consisted of 58,704,000 standard silver dollars, struck to replace those melted to provide bullion for the use of England in the East Indies, the Scientific American reports. Other coinage included 1,597,000 gold eagles, 538,000 dimes, 12,049,000 nickels and 1,431,000 pennies. The coinage for Peru included 1,000,000 1-sol silver pieces and 2,000,000 nickel 5-centavos. For Nicaragua the output was 500,000 1-centavos and 400,000 half-centavos.

Some of our readers may not know that the United States government does coining jobs for other countries that are not fortunate enough to have a mint of their own. The work is done at a small profit.

Wisdom in Waiting

"I'm glad I didn't start to build my house too early in my married life," remarked Gap Johnson of Rumpus Ridge, in the crossroads store.

"You are, eh?" asked one of the loungers.

"Yep! You know, the old way was to lay the floor and then stand the family on it and build the house around 'em. Well, if I'd a-did that anywhurs along toward the beginning I wouldn't have now more than enough house to hold what you'd call a durn' small per cent of 'em."—Kansas City Star.

Home for Carnegie Relics

Carnegie relics will have a home in Dumferline, Scotland. Mrs. Carnegie has devised a method by which to perpetuate the memory of her late husband. She has had prepared plans for the erection on a site adjoining the humble dwelling place in Dumferline in which the millionaire was born, a building which is to house many of the priceless possessions of the great benefactor. It will not be an imposing building, although it is destined to house a collection of relics which will make a world-wide appeal.

Dog Gave Trick Away

A New Jersey woman adopted a clever but unavailing scheme to get around the rule prohibiting dogs in railway passenger cars. She dressed her pet Boston terrier up in baby clothes, put a heavy veil over its face and head, then carried the "infant" in her arms. All went well until the dog barked just as the conductor was coming through the car to collect tickets.

St. Joe Locals

Your subscription may be due and we would appreciate you sending us the money.

For Sale: 3 Wilson Heaters used only one season.
37tf Bowser & Reed.

John R Leighty of Washington, D. C., came Saturday for a few days visit with his mother, Mrs. Kate A. Leighty.

The automobile speeders should not drive so fast that when they stop, they have to make their exit through the windshield.

Mrs John Guisinger of Garrett, visited from Thursday evening until Saturday afternoon with Mr. and Mrs. Frank Johnson.

The next regular meeting of the W. C. T. U. will be held at the home of Mrs. Mabelle Thornton on Friday, October 2. This postponement is on account of the Hicksville Fair.

Will Hamilton and wife had as Sunday afternoon guests Mr. and Mrs Lee O Tustison and son, Keith and Charles Tustison of Defiance, Earl Tustison, wife and daughter of Hicksville and J. C. F Abel and wife of St. Joe.

Lester Pugsley and wife entertained the following relatives Sunday at dinner: Mrs. Al Jennings, Delbert Jennings, George Edwards, wife and baby of Butler and Earnest Jennings and wife of near Edgerton, Ohio.

Receipt books on sale at News office.

YOUR Last Name

IS IT BASSETT?

IN ENGLAND the Bassetts are a well known Cornish family; that is to say they have been from time out of mind associated with affairs in Cornwall and have intermarried for centuries with families of that county until one could hardly imagine Cornwall without the Bassetts.

But we must look beyond Cornwall to find the origin of the Bassetts. In fact they came from Normandy, as can be well enough proved by the fact that the name of Thurston Basset, a companion of William the Conqueror, is found on the roll of Battle Abbey.

Since the days of the Plantagenets the Bassetts have been seated at Tehidy, the seat of the present representative of the family in England. In a list of the prominent Cornish families with whom the Bassetts have intermarried you find such names as Trenouth, Trengove, Trelawny, Marrys, Enys, Carveth, Godolphin, Prideaux, Grenville and Rashleigh. Some of these once prominent families have since become extinct, but their blood runs in the veins of the Bassetts.

The two most distinguished members of the family in England are said to be Sir Francis Bassett, vice admiral and sheriff of Cornwall in the time of Charles I; and another Sir Francis Bassett, first baron of Dunstanville in the time of King George III, noted chiefly for his opposition to the American colonists just before the breaking out of our Revolution. He held out persistently against peace with the American colonies.

The first of the name in this country was William Bassett, who sailed from England on the "Fortune" in 1621. He lived first at Duxbury, but settled eventually at Bridgewater. He was associated with the chief dignitaries of the colony. His son William Bassett, second, was a close friend of Governors Winslow and Hinckley and appointed them joint guardians of his children just before his early death.

A prominent member of the Bassett family here was Richard Bassett, governor of Delaware, about the time of the Revolution.

George Washington Couldn't Pay by Check

Checking Accounts similar to those now widely used were first introduced about the year 1793—some years after the close of the American Revolution. Are you, today, making purchases and paying bills in the inconvenient and unsafe ways that were in vogue in Revolutionary times? If so, we cordially invite you to open a Checking Account with us and enjoy the advantages of modern methods!

If you are not taking advantage of our service, you're missing something.

Flare Is Feature of New Fall Duds

In discussing the fall fashions in women's coats and dresses, especially apparel for the young lady who is attending school, a fashion writer in the New York Herald-Tribune says:

Let us start with the coat or cape as a beginning and work inward. Coats for autumn are more ample, surely from the waist downward, and most of them are made from beautiful rough materials with an incredibly soft, long nap, something like velvet. They are marked with the designs you see in men's overcoats and winter suits—chevrons, zigzag stripes, shadow plaids and small irregular diamonds. The outside of these winter coats is usually of some neutral tint like smoke gray, dull bois du rose, light brown or bright navy blue, and the inner side is of a bright color, so that many of them are made without linings. Coats are made with flaring backs, many of them swinging free from the shoulders, and are quite straight in front with diagonal closings or else are buttoned up to the chin. Jenny makes the backs of her youthful coats plaited from a deep shoulder yoke, which is very attractive if the material is not too heavy. Chanel buttons some of her coats straight down the center front from the chin. They have round collars of material or fur which frame the face and flare from the shoulders at the side and back.

Double-Faced Materials.

Some of the most attractive French costumes for the high school girl are three-piece, being composed of a cape and sports suit. Lucien Lelong makes these suits of double-faced material with circular full-length capes that fit the shoulders and show double-breasted jackets with front-plaited skirts. The interior of the cape is a bright color, and the skirt is also made of this brilliant side of the material. Another version of the three-piece suit, from Vionnet, shows a cape of gray lined with bright blue and a gray dress of frisca over which is worn a double-breasted vest of bright blue.

School dresses have jumper bodices and either circular or plaited skirts. Popular materials are a loose-woven fabric called kasha natte, frisca and cashmere. Remember that the jumper should be considerably shorter than last season, reaching just to the hips and no farther, and that the sleeves must be loose at the top. Standing band collars have, to a great extent, replaced the familiar round collar. Some of these collars have long bands that tie in front, on the shoulder or in back, and others have the band opening in front into a V. Martial et Armand have a dress for the young girl made of bois du rose cashmere with straight unadorned front and jacket back, split at the center, with rounded corners joining at the round lace collar. The back of the skirt is

Wrap Du Soir of Silver Cloth Lined With Pale Pink Velvet.

fully gathered and has apron ties. This creates a new and youthful line that gives a little relief from the familiar jumper bodice. However, the simple jumper frock of any of the new woolens, either patterned or plain with a rough surface, is the popular Paris entry for the Prix de la Jeune Fille.

Every amusing fantasy of trimming is possible in the simple jumper frock. Naturally there must be nothing that detracts from its line, for half its charm lies in the silhouette with that clever skirt fullness that allows perfect freedom of movement without destroying the harmony of line. The newest decoration is a band of fine shirring that may be placed on collar, cuffs and also at the hem, while it is also being introduced on skirt pockets or wherever the ingenuity of the designer suggests.

For informal parties and afternoon wear there are innumerable dresses of crepe and velvet combined, or crepe and cashmere. Jenny makes charming frocks of crepe de chine in soft shades of capucines, bois du rose, madonna blue and green and trims them with collars, cuffs and bands of velvet in the same tone. Madeleine Vionnet makes some of her young girl frocks of wool and bands them with a lighter-toned crepe de chine. Lace collars and cuffs are also seen on some of these frocks.

The Circular Cut.

Skirts show a preference for the circular movement, although plaits are also prominent. The godet is not used so much as either full or half-circular skirts. Plaited dresses of crepe de chine, banded in wool of the same shade or a lighter or darker tone of it are being offered by such houses as Chanel, Premet and Martial et Armand. These dresses are shown with

A Dance Frock of Scarlet Chiffon With Silver Embroidery.

sweaters of the wool banding; that is, a reseda green crepe de chine dress, plaited from a deep shoulder yoke and having a hem, pipings and collar and cuffs of dark green kashannette, is worn with a sweater of the same fabric that fastens straight down the center front with green bone buttons and is banded with the lighter crepe de chine. Sometimes, particularly in the models of Madeleine Vionnet and Lucien Lelong, the sweater is replaced by the double-breasted sleeveless jacket. Sweaters and jackets of shadow plaid are worn with plain circular skirts of wool and with long coats or capes of plaid in order to give warmth when needed.

The young girl's dance frocks and general party dresses for early autumn have very full skirts indeed, and many of them have straight bodices that are cut to the normal waistline or at the longest, not lower than high on the hips. A dance dress of this type, from Drecoll, is made of dull orange velvet with a straight bodice, cut to a V in front and back, and a skirt made very full with circular gores. It is new and entirely charming. Lelong has an attractive party frock for the young girl made of white crepe de chine with a skirt that is made full by means of godets all around, and a straight square-necked bodice. Over this is worn a sleeveless jacket of rose-colored velvet, surplice in front and tied in a sash at the back. Doucet has a debutante's dance frock made of madonna-blue tulle with a V-necked bodice and a godeted skirt, worn over a straight slip of cream-colored lace.

For Hop and Prom.

Louise Boulanger offers a unique party frock for the young girl, made of white and silver crepe with a straight bodice and long sleeves, bishop in cut, slit from wrist to the front and side of the armhole. The skirt is very full in front and has a butterfly sash of silver tulle placed at the waistline in front only. Capes of velvet or coats of velvet and lame brocade are worn with such frocks. Scarf collars are more often shown than collars of fur.

The guiding principle for the modern young girl in choosing her wardrobe is simplicity. In later years she can cover herself with embroidery and elaboration if she will, but if she is wise, or her parents are, she lets youth reap the full advantage that is given it by a charming, slim figure and a fresh complexion, and lets her frocks form a setting rather than fill the foreground of the picture.

Naturally, the simplicity will vary directly with the age of the girl, and it will not do to deny the budding collegiate undergraduate some of the frills and furbelows of the post-debutante, particularly in evening clothes. For girls still in the secondary schools, however, the American tradition of unaffected simplicity should be followed without deviation.

THE KITCHEN CABINET

(©, 1935, Western Newspaper Union.)

Harvest and birds aswing;
Orchard and vineyard with rich fruitage crowned,
And golden sheen on the sheaves well bound—
Fulfillment in every thing.
—Edith Bradt.

ECONOMICAL SUGGESTIONS

All liquids in which vegetables are cooked should be saved; either serve combined with thickening for a sauce, with butter or cream, in gravies, or simply chill and use as a drink for those who need iron and the various mineral salts. A few tablespoonfuls of the water in which young carrots are cooked will be far more effective than iron pills or tonic. Even the water in which potatoes have been cooked, though we have been taught in times past that it was poisonous, will be found good in bread, griddle cakes and gravy.

When cooking such succulent greens as spinach, no water is used, but any drained off should be used in the food for the family.

When cooking any of the green vegetables that grow above ground, do not add salt until they are nearly ready to serve, as it toughens the fiber and makes them less digestible.

When peas or corn lack sweetness a teaspoonful of sugar added to the kettle when cooking will greatly enhance the flavor. However, do not overdo the sweetening, as it will be noticeable and unnatural.

A small steak which could serve but three will answer well for five or six in the following dish:

Chop Suey.—Brown a small steak in suet, cut into small pieces, add a small onion or not as one's taste dictates, and simmer with a little water for a half hour on the back of the stove; then add two bunches (if ordinary size) of celery cut into small pieces, and continue to simmer until the celery is tender but not soft. Season well with salt and pepper and a few teaspoonfuls of chop suey sauce. Serve in the center of a hot platter with a border of cooked rice well seasoned and sprinkled with chop suey sauce. Left-over meats may be used for this dish, such as roast veal with a little fresh pork browned and cut up. A small amount of meat thus flavors a large dish and it is one that most families call for again and again.

Corn Souffle.—Melt one tablespoonful of butter, add two tablespoonfuls of flour and stir until well blended, then pour on one cupful of milk. Bring to the boiling point and add one can of corn, one and one-fourth teaspoonfuls of salt, a few grains of pepper, the yolks of two eggs beaten until thick and the whites of two eggs beaten stiff and dry. Turn into a buttered baking dish and bake in a moderate oven thirty minutes.

Suggestions for Dinner.

A fruit cocktail is a good beginning. Slice a ripe peeled pear into fine strips, add a peeled sliced peach or two, then a dozen or more melon balls; these are prepared with a potato scoop. Put the mixture into sherbet cups and pour over a thick sugar sirup made of sugar, water, lemon juice and a bit of the rind grated. Chill and serve for the first course.

Breast of Veal Stuffed.—The market man will cut a pocket as deep as one likes in a breast of veal. Fill it with a stuffing, using breadcrumbs, butter, eggs, salt, pepper, onion finely chopped and such poultry dressing as one likes. Sew up and roast, basting often during the roasting. Serve with:

Spanish Potatoes.—Boil as many potatoes as the family needs, drain and shake over the heat to dry. Into a vegetable dish which has been well heated, put plenty of butter and a small onion very finely minced. Mix well and turn in the hot potatoes, cut with a knife, mixing until all are well-seasoned.

Hashed Brown Potatoes.—Try out fat salt pork cut into small cubes and remove the scraps: there should be one-third of a cupful of fat. Add two cupfuls of cold boiled potatoes, finely chopped, with pepper and salt if needed. Mix the potatoes thoroughly with the fat, cook three minutes, stirring constantly, then let stand to brown underneath. Fold as an omelet and turn out on a hot platter. Garnish with parsley.

Potato Muffins.—Mashed potato, left over, put into buttered gem pans and baked until brown is both attractive and good. Serve as a garnish to platter of fish or chops.

Browned Cheese Crackers.—Split milk crackers and spread with butter, sprinkle with grated cheese and cayenne. Put into a dripping pan and bake until delicately brown.

Mock Crab.—Melt one tablespoonful of butter, add two tablespoonfuls of flour and stir until well blended, then add one cupful of milk and cook until thick. Add one can of corn, one and one-fourth teaspoonful of salt, a teaspoonful of worcestershire sauce and a half teaspoonful of mustard. Add two egg yolks and the beaten whites at the last. Bake slowly until set.

IMPROVED UNIFORM INTERNATIONAL Sunday School Lesson

(By REV. P. B. FITZWATER, D.D., Dean of the Evening School, Moody Bible Institute of Chicago.)
(©, 1935, Western Newspaper Union.)

Lesson for September 27

REVIEW

GOLDEN TEXT—"Whom having not seen, ye love; in whom, though now ye see Him not yet believing ye rejoice with joy unspeakable and full of glory"—I Peter 1:8.

PRIMARY TOPIC—Paul's Love for His People.

JUNIOR TOPIC—Paul's Best Wishes for His People.

INTERMEDIATE AND SENIOR TOPIC—How the Gospel Spread.

YOUNG PEOPLE AND ADULT TOPIC—The Power of the Gospel.

The method of review must always be determined largely by the genius of the teacher and the condition of the class. For this review, two methods are suggested:

1.—The Biographical. This can be used in all the grades excepting, perhaps, the beginners. When skillfully presented, living, active personalities appeal to the heart and imagination of all ages. Among the interesting characters appear Paul, Luke, Silas, Timothy, Barnabas, Mark, Lydia, the Philippian jailer, James and the slave girl at Philippi. These characters can be assigned to the members of the class the preceding week.

2. The Summary Method. This involves the presentation of the salient points, and the central outstanding message of each lesson. The following suggestions are offered:

July 5.

The sending forth of Paul and Barnabas marked the beginning of foreign missions as the deliberately planned enterprise of the church. The Holy Spirit selected and sent out these missionaries, showing that the true method of world evangelization is to have spirit-sent men to preach the gospel.

July 12.

The grand theme of Paul's preaching was justification by faith. Those who receive Christ as their Saviour are freely justified from all things. Jesus took the place of the sinner that the sinner might have His place (II Cor. 5:21). This is the missionary message for all times.

July 19.

At Lystra Paul and Barnabas "so" preached the gospel that a great multitude believed. Only that which brings conviction of sin and induces belief in Christ can be said to be preaching in the biblical sense.

July 26.

Receiving the Gentiles on the simple condition of faith in Christ provoked a spirit of controversy in the church. Through Christ the middle wall of partition was broken down so that in this dispensation God makes no distinction between Jew and Gentile.

August 2.

James shows to the Jewish believers scattered abroad, who were passing through sore trials and persecutions, that true religion was to receive with meekness the engrafted Word, and live a self-restrained, unselfish life, bridling the tongue, helping those in need, and keeping unspotted from the world.

August 9.

Because of differences of opinion over John Mark, Paul and Barnabas separated, God overruled their contention to the wider dissemination of the gospel.

August 16.

The believer has been born twice, of the flesh and of the Spirit. A mortal conflict goes on within him. The Christian's victory over the flesh is by yielding to the Holy Spirit, who dwells within.

August 23.

On the second missionary journey Paul attempted to preach in Asia Minor, but the Holy Spirit shut the doors against him. At Troas he had the explanation in the vision of a man from Macedonia calling him to preach the gospel in Europe. Divine guidance is as truly through closed doors as through open doors.

August 30.

Because of the casting out of an evil spirit from a slave girl at Philippi, Paul and Silas were imprisoned. As they were singing God's praises in the jail, God miraculously delivered them.

September 6.

To be in Christ is to have gain above the best things in the world. Those who are in Christ will have His mind, and therefore will press towards the goal.

September 13.

Though unselfishly preaching the Word of God, Paul was hated and persecuted by the Jews.

September 20.

Because Paul had experienced the life in Christ, and knew whom he had believed, he with undaunted courage went about preaching the gospel.

Read the Bible

Do you want to hear God speak to you? Then read His Word, the Bible. This is His voice to us.—Youth's Visitor.

Starting the Day

Hem the day with prayer, and it will be less likely to ravel out before night. —Christian-Evangelist.

Some Talent

"God has given to each of us some talent."

THE HAPPY HOME

By MARGARET BRUCE

WNU Service

Shirred Bands for Curtains

One of the newest and prettiest forms of fashioning coverlets, cushions, chair seats, dressing-table covers, curtains, and the like, is in the use of the shirred band. This is a finish that adds very much to bed covers, scarfs, and draperies where one wants a simple edge rather than fringe, braid, or other ornamentation and yet where one wishes to have some softening lines on an otherwise severe material.

These shirred bands are exceptionally lovely when carried out in the changeable drapery silks so much used for bed coverings and the curtains that match them. They are easy to make, too, and when puffed out softly they make a welcome change from the ordinary full valance or shaped valance that we have been using for the past year or two.

In the window shown today, the draperies are of changeable silk in apricot and periwinkle blue. The puffed band at the top is shirred both top and bottom and the line marked with a thick overstitch in gold embroidery silk. The narrower bands that catch the curtains back on either side are shirred and stitched in the same way, and the edges of the hanging curtains themselves are buttonholed in wide deep stitches with the gold embroidery silk.

The bed in this pretty room has a cover of the changeable silk, with a shirred and puffed band the width of the mattress all around the sides. Below this band is a full valance reaching to the floor. The pillow strip is edged all around with a three-inch shirred and puffed band of the silk.

These shirred bandings can be worked out in other materials and colors, of course. A breakfast room seen recently had shirred bands of plain yellow chambray over curtains of yellow and white checked gingham. A child's room could have curtains of figured chintz showing sunbonnet babies, cows, chickens, and so on, with shirred bands of plain blue or any color predominating in the chintz. The attractive scheme is adaptable to almost any room or any material.

At One's Elbow

"I never knew a hostess who could make one as comfortable as Mrs. Archer does," remarked a week-end guest to her husband, as they made their way back to their city home after a Saturday-to-Monday stay in the country. "Some way everything you wanted always seemed to be right at your elbow. If you wanted to lay down your book to accept a cup of tea or a glass of iced punch, there was a place to lay the book and a place to put the cup after you had finished with it.

"Yes," added her husband, "and the smoking conveniences were always just at your elbow, too. I noticed that."

"Well, I think I know the secret," said his wife, thoughtfully. "She just has any quantity of low stools or tabourettes standing about. There is always one within reach, whether you are smoking, reading, eating or drinking. If you want to put your feet up, you can draw up one of these low stools and rock your heels on it. If you want to lay your sewing down while you step away a few moments, there is a stool nearby to drop it on. I noticed that there was one near every single chair in the sun room,

and tucked around near the wall here and there in the living room and library. In the hall there was an old carved Indian one that was a beauty."

"They were in the bedrooms, as well," her husband contributed. "Remember the low stool near the deep wing chair and the little wicker one over by the wicker lounging chair? That woman knows how to anticipate people's needs, I can tell you. You never have to get up and go groping around with your hands full—not in her house. There is always a silent servant at your elbow to relieve you of your burden, whether it is an empty glass or some cigar ashes, a magazine or a box of candy. Let's tuck in a few handy stools at our house, lady!"

(Copyright.)

Umbrella Plants

For the best results when caring for umbrella plants, put them into jardinieres filled with rich wood-earth. Give the plants all of the water the ground will absorb, and it is well to keep enough water in the jardinieres for it to show all of the time. Umbrella plants are much more luxuriant when put in pots that drain the water off. It is well to keep these flowers in the house during hot weather. At any rate, they should be kept in the shade if a deep, rich green is desired

Two Letters

The first written twenty years ago, the second recently by Mrs. J. H. Bourland, Frankston, Texas.

June 2, 1904, she writes:—

"For twenty-three years I was a constant sufferer from chronic catarrh. I had a severe misery and burning in the top of my head, a continual dropping of mucous into my throat causing frequent expectoration. My entire system became involved and I grew worse. It seemed as if I could not recover from a constant cough and frequent attacks of bilious colic. My bowels were affected, causing alarming hemorrhages. I tried many remedies and finally took Pe-ru-na. In three days I was relieved of my bowel trouble and entirely cured by five bottles. I most cheerfully recommend Pe-ru-na."

June 30, 1924, Mrs. Bourland writes again:—

"I will soon be seventy-nine years old and enjoy god health for one of my age. I still recommend Pe-ru-na and take it myself when necessary."

For more than half a century Pe-ru-na has a proud record of good done. Men and women the world over stand ready to testify to its value in the treatment of all catarrhal disorders.

Send 4 cents postage to the PE-RU-NA COMPANY, Columbus, Ohio, for book on catarrh.

Pe-ru-na in either tablet or liquid form sold everywhere.

"So Al joined th' police force?"

"Yeh. Yuh know they've been after 'im for some time."

WHY SHOULD ANYONE SUFFER WITH INDIGESTION OR ANY STOMACH MISERY?

If you want to fix up your dyspeptic, out of order stomach so that you can relish what you eat with not the least bit of after distress, do what tens of thousands of people have already done.

Getting rid of gas, bloating, belching, heaviness and that feeling of near suffocation isn't such a hard matter as you may think—You've been getting hold of the wrong medicine—that's all.

But better late than never—ask your druggist for a bottle of Dare's Mentha Pepsin—a real stomach medicine and a very pleasant one. For acute indigestion one or two doses is enough, but when the trouble is chronic, two or three bottles may be needed to put your disordered stomach in good healthy condition and make life worth living.

Making a start is the main thing, so why not get one bottle today with the distinct understanding that if it doesn't help you the purchase price will be returned.

POINTS ON KEEPING WELL

DR. FREDERICK R. GREEN
Editor of "HEALTH"

(©, 1926, Western Newspaper Union.)

CAN MONEY BRING DISEASE?

A FRENCHMAN wrote to the Paris Academy of Medicine, asking whether there was any danger of disease being carried by paper money. The learned academy, with unintentional and perhaps unconscious humor, replied that there was very little danger, as microbes "hate the agitation of constant transfer from one place to another."

Evidently money circulates as rapidly in France as it does here. Most of us are quite willing to agree that, even if disease germs could be carried on bills, few of us are able to keep them long enough to be in much danger.

While we don't refuse to accept money in whatever form it is offered, we would all of us rather have clean, new bills just out of the bank, than worn, dirty bills that have evidently passed through many hands.

But aside from the esthetic side of the question, is there any serious danger of disease being carried by money? It is possible that such a thing might occur, but practically, the chances are so small as to be negligible. There are a few cases on record of some forms of skin diseases being due to the common habit of women carrying money in their stockings in direct contact with their skin. But the short skirts and cobweb hose of today offer little chance of concealing anything. Another favorite hiding place for women has been the bosom of their dresses. But here again the loose, one-piece dress offers little concealment and no security. So most women today carry their money in their handbags. The present-day styles in women's dresses are, even in this small particular, more hygienic than the long, heavy, tight-fitting clothes of yesterday.

But in any case, paper money, like paper of any kind, is a poor breeding place for germs. These microscopic plants (for most forms of microbes are plants and not animals) like plants of any kind, need a certain amount of moisture. On a perfectly dry surface they do not increase and soon die.

In the earlier days of our knowledge of germ life practically every object that might harbor these minute bodies was regarded with suspicion. Those were the days when doorknobs, chairs and a multitude of other harmless objects caused a great deal of uneasiness among nervous people. With wider knowledge, we know today that, while such everyday articles might, under unusual conditions, transfer disease germs from one person to another, as a matter of every day experience they seldom do. Those diseases which are transmitted are carried by dirty water, dirty food, insects, animal and human carriers and by personal contact.

So don't refuse any money through fear of contagion. Get clean new bills when you can or, if you must take dirty bills, change them for clean ones as soon as possible. Keep your money in a purse or bag and don't worry about infection.

A BABY'S TEN COMMANDMENTS

THE ten commandments which God gave Moses from the mountain top have for centuries been recognized as containing the principles of right living for all those who are old enough to regulate their own acts. But how about the baby who is too young to know what is good for him, who cannot even tell his needs and his wants and who must depend on others for his food, his drink and his rest, who can only by crying tell older people whether a pin pricks him, a band scratches him or his stomach hurts?

In a "Baby's Book" the Manitoba health department gives "A Baby's Ten Commandments," which every mother and nurse should study and follow. Here they are:

1. Thou shalt not kiss me on the mouth.

2. Thou shalt not sneeze nor cough in my face, for I may take cold; neither shalt thou expose me to whooping cough, measles or other communicable diseases for I am human and may die.

3. Thou shalt not pick me up by the arms, but be careful how thou handlest me and dost lay me down.

4. Thou shalt not give me candy, cake, pastry, tea, coffee, or any such thing I may cry for, because I do not know what is good for me.

5. Thou shalt not give me a dirty pacifier to suck, nor allow me to suck my thumb, for it will give me enlarged tonsils, adenoids, to say nothing of spoiling the shape of my pretty mouth.

6. Thou shalt not take me to motion picture shows, nor keep me up at night, for it robs me of my sleep and makes me sick and cross.

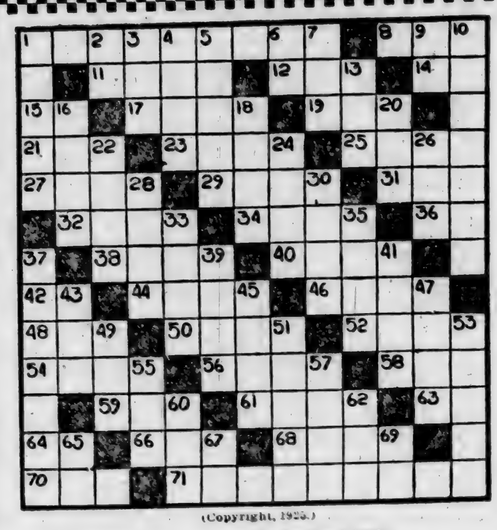
7. Thou shalt not rock me to sleep nor jolt nor trot me on thy knee when I cry.

8. Thou shalt give me the right things to eat, and feed me on time.

9. Thou shalt give me pure cool water to drink between my meals, for I get very thirsty.

10. Thou shalt give me a bath every day, clean clothes, my own bed, a comfortable room, plenty of sleep in the fresh air to make me grow, and last but not least, mother love to make my life worth while.

CROSS-WORD PUZZLE



(Copyright, 1925.)

Horizontal.

1—One who has been appointed for a position
8—A flying mammal
11—An automobile accessory
12—A female deer
14—A preposition
15—A continent (init.)
17—To be alive
19—Meshed twine
21—A falsehood
23—Directed
25—Name of a king in a Shakesperian play
27—A kind of tree (plural)
29—To wander
31—Before
32—Seeing that (obsolete)
34—A country in southeastern Asia
36—A printer's measure
38—An implement
40—A ferocious animal
42—One
44—Belonging to an American poet
46—A burden
48—Turf
50—Small masses of butter
52—Passes away
54—"Let it stand" (printer's term)
56—Oily or greasy substances
58—A meadow
59—The head (slang)
61—Part of the verb "to be"
63—Doctor (abbr.)
64—To proceed
66—To search for placer gold
68—Brings forth
70—Finish
71—Encourage

Vertical.

1—A passageway
2—Point (abbr.)
3—To lubricate
4—A kind of flower
5—At no time
6—A man's name shortened
7—An immeasurable period of time
8—A preposition
10—A violent stream
13—A snake-like fish
16—Is ill
18—A man's name
20—An artificial mound used in golf
22—To send forth
24—A flexible appendage
26—Part of the verb "to be"
28—To cease
33—A strip of wood or metal bent in circular form
35—Disposition
37—To rub or knead
39—Part of a tree
41—A sharp fastening implement
43—A negative
45—To pierce
47—An action
49—A lair
51—To guide
53—Ventured
55—Summit
57—A place for sitting
60—An exclamation of contempt
62—A point of the compass
65—Upon
67—A point of the compass
69—Tin (symbol)

Solution will appear in next issue.

HOW TO SOLVE A CROSS-WORD PUZZLE

When the correct letters are placed in the white spaces this puzzle will spell words both vertically and horizontally. The first letter in each word is indicated by a number, which refers to the definition listed below the puzzle. Thus No. 1 under the column headed "horizontal" defines a word which will fill the white spaces up to the first black square to the right, and a number under "vertical" defines a word which will fill the white squares to the next black one below. No letters go in the black spaces. All words used are dictionary words, except proper names. Abbreviations, slang, initials, technical terms and obsolete forms are indicated in the definitions.

Simple Case of Duty, as Manager Saw It

President William Green of the American Federation of Labor said the other day in Washington:

"Some of the arguments that employers advance for cutting down wages remind me of an anecdote:

"A manager was touring the South with an 'East Lynn' company, and one day in a hotel the actors and actresses had to put up with a poor dinner of salt codfish because funds were low, but the manager at a near-by table ate duck and green peas, and washed them down with a bottle of what looked suspiciously like wine.

"As no salaries had been paid for three weeks, the company held an indignation meeting, and a committee waited on the manager to protest.

"'Look here,' the committee's spokesman said, 'we don't think we're getting a square deal, boss. We have to eat salt cod, while you gorge celery-fed duck and wine. How about it?'

"'It's all right, quite all right,' said the manager. 'Tell the company I'm doing it for their sakes. What would become of you all if I didn't keep my strength up?'"

Japs Make Study of Resources of Nation

Japan's army intends to establish a mobilization bureau to study and prepare for national mobilization in times of emergency. Having disposed of other changes, Lieutenant General Ugaki, war minister, is ready to deal with the problem. The bureau will investigate as to what natural resources may be utilized in times of war and the amount of the resources necessary for the sustenance of the nation and the army and the navy in wartime. The establishment of an organ similar to the board of census, now defunct, is advocated by the war minister, to supply material on which the new bureau may begin work. Army authorities have decided to create the bureau in the army, as the cabinet leaders, owing to lack of funds, are opposed to the establishment of an independent organ in the government. The war minister, however, finds the present situation of the world conducive to the creation of the bureau because European and American powers are endeavoring to prepare themselves with complete systems of national mobilization.

Orchestra Is Leaderless

In Russia under the soviet rule the uncommon sight of an orchestra playing without a leader will be met with. Under this circumstance, it requires 50 rehearsals for the organization to perfect itself in a new number. The idea is that such an orchestra is more in line with soviet principles and gives untrained musicians an excellent opportunity for development in technique and accuracy. A particular example is the Moscow state orchestra.

To Avoid Foot Trouble

The public health service gives the following information on standing and walking: In using the feet, it is important to (a) toe out a little, if at all, (b) throw the weight rather toward the outer side of the foot, (c) try to learn to use the toes to push as the foot leaves the ground, (d) in standing try to grasp with the toes, (e) in tiresome long standing toe-in on the weight-bearing foot.

Irrigation in India

In Madras the most recent plan that has now been sanctioned by the government is the Polavarum irrigation project in the Godavary delta to irrigate 20,000 acres at a cost of 1,300,000 rupees (1 rupee is now, worth 36 cents). The government has also sanctioned the construction of new regulators at the head of the Ellore canal, in the Krishna district.—Commerce Reports.

Cavaliers and Roundheads

During the civil war in England (1642-1649), the partisans of Charles I were known as the Cavaliers, while those who espoused the cause of parliament were termed Roundheads. These nicknames were first bestowed in 1641, as terms of reproach; but afterwards they came to be adopted as titles of honor. The Cavaliers wore long hair falling in ringlets over their shoulder; while the Roundheads wore their hair cropped short, and affected extreme simplicity in dress.—Kansas City Times.

INDIANA BREVITIES

Twenty-eight new names appear on the faculty of Indiana university at Bloomington this year, it has been announced from the office of the registrar.

The 1926 convention of the International Baby Chick association will be held at West Baden, it was decided at the annual convention held in Kansas City, Mo.

President Coolidge holds that very strong evidence will have to be presented before he will consider a pardon for former Governor McCray of Indiana, now serving a septence at the Atlanta penitentiary, according to a Washington dispatch.

John S. Drake, age sixty-five a widely known bridge and road contractor, was fatally injured when the automobile he was driving was in collision with a car on the T. H. I & E. Traction company's line, three miles west of Richmond.

The grand sweepstake prize for the best ten ears of corn, any variety, announced at Indianapolis in connection with Farmers' day at the annual event, went to Angus Wagner of Manilla, Rush county. The prize was won by an exhibit of Reid's Yellow Dent corn.

It was learned at Indianapolis that Gov. Ed Jackson had decided on the appointment of Thomas D. Barr of Fairmont, present chief deputy bank commissioner for Indiana, to serve out the unexpired term of Eben H. Walcott, present commissioner, who has resigned, effective October 1.

Reappointment of two state officials whose terms had expired was announced by Gov. Ed Jackson at Indianapolis. The officials reappointed were Newman T. Miller, state fire marshal, and William A. Hough, a Republican member of the state board of tax commissioners. Both offices have four-year terms.

The state pardon board at Indianapolis has 123 petitions for executive clemency on its docket to be heard at the September session. Fourteen of the petitions are for persons now serving life sentences on charges of murder. Nine of these are before the board for the first time and five are seeking a rehearing.

Members of the state board of agriculture, although disappointed that attendance records were not broken by the Indiana State fair held at Indianapolis, are confident that the event had surpassed all previous fairs in point of interest, in the number of exhibits and in the quality of farm products and live stock displayed.

The highest yield of corn Indiana has had in more than a quarter of a century is indicated by the present condition of the corn crop, it is stated in the September crop report issued by the United States Department of Agriculture, division of crop and live stock estimates. Other crops likewise are reported in good condition.

The state library and historical commission at Indianapolis appointed Demarchus C. Brown, state librarian, to the position of director of the state library. It was also announced that the commission had named Charles Kettleborough, director of the legislative bureau, and Christopher B. Coleman, director of the historical bureau.

Frank Fuchs, who, while vice president of the Citizens' National bank of Evansville was convicted of embezzling approximately $80,000 of the bank's funds early last year, and who was sentenced to the federal penitentiary at Atlanta for five years, in all probability will be pardoned October 5, according to word received in Evansville.

Thirty-three applications for parole out of a total of 47 considered were recommended by the board of trustees of the Indiana reformatory at Pendleton. The board inspected new works at the institution and heard reports of various officials and activities. At present there are 1,526 inmates at Pendleton and 300 more at Michigan City prison which should be at the reformatory.

By an affirmative vote of 164 as against a negative vote of 18, the Indiana conference of the Methodist church, in session at Jeffersonville, gave its approval to the proposal to unify the northern and southern branches of the followers of John Wesley, making a total of 63 out of 124 conferences in the northern church which have supported the effort toward union.

The stopping and searching of automobiles, in the quest for violations of the prohibition laws, on the highways of Indiana, is dealt with in two statements issued at Indianapolis, one by E. S. Shumaker, superintendent of the Anti-Saloon League of Indiana, and the other by the Hoosier State Automobile association. The writers of the two statements take opposite positions on the question.

Cap. Edward Raeder, post quartermaster at Fort Benjamin Harrison, committed suicide by shooting himself in the head with an army pistol. He had been ill for a week.

Married only a month J. B. Steffey, age twenty-two, and his bride, Rachael, age nineteen of Indianapolis are in the City hospital in a serious condition, victims of a hammer burglar. The burglar, a negro, entering their bedroom while they were asleep, beat them with a hammer until they were unconscious, ransacked their home and fled. Seven suspects were arrested.

CHILDREN CRY FOR

MOTHER:— Fletcher's Castoria is especially prepared to relieve Infants in arms and Children all ages of Constipation, Flatulency, Wind Colic and Diarrhea; allaying Feverishness arising therefrom, and, by regulating the Stomach and Bowels, aids the assimilation of Food; giving healthy and natural sleep.

HERE AND THERE

See Furnish for that new Chevrolet.

Mrs. Bessie Henley and daughter, Goldie and Mrs. Hazel Monroe, were Hicksville visitors Monday.

Mrs. Retta Hathaway of Auburn came Wednesday morning for a short visit with her parents, Mr. and Mrs. M. T. Bishop.

Roy Wade, wife and son, George and Wm. Keeler, wife and two younger children, were Sunday guests of David Kosht and wife.

Get that Furnace repaired before winter. Bowser and Reed.

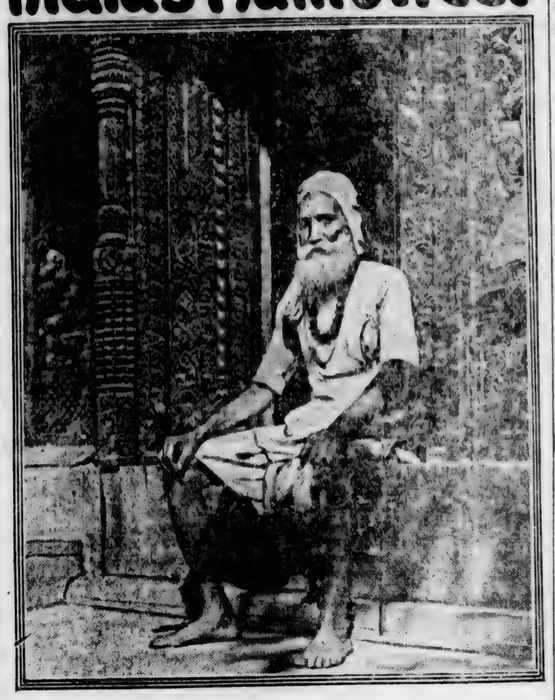
H. E Randall and wife had as Saturday night and Sunday guests Mrs Claris Cook, Miss Martha Flynn and Messrs Al Carnes and Buddy Burgett, all of Lima.

For Sale: Jewel Heating stove 16-inch fire pot, and Wilson heater. John Crothers.

W. E. Henley and family, Rolla Wiers and family and Mrs Vina Fish of St. Joe, Mrs. Carrie Williams of Fort Wayne who accompa ied them, Stearle Wade and family, were those from here who formed a company of thirty-eight that went to the hom e of Adam Lemon near Hicksville, Sunday with well filled baskets and enjoyed a picnic dinner with him He served water melon and musk melon afterwards.

On another page of The News will be found a call for election of local officers for St. Joe It will pay you to read it and know what will be required The Citizens and Independents will hold caucuses and nominate their tickets, thirty days prior to election. All the officers of the town are holding over from two years ago, due to lack of interest in voters to make nominations. The entire board will be elected this fall.

India's Main Street



A Temple Guardian of Benares.

(Prepared by the National Geographic Society, Washington, D. C.)

WHAT might be called "the Main Street of India" is the great roadway of the ages, roughly paralleling the foothills of the Himalayas, that stretches through the heart of Hindustan from the Afghanistan border in the west to the east coast. There is nothing provincial about India's Main street. Starting at the Khyber pass, where the Afghan caravans weave a tenuous thread of trade between the frontier hills, it runs to Calcutta, where a goodly share of the world's shipping is idly swinging to the tides of the treacherous Hooghly.

The railways which parallel its more than 1,500 miles, as they parallel many of our own best highways, have diverted much traffic from the open road and cooped it up like crated fowls in third-class cars. But the bullock-cart still rolls on and the motorcar has made its presence smelled from the northwest frontier province to Bengal.

The "broad road" of Kipling's lama and his adventurous chela, Kim, runs through one of the most thickly populated regions in the world. It is a plain road from beginning to end. From the mud fort of Jamrud to the docks at Kidderpore, this highway is a low way. It passes over the watershed between the Indus and the Ganges at an altitude of less than a thousand feet, and thence runs along with the Jumna or the Ganges to the alluvial delta in the midst of which Calcutta proudly reigns as queen.

To the left, throughout the length of the road, are the eternal hills, beyond which the snow wall of the world's mightiest mountains can sometimes be seen. To the right is the jumble of low hills which bear various names, but which, if the peninsula of India were slightly lowered, would form the irregular northern base of an arrow-shaped island, with its point at Cape Comorin, opposite Ceylon.

Although Main street runs through a region of rivers, let us not think of it as a garden land; for during much of the year it is dusty and dry and at no time does it have the lush loveliness which dots the hot southland with scenes of refreshing beauty. Throughout most of its length irrigation has been developed to a high degree.

Hot and Cold, Dry and Wet.

From the arid furnace of Ali Masjid, in the Khyber, to the steamy Sundarbans, this road is deadly hot at times; yet along the watershed between India's two most famous rivers the nights in winter can be bitter cold, even for those Mongolian peoples whose heavy costumes remind one of the Himalayan snows, whence they come.

Main street runs from the aridity of less than ten inches of rain annually, near the Afghan border, to the region of 75 inches, beside the lower Ganges; and were it to be continued farther, it would soak in the rains of Chittagong or Cherrapunji, where Jupiter Pluvius is always wringing out his heavy clouds like washed towels, and where in July, 1861, rain fell at the rate of one foot a day. Cherrapunji is accustomed to this form of hydraulic mining, which is wearing down the Garo and Khasi hills, but with 75 feet of rain in twelve months, 1861 was known, even among those to whom rain is no novelty, as the year of the big rain.

Throughout the entire plain which flanks the great Indian highway the mean annual temperature is between 75 and 78 degrees. In May the mean isotherm of all India runs so directly over the Grand Trunk road that one would think that by stepping into the fields on either side he would run off its 88.7 degrees to 88.6 on the right toward the hot heart of the continental land-mass and 88.6 on the left as he turned aside toward the hill stations and breweries which line the lower slopes of the Himalayas from Murree to Darjeeling.

Races are strung out along the road like ethnological exhibits, but the constant flow of life along this boulevard of people is such that the various stages in the transition, from the Turko-Iranians, whose handsome faces fill the Kabul bazaar at Peshawar, to the Mongolo-Dravidians, who dominate the racial complex of cosmopolitan Calcutta, are difficult for the stranger to detect.

Many Races and Tongues.

From the Pashto of Peshawar, which a Persian can understand, one enters the linguistic area of Lahnda, or Western Punjabi, with plenty of Kashmiri, another of the Outer-Aryan tongues, heard in the Rawalpindi bazaar. Then Punjabi, shading off to Hindustani, the lingua franca of a much larger region than that where it is common speech, Eastern Hindi, Bihari, and Bengali complete the needs of the man who would thread the road from Peshawar to Calcutta and understand the general conversation throughout.

Along the whole road, one finds Hindus and Mohammedans in imposing proportions. Between Lahore and Delhi the Sikhs, with their military bearing, Greek noses, and uncut hair, reveal themselves in considerable numbers, and at Buddh Gaya the yellow robe of the Buddhist adds a touch of variety to the religious complex.

A book could be written about each of the cities and great geographical features along India's Main street. There is the Khyber pass, road to central Asia, reeking with history and romance, the military, political and ethnical key to India. Peshawar, at its Indian end, is the first market for the rich carpets from Bokhara and Merv and Afghanistan; for bright copper trays, sheer veils and scores of other fascinating wares that come out of the north.

Rawalpindi, a little farther to the east, is the gateway to charming Kashmir and entrepot for its shawls, not so fine as those of old, but still things of beauty. There is Lahore, capital of the Punjab; and Amritsar, whose carpets are known to all the world and which is the Mecca and Jerusalem of the stately Sikhs.

When it comes to visitors, Delhi stands in a class by itself. Benares is a religious edifice with running water laid on. The Mela ground at Allahabad is a hive of Hindu pilgrims. But Delhi attracts great numbers of visitors whose interest is not in temple or mosque, but in the historical buildings of the fortress.

Where Hindus Prefer to Die.

Beyond Delhi lies Agra of the wonderful Taj Mahal, most beautiful of the world's memorials; Allahabad, where the sacred Ganges and almost equally sacred Junna meet; and Benares. From a religious point of view Benares is a city of perpetual piety; physically it is a crescent waterfront on a filthy stream backed by a malodorous city. The river front is lined with a succession of ghats or huge stairways, and palaces which make it a vision of beauty. But unfortunately Benares is the favorite place for Hindus to die. Thousands of them go there for that purpose and their half-charred bodies are consigned to the waters of the Ganges.

After Lahore and Benares, after the gay colors of Amritsar and the dun crowds of Allahabad, Calcutta is of little interest. The docks teem with life in spite of inaction resultant upon the mystery of foreign exchange.

The district made infamous by the Black Hole is now as imposing with solid-looking bank buildings as any Occidental financial district, and no more so. Kalighat almost, but not quite, reminds one of Benares. The theaters almost, but not quite, recall Piccadilly Circus or Times square. Yet Calcutta, queen city of India, is proud of herself. "Second City of the Empire" is a phrase which is always left in type by the Calcutta papers.

Christian Church Notes

Bible School at 9:30, communion service immediately following. Sermon by the pastor, I Konkle in the morning

Rally Day and Promotion Day will be observed. All members of the Bible School are urged to be present to answer at roll call.

Rev. Shape of Bryan will speak in the afternoon.

Rev. I. Konkle and wife, of Butler and the former's sister in-law and daughter of Canada, attended services here and at Coburn's Corners Sunday. It being the first evening service held here since Mr. Konkle's illness.

Lutheran Notes

Sunday School 9:30.

Preaching 10:30.

Prayer meeting Thursday eve at 7:00 o'clock.

S. D. Steffey, Pastor.

HEARD AROUND THE CORNER

The Champ Bailey residence is being painted.

Roy Koch and fan ily were Sunday dinner guests of Loretta Riggs at Concord.

Mrs. F. M. Thornton and children were weekend guests of relatives in Elkhart.

For good glasses see Griest at American Building Hicksville, Ohio.

For Sale:—2½ acres corn in shock and good cow giving about 2 gallon milk. R. W. Brodbeck.

Mrs. H. K. Reynolds, of Fort Wayne, visited Thursday for the day with Mrs. Emma Baker in the F. R Bowman home.

All local items of organizations or individuals advertising anything for the purpose of making money will be charged for at the regular rate.

S. N. Brunson, son Robert and daughter Ethel, of Waterville, O, were Saturday and Sunday guests of his mother, Mrs. A D. Brunson and other relatives. They report the arrival Friday of a son in their home who has been named Argyl Franklin

The state administrative board of Michigan has ordered a concrete pavement from the city limits of Coldwater south to the Indiana line, a distance of a little more than twelve miles, and now known as M-29. Construction work will be begun as early as possible next spring.

ST. JOE NEWS.

VOL. XXXIX | ST. JOE DeKALB COUNTY, INDIANA, THURSDAY OCT. 1, 1925 | NO. 39

Merchants Must Keep Pace With Competition

Encroachments of mail order houses upon the trade of local stores have long been the subject of concern to home merchants and will continue to be, no doubt, indefinitely.

Of late the bell ringer, who goes from house to house taking orders for his wares, has become another formidable competitor in certain lines.

If the home merchant is to hold his own against these encroachments, he must fight and fight hard. Appeals to local pride and sentiment are productive of little in the way of practical results.

Satisfactory goods, REASONABLE PRICES and advertising are the weapons he must use to hold his own. They are the same weapons that his outside competitors use against him.

The three must go hand in hand. Satisfactory goods will not alone secure the business without reasonable prices; both together will not draw the full measure of trade without advertising. First have the goods and values—then tell the public about them through your local newspaper.

As was said to the American Retailer's Association recently by T K. Kelly, of Minneapolis:

"It has become the habit of the American people to do practically all their shopping through the newspapers and the newspapers in America today have too great an economic force to need any recommendation."

The matter of price has a great deal to do with the average customer of today. People know prices today better than ever before. Why? Merchants are advertising prices more than ever before and the average home must buy where they get the most for their money. Ask the housewife what place in Ft Wayne she can get the best prices this week and she can tell you, why? Because she reads the ads. Your store window will not get the news to the people, it takes the window of the community, "The Newspaper" to get the news across properly, and then the store news must have sufficient pull to create a desire in the buying public to want that thing

The St. Joe Filling Station has inaugurated an advertising campaign starting in this issue, that will mean a real saving, in cash. Competitive prices are prevailing in all lines and the station is trying to give local patrons real service and real goods. It will pay you to investigate their advertising.

Read The News this week with more interest in the advertising

Crushed !!!

Dogs Ruin Flock of Sheep Monday

Sheep-killing dogs got in their dirty work Monday afternoon on the Wm Staman farm. While he was cutting corn Monday, he heard dogs barking and when he investigated he found one ewe in the creek and two dogs terrorizing her. Instead of getting a gun, Wm. preceeded to drive the dogs away. He commenced to investigate and found 5 dead and 4 badly hurt. He had 21 head in the flock and there are 13 others missing. They have been driven from the pasture, along the creek, by the dogs in their attempt to catch them. The loss is tremendous to Mr. Staman, as he has extra fine sheep and besides it will take a long time for them to overcome the fright. As we go to press Mr. Staman has two sheep unaccounted for.

Everything Comes To Him Who Waits

The truth of this old adage has again been demonstrated. For years S. S. Widney has had a longing or desire for an office secretary and not until Friday had he been able to find one that would fill the requirements of his office needs and his only personal peculiarities Miss National Mazda arrived Friday on the B. & O. and when she made her proposal to Mr. Widney, he accepted without reservations From now on she will have complete charge of Mr. Widney and his office. Since her arrival he has not been able to work, and the editor hears him remark about her beautiful complexion and pearly teeth. She is the finest ever. To show his appreciation of her arrival, Mr. Widney brought his noonday lunch and they enjoyed the lunch hour together last Friday. "Hands off" is the notice he serves on his gentlemen loafers.

Preparing For Town Election

Considerable interest hrs already been shown in the nomination of officers for the town of St. Joe this fall. The citizens caucus held Tuesday evening made the following nominations:—

One Trustee for 1st. Ward to serve for 2 years.
—F. M. Monroe.

One Trustee for 2nd. Ward to serve for 2 years.
—F. R. Bowman.

One Trustee for 3rd. Ward to serve for 4 years.
—E. B Smith.

One Clerk to serve for 2 years.
—B. S. Sheffer.

One Treasurer to serve for 2 yrs.
—L. B. Meek.

The Independent voters will have a caucus on Friday evening at the Town Hall and put in nomination a contesting list of officers. There is strong talk of the lady voters putting a ticket in the field. Friday is the last day for nominations

Culture Club Meet October Seventh

Last week The News turned out a very neat club program for the Culture Club of St Joe. The book is 3x6 inches and 20 pages, the cover in the club colors, purple with gold printing. The first program for the year will be as follows:

October Seventh

Hostess ..... Mrs. Price
Music ..... Hostess
President's salutatory.
Social Hour—Catherine Bowser, Dorothea Scholes, Alice Copp.

Cook Says He Loves Another

Murray Cook, operating a bus line between Fort Wayne and St Joe, admitted writing a letter to his wife in which he declared he loved another woman and urged his wife, mother of his seven children, five of whom are living, to get a divorce. Cook was ordered to pay his wife $30 immediately, and $15 a week for support of four children with her. He was fined $1 and costs and sentenced to 180 days at the penal farm, the sentence being suspended on condition he make regular payments "On the witness stand Cook declared he did not want to live with his wife again.

See Furnish for that new Chevrolet.

Workmen started Monday tearing down the big stack at the court house power plant at Auburn. Cracks have appeared in the 100 foot structure making it necessary to tear down and rebuild 50 feet.

Henry Beree, aged 25, of Newville, died Monday evening about 9 o'clock of tuberculosis. About a year ago he had influenza and pneumonia and being a very ambitious young man, he started work sboner than he should. After working for months he was compelled to quit and in July he took his bed.

Harry Waltz is a brand new Hot-Shot ahead. While unloading coal near the depot Monday, he parked his car near by. When he went to his car to go home he discovered a new hot-shot battery and one supposedly dead in the rear. How they got there, Harry does not know and no one was seen around the car during the day.

Monday will mark the opening of another very busy term of court. One lady, Mrs. Blanch Leighty of St. Joe, was drawn on the petit jury. Others of the township chosen were Howard Krise and Elmer Inlow. Lloyd Goldsmith of Spencer has been chosen for grand jury. Clarence Hart of Concord and Guy Platter of Newville are talesmen.

St. Joe Doctor Weds To Move Today

Dr. H R Minnick, 71, of this place and Mrs. Hannah E. Snyder, 64, of Albany, Deleware county, were married Thursday at Auburn, by Howard M. Morgan, pastor of the Auburn Presbyterian church.

Dr Minnick came here two and a half years ago from Grabill. Mrs. Minnick has been the doctor's housekeeper since last January. They left today (Thursday) for Albany where they will make their future home. The doctor has a very large circle of friends in St. Joe and vicinity who are displeased at him leaving St. Joe, but he feels that he has a better opportunity in Albany, a town of 1,500, with a young doctor and one old practicing physician.

Dr. Minnick is a jovial fellow and believes in spreading good cheer as well as good health. We hope that he will have as successful practice in his new location as he had here. Congratulations.

The DeKalb county schools exhibits will be a big feature at the Garrett street fair, October 8 9 10. The local school will have a display.

WILLIAM HARMAN, Proprietor.

Perfection Oil Heaters
"Heat by the Roomful"

THE PERFECTION OIL HEATER is undoubtedly the best known and largest selling oil heater in the world. It has gained this popularity because it is a real heating unit capable of heating an entire room. The low cost of upkeep and absolute dependability are two other reasons why it is so popular. Unlike many others, the Perfection radiates its heat in all directions, spreading its warmth to all corners. It is clean, odorless and economical. Burns ten hours on one gallon of kerosene. We have two styles on our floor:

The Vanishing Men

—By—

Richard Washburn Child

(Copyright by E. P. Dutton & Co.) (W. N. U. Service)

SYNOPSIS

Out of uniform, at the end of the World war, with the rank of major, Peter DeWolfe, young American of wealth and family, is urged by an English comrade in arms, Eversby Benham, to visit the Benham home and meet the Englishman's mother and sister, and, incidentally, Brena Selcross, young woman about whom there is an air of mystery. Muriel Benham, Eversby's sister, becomes infatuated with Peter, but he is interested only in the mysterious Brena Selcosa. The feeling between Peter and Brena ripens into love. Brena confesses that she is married and that her husband has "vanished." Brena's life story is out of the ordinary. Her father had been forced to leave Greece because of revolutionary affiliations, and his death, following quickly upon that of his wife, leaves Brena penniless, at Dallas, Texas. She secures work, and meets Jim Hennepin. He falls in love with her. He urges her to meet him in St. Louis. Brena returns to Dallas alone. Compton Parmalee, Hennepin's employer, tells Brena Hennepin's intentions toward her were dishonorable. Parmalee makes Brena an offer of marriage. After reflection, she accepts the offer. They are married. At the railroad station, immediately following the ceremony, Parmalee is seized with apparently uncontrollable fear. Brena shows her husband a scrap of paper Hennepin had given her. On it is a figure which Parmalee tells her is the "Kuk-ul-can," symbol of the Mayas. He appears perturbed.

CHAPTER X—Continued

—9—

"Oh, I know," Sydenham replied with his superior manner. "I didn't mean that; I'd thought it better to call the picture Brena."

"Brena!" roared Parmalee.

"Yes."

"I won't have it!"

"Why not?" his wife asked, rising from the divan and coming out of the studio shadows. "Why not, Compton?"

"Because the name is a peculiar name," said her husband in a ridiculous petty rage. "It is yours and I don't want it spread all over every picture gallery. It's bad enough—"

"Wait," Sydenham interrupted. "You have no cause to be disturbed. I shall call the picture 'The Riddle.' It will be offered to you at the end of my exhibitions under that title."

It never was offered to Parmalee, as a matter of fact, and those who remember it only identify it by the title Sydenham gave it, but Brena tried in vain whenever she thought of this incident during that period to escape the conclusion that Compton feared that somewhere someone would recognize her likeness, especially if her own name had been attached to it, and then through the artist trace back until she were found.

Not six months later the suggestion that Parmalee feared some individual or group of individuals who would deliver to him a dreadful vengeance, came sharply to her attention, leaping up like a horrid shape out of the quiet path of life, to stare into her face.

She had been motoring out from New York with Paul, the taciturn chauffeur, who always appeared to her to be a man with the odors of the penitentiary clinging to his bristled, badly shaped head, but who had been retained by Parmalee, through many a raise in salary and many an exhibition of insolence.

"I'm glad that you are well again," Brena said to him as they were winding up the vinelike road that approached the glowering old house.

"I'm not well, madame," Paul said. "But the substitute—Marks—the man Mr. Parmalee engaged to cover my illness, ma'am—he left."

"I didn't know," she said. "Mr. Parmalee engages all the employees, Paul—even the maids. He wishes to do so. So I didn't know."

"There's much that one doesn't know, ma'am, isn't there?" he said in an oily voice behind which was a snarl.

"What do you mean?"

"For instance, the reason Marks left."

"What reason?"

"Well, ma'am, Mr. Parmalee is suspicious of servants. You probably don't know he requires a birth certificate and all of that. Getting a job here is just like getting a passport, ma'am. And Marks he had one forged—he did—not meaning any harm. But Mr. Parmalee found it out. He wrote himself to the city clerk of the place. And when he knew, there was no taming him, ma'am. He was like a rat in a corner, if I may say so—frothing like a mad dog."

If Paul had not occupied a position from which no insolence of his own ever had dislodged him, Brena would have dismissed him then and there. She knew, however, that her husband would reinstate him.

"Paul is a handy man—with his fists and perhaps with other weapons," Parmalee had said. "I feel that he would be useful in an emergency."

Brena concluded that not only was Compton living in terror himself, but that now and then he yielded to the temptation to communicate this terror to her just as one who suffers from a disease might have a degenerate desire to spread its contagion. She resisted this by pretending not to recognize the existence of any abnormality in their lives.

The third winter of their marriage her husband began a practice of finding relief from that terror which had crept in upon him at first but now had begun to drive his nerves into a gallop. He who had conserved so carefully his precious health, now undertook a new burden.

Brena came down one morning when the rain of a wild March day was beating on the windows. The wind, tearing up the leaves of the autumn that had lain all winter beneath the snow and ice of the mournful, dripping garden, but was now released by a thaw, was slapping wet refuse against the great window panes behind the menacing iron bars. It cast rotten vegetation at this house as if it were throwing riff-raff into the face of an accursed personality.

Parmalee did not answer her call. He was not at the breakfast table. The servants could not find him in his rooms. He was discovered finally by his voice, which came in faintly with the sound of the wind. Brena without protection from the driving rain ran out the great front door, down the path which cut a diameter in the circle of the driveway, to the massive iron gate.

Parmalee was there with his little white hands grasping the upright bars swaying backward and forward like a caged animal, staring out with wild, red eyes, at the high shores of the distant river bank seen through the haze, his bare head wet and disheveled.

"Come and get me, d—n your eyes!" he screamed. "You've been waiting long enough. Come and get me. I'm not afraid of you all."

Brena looked over his shoulder up and down the road beyond the gate. Water was standing in the shallow ruts and the shrubbery, whipped by the wind, danced like lithe devils along the crest of the palisade. But no living creature was in sight.

"You better come into the house, Compton," she said with a tone of authority.

She realized afterward that she had leaped rather joyfully toward the conclusion that this moment explained the menace which had hung over them so long and that it promised a definite end of her obligations. She remembered of thinking how like an angry, impotent little dog he was, coward at heart, but barking behind a gate at an empty road. She believed he had lost his mind.

"Come into the house," she repeated.

He looked at her stupidly, his lower jaw limp and hanging, his eyes watery and looking into her face with the troubled expression of one trying to discover the surroundings after a loss of consciousness.

"All right," he said hoarsely; "I'm all right, Brena."

He appeared weak, unable to carry himself erect, and his breath wheezed unpleasantly as he followed her feebly up the walk and the wet granite steps of the frowning house.

"Go upstairs and lie down," she commanded.

He stopped with his hands on the black walnut newel post of the stairs and leaned toward her confidentially.

"Footprints," said he, grinning like a fiend. "Footprints."

Brena, opening the door of his library, walked rapidly toward the telephone on his desk. At last she had been driven to summon the aid, counsel and authority of the world beyond the doors of this damned home. Parmalee was mad. But as she put out her hand toward the telephone instrument it knocked over an empty glass. She raised this glass to her nose. The supports of her heart suddenly crumbled, for she knew then that her husband was not mad, not changed permanently from the crafty, secretive, self-isolated and haunted man that he had been, but was only at the end of a long night of trying to drink himself into the freedom of insensibility.

At this moment she wondered why she did not feel a marked increase of the old loathing and disgust that she had been unable to weed out as it had sprung up like some rank growth. At this moment she remembered his first appeal to her, how he had begged her to help him win back the clean spirit of his boyhood, how she had once seen the glint of that treasured something, which men forget to keep, shining dimly in the midst of decay, how, having tasted the bitterness of success, he had built new hope. Now he was a grotesque failure, pounding to pieces upon some unseen rock below the surface of the waters. He was paying the account of a lifetime, perhaps; perhaps the reckoning of one mistake. There surged up to the brim in her heart a great pity.

To Brena the cause of his panic, his terror, his suspicions, his isolation, the horrid exiled days he led, the sleepless nights he spent now appeared of less importance than the fact that no man was suffering more than he. But she was unable to help him: his defenses were now impregnable.

"I do not know what you mean," he said. "We live a clean, wholesome kind of existence, don't we? You never hear complaints from me. I do not go out much, that is true. But I am working. I do not sleep well. Neither do many men. I drank too much once, that is true. But that was thirty or forty days ago. You have not seen me make the mistake again."

"You are forever sending John down for a new bottle," said Brena.

He thrust a glance at her.

"It calms me. My nerves are not good—there's no denying. But why should you complain, Brena? You have your freedom. You go your own ways. You conduct your own studies. You can have anything you want for the asking. Why complain?"

"I'm not complaining," she had said, shutting her lips into a firm line. "I am inquiring."

"Inquiring?" he said with sudden heat. "Well, by G—d, if you ask once too often—you shall know! I'll tell you something about yourself you'll not want to hear."

"You cannot," she answered quietly.

"Are you laughing at me?" he exclaimed angrily.

"I was smiling."

"Smile on!" he snapped. "Maybe you can tell where Jim Hennepin is. Maybe in the end you won't smile. Maybe you will learn what it is that has clung to you unseen and unknown."

"I demand to know."

"No—by G—d—you shan't. Not until I know all—myself. Not until I know how I shall pay."

He paused.

"And let that come quickly," he added, throwing his open hands toward the ceiling, as if beseeching heathen gods. "Sudden, swift and sure!"

He rushed out of the room.

Night after night she heard him pacing his study floor beneath her room. He walked twenty paces one way, twenty at right angles, twenty more, twenty more. She had learned the count. He was pacing off a square around his big, paper-laden desk in the center of the room. She went to sleep with that sound of a caged animal in her ears; she awoke in the middle of the night when the moon

She Shuddered. She Wondered if by Any Chance It Could Be That the Blow Had Fallen at Last.

of summer threw the shadows of the plumed branches of the great trees upon her floor, hearing that faithful beat of footsteps she could recall, awaking when the bright sunlight was prying at the shutters on the western windows to hear the measure of his pacing.

Once she had awakened in the night and heard no sound. She had crept downstairs and peered into his study. He was crouching down below the window sill, only his eyes above, like a man in ambush, or like one who expects an attack upon his home, watching the running shadows made by trees, shrubs, wind and moon upon the lawn.

"What are you doing, Compton?" she asked.

He had jumped around and then laughed.

"What are you doing down here? You'll catch cold. I was thinking."

"Thinking? Thinking of what?"

"Of life."

"And what about it?"

"How I love it," he had exclaimed.

A few days later he rode in with Brena to New York. A new spirit had come into him. His eyes were filled with a new light; his voice had grown more firm. He did not converse with his young wife, but his silence had changed from that of fear and brooding to that of one who plans and weighs. On his countenance was a new expression, in his motions something of the former dynamic activity and decisiveness.

When Brena came home that evening she asked if he was there.

"No, ma'am," said the maid. "There's been someone telephoning from New York. His lawyers, ma'am."

"Oh, Mr. Lanfrew."

"Yes, ma'am. Several times, ma'am."

Brena ate dinner alone.

At half-past eight the telephone rung again.

"I will answer it," said Brena.

Again it was Mr. Lanfrew. He wanted to speak to Mr. Parmalee. It was about some legal document that had been drawn that morning.

"But Mr. Parmalee is not here yet," said Brena.

"That's strange," said the telephone instrument. "That's strange. I understood he was going home. I understood you were going on a long journey, Mrs. Parmalee. He had drawn the money to buy tickets. I thought he said that he was going to surprise you. He wanted to hurry home this afternoon."

"I'm sorry, but he hasn't come."

"Or sent you any word?" the telephone asked.

"No word," said Brena.

She shuddered. She wondered if by any chance it could be that the blow had fallen at last—the final dread conviction; she felt that it had.

Brena was right. Compton Parmalee, in spite of the secret efforts of the police, in spite of all that money could do to conduct a search without publicity, had dissolved as completely as a wisp of smoke in the blast of some great wind of heaven.

CHAPTER XI

Peter De Wolfe drew a long breath, put the palms of his hands upon the tightest area of his waistcoat over his expanded chest, threw back his head and exhaled so that it sounded a good deal like a sigh.

"Well," said he. "That is not a very pretty story."

The lamp had gone out; the slate gray light of early summer dawn filtered through the chintz curtains of the apartment of Brena Selcoss. She was facing this watery light, her beautiful hands folded in her lap, her dark eyes looking into profound space. In her attitude and in her expression Peter saw the suggestion of one condemned, who has awakened upon the day of execution and sits upon the side of a prison cot, thinking.

"No, Peter," Brena said at last. "It is not a pretty story."

"I'm sorry," he said, drawing his chair nearer to hers, and leaning forward he took her hands in his. They were cold as marble. She shivered as one who, having no sleep, feels the dawn as a wet shroud. After a slow, inquiring glance around the little chamber where in a variety of soft colors, in seasoned, suggestive furniture and in the smaller things, something of the rich diversity of herself had been expressed, she at last looked at Peter.

"I know," said he. "I am a shaggy brute. The room is cold—a kind of a still, stagnant cold. I'll light the fire."

She did not protest: for the moment her own will appeared inert. She watched him dully as he put the lumps of soft coal into the typical London grate and poked them meditatively just as if he had been born an Englishman and found that a soft-coal fire was an entertainment as well as a utility. She allowed him to lead her to the little upholstered sofa which he had pulled in front of the yellow flames and to put her wrap, laid aside when they had come in, around her shoulders and to put his hand upon her throat and cheek as he stood behind her still thinking.

"That is an ugly story," he said, as if determined that there might be no question as to the premise upon which his comments would be based.

Brena nodded. She said: "You can see now, Peter, why the one moment when your arms were about me and your lips were on mine is the end. If I knew I was free, Peter, I could not see more of you. I could not bear the thought that you, too—"

"Would be rubbed out?" he finished, and laughed.

She did not answer.

"But you can't believe—" he began. "D—n it—the thing is too absurd, too picturesque."

He considered it a moment.

"Why, if there were anything in it, Brena, dear one, it would be magnificent!"

"You forget that I have lived close to this thing. You might believe, too, if you had heard not my words but the words of life itself."

"You've told me all?"

Brena, sensing the presence of a doubt, rose, and, leaning upon the mantel with her face bent down toward the firelight, waited for several moments before she said, wearily, "Yes, Peter—all."

"And others knew?"

"Only Muriel Benham," she answered. "It was when I was ill. I had fled from America. It was ghastly there and I had the—what can I say?—the instinct for flight. I went to France. There was pneumonia, and after that I found my little retreat in Beconshire. Muriel was kind. She attended to my mail. I did not expect a letter from Lanfrew—his lawyer. She read it. There was a reference to—to both—to both."

"I understand," said Peter. "You explained a little; you had to."

He walked up and down the rug, touching the repetitions of the pattern with the toes of his shoes.

"How long has it been since he—went?" he asked.

"Over three years."

"And no word?"

"No word. Like the other—nothing—complete—nothing."

Peter made a wry face as if the phrases had made real to him the fact.

"There was no publicity?"

"No—almost none—a paragraph or two. Less, perhaps, than there would have been in London or Paris. In New York we were unattached—just people with a little money—making no acquaintances—nobody."

Peter nodded, reflecting that, after all, there could be nowhere on earth quite the obscurity of a man with a million or two living on his income in New York.

"What became of his money?" he asked.

"It is there—"

"Untouched?"

"Untouched."

He scowled. He said: "The house?"

"Just as I left it—one October day. Just as it was. Nothing changed, I suppose—insured, and left there. A haunted place. Peter—a place where one expects to find a poor murdered creature lying face upward just beyond every door sill. I fled. I even left the dog. I sent back a telegram to a neighbor—the caretaker—and gave him the beast."

"You didn't speak of a dog."

"I forgot—a horror of a beast turned loose inside the walls at night when the gate was closed. It was his dog, bought a few months before—a cross between a Great Dane and bloodhound—a thing with white fangs. They had to shoot him, I've heard."

Peter, walking to the table, picked up a small bronze Buddha upon whose face there was a satanic grin and with great seriousness the man gazed back at the heathen thing for several minutes.

"What about this—whoever it was—this symbol, half bird and half snake—Kuk-ul-can? You never found it again?"

"Yes," said Brena.

"You found it?" He appeared unable to believe.

"Yes," she said. "I had kept the purse. It belonged to my mother. I kept it. In the lining—last year—I found the scrap of paper."

"It's here?" asked Peter with a marked eagerness.

"Yes." She got up again, brushed the stray red-gold hair from her high calm forehead and opened a box on the bookshelves. When she gave the torn bit to Peter, she did not follow it with her glance; her gesture gave the impression that she regarded the scrap of paper as of little consequence.

Peter, however, was interested. He threw his cigarette into the fire and walking to the window, examined the crude drawing, looked at the two words scrawled beneath and, pushing aside the curtains, held the scrap up to the gray light.

He was interrupted by Brena's voice. It was filled with the tone of agony, of weariness, of sickness of soul.

"Peter, be merciful."

He wheeled about. She had been sitting gazing at him.

"Can't you see, Peter, that you must say good-by to me? Can't you see that it is torture not to say good-by? Can't you see, Peter, that I want you to go, that I want to go myself—back to Beconshire, to Beconshire, to my garden, my books, the wide view over the sweep of open country? Can't you see that I want the memory of these days to end with your kiss—that now we are only obliterating that memory?"

He came back toward her and, poking the fire again, he laughed to himself.

"You don't think there is to be an ending—now?" he asked after a moment.

She looked at him with her eyes filled with wonderment.

"Oh, no," said he. "No ending, dear one. Here's where we begin. There's just some cold hard business to do now. If it weren't for that I'd be sitting there beside you holding you very tight until we were found by the authorities, starved to death."

"Peter!"

"Yes. I mean it. That wasn't a pretty story. But it hasn't jarred me, Brena. We've the work cut out for us. First we've the job of getting your freedom—or finding out and proving that some death-dealing agency has given it to you already. Then we'll uncover this trail of fear that tracks you, dear. It's the work first."

"You dare—"

"Dare?" said Peter. "Don't make fun of me. Do you suppose I'd quit now? I want to go and get the facts, Brena. I want to knock to pieces this hideous waiting you've done—this menace. I want to come and get you then, Brena—if you love me."

"Love you, Peter?" She buried her face in her hands.

He stood before her, looking down and his hands would have taken her head between them if he had permitted them to exercise a will that directed them as if flesh and bone and sinew had volition of their own.

"I love you, Peter?" she said, without looking up. "Why, I love you as I never knew love could be."

"Then you help me to be strong," he commanded. "We've got to be Spartans now. You're going back to Beconshire today—I'm going to America on the first boat that I can get—passage or stowaway."

She looked up amazed.

(TO BE CONTINUED.)

Euphemistic

Mrs. Newrich—So you've traced my family back to great-great-grandfather. How did he die?

Genealogist—Well—er—he died of apnoea, superinduced by pendulous illaqueation.

Mrs. Newrich—Oh, that sounds so aristocratic. Please write it down. I must tell my lady friends.

Genealogist—I don't think I would madam. To tell the truth, it means that he was hanged.—Boston Transcript.

Help That Bad Back!

Is a bad back wearing you out? Are you lame, achy, nervous and depressed? Suffer headaches; dizziness and disturbing bladder irregularities? These are often signs of kidney disorder and too dangerous to neglect. Your kidneys keep the blood stream pure. Once they slow up, poisons accumulate and upset the whole system. Why risk neglect? If you suspect your kidneys, give *Doan's Pills* a trial. *Doan's* have been used successfully over thirty-five years. Are recommended by thousands. *Ask your neighbor!*

An Ohio Case

Mrs. Jane Sutherland, 603 No. Front St., St. Marys, Ohio, says: "A recent illness left my kidneys weak. I suffered much misery through my back. My kidneys were weak and acted too frequently. I was told about Doan's Pills and began using them. By the time I had taken one box, I was strong and healthy again."

DOAN'S PILLS 60c

STIMULANT DIURETIC TO THE KIDNEYS

Foster-Milburn Co., Mfg. Chems., Buffalo, N. Y.

Tells Why He Can Now Eat Hearty

"A letter which I read in the paper about Carter's Little Liver Pills fitted my own case so closely that I could not help trying them and am very happy I did." So writes Mr. Frank J. Trumbull of Jersey City, N. J., whose letter goes on to say: "I had heard about Carter's Little Liver Pills for years but never knew they helped overcome poor appetite and sour stomach, until I read about another man in the same plight who took Carter's with good results. I tried them and can honestly say that they freed me of nasty gas on stomach, so that I can now eat without getting bilious, and they improved my appetite fully 100%. You can rest assured that from now on I will boost Carter's Little Liver Pills whenever I can."

Two More Payments

"Say, Mary, how much more do we owe the doctor?" asked an East side man of his wife.

"Why, only $10," she replied.

"Oh, goody," spoke up the oldest son. "In two more payments the baby is ours."

DON'T BROOD OVER STOMACH DISTRESS

Don't lay awake nights and feel miserable all day—there's one right way to fix up your gassy, rebellious disordered stomach in such a short time that you heart will be gladdened.

Today Dare's Mentha Pepsin is the remedy supremely efficient where acute or chronic indigestion or gastritis is making your days and nights miserable.

Reports of its mighty power to overcome unbearable, near suffocating stomach agony have swept the land until to day its sales are marvelous.

Get one bottle of this pleasant speed acting medicine today with the distinct understanding that if it doesn't help you your money will be returned.

RADIO

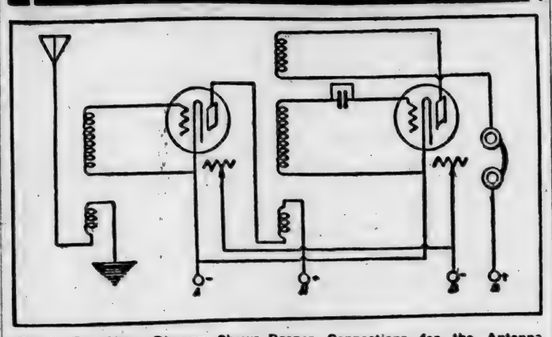

Fig. 3—The Above Diagram Shows Proper Connections for the Antenna Coupler and the Radio Frequency Transformer.

By PETER MOMBELLO, in New York Herald-Tribune.

Very often a radio set, especially if it is one of the popular radio-frequency type, will not work very well on DX stations, even after the fan has taken great care in making the proper arrangement of coils, spacing, soldering, etc. This is very often due to the fact that the set builder does not recognize any difference in the way that the four leads from the tuned couplers and audio transformers are connected.

It should be pointed out that every coil in a set is at a high potential at one end and at a low potential at the other end. This potential difference is necessary for a flow of electricity. For example, in a primary coil the end connected to the aerial is at a high potential while the side connected to the ground is at a low potential. A current can thus flow through this coil from the side of high potential to the side of low potential. In so doing a magnetic field is set up about the coil, which is constantly rising and falling with the reversals of the radio-frequency currents flowing through the primary since this is an oscillating circuit. The changes in the magnetic

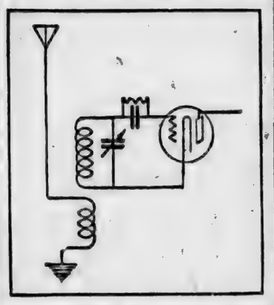

Fig. 1—Showing the Primary Circuit Incorrectly Connected.

field induce a current in the secondary coil, which also changes direction as many times as there are reversals in the primary coil.

Potential Difference in Coil.

Let us now go back to our idea of potential difference in a coil. The idea of potential is relative. A conductor is at a high potential with respect to some other part of the circuit which may be grounded and thus will be at a low potential. Also it has been shown that the end of a coil which is farther away from the source of current is the side of higher potential. Thus in the secondary coil the end that is farther away from the primary is the end of higher potential. Advantage should be taken of this fact and the proper connections made on a coupler so that the current from the aerial will flow through smoothly from end to end without any losses and that the end which is at the highest potential should be connected to the

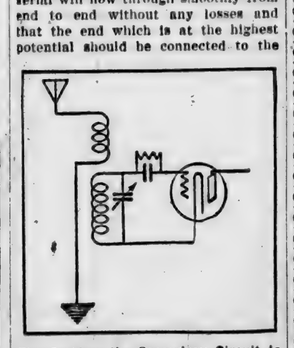

Fig. 2—How the Secondary Circuit Is Incorrectly Connected.

grid which is to have the greatest force impressed upon it. That is, the facts about differences in potential in a coil should be applied.

Mistakes in Connecting.

Figs. 1 and 2 show the usual mistakes that are made in connecting couplers. In Fig. 1 the side of the high potential (aerial end) is connected next to the low potential side of the secondary. In Fig. 2 the low potential side of the primary (ground end) is connected so that the grid side of the secondary is next to it. The fault here is that the grid is not insulated from a low potential influence. Both of these improper connections cause losses which are noticeable on DX stations. They result from a misinterpretation of diagrams which are drawn in a way that will be very compact and neat in appearance, but the connections shown are not to be made as if the diagram were an actual picture of the apparatus. It would be well if all experimenters drew all their diagrams such as the one in Fig. 3. Then no mistakes could be made in the coupler connections, which would save a great deal of experiment in reversing connections continually after a set is completed.

Fig. 3 shows the proper connections for a coupler. The low potential side of the primary (ground end) and the low potential side of the secondary (filament end) are placed together so that no leakage can occur. The important thing to remember is to connect the side farther away from the primary coil to the grid, as shown. In the intermediate stages of radio-

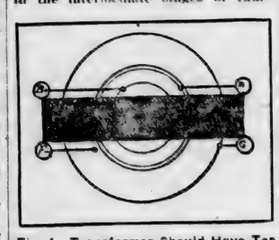

Fig. 4—Transformer Should Have Terminals Marked as Shown.

frequency amplification the couplers are connected in the same way, the lead from the plate being treated as if it were the lead from the aerial, and the connections of high and low potentials are based on this, the plate being at as high potential as the aerial.

To Save Making Reversals.

In the case of audio-frequency transformers the same rules hold true. Most transformers have their terminals clearly marked, but if this be not the case the fan should carefully examine the windings and leads to determine the high and low potential sides. Even if the leads are marked it is worth while to check them up and be sure that they are correct before connecting them, so as to save trouble in making reversals. The secondary is the outside winding in the transformer, it being wound over the primary and having two leads. The lead from the outer turns is farther away from the source, which is the primary, and hence must be connected to the grid since it is the side of the highest potential.

RADIO RHYMES

By ROBERT SUTLIFFE

THE NORTH POLE
A. D. 1926

IT IS sure a lonesome hole,
way up near the old North
Pole, where the nights are long
and houses built of snow; and
aside from eating fish or some
greasy kind of dish, it doesn't
even charm an Eskimo.

There the women dress in furs, some sealskin coat is hers (!) and the kiddies loll about in skins expensive; but the nearest house perhaps (just some hut with spears and traps) is miles away, the place is so extensive.

With its boundless ice-bound sea, it's a cheerless place to be; the only tune they have's the "Zero Blues"; and they live but in the past, the events of year 'fore last, are masqueraded as the latest news.

But those things will fade away, where the little bear cubs play and where the crop is only ice and snow; when the long night comes along, they'll be entertained with song and they'll get the latest dope by radio.

When the ice field heaves and breaks, they will hear about earthquakes, they will learn about the doings at Miami, that the price of coal is high, how to make an apple pie, and a song about some wondrous colored mammy.

When Aurora flashes out, they will know what it's about, they will learn the latest way to trim a hat; 'bout a husky dog that's sick, and the kind of milk to feed a well polecat.

No longer dense and slow will be the Eskimo, each house or two will have it's radio set, and upon some icy ridge we will see the dames play bridge, while a "cold deck" for the men will win a bet.

MRS. BORGELIN'S REMARKABLE RECOVERY

Gives Credit for Restored Health to Lydia E. Pinkham's Vegetable Compound. All Women Interested

MRS. OSCAR F. BORGELIN
FOREST CITY, IOWA

Forest City, Iowa.—"My first child lived only a short time and I was sick for a year after. When I bent over and raised myself up again I could almost scream with pain in my back. One day I was so bad that I had to leave my washing and get ready to go to the doctor. He gave me medicine, but it did no more good than if I drank just water. Once when we had been in town a little book telling about Lydia E. Pinkham's Vegetable Compound was left in our car. I have taken five bottles of the Vegetable Compound now and I do all my housework and help with the milking, and taking care of chickens and garden. Besides I have a fine baby girl eight months old, just the picture of health, and I am feeling fine myself. You may use this letter as a testimonial and I will answer any letters asking about the Vegetable Compound."—Mrs. OSCAR F. BORGELIN, Route No. 5, Forest City, Iowa.

A Bad Case of Nerves Relieved

Denver, Colorado.—"I was very despondent, blue and sad all the time, which is worse than real pain, and extremely nervous, with no appetite. I was this way for about two years and thought no one cared for me. My mother had had the same trouble and had taken Lydia E. Pinkham's Vegetable Compound for it. I tried everything else, then I began to take it. I soon had a better appetite and restored mental condition. I moved to a bright, sunny house, began calling on different people, and changed many other things. I also used Lydia E. Pinkham's Sanative Wash for my female weakness. With the aid of your medicines I am now a really healthy, happy and contented woman. I've used the Vegetable Compound at different times and will say it always helps me over the bad spells that come to every woman past 40 years."—Mrs. HELEN FINE, 35 South Washington Street, Denver, Colorado.

It needs but a little neglect to breed a great mischief.

Some people never get religion till they have tried everything else.

The Sea and the Roses

By GEORGE A. BARNES

(Copyright.)

GREAT masses of roses covered the wall and grew in rank profusion along the roadside, and, when I left the pony-cart and climbed the bank, I could see that the yard was filled with them and the little cottage facing the sea almost hidden with their wealth of color.

Thinking that the owner would not object to my gathering a small bunch from such an abundance, I was proceeding to do so, when, from behind a bush, a little old lady appeared, her refined face delicately pink from her exertions, looking as sweet as one of the roses among which she was working.

"Please don't pick them," she said, coming forward a few steps. "Don't think I'm selfish, but they're Dedie's, and I can't let anyone else have them," and with implicit faith in my obedience to her request, she returned to her work.

For a few minutes I stood and watched her deftly loosening the earth around the roots of a young rose bush, and then, with the guilt of a child discovered in some wrong-doing, I laid the few roses I had plucked upon the wall, and going back to the cart drove to my friend's house, where I was visiting.

A few days later, while we were passing the garden with its rose-covered wall, the sweet old lady appeared from among the bushes, her arms full of cut roses, which she pressed against her breast.

To my friend's greeting she replied with a pleased light of recognition in her eyes.

"Who is she?" I asked, when we had passed out of hearing; and I told the episode of a few days ago.

"Hers is a sad story. Years ago she came here, a bride, to spend her honeymoon in the little cottage, which belonged to her husband. They were wealthy, and the weeks slipped by until fall, when they returned to their city home; but she loved the place so that every summer they returned here to spend a few weeks in the country, within sight of the sea. And here, one July morning, when the roses she had trained over her windows were hanging heavy with dew, a little girl came to bless the household. The husband, going to the open window, plucked a great spray of roses, and placing them on the stand by the bedside, said: 'This shall be her luck flower.' And he kissed the babe and the young mother. They named the child Edith, but she always called herself 'Dedie.'

"When the lady appeared among us the second summer after, she was accompanied only by her baby; and instead of the beautiful gowns that had been her husband's delight, she wore a widow's dress, and her dear face was haggard with grief.

"The child had grown into a little lisping tot, who followed her mother about the house and garden, which was the widow's great solace, and where she spent most of her time, only going each day to the high cliff, from which she and her husband used to watch the sun set across the ocean, and the beach where they had walked in the moonlight, two married lovers.

"The flowers that had graced the baby's entry into the world seemed to have possessed some occult charm, for never was anyone more fond of roses than this child. She always carried a bouquet in her chubby hand, or wore a spray pinned onto her little pinafore, and if, by chance, she dropped one, she always stopped to pick it up.

"She was a strange child, too, with little unchildish notions and fancies that oppressed one with a feeling of eeriness. The ocean fascinated her, and oftimes at night, when it roared upon the rocky headland, she would awaken her mother and say: 'Mamma, why does the sea want me? Why does it keep calling to me?'

"One evening her mother tied a little hood over the curls, and together they went down to the headland, as was their custom, the child carrying a big spray of jacqueminots. A strong wind was blowing out to sea, and the mother shielded the child in front of her. They had stood thus for some minutes, when the roses slipped from the child's hands, and the wind caught and blew them toward the edge of the cliff. She darted forward to save them, and was stooping at the very edge to pick them up, when there came a sudden blast, she tottered on the brink for a moment, and then, grasping the spray of roses in her little hands, pitched forward into the sea.

"Her mother never returned to her city home. Winter and summer she has roses blooming in the cottage or garden, and every evening she goes to the cliff with an offering of flowers for 'Dedie's grave,' as she calls the ocean."

As we returned home that evening, my friend pointed out toward the sea. On a high point overlooking the water a lone figure was outlined against the setting sun. As we looked, she raised her arms and threw a great cluster of roses out into the water, and then sank upon her knees and with clasped hands watched them float out into the pathway of the sun.

So large a grave; so small a child!

Dog's Intuition

A dog knows the just from the unjust, the kind from the unkind, the charitable from the uncharitable, the true from the false, the man from the hypocrite, better perhaps than some humans.—Representative Harry B. Howes, Missouri.

Butchers' Company to Honor Defoe's Memory

The Butchers' company has decided to place in its hall a stained-glass window to the memory of Daniel Defoe, author of "Robinson Crusoe." The explanation is that Defoe's father carried on the trade of a butcher in London. The Butchers' company existed as a fraternity of "bochers" so long ago as 1180, says the Detroit News.

The authorities not only kept an eye on the quality of the people's food, but also on the price. A proclamation in the reign of Edward III sets out that the best goose be sold for 6d; best suckling pig, 8d; best capon, 6d; hen, 4d; rabbit, 4d; woodcock, 3d; perdriche, 5d; fesaunt, 2d; spaude or shoulder of roast mutton, 2½d; carcass of mutton, 2s; loigne of pork, 3d; loigne of beef, 5d; pestelle (leg) of beef, 3d.

The company's minutes record the admission of Daniel Defoe. He was the son of a butcher and became a member of the company on January 12, 1687, by virtue of his father's freedom.

Edict Will Be Blow to Perfume Industry

The perfume industry will be hard hit by an edict recently issued by the Lamas of Tsarung, in southeastern Thibet, prohibiting the killing of deer to obtain musk, a very necessary element in the manufacture of nearly all high-grade perfumes. The tiny musk deer already has become scarce and the edict will serve to make the supply of musk scarcer, and perhaps dearer, than rare jewels, says the New York World.

Dr. Joseph Rock, an explorer for the National Geographic society, who has just returned from an expedition to Chinese Thibet, brings word of the edict, which provides that hunters caught killing musk deer will have their hands cut off and nailed on the temple doors.

Street Car Horse Passing

The street car horse is becoming more and more legally dead. Thirty years and more ago when city transit was a matter of horse-drawn cars, the cost of repaving the space between the rails was charged to the company operating the car line on the logical contention that horses wore out this paving. Then horse cars gave way to electric trolley cars, but still the paving cost was assessed against the operating company. Now quite recently Massachusetts and Connecticut together with 46 cities located in 20 other states have enacted laws and ordinances that relieve electric traction companies from paying for repaving which the horses they have not been using for 30 years were legally held responsible for wearing out.

Roosevelt Bird Shrine

Eleven and one-half acres of land surrounding Young's Memorial cemetery at Oyster Bay, where the great ex-President is buried has been presented by his cousin, W. Emlen Roosevelt, to the National Association of Audubon Societies for a wild-bird sanctuary. Theodore Roosevelt was a good friend of the association. His first book was written on the birds of Oyster Bay and he was president of the Bird club of Long Island when he died. So it is very appropriate to erect a bird sanctuary, in his name.—Scientific American.

Grow Tall in United States

American war records show that the average English-born man dwelling in the United States is distinctly taller than the average Englishman. This may be explained, according to Doctor Shrubsall, by the greater tendency of the taller stock, the Nordic, to emigrate from the mother country to fresh fields. It may, on the other hand, be the effect of the vigorous American environment, causing foreign scions to sprout and thrive phenomenally and outstrip their parents physically.

Empress' Vanity Costly

To obtain face powder for Poppeae, Nero's wife, daring marines had to brave tempestuous seas in frail crafts and scale the dangerous cliffs of England. In those early ages powder was merely a chalk, and Poppeae preferred chalk from the English cliffs.

Since the fastidious Poppeae also fancied baths from the milk of wild asses, her beauty was costly; both the capture of the wild asses and the obtaining of the English chalk frequently involving loss of life.

Having the Last Word

By SIDNEY M. WILDHOLT

(©, 1926, Western Newspaper Union.)

MRS. WILLIAMS bustled out of the back doorway from her kitchen, ostensibly to sweep off the rear porch.

"Good morning, Mrs. Williams," she said.

"Good morning, Mrs. Chase." Mrs. Williams was inwardly relieved. She waited a decorous interval and went on: "You know Miss Matilda Merritt."

Mrs. Chase solemnly nodded. She had no need to nod. It was Miss Matilda, who, acting as representative of the estate that owned most of the houses, collected the rents. Oh, yes, Mrs. Chase knew Miss Matilda.

Mrs. Williams paused dramatically. "Well, she rode away with him in a taxi last night."

Miss Matilda had two rooms on the third floor of Mrs. Williams' house.

"You don't mean she went away with Samuel P. Sanderson?" chirped Mrs. Chase.

"Exactly," confirmed Mrs. Williams. "In a taxi, about seven o'clock."

"That means she's after him, all right," Mrs. Chase commented.

"And that isn't all," Mrs. Williams continued. "I didn't hear her come in last night. She must have got back after I was abed and asleep."

"Probably a show and supper afterward," suggested Mrs. Chase.

"Perhaps she didn't come back," Mrs. Williams observed ominously. "I only said I didn't hear her come in."

"You don't mean—?"

"It would be just like her," Mrs. Williams complained in an injured tone.

Mrs. Chase shook her head sadly.

"Not so much as a good-by or gratitude or anything," Mrs. Williams went on.

"Yes," agreed Mrs. Chase. "Especially you. You saw Mr. Sanderson going into his big house out in Auburn that day, and you told Miss Matilda about it, and then you found out that the house belonged to Sanderson, the lawyer, and you told her that, too."

"Well," said Mrs. Williams, "what can you expect? He met her walking by the house one day with his portfolio under his arm. She told me that she dropped one of her bills—it was the day she was collecting rents—and when he picked it up for her she explained she was going her monthly rounds. He laughed and said that walking would do her good, just as he walked to do him good."

"He must be past forty," Mrs. Chase remarked.

"But his walking, I suppose, keeps him young," remarked Mrs. Williams. "Miss Matilda asked him, you know, after I told her about the big car in front of his house, why he didn't ride sometimes, and that was what he said—that walking kept him young." She paused. "And Miss Matilda's thirty-six herself," she hoarsely whispered.

"Well, if she hooks him she'll lord it over us," mourned Mrs. Chase resignedly.

"If she hooks him," Mrs. Chase repeated scornfully.

The two women finished sweeping their bottom steps together. They heard a door open. It was the door upstairs, and Miss Matilda Merritt herself stood in the doorway.

"Good morning Mrs. Williams," said Miss Matilda drearily. "I came down to ask you—"

"Good morning," Mrs. Williams replied. "Did you have a good time with your lawyer last night?"

"He's not a lawyer." Miss Matilda said bluntly.

"Not a lawyer?" Mrs. Williams repeated in a puzzled voice. "Samuel P. Sanderson not a lawyer?"

Miss Matilda clenched her fingers and regarded her two small fists intently for a moment—not, however, purposing any violence.

"His name is not Samuel P. Sanderson," she replied.

Mrs. Williams was stunned. "But—but—," she stammered. "But that was Mr. Sanderson's house."

Miss Matilda's eyes flashed sudden fire. "That may be," she admitted grimly, and then, "but it's not his house!" she exclaimed defiantly.

Mrs. Williams gazed at Miss Matilda open-mouthed, but silent—for once.

Miss Matilda glared with suppressed anger and chagrin. "He's only a book salesman," she exploded. "He walks," she added maliciously, "to keep young. He had occasion to walk one day into the driveway of Samuel P. Sanderson, the lawyer. Furthermore, he thought that I owned all these houses from which I collect rents—or did collect rents," she amended.

Mrs. Williams regained control of her temporarily paralyzed tongue. "He did?" she gasped.

"He did," asserted Miss Matilda with emphasis. "He had the audacity to say so—last night."

"Oh," breathed Mrs. Williams softly. Mrs. Williams subsided, nay, expired in that breath.

"I came down," Miss Matilda said, reverting to the statement Mrs. Williams had interrupted, "I came down, Mrs. Williams, to ask you to forward my mail."

Mrs. Williams stared.

Miss Matilda handed her a slip of paper with a written address. "You see," she added, turning back up the stairs, "I'm packing up now, because," she paused to plunge home the full force of her revelation, "because I married him last night!"

Trying Out New System of Prison Discipline

A new system of prison discipline is being tried out at Peterhead, the Scottish convict prison, says London Answers.

Ten "noncommissioned officers," graded as in the army, and wearing the stripes of their "rank," have been appointed from among the convicts themselves. They move freely about the prison buildings, are put in charge of other convicts, and report breaches of discipline to the wardens.

Evening classes, at which all the teachers are convicts, and concerts, also run by the prisoners, are other features of the new regime. Games are played in the prison yard, with convict "N. C. O.'s" as referees or umpires.

Serbia, however, has probably the most popular prisons in the world. The convicts are allowed to go out for the day. There is no fear of their escaping, as they are better fed and housed in prison than at home.

"Make the most of this, my boy; you won't live so well again," one old woman was overheard saying to her convict son when she visited him in prison.

Just Habit

"What's the poet grumbling about now?"

"Thinks he ought to be able to run his car on a poetic license."

Thievish Plot Failed

The famous coronation stone, in Westminster abbey, which has been the subject of much discussion recently on account of the protest of Scottish visitors who with others have to pay to view it, was once the center of a practical joke, which, luckily, came to nothing. A body of young Scotsmen, mostly students, concocted a plan to steal the stone and smuggle it back to Scotland, where it was to be secreted away in a place revealed only to the chosen members of the "Inner Circle." Things even went as far as having an imitation stone of painted wood made. However, the hearts of some of the conspirators failed them at the last moment, and word reaching the ears of the authorities the whole thing fizzled out.

Bees Seized Cannery

Bees attacked the peach packing plant of the California Co-operative canneries at Visatia, Cal., requiring the combined ingenuity of the law, beemen and factory heads to keep the machinery running.

The law admitted it was helpless in the face of a whole hive of bees, which seemed to belong to nobody and refused to stay put. The beemen were unable to lead them into any hives, since the bees thought considerably more of the sugary content of the fresh packed peaches and syrup than they did of home.

The women employees stayed with the job, but some of the men abandoned their positions until a smoke screen had driven most of the pests out.

Unfortunate Accommodation

"The branch line trains are very accommodating," said Sandstorm Smith of Rampage, Okla., "but still they can't please everybody."

"Can't, eh?"

"Nope! As the train for Ten Degrees pulled out from the station yesterday the conductor saw a feller running after it and gave the engineer the slow signal. The feller was running with his head down and didn't know the train was slowing up, and ran square against the rear end and broke his nose. And you ort to have heard him roar!"—Kansas City Star.

Uncover Roman Bath

Excavations at Folkestone, England, have uncovered an ancient Roman bath with a complete heating system. A perfect furnace arch, four feet high, has been uncovered. The main building in which was the bath was 156 feet in length. The bath is at least 1,700 years old.

The Whiskers of Hercules

By WOLCOTT L. BEARD

(©, 1926, Western Newspaper Union.)

THEIR wedding journey included a visit to their common birthplace; the town had changed. A glimpse of the Maison Puchaud caused Alice to quote poetry.

"'Man may come and man may go,'" she murmured, "'but I go on forever.'"

Dick, her husband, knew that it was a brook that Tennyson had in mind when he wrote those words, but they were expressive enough even when applied to that candy shop. There was a pause, filled with early memories. Memories of Madame Puchaud, huge, dominating and capable; of M. Hercule—"Mr. Hercules"—her very unherculean spouse, renowned for his skill and the glory of his golden whiskers and of "Herculette," their son, who, was a replica of his sire.

"D'you remember, Dick," asked Alice, after a little, "how the little Puchaud boy used to fly into a tantrum when we called him 'Herculette,' because it was a girl's name?"

"None of the other kids had much to do with him," remarked Dick, "except Molly Bowman. She was sorry for him, she used to say."

"And he adored her in consequence," smiled Alice, reminiscently. "Larry Burke also adored her—and she him. I wonder how it all came out."

II.

"Just look at those kids," chuckled Dick as they seated themselves at one of the little tables. "It's 'Whiskers Day,' Alice—have you forgotten?"

She had not forgotten that weekly event of her childhood. On this day the Maison Puchaud produced a glorified molasses taffy of peculiar consistency and a deliciousness to be found nowhere else in the world.

The kitchen door opened, and a white-clad figure, in a cook's cap and apron, could dimly be seen bearing one of those trays, as a young man and a woman, also young, came into the garden. On the girl's hand gleamed two rings, one of plain gold, and both of them new. It was the face of Molly Bowman, and Larry Burke! With glad fellow-feeling for her sister-bride, Alice started to run forward to renew the old friendship, when a wild yell made her start, then shrink back in fright.

The yell was repeated; from the shop door, scattering the children, there burst that white-clad figure. With apron and long, golden whiskers streaming behind, with cap rakishly askew and a knife flourished in its right hand it sped down the path.

Before the astonished Larry could do more than take a quick step backward, this wild figure had sprung and was clinging to him. The knife glittered as it fell.

Followed by Alice, Dick dashed around madame. They found Larry, with reddened shirt-front, with his head supported on the knees of his bride, whose face was paler even than his own. They found madame, standing horror-stricken, gazing with widened eyes at the white-clad form that lay prone on the gravel walk. Reaching down, Dick jerked this figure to its feet—then gasped with surprise.

"Oh, papa, papa! He is crazed—and where has he fled to?—who saw him go?"

No one answered. Then the police came; and still lamenting loudly, Herculette was led away.

III.

Thus began the great Puchaud mystery, and which, incidentally, detained Dick and Alice in town as material witnesses.

Alice and Dick stated positively that they saw M. Hercule Puchaud rush down the path and strike Larry Burke with a knife. Larry—who was not fatally wounded—and Molly made the same unequivocal statements. Madame, who had come from the kitchen, also had no doubts, though she naturally could not see her husband's face.

Monsieur Hercule Puchaud, on the other hand, swore that he had been purchasing supplies, and at the time of the assault was in the act of returning home on a street car.

In short, the affair ended in an absolute deadlock—and there you are!

IV.

It was madame who answered the riddle. But she gave that answer to Alice alone, and then only because both were old friends and—especially—because Dick was a doctor.

"Figure to yourself!" said madame. "As he brings the confection beloved of children, my son sees his hated and triumphant rival. His artist's soul is aflame! To fix a portion of the confection to each cheek and another to his lip, so that they resemble the golden whiskers of his father—that is the work of an instant. He rushes forth—strikes—and is hurled to the ground. He is surrounded—must escape! He eats his disguise—those whiskers of confectionery," explained madame. "He ate them—swallowed them in one superhuman gulp! But alas, they had been dragged in the stone-covered path. Pebbles, great and small, adhered to them. Confide in a local doctor he will not. And me—I am distracted. A doctor he must have. His stomach is a human gravel pit. Therefore—"

At this point madame's feelings overcame her, and she sobbed aloud. Alice, however, had heard enough. With a consolatory pat of the elder woman's cheek, she went in search of Dick, in order that excavations might be duly begun.

PERSONAL PARAGRAPHS

Receipt books on sale at News office.

Foster Gee returned home Monday evening from the Peru hospital.

Mrs. John Hart left Monday morning for two weeks visit at New London, Ohio.

Mrs. Libbie Lacer of Mansfield, Ohio, is here spending the week in the Frank Terman home.

Abe Mason and wife of Auburn, were Sunday afternoon guests of Derwood Ridgway and wife.

Mr. and Mrs. Howard Northrup are spending the week with their daughter, Mrs Will Hamilton.

Mr. and Mrs. Frank Brandon of Auburn, were Sunday afternoon guests of F. R Bowman and wife.

Lee O. Tustison, wife and son, Keith, of Defiance, were Sunday guests of Mr. and Mrs O K Shull.

Merritt Sechler and mother Mrs. Jennie Sechler, were Sunday guests of Charles Hamm and wife at Garrett.

Derwood Ridgway and family will occupy the residence being vacated by Dr and Mrs H R Minnick.

Mrs Fred Badman of Lima, spent the past week a guest of her daughter, Mrs. Charles Brown and family.

J. P Buckingham and wife and Wm Randall and wife attended a Lutheran church supper at Harlan Saturday evening

Clayton Wyatt and wife and Harry Hursh and wife, were Sunday guests of their parents, Marsh Andress and wife.

Miss Latha Dermott is able to be out on crutches after being confined to her home on account of torn ligaments of the left foot.

Mr. and Mrs. Frank Scholes entertained at Sunday dinner Rev Konkle, wife and son, Diehl and Robert Ulm and family of Butler.

If you are wanting to subscribe for any magazine by the year or single copy, see The News first We can save you money and trouble.

There will be no more express business on the Wabash, as far as St Joe is concerned. All the business has been transferred to the B. & O. Passengers are compelled to ride their local freights and if they expect to return will be given a tie pass.

Mrs. Maranda Maurer was pleasantly surprised Sunday when the following persons gathered at her home serving a pot luck lunch: Mr. and Mrs. Simeon Maurer, Mr. and Mrs. Wm. Ludwig, Mr. and Mrs. Walter Moffett and daughter, Mr. and Mrs George Reed and three daughters of Auburn, Mr. and Mrs. Orange Herrick, Mrs. Anna Dilley, Mrs. Maude Braithwait and Scott Maurer.

Public Stock Sale, 5½ miles north west of Auburn, 2½ miles southwest of Corunna, Monday, Oct. 5, the following:—Span of mules, 2 horses, 17 head heifers, 5 hd. milk cows, 2 high grade Jersey bulls, 17 head hogs, 23 head of sheep. The above stock are all high grade and in a good condition.

J. I. Farley, Owner.

Christian Church Notes

Bible School at 9:30, communion service immediately following.

The Martha Society will meet Thursday afternoon with Mrs. Nan Lysher.

Council meeting of officers and teachers at the church, first Monday evening in October. Loyal Delta Alpha class to have charge of the social hour.

Rev. Shape of Bryan gave an excellent address Sunday afternoon. He was accompanied to this place by his wife and two children. The male quartette furnished several selections throughout the day. Mr. Williams and Mrs. Konkle gave a duet and Miss Floy Ulm of Butler sang a solo.

NEWVILLE

School was dismissed Friday on account of the Hicksville Fair.

Mrs. Willie Miller spent last week at Groverhill, Ohio, visiting relatives.

Mrs. A. I Richmond of Chicago, is visiting her parents Frank Snellbaker and wife.

Fay Smith and wife of Toledo, spent last week here with his sister Mrs. Omo Richmond and family.

Mrs. J. H. Benner spent last week at Fort Wayne with her grandson, Levertie McDanials and family.

Born to Argyl Sechler and wife, September 22, a little daughter, Alice Carmen. Mrs. Harriett Sechler of St. Joe is caring for the family.

Mrs Minnie Hatch came home from Lansing, Mich., Wednesday, where she and her husband have had employment during the summer.

Sunday, Sept. 13, was the 50th wedding anniversary of Mr and Mrs. J. H. Benner. Their children and grandchildren to the number of 20 came to help them celebrate the day. Those present were Mr. and Mrs Oliver Morningstar and six children of Adrian, Mich., A C. Koeppe and wife and A. H. Caskey and wife of Melburn, Ohio. H. A. Benner, wife and son of north of town, Levertie McDaniels and wife and Mrs. Claud Tarney and son, Ned of Fort Wayne. All enjoyed the day and wished the bride and groom many more years of wedded life.

LOCAL ITEMS IN BRIEF.

Orla Woodcox has been working for Ed Collins north and west of Concord.

A baby daughter was born at 6:30 Monday evening to Mr. and Mrs. Grover Curie.

J. P. Buckingham and C. C. Woodcox with their wives, were at Paul Baer landing field at Fort Wayne Monday and saw the seventeen flying machines in the reliability contest land

MA ON SAVING

By DOUGLAS MALLOCH

WELL, Pa is talking saving, too—
I like to hear him rave;
I hope when Pa is good and through
He'll really start to save.
This ain't no spender I have got;
But, like a lot of men,
Whenever he has saved a lot
He blows it in again.

He saves it here, he saves it there,
He saves on this or that;
And that is why I have to wear
A 1920 hat.
And then some fellah comes along
With some gigantic scheme,
And Father listens to his song
And spends it on a dream.

To save is better than to spend
But saving ain't enough:
The thing that matters in the end
Is where you put the stuff.
Don't try for twenty-five per cent,
A fortune in a week;
I wish I had what Pa has spent
For rainbows, so to speak

Just put a little in the bank
Or else the building loan,
Not hand it to some crazy crank,
Some man you've never known
Go buy a bond, or buy a lot,
Or something you can see,
Right spending after all is what
Is real economy

Two Men and One Woman

By JOHN MATTER

(©, 1925, Western Newspaper Union.)

THE yellow sun slid out of the green ocean; the girl stirred in her sleep and faintly moaned; and so began another day in the lifeboat.

"Say, you," muttered the red-faced man, "slide that woman overboard. Gets on my nerves, her groanin'."

"Gets on my nerves, you're yappin'," replied the pasty-faced man, "and don't you go to orderin' me 'round. You can do your own murder, you can."

The girl sat upright. She gazed first upon the two men, who dropped their eyes at once and quickly looked away, and then her glance went around the horizon.

"I beg your pardon," she smiled.

Silence followed for several minutes.

"Would it be a kindness," she inquired, "to—ah—to murder me?"

Another silence lasted for minutes. It was finally broken by the pasty-faced who squirmed and asked: "Feelin' better, ma'am? You've been off your nut, now an' then."

The woman studied him before she answered. "My head aches, I can't remember everything." Her eyes went to the face of the other man. "Who are you two?" she asked.

"Bill Thatcher—stoker," said the red-face, sourly.

"Henry E. Wiggin—steward, an' at your service," added the pasty-face and grinned for no apparent reason.

"Who put me in this boat?"

"We found you here after we lowered her away."

"Oh! I remember now. I was trampled under the first rush on deck, and one of the ship's officers picked me up and placed me in a boat. Were many people—" she hesitated.

"Reckon nobody was. Ship struck makin' half speed 'count the fog." Thatcher drummed moodily on a thwart and scowled. "Should have stayed by the ship. Better off. That cabbagehead yonder with his chatterin' teeth stampeded me. Me! Bill Thatcher—stoker!"

She studied their countenances again and then remarked: "I'm thirsty."

Thatcher raised the water bottle. "Here's a swig apiece," said he. "You can have yours now if you want it."

"I'll take my share now," the girl decided. "You scum of earth and ships," she flashed. "I heard your talk when you thought I was—ah—off my nut. You've another water bottle hidden beneath the coat under that seat and another tin of biscuits."

"We has, eh?" sneered Wiggins. "Well, what of it?"

"Nothing. But I haven't been off my nut, as you call it, all the time; in fact, Henry, I've heard some talk of murder."

"You'll hear more, likely," growled Thatcher.

"Likely, you will," added Wiggins.

The girl whitened but did not flinch. "You rat face!" she laughed. "Henry, you amuse me."

Wiggins arose, shrilling, to his feet. "You—you—quit callin' me Henry!"

"It would be a pleasure." She turned to the other man. "Do you mind if I call you Bill?"

"What the devil do I care?"

"Then perhaps you won't care if I ask you why you stole biscuits from the extra tin last night while Wiggins was asleep?"

Thatcher arose to his feet with a bellow. "It's a lie!" he cried.

"What do you think?" the girl asked of Wiggins.

A transformation had taken place with the steward. He was kneeling, crouched as though to spring. Already one hand held a knife. "Just a moment, Henry," pursued the girl, "I have a question to ask of you, if you don't mind."

"Ask it," commanded Thatcher.

"Why did you drink from the extra water bottle last night when Bill was asleep?"

"A lie!" screamed Wiggins. "A lie!"

"Is it?" roared Thatcher. "Is it? I'm not so sure of that, you slimy dried herrin'!"

And now a change came over the stoker. He was crawling aft toward Wiggins, and in one hand was a knife.

The girl scrambled to the bow to give the combatants room. She took with her, from under the seat, the tin of biscuits, and proceeded to scatter them upon the water. Then she flung the empty tin toward the two men in the stern and sat back to await developments.

It rolled between them as they feinted for an opening for attack. Their knives, ludicrously, dropped from their unclenched hands as the two men leaned forward open-mouthed to stare into the empty biscuit tin.

Wiggins spoke first. "She's done us in, the wench!" he screeched. "There goes our biscuits floatin' off astern! An' now I does her in!"

Thatcher pulled him back. He grappled Wiggins around the waist and flung him overboard, and plunged in after him.

The steward came to the surface, gasping and fluttering. "I can't swim! I can't swim!" he wailed.

"Sink then an' be d—d!" bellowed Thatcher, striking out after the biscuits.

The girl laughed unsteadily and quickly unshipped the oars to point the boat toward the men astern. She glanced over her shoulder to observe how much closer the distant liner had drawn during the half hour since she had glanced around the horizon.

New Autumn Modes Are Conservative

Describing the Paris openings a fashion correspondent in the New York Times says:

In all of the exhibitions there is a tendency toward more art, more refinement, less of the flash and "noise."

These affairs are done in Paris as nowhere else. They are, more or less, formal private entertainments, and to receive an invitation is something of a distinction. In the handsome rooms of the establishments, many once the residences of the elite of Paris, the wide corridors and winding stairs, richly curtained and carpeted, impress one with the prestige of Paris as the fashion center of the world and its styles creators as masters of their art. One has only to glance about to feel that thrill that artists must find in the grace, style and elegance of the environment. The liveried attendants, the convenable and courteous attitude in everyone who appears in connection with la maison—all are in keeping with the occasion.

Dealing With Waistline.

In the more important houses the opening is either a tea or an evening party. This year Jean Patou was the first host, and his exhibition was a really brilliant affair with everyone in evening dress as for a first night at the play. There was an orchestra and supper, with vintage champagne.

In his advance styles Patou has developed a definite type in which the line is of utmost importance, though it is handled with such skill as not to be obvious. The widely discussed waistline, which women of fashion insist must be once more normal, though refusing to return to stays, Patou deals with in dexterous and delicate manner. Few of his bodices are built on the middy blouse plan, but his sports clothes and tailleurs are cut like boys' clothes and in entirely new designs.

To avoid the commonplace, suits of this description are made like norfolk jackets. In one, box plaits begin at a yoke, are confined by leather belt just above hip line, and then carried down the skirt, back and front. This scheme is varied in other tailored suits and frocks. In another arrangement the front plaits begin at the waist.

Afternoon and evening dresses are less simple and present the real waistline problem. But in these Patou also has accomplished real achievements. The normal waistline he announces as now "stabilized," is subtly evident in the lines of soft materials drawn closely around the figure in a charming manner. This model is done in crepe satin, crepe marocain, crepe de chine, panne and silk velvet.

Patou is doing his most artistic work in velvet and in this fabric his interest is now centered. In order to obtain best results in his designs for handsome gowns and manteaux, Patou has obtained from Lyons a straight pile silk velvet of extra width, unknown heretofore in the fashion ateliers. The last word in elegance is expressed in costumes made of this new velvet—a material especially

Coat of Ottoman Silk, Embroidered Yoke, Cuffs; High Waistline.

gentle in drapery which gives to one's figure a delightfully supple appearance.

In the circular and flaring godets, accepted models for the coming season, velvets, broches and crepes work out most happily. The uncompromising plainness of last year's styles is changed. All of the dressier gowns are richly trimmed. Needlework of silk, beads, chenille, and the latest novelty leather are used in handsome motifs, plaques and borders. On some gowns, in just two or three touches to give distinction to the ensemble, gold and silver lace and passementerie, appliques and fur are the trimmings generally used.

Patou is something of a plunger in fur, bordering his coats with bands of it, making large collars, deep cuffs, shaped panels and whole waistcoat fronts from collar to hem of the novelty furs.

Skirts With Circular Flounces.

The couturiers whose pageants followed Patou's have each a wealth of ideas about dressing the fashionable world this season. Lucien Lelong, whose incidental evening party was a joyous occasion; Redfern, Martial et Armand, Philippe et Gaston, Paquin Vionnet, Lucille, Louise Boulanger Worth and Poiret have all created many beautiful designs.

Redfern elected to give his friends and patrons tea, and gave them at the same time a rare treat in the lovely things of his production.

With a fine sense of proportion Redfern designs, for women of stature and for maturer years, costumes of distinguished lines in splendid materials, some trimmed elaborately. For afternoon he is using panne, crepe satin, silk, velvet, crepe de chine and chiffon. Most skirts have the circular flounce or a cluster of fullness toward the back. More formal gowns are

Gown of Ombre Brocaded Chiffon, With Apron Effect in Back.

draped, or the fabric is handled in some fashion making for grace and softness. When, in an occasional frock, plaiting or fullness is placed in front, a sash and bow make connection with the back panel. In some of the more elaborate gowns a very large loose bow is added.

This is a smart feature in one especially charming gown of black panne, faced with rose-colored chiffon. In this particular model the bow touches one shoulder and falls, but half tied, across the back of a deep V bodice and ends in a long, sweeping sash train of the velvet, lined with the rose.

Much gold lace, gold and silver tissue and passementerie are employed by Redfern, as by other leading houses, but not in the garish style of late seasons. Lame is veiled with chiffon, or one of the new silk laces dyed in delicate colors. Velvet gowns are much beaded in jet, crystal, sequins, or in some graceful design done with the two. Needlework also is combined in the trimming detail.

Embroidery is seen on more elaborate costumes for both afternoon and evening. Metal, silk, chenille, bits of fur, oriental ornaments are used in these, but with restraint, on some frocks and coats just a touch, a line down the front or back, collar and cuffs, or pocket flaps. Fur is used on almost everything, but not in the wholesale manner of last year. Some of the smartest coats have but a collar of a novelty fur. Others have the collar and deep cuffs of fur. A few make extravagant display and many are lined with fur. These, of course, have also the collar and cuffs to match.

Knitted Sports Hat Popular.

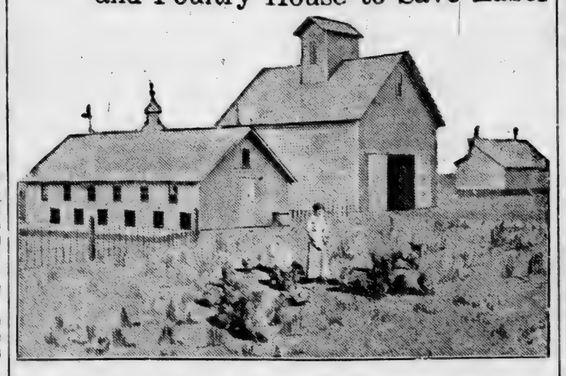
One of the most charming novelties seen in the shops of the Rue de la Paix and the Avenue de l'Opera is the knitted sports hat. Some of these were brought out earlier in the season, rather crude affairs of cotton or wool yarn. This latest Parisian chapeau is a bit of hand work, worthy of attention on its merits. It is knitted or crocheted in fine zephyr into which a border of flowers or conventional pattern is woven. The colors are lovely, and the hat has made a sensation, particularly among the younger set.

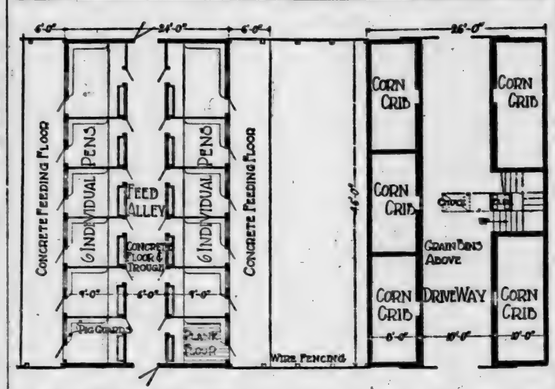
Another new and particularly picturesque hat for occasional wear is a soft toque of silk or velours draped to look like a gypsy's headdress. Some of the specialty shops are showing square kerchiefs printed in the Romany and peasant patterns. These are something of a fad for the moment to wear with sports suits.

The Lenglen bandeau, a scarf of colored silk tied about the head, is considered very chic, and is worn by the mannequin who displays the new sports suits.

Bijouterie and fantaisie are two words one sees in many enticing little shops all over Paris. The craze for trinkets has not in the least abated.

Hog House, Corn Crib and Granary, and Poultry House to Save Labor





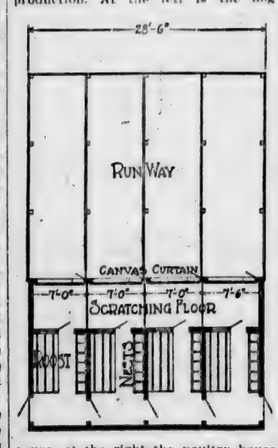
By WILLIAM A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all problems pertaining to the subject of building work on the farm, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on the subject. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

When big business executives plan new factory buildings they spend large amounts of money employing high-priced experts to study their manufacturing requirements in order that their buildings shall be properly grouped and the machinery within the buildings properly grouped to save time and labor in the progress of the manufacturing process. Experience has taught these men that money so spent is a good investment and will come back to them many times over in the reduced manufacturing costs which result.

In one sense the farm may be said to be simply a manufacturing plant. It is true that nature is one of the chief factors in turning out farm products but labor, machinery, raw materials and storage space and working plants are also involved, and in many respects the process is similar to the manufacturing process. And the same methods which have proved profitable in manufacturing can often be applied to farm production. One of these is the grouping of farm buildings and the arrangement of these buildings.

In the photograph reproduced here we see three farm buildings which have been well grouped for profitable production. At the left is the hog



house, at the right the poultry house while between is the corn crib and granary serving both with equal facility.

These three buildings are of similar construction all being frame construction with shingled roofs, and in addition to their practical utility they are built in the same style, which adds an air of neatness and efficiency to the whole group. This is an item not to be overlooked. It has a real value in creating the same sort of an air in the morale of farm employees. There is not a man, not even the farm owner himself, but that will work harder and better in an atmosphere of neatness and efficiency.

The hog house is of the gable-roof type and contains 12 farrowing pens, six along each side of the building, which are separated by a feed alley. The feed alley has a concrete floor and trough but the pens are all floored with planks. This building is 46 feet long and 24 feet wide and there is a concrete feeding floor, outside the walls, on each side of the building. Wire fencing at each side provides light hog yards.

The corn crib and granary is 46 feet long and 26 feet wide, and is so constructed that it will house a power elevator. There is a central driveway through this building and at one side three corn cribs occupy the entire space. At the other side there are two corn cribs, of a little larger size and between is the stairway and the elevator space. The stairway leads up to the grain bins which are located above the cribs.

The poultry house is of the saw-tooth-roof type and measures 20 feet by 28 feet. It is large enough to house more than 100 chicks. There is an entrance at the front, at each end, which gives access through a passage to four separate rooms in which are provided roosts and nests. These are shut off from each other by doors. At the back, each of these rooms opens into a separate scratch floor which in turn opens onto an outside runway. The openings onto the runways are closed when desired by means of canvas curtains.

Use of Short Lumber Would Cut House Cost

Through their failure to buy short lengths of lumber for the construction of small houses, many builders are losing money, both in the waste of materials and loss of time by carpenters, according to a report issued by the Department of Commerce.

These builders, who constantly buy the regular lengths for the construction of the house, lose money because their carpenters must spend time in cutting the lumber into smaller lengths, and that which is left over goes to waste because the builder has no new operation on which to use it.

Such a plan, it can easily be seen, is not only expensive to the builder, but must necessarily be saddled onto the prospective purchaser of the house, the report says.

A survey of the construction uses of short lengths of lumber was made by the Department of Commerce and the Central Committee on Lumber Standards to determine the practicability of buying short lengths of softwood yard lumber for use in the building of small and medium-size houses of lumber construction.

The study shows that in 20 houses, taking 46,842 pieces of lumber, nearly 33 per cent of the lumber used was under 8 feet in length. Nearly 11 per cent was of lumber from 8 to 9 feet, while more than 56 per cent was more than 9 feet in length. That is to say, one-third of all the lumber delivered to the operation in long lengths was cut into lengths of less than 8 feet during the process of construction, while an additional 11 per cent was cut into 8 to 9 foot-lengths.

Four districts were selected in which this survey was conducted—Washington, Philadelphia, Chicago and Kansas City. The houses in the Philadelphia district were at South Ardmore, Pa., and Haddonfield, N. J., while the houses in Kansas City and Washington districts were within the city limits. In the Chicago district they were located at Hammond and Gary, Ind.

The survey showed that in the Eastern district the lumber house was virtually of one size, consisting of six rooms and bath, and that when a larger or more pretentious house was desired, brick, stone, stucco or tile was used. The largest lumber houses were found in Kansas City.

Data and charts prepared by the National Lumber Manufacturers' association and presented at the May 1, 1925, lumber conference, show that 5.3 per cent, or about 1,350,00,000 feet of the total softwood yard lumber produced, is under 8 feet, and that 5.5 per cent, of 1,080,000,000 feet, is from 8 to 9 feet.

The lengths less than 8 feet can be purchased at an average reduction of about $6 per thousand feet for common lumber and about $12.50 for select lumber, these prices being f. o. b. mill. It can be seen, therefore, that the purchase of short lengths of lumber would result in national economy through closer lumber utilization as well as a saving in price.

THE KITCHEN CABINET

(©, 1925, Western Newspaper Union.)

The garden still is green
And the green trees around,
But the winds are roaring overhead
And branches strew the ground.
And today on the garden pool
Floated an autumn leaf;
How rush the seasons, rush the years,
And oh, how life is brief.
—Richard Watson Gilder.

WHOLESOME FOODS

Sour cream is not enough prized. By keeping a little on hand from day to day one may have delicious cakes without butter, salad dressings, cookies, doughnuts and various other dishes which will appeal to all appetites.

One will have to use judgement in regard to the amount of cream used as it will vary with its richness. The following is a doughnut recipe which has been worked out and tested and found to be the "best ever." If the directions are carefully followed the cakes will be rich without soaking, tender and very moist. This kind will keep without drying out.

Best-Ever Doughnuts.—Beat two eggs in an aluminum bowl, add one and two-thirds cupfuls of sugar and beat until the sugar is well dissolved, then add a half teaspoonful of salt and one and one-fourth cupfuls of thick sour milk with a teaspoonful of soda well dissolved in it; then one-fourth cupful of rich thick sour cream, so thick that a spoon when dipped into it will stay well heaped with the cream. Powdered mace or grated nutmeg makes the best flavor. Vanilla never seems to be an appropriate flavor for doughnuts, and never, if you must use vanilla, use the substitute commonly called vanillin; it spoils the flavor of any food. Now the aluminum dish is set directly on the ice after just enough flour has been added to make a thick mixture that will still stir with the spoon. The secret of moist, tender and altogether delicious doughnuts is to cut them as moist as possible. The chilling process makes them easy to handle with no more flour. Work quickly, have the fat just right and carry the cakes to the fat on a broad knife, so they will not lose their shape; being soft they are hard to handle. This makes three dozen doughnuts cut in the usual size.

Sour Cream Dressing for Salads.—Add a tablespoonful of any good salad dressing to a cupful of thick sour cream, mix until well blended, add such seasonings as onion juice, red pepper or any chopped green pepper and onion with a bit of fresh red pepper. With this as a foundation one may vary it to suit any salad. For cucumbers add a bit of vinegar; also for chopped or shredded cabbage.

Sour Cream Cake Filling. Cook together one cupful each of sour cream and brown sugar; when thick, add one cupful of hickory nut meats and beat until stiff enough to spread on the cake. Add any flavoring desired; maple is especially good with this filling.

Seasonable Foods.

Oysters are now coming into the market and should be served occasionally by those who enjoy them. An oyster stew is a simple dish to prepare, but it is too frequently poorly made and served. Oysters should be carefully looked over to remove any bits of shell, then put under the tap and rinsed in a sieve. The liquor should always be reserved and used, but carefully strained. The amount of oysters to serve depends upon the number to serve and their fondness for the shell fish. Enough should be used to give the broth a flavor; many like the broth who care little for the oyster.

Drop the oysters into the strained oyster liquor, adding enough cold water to cook the oysters until their edges curl. Remove them to the soup tureen, adding plenty of butter and salt and pepper to taste. To the hot liquor add fresh scalded milk, pour over the oysters and serve at once. Too long cooking of the oysters will make them tough and too little will make them most unpalatable. Serve at once with crisp oyster crackers.

Grilled Oysters.—Put a large piece of butter into a hot pan; when smoking hot drop in the oysters, a few at a time. When the oysters are browned remove to a hot dish and pour over them a sauce made by using the liquor from the oysters, thickened with flour and butter well blended. Season with worcestershire sauce, salt and cayenne and serve on buttered toast.

Fried Oysters.—Drain and wipe the oysters dry, roll in cracker crumbs seasoned with salt and pepper, dip into egg which has been beaten with a tablespoonful of milk, then dip again into cracker crumbs. Fry quickly in deep fat; drain on paper as fast as taken up. Serve very hot with parsley and lemon.

Colonial Cabbage.—Shred a hard head of cabbage which has been allowed to crisp in cold water. Drain well and add sweet cream, using enough to moisten the cabbage, a few tablespoonfuls of sugar, a little salt, and just enough vinegar to give zest to the dressing.

Grated carrot, chopped celery with a few minced nuts, mixed with a good salad dressing makes a good salad or sandwich filling.

(©, 1925, Western Newspaper Union.)

Lesson for October 4

PAUL IN ATHENS

LESSON TEXT—Acts 17:16-34.

GOLDESN TEXT—"For Him we live, and move, and have our being."—Acts 17:28.

PRIMARY TOPIC—Paul Tells the People About God.

JUNIOR TOPIC—Paul Preaches on Mars' Hill.

INTERMEDIATE AND SENIOR TOPIC—God the Father of All Mankind.

YOUNG PEOPLE AND ADULT TOPIC—True and False Ideas of God.

I. The Idolatry of the Athenians (v. 16).

Athens was the intellectual metropolis of the world at that time, the home of the world's greatest eloquence and philosophy. Paul's spirit was stirred within him when he saw the city wholly given to idolatry.

II. Paul Disputing With the Athenians (vv. 17-21).

1. In the Synagogue (v. 17a).

True to his usual custom, he went into the Jewish synagogue and entered into earnest argument with the Jews and devout persons.

2. In the Market Place (vv. 17b-21).

From the Jews he turned to such as were found in the market place. Here he came into touch with the Epicurean and Stoic philosophers. The former were atheistic materialists. They denied the doctrine of creation, and gave themselves up to sensual indulgences since they rejected the idea of a future judgment. The latter were pantheists. When they heard the preaching of Paul they desired to know what new doctrine he preached, so they invited him to the Areopagus where he might speak to them of his new doctrine. They inquired as to what this "babbler" might say. Since the Athenians spent their whole time either in telling or hearing some new thing, they were willing to listen to Paul. The word, "babbler" means literally, "seed picker." They conceived Paul to be a globe-trotter who had gathered up seeds of truth here and there over the world, and that he was somewhat like themselves, interested in talking about that which he knew.

III. Paul's Address on Mars' Hill (vv. 22-31).

1. The Introduction (vv. 22-23).

He did not accuse them of superstition, but as in the Revised Version, he introduces his discourse in a courteous and conciliatory manner, stating that he perceived that they were very religious. This he explains by saying that as he was viewing their city he beheld an altar with an inscription to the unknown god. This was his point of contact. He proceeded at once to connect it with the idea of the living God, implying that this altar had been erected to Him.

2. The Body of His Discourse (vv. 24-31).

(1) A Declaration Concerning God (v. 24-25).

a. He created the material universe (v. 24). This was a direct blow at the philosophy of both the Epicureans and the Stoics.

b. His Spirituality and Immensity (vv. 24-25).

He is not worshiped with men's hands as though He needs anything, neither is He confined by any sort of a religious temple. Being essentially spiritual, He demands heart service, and being omnipresent, above all, He is not confined to earthly temples.

c. His Active Providence (v. 25).

He gives existence, bestows needed gifts, and as sovereign, directs all things.

(2) A Declaration Concerning Man (vv. 26-31).

a. This was a blow at the foolish Athenian pride which supposed that they were superior to all other people. This proposition he proved from their own literature (v. 28).

b. Nations have their place by the sovereign purpose of God (v. 26).

c. Men Should Seek God (v. 27).

His goodness and grace in supplying all our needs, and ordering that even the affairs of the nations should move men to see and seek God.

d. The Pressing Obligation to Repent (vv. 30-31).

This was his supreme message.

IV. Results of Paul's Preaching (vv. 32-34).

1. Some Mocked (v. 32).

This is even the case today. Men and women will mock the preacher who preaches a judgment to come.

2. Some Procrastinated (v. 32).

Many do not mock, but they hesitate to accept and act upon the urgency of the message.

3. Some Believed (v. 34).

Wherever the gospel is preached there are some who believe and are saved.

As Men Succeed

Men succeed in proportion to the fixity of their views and the invincibility of their purpose. If you can find out a man's quitting point, the place where he gives up, turns back, you can measure him pretty easy.—Marden.

Children's Prayers

Jesus loves to hear the earnest prayer of a little boy or girl more than He does a long hypocritical prayer of a big preacher.—Gospel Messenger.

Seen and Heard In Indiana

The annual reunion of the One Hundred and Thirtieth Indiana regiment in the Civil war was held at Anderson.

Gov. Ed Jackson, in company with Mrs. Jackson and several friends, attended the Wayne county fair. The governor displayed his horsemanship by riding at the head of a procession of saddle horses.

To test the right of druggists under Indiana's bone-dry law to sell Jamaica ginger for beverage purposes, B. O. Renburger, Grant county sheriff, closed the Tiven drug store at Marion by court injunction.

George B. Hoppingarner, sixty-nine years old, prominent Elkhart physician, former secretary of the board of health of Elkhart and a leader in the Democratic party, died at his home after an extended illness of heart disease.

Crull hall, the new $300,000 dormitory erected on the campus of Concordia college at Fort Wayne theological school of the Missouri synod of the Lutheran church, was dedicated, with Dr. Martin Luke, president of the college, in charge of the ceremonies.

All students in Indiana university, at Bloomington, who have automobiles and wish to keep them while in school, first must get permission to do so from the students' affairs committee. Violation of this rule was the cause of several dismissals from the university last year.

Financiers who attended the annual convention of the Indiana Bankers' association at West Baden, went on record as favoring repeal of the federal estate tax and as being against parole of any criminal. R. C. Stephenson of South Bend was elected president of the association.

Boys and girls in dairy calf clubs of twenty states will come to Indianapolis October 10 to 17 to compete in a cattle-judging contest, one of the principal events of the 1925 National Dairy exposition, which will occupy eight of the large buildings on the state fair ground.

The state highway commission's weekly traffic bulletin issued from the office of John D. Williams, director at Indianapolis, announced pavement open on No. 37 (the Indianapolis, Anderson to Muncie road) from Fortville to the junction of Nos. 11 and 37. There is one short detour in this stretch around bridge construction at Ingalls.

The case against fourteen spiritualist mediums charged with obtaining money under false pretense probably will be set for trial in November, according to Lawrence V. Busby, Madison county prosecutor. Additional charges of violation of the state bunco steering statute probably will be filed against the mediums, Busby said at Anderson.

Indiana, with its scores of chapters, has become one of the bulwarks of Red Cross effort, declared James L. Fieser of Washington, vice chairman in charge of Red Cross domestic relations, speaking before delegates and guests at the national regional Red Cross conference which met in an all-day session at the Ulen Country club at Indianapolis.

The Indiana Rural Letter Carriers' association has planned to erect a monument to mark the oldest rural free mail delivery in the United States, which was started twenty-nine years ago. Two experimental routes were started a year before the Hope project, but they since have been abandoned, while the route out of Hope has been continued without interruption.

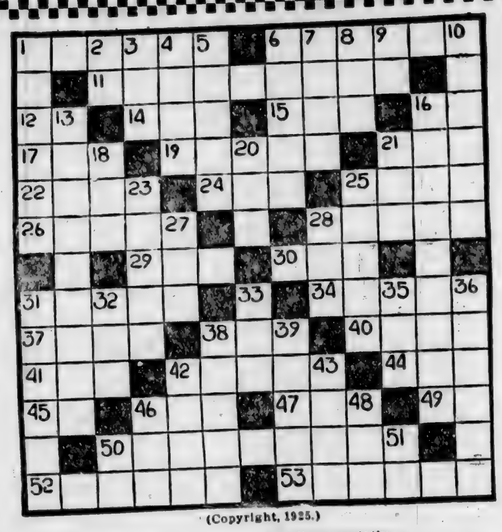
The body of Robert E. Mansfield, age fifty-nine, former Indiana newspaper man and writer, who spent nearly twenty years in the United States consular service, was taken to his home at Rushville, where funeral services and burial took place. Mr. Mansfield died at the Methodist hospital in Indianapolis. In 1897 he served as secretary of the Republican state central committee.

Seven members of the state motor police will be dropped from the pay roll beginning October 1, as the first cut to be made by the department this year because of the reduced appropriation for maintenance of the force under the enactment of the budget law, according to an announcement by Robert Humes, chief of the state police and authorized by Frederick Schortemeier, secretary of state.

A complete shakeup of the personnel of the federal prohibition forces in Indiana will be effected on or before October 16, under the direction of A. R. Harris, named to succeed Bert C. Morgan as head of the dry activities in the state, it was learned at Indianapolis. Mr. Morgan, informed by E. C. Yellowley, prohibition enforcement administrator for Indiana, Illinois and southern Wisconsin, to retire from the service and turn the office over to Harris, issued a letter saying he will comply with the order.

With the total value of taxable property in Indiana this year at $5,208,117,801, according to a compilation recently completed, indications are that when the state tax board meets at Indianapolis with the governor and auditor of state it will fix the 1926 tax levy at 28 cents. Such a levy, according to estimates made by state taxing officials, would bring into the treasury during the next fiscal year, beginning October 1, enough to pay all expenses of the state government and leave in the treasury October 1, 1926, a balance of $824,039.83.

CROSS-WORD PUZZLE



(Copyright, 1925.)

Horizontal.

1—Pertaining to the backbone
6—Humiliated
11—State of being publicly known
12—Account (abbr.)
14—Summit
15—Before
16—To perform
17—A definite article
19—To absorb
21—Name given to a lion
22—The god of love
24—A female deer
25—Assistance
26—A feminine name
28—Parts of books
29—A negative
30—A dirty animal
31—A musical composition
34—A heathen
37—Kinds of evergreen trees
38—Common level
40—Price
41—An implement for stirring up a breeze
42—Made a noise like a cat
44—A compartment in a church
45—Upon
46—To go to court to gain legal redress
47—An epoch
48—A point of the compass
50—Destruction of something for the sake of something else
52—Pledged faith (pl.)
53—Expends

Vertical.

1—Arranged in seats
2—Within
3—A negative
4—An indivisible particle
5—Galloped
6—An attack
7—In this place
8—Consumed
9—Belonging to me
10—Wilts or sags
13—A follower of Christ
16—Representatives
18—An immeasurable period of time
20—To decay
21—Part of the body
23—Beaches
25—A slave of Sarah (biblical)
27—A garden implement
28—A disease of fowl
31—Attempt
32—A vase
33—The binding custom of a community
35—A mountainous ravine
36—Posts on staircases
39—Noblemen
39—Reduces the area of a sail on a boat in a certain way
42—A great quantity
43—To fall in drops
46—Heated
48—A high card
50—In such a manner
51—A printer's measure

The solution will appear in next issue

HOW TO SOLVE A CROSS-WORD PUZZLE

When the correct letters are placed in the white spaces this puzzle will spell words both vertically and horizontally. The first letter in each word is indicated by a number, which refers to the definition listed below the puzzle. Thus No. 1 under the column headed "horizontal" defines a word which will fill the white spaces up to the first black square to the right, and a number under "vertical" defines a word which will fill the white squares to the next black one below. No letters go in the black spaces. All words used are dictionary words, except proper names. Abbreviations, slang, initials, technical terms and obsolete forms are indicated in the definitions.

Charles Lamb's Salary by No Means Inadequate

Charles Lamb, whose release from the India house on March 29, 1825, was celebrated by a centenary dinner, was not badly treated there. For some time before his retirement at the age of fifty his salary was £750—equal to about £2,000 ($10,000) in those days, when the purchasing power of money was much greater. Moreover, the India house clerks had breakfast provided for them at the office and were given free supplies of tea to take home; while the East India company paid the postage on all letters addressed to them at Leadenhall street.

When he retired, the company granted Lamb a pension of £450, ($2,250) which was continued on a smaller scale to Mary Lamb after his death. —London Post.

Eruption of Mount Pelee

Mt. Pelee is an active volcano on the northwestern side of Martinique, an island in the West Indies belonging to France. Notable eruptions of Mt. Pelee occurred in 1762, 1851, 1902 and 1906. During the eruption of May 8, 1902, a giant rock 1,000 feet high was forced out through the crateral dome. The town of St. Pierre was completely destroyed and between 25,000 and 30,000 people were killed. In the fall of the same year another eruption partly destroyed Morne Rouge and killed about 2,000 people. —Pathfinder Magazine.

Nature's Provisions

The carrier pigeon electrifies itself by friction with the air. It rises and falls, thus forming between the earth and itself an actual variable air condenser; then, when the proper balance has been achieved, it shoots forth into space. The radiations emitted by the insects themselves guide the bat in its noctural chase. It is the radiations sent forth by the shoals of fish they are seeking which guide the lemmings in the direction that they follow with mathematical exactitude.

Archdeacon Kept Tab on "Strokes" of Bell

Christ Church gives the signal for locking-up time to the other Oxford colleges by the ringing of the big bell in "Tom Tower" which formerly belonged to Oseney abbey. Whatever may be the case today, "Tom" was formerly not rung, but banged with a sledge hammer 101 times, the number of the members of the house who were on the foundation. During the mid-Victorian era each stroke was carefully counted every night by one of the canons—Archdeacon Clarke—a little man with a sepulchral voice, who preached for seven years on the parable of the "Unjust Steward." One night the scout who banged "Tom" either from indolence or negligence made only 92 strokes. But he had reckoned without the meticulous archdeacon, who detected the omission, and next morning, he was sent for and dismissed.

No Give at All

Secretary A. D. Call of the American Peace society said in an eloquent and optimistic address:

"The road to world peace looks long, but there is an end to it, after all, and a speedier end, maybe, than we think.

"Let us hope. Don't let us imitate the discouraged pacifist, who growled

"'Oh, yes, we pacifists will never give in; but, then, you know the militarists will never give out.'"

Job More to His Liking

The box-office man of a popular theater quit his job and before long was seen working for a commission house. It seemed such a complete shift that one of his friends was moved to ask the wherefore.

"When I was selling theater seats," was the prompt reply, "after I sold the first 200 I was in trouble. Nobody liked the seats I had to offer. There was always an argument. Today I sold 2,000 bushels of potatoes and I still have good potatoes. Want any?"

The HAPPY HOME

By MARGARET BRUCE

WNU Service

A Lesson in Bed-Making

The training of a home-maker begins when she is a very little girl. She gets started on the road most women must tread when she is too young to do anything but look on. How often you hear a housewife say: "I remember seeing my mother do thus-and-so." And so it behooves mothers to do everything as well as possible, if they are to be quoted some day!

By the time the budding home-maker is large enough to help, however, she ought to be taught very accurately and thoroughly. The making of a bed neatly and smoothly, so that the covers will stay in at the bottom and turn down properly at the top, is one lesson that may be learned very young.

To begin with, sheets and blankets should be amply long, so that they may tuck under far enough at sides and bottom never to pull out. The blankets or quilts should be drawn just to the line of the chin and brought to an even line instead of leaving a number of loose ends of varying lengths. The top sheet should then be folded over at least a foot,

so that the roll of the sheet comes under the chin and protects the sleeper from a confusion of cover ends. Sometimes sheets are made double length, so that they may fold entirely back to the foot of the bed and conceal the blankets completely. In this case extra bedding is supplied by an elderdown quilt folded at the foot of the bed on the outside.

Nowadays pillows are not stood up against the headboard, but are laid flat and covered either by a pillow-strip or roll matching the cover, or by the spread itself, which is made long enough to cover the pillows, with a crease to define their shape. A bed should be absolutely smooth and without wrinkles, and the mattress should be turned every day or two to avoid hollows. Children should be taught to throw the bedding back over the footboard every morning, and not leave the bedclothes in a tumbled mass. This airing is healthful and necessary.

Transforming High Windows

There are some few rooms—spacious, lofty rooms, with breadth as well as length and height—in which the very high window is beautiful and impressive. Such a window is attractive, too, in a hall or at the top of a noble flight of stairs. It must be confessed, however, that in the average long, narrow city double-parlor where this window flourished some decades ago and where it still lingers, it does little but increase the tomblike effect of the interior.

To offset this uninviting appearance, the remodelers of such city houses have given their first attention to the windows. In many cases the high windows are removed entirely and replaced by groups of low, small-paned casements, extending across the entire front of the room. This is expensive, however, and very often the owner of the building is unwilling to make the change.

In a certain New York city living room which I saw recently, the occupants of a high, narrow house had worked out an ingenious scheme for the high French windows, which reached from floor to ceiling with a beautiful arch at the top. They might have lowered the windows in effect by placing a deep valance at the top, but for two reasons they did not do this—they wanted every ray of light they could get and they loved the gracious lines of the arch.

What they did instead was to shorten the window by putting in a temporary paneled wainscoting across the lower panes, the panels being horizontally placed, to increase the apparent width. Richly translucent draperies in color were caught back very high, to give a valanced effect and still retain the arch. When this change was completed, the window seemed at first glance to be no higher than the average sized window of more modern homes. A chair rail, with a deeper shade of color below than on the upper walls, cut down the room still further, and low wall-sconces made one forget the distant ceiling and the one-time feeling of being down in a well!

IN ECUADOR

Weaving in Ecuador.

(Prepared by the National Geographic Society, Washington, D. C.)

IF THE name of every country were as self-explanatory as that of Ecuador, geography would be simplified. For "Republica del Ecuador" means "Republic of the Equator," which, together with the fact that the country is on the Pacific coast of South America, locates Ecuador beyond all question. But, though Ecuador lies under the equator, it is not in the main a land of heat. Over the greater part of the country rise the peaks, plateaus and foothills of the Andes, lifting the land into regions of pleasant temperature.

Because of unsettled boundary disputes the exact area of Ecuador is unknown, but it is safe to say that it is larger than any state of the United States except Texas. The population is about 2,000,000. Although the country is comprised between one degree north and four degrees south latitude, almost every variation of climate is obtainable, from the torrid lands of the coast to the chilly plains, at an elevation of 12,000 feet, at the foot of the snow-clad peaks of the Andes.

Both the eastern and western ranges of the Andes traverse the republic. Between these ranges lie extensive high valleys yielding the products of the temperate zone. To the west of the Cordilliera stretch the low tropical lands on the Pacific, and to the east the country gradually descends to the low Amazon valley and the frontiers of Brazil.

The principal cities of Ecuador are the capital, Quitô, and the seaport, Guayaquil. The latter is the first port of call for many ships sailing south of Panama, and to reach it the vessel must enter the Gulf of Gayas, and then steam up the wide tidal river of the Guayas.

Guayaquil is a large city, of about 90,000 population, and for many years had the unsavory reputation of being the worst posthole on the Pacific coast. This was due to the virulent yellow fever which was prevalent there and to the sporadic outbursts of the bubonic plague, which kept the city under a perpetual quarantine; and travelers shunned it whenever possible.

Guayaquil Well Cleaned.

The Rockefeller Foundation took in hand the cleaning up of this city, with the result that now yellow fever has practically disappeared and the bubonic plague is kept well in hand. The quarantine against the port has been lifted, Guayaquil is once more a stop on the maritime itineraries, and the Ecuadorean has a reverence and a faith in the "gringo medico" almost as strongly fixed as is his religion.

Coincident with this improvement in the hygiene of the city, new streets have been built and new buildings erected, so that Guayaquil is rapidly forging ahead. It is the emporium of Ecuador. All imports and exports pass through Guayaquil. The houses are built of wood, owing to the lack of other material. They are constructed in the Southern style, with balconies protruding over the sidewalks and resting upon wooden pillars, thus forming piazzas which afford protection against sun and rain. As fires under the circumstances are particularly dangerous, Guayaquil has perhaps a more extensive fire department than any other city of its size, and ample reservoirs of water on a hill behind the town. It is improbable that Guayaquil will ever again be visited by such disastrous conflagrations as in the past.

Across the river from Guayaquil is Duran, the terminus of the Guayaquil & Quito railroad, a company incorporated under the laws of the state of New Jersey. This railroad, built by American engineers, extends to Quito, 280 miles from the coast.

Leaving Duran, the train proceeds over the flat and gently rising country to the foothills of the Andes. In the level country are the great sugar estates, stretching for miles on either side of the track and equipped with lines of miniature railway for hauling cane and with large sugar factories. Leaving the plains, the ascent is gradual through dense tropical forests plentifully watered by streams and cascades which can supply unlimited water power. The trains need two days for the climb up to the capital.

Quito's Public Market.

The most interesting feature of Quito is its public market, in an open square. Scattered over the ground are groups of Quichuas and a few Spaniards with a great variety of things for sale.

In one corner of the market are the butchers, with beef or pork on display, the beef haggled and chopped up with a complete disregard of joint or bone, the pork not infrequently sold as a whole roast pig. Next to them may be the millers—women seated on the ground with a row of opened sacks before them, in which may be seen flour made of wheat, barley, corn, or peas, the dealer measuring out the flour in a tiny cup or perhaps weighing it with a crude balance.

The common trade balance of Ecuador is a short stick carying a suspended pan at each end and held up by a cord about the center. The weight is a rock about the size of a man's fist, and, while no two of them are ever the same size, the merchant is always prepared to pledge his honor that the stone weighs a full and exact pound.

The price for a commodity is almost never fixed, and as the Ecuadorean is always prepared and expects to come down somewhat from his first price, it speaks worlds for his optimism that he invariably tries to get more. The bargaining does not actually begin until you have disregarded the first figure and asked, "What is the last price?" ("el ultimo precio?")

Quito is almost as large as Guayaquil, but because of its invigorating climate it has a far more healthy environment, and the city itself seems to disclose more vigor among its citizens.

It is built in a bowl-shaped valley at the foot of Mount Pichincha. The altitude of the city is 9,600 feet above the sea. The mountain rises in the background to a height of 16,000 feet. The view which presents itself from the summit of this mountain is one of the most superb and imposing possible to conceive. Twenty snow-clad peaks rise before you, ranging from 15,000 to 22,000 feet. It is truly a Council of the Patriarchs of the Andes.

Panorama of the Streets.

The direct rays of the equatorial sun are white as limelight, and the first impression of Quito is that of a snow-white city, relieved by roofs of rich red tiles. In the streets and plazas are thousands of people, continually moving. The majority are Indians in scarlet or orange ponchos, wide white cotton trousers and broad-brimmed white felt hats. There are Indians from a hundred different villages, marked by the cut of the hair, the turn of a hat, or the shape of poncho. The streets are thronged from morning to evening with mules, horses, oxen, donkeys and llamas with loads of every description.

Ladies in smart victorias, drawn by Chilian or native horses, drive to and from the shops filled with merchandise from Paris, New York, London, Vienna and Berlin. Handsome officers in full regimentals stroll along the streets. Gentlemen in frock coats and top-hats are everywhere.

The city is traversed from east to west by two deep ravines, through which Pichincha sends down its torrents of melted snow. The land upon which the city is built is, in shape, like the inside of an oval bowl, at the bottom of which is the Plaza Mayor.

Because of their inaccessibility the interior towns are apt to be more picturesque, more untrammeled by civilization in its final manifestations. Such a city is Loja, the modest metropolis of southern Ecuador, with a population of perhaps 10,000 or 12,000 souls.

The educated class of the Lojanians, the Spaniards, are very punctilious in the observance of dress, and it is a common sight to see a citizen clad in very proper Prince Albert, with a tall hat, cane and resplendent shoes, picking his way over the uneven cobbles, rubbing elbows with a scarlet-ponchoed Quichua or crowding by a group of Canari Indians, with their hard woolen hats, which look like dirty, disreputable derbies.

The majority of the people one sees in Ecuador are Quichuas, a sturdy people rather short in stature, but well built and stocky. In color they closely approximate our North American Indians, but their features are less stern and warlike. They do most of the labor of the republic and serve as porters, drovers, farmers, etc. The women labor as hard as do the men and take their places alongside them in the fields.

What they think about it

Our schools are no better than our teachers.

The supreme task of every individual is to get from himself the best that is in him.

Money cannot pay the best teacher; the poorest are expensive if they work for nothing.

Education does not train a child away from work; it makes him capable of doing more work in a more efficient manner.

St. Joe's greatest wealth is wrapped up in the brains of her boys and girls, the men and women of tomorrow.

We must build children as well as houses and factories; the finest building material in the world is our boys and girls.

The youth who puts off until tomorrow the task of educating himself may find to his sorrow that tomorrow may be too late.

Every child, no matter where born, is entitled to the same opportunity as all other children. Equal opportunity for all, class distinction and favoritism for none.

In this twentieth century the child, looking into the future, may well exclaim, "A new world lies before me." The best preparation for conquering a new world is a college or university education without the frills.

The only persons who have no problems are dead ones. Whenever the people of Indiana have no problems there will be no Indiana. The fact that Indiana now has many serious problems for solution is the best evidence we know of that the state is very much alive.

Down deep in the depths of the human heart and soul is an unquenchable thirst for knowledge. Placed there by the Almighty in His infinite goodness and wisdom it demands and should receive our most careful attention. The heart of every normal child is a fertile field for the growth of noble ideas.

This twentieth century with its exacting demands, requires men and women who are capable of assuming the duties of, big business. Big mercantile establishments, big institutions of learning, big railroads, big cities, big states, big nations, all require men and women of authority, of ability, who are capable of assuming these arduous responsibilities. The man or woman reared in the country invariably meets the requirements and fills the bill.

VOL. XXXIX | ST. JOE DeKALB COUNTY, INDIANA, THURSDAY OCT. 8, 1925 | NO. 40

Motorist Gets Flippant at Spencerville

Delbur Furnish had an experience last week that sure took all his Pep. A stranger drove up to the garage and Delbur proceeded to wait on him A small bolt was needed and Delbur tried to find one, but not being successful, he returned to the car and said, "I can't supply you, but think you can get it at the postoffice." The stranger, thinking that he was being guyed, said, "Look here young fellow, do you think I was born yesterday?" Mad, well he just raved. Delbur was giving him the truth and of course the stranger did not understand it as such. The manner in which the fellow raved, took Delbur by surprise and he hardly knew what to say back. The stranger drove on but he did not stop at the postoffice.

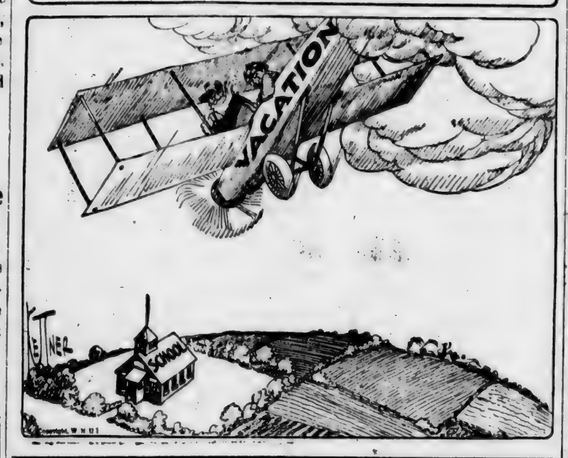
Cause of the Electrical Disturbance

The long outage to electric service Thursday evening, Oct 1, was due to Cloverleaf Railroad Company, blasting stone for new bridge near the France Stone Quarry at Delphos, Ohio.

The charge was directly under the telegraph wires also the high tension wires supplying electric service to St. Joe, Ind. The telegraph wires became entangled with transmission lines which made repairs very difficult for linemen to restore service on account of being forced to work in the dark.

The Company has under construction a new line connecting into their present lines at the new substation at Hicksville, Ohio, which when completed will overcome interruptions of this nature.

Coming Back to Earth



Another Ticket In The Field

The coming town election has taken on quite an interest this fall Voters will remember that two years ago not enough interest was taken to put a ticket in the field, but this year, quite different. The second ticket was nominated last Friday night, when the Independent voters met in caucus.

One Trustee for 1st. Ward to serve for 2 years.
—Harry Kees.

One Trustee for 2nd. Ward to serve for 2 years.
—J. C. F. Abel.

One Trustee for 3rd. Ward to serve for 4 years.
—Craig Sheffer.

One Clerk to serve for 2 years.
—No nomination.

One Treasurer to serve for 2 yrs.
—Mrs. Ed Miser.

A much needed officer is a Justice of the Peace, and realizing this each of the caucuses suggested the appointment of such an officer. The citizens suggested Chas. Cochran and the Independents, Frank Curie. The official request for appointment will be made to the County Commissioners by the Town Board, they to make their selection from the two names.

Within a couple of weeks, at least, The News will be printing the ballots for the election, November 3rd.

While this is considered by many as the off year in elections, in our opinion it is by far the most important so far as the home people are concerned, as it has to do with our local government. More interest should be shown by the voters in both caucus and election. In the caucus to see that the best persons qualified for the offices are nominated and in the election to see that the same are elected.

Politics cut no figure in local elections where all the candidates are known, and the candidates best qualified to fill the offices are the ones to be elected. We are all interested alike in the success of our home town and should elect the ones we know will best serve our local needs.

Mr. and Mrs. Charles Kaser will move sometime this month into Mrs. Clara Burch's house, coming from their farm near St. Joe, Ind., which they recently exchanged for Fort Wayne property.—Montgomery (Mich.) Record.

Parent-Teacher Association

The following is the program for the first meeting of the P. T. A., called for Friday evening, Oct. 16:
Community Singing led by - - - - - C A. Woodcox
Greetings to Teachers - - - - - Mrs. F. M. Thornton.
Response - - - - - Mr. Neer.
Entertainment - Senior High Male Chorus, leader A. M. Baker
Social Hour.

Dies Following Birth of Child

The death of Mrs. Ray (Wyatt) Antrup occurred Saturday night at 10 o'clock at her home near Newville following the birth of a boy baby Saturday morning at 1:45.

Her age at the time of her death was 35 years. She was born in Concord township and was married 18 years ago June 9th to Ray Antrup.

Besides her husband she is survived by three children, Ethel May, Mabel Elenor and the baby born Saturday and two brothers, Daniel Wyatt of Auburn and Albert Wyatt of Fort Wayne.

The funeral service was held Tuesday morning at 10 o'clock at the residence of William Carr at Auburn, the Rev. G. F. Hubbartt, pastor of the Auburn M. E. church officiating. Burial was made in Woodlawn cemetery.

Wanted to hire lady for doing general housa work. If interested call Mrs. Walter Zonker, phone 56, St. Joe. 40t1p.

Methodist Rally Day service will be held Sunday evening. Special program will be given. A feature will be a four act playlet.

Mrs Chas. Cochran suffered a nervous breakdown Saturday evening while at work at the restaurant. She was taken to her home at once and was in a critical condition for a few days but is improving. Her daughter, Mrs. Willys Wilcox came to care for her.

Cook Ford, a well known Auburn resident, took his life Sunday night. For 12 years he had served as Justice of the Peace and was an active man in the affairs of Auburn. He was born in Auburn 73 years ago The act was premeditated, as he had made disposition of all his business matters, to every detail, telling that he was going away.

Home Coming Services at Spencerville Lutheran Church

It was decided at the Lutheran church last Sunday to have an all day service on Sunday, October 18. It is to be a real Home Coming and is to embrace all of the services for the day. The Sunday School invites all of the members for the meeting at 9:00 o'clock. After this will be held the communion service for the congregation to which all are invited.

Dinner will be served in the basement and after a social hour the people will assemble in the auditorium at which time a splendid program will be given under the direction of the young people of the Sunday School. All members and friends of the church are invited.

Bring a Basket and spend the day at your spiritual home. Look for the program next week.

S. D. Steffey, Pastor.

Mrs. Wid Williams was called to Hammond Sunday by the illness of her daughter, Mrs Dewey Smith who submitted to an operation at that place Thursday.

Perfection Oil Heaters
"Heat by the Roomful"

THE PERFECTION OIL HEATER is undoubtedly the best known and largest selling oil heater in the world. It has gained this popularity because it is a real heating unit capable of heating an entire room. The low cost of upkeep and absolute dependability are two other reasons why it is so popular. Unlike many others, the Perfection radiates its heat in all directions, spreading its warmth to all corners. It is clean, odorless and economical. Burns ten hours on one gallon of kerosene. We have two styles on our floor:

The Vanishing Men

By Richard Washburn Child

(W. N. U. Service)

(Copyright by E. P. Dutton & Co.)

SYNOPSIS

Out of uniform, at the end of the World war, with the rank of major, Peter DeWolfe, young American of wealth and family, is urged by an English comrade in arms, Everaby Benham, to visit the Benham home and meet the Englishman's mother and sister, and, incidentally, Brena Selcoss, young woman about whom there is an air of mystery. Muriel Benham, Eversby's sister becomes infatuated with Peter, but he is interested only in the mysterious Brena Selcoss. The feeling between Peter and Brena ripens into love. Brena confesses that she is married and that her husband has "vanished." Brena's life story is out of the ordinary. Her father had been forced to leave Greece because of revolutionary affiliations, and his death, following quickly upon that of his wife, leaves Brena penniless, at Dallas, Texas. She secures work, and meets Jim Hennepin. He falls in love with her. He urges her to meet him in St. Louis. Brena returns to Dallas alone. Compton Parmalee, Hennepin's employer, tells Brena Hennepin's intentions toward her were dishonorable. Parmalee makes Brena an offer of marriage. After reflection, she accepts the offer. They are married. At the railroad station, immediately following the ceremony, Parmalee is seized with apparently uncontrollable fear. Brena shows her husband a scrap of paper Hennepin had given her. On it is a figure which Parmalee tells her is the "Kuk-ul-can," symbol of the Mayas. He appears perturbed. Unable to purchase a painting of Brena, by a famous artist, Parmalee shows irritation amounting almost to madness. She is convinced now that he fears recognition either of her or himself, but can learn nothing from him. He begins to drink heavily. After a visit to his lawyer, Lanfrew, Parmalee disappears, leaving no word of explanation. That was three years before Peter and Brena meet.

CHAPTER XI—Continued

—10—

"I want this scrap of paper," he said. "I want the keys, if you've got 'em, of that house up the Hudson. I want a letter to Lanfrew, the lawyer. I want your permission to do anything I want—burn the house down, perhaps. I may cable you for more facts if I want them. I'm going out now to cable some persons on my own list, Brena."

"It is useless," she said wearily. "You forget I've had nearly four years of it—leading nowhere, explaining nothing, dear. It will only cause me new humiliation—perhaps drag my name—"

"No it won't," he said. "I'm going to do the job myself."

"Please—" she began.

Peter smiled grimly as he held up his hand.

"Well, I'm no detective, Brena, I'll admit. I am glad to be able to tell you that I am not a master mind, or a great analyst or any other kind of a red or yellow-bound sleuth. I didn't even look for wireless apparatus in Central park before I joined the army. Spies and mysteries bore me to death."

He chuckled, however, as if glad that he was alive.

"I'm more or less an idler whose time is almost all taken up in one way or another. I'm a New York bachelor on the loose who has written a little verse and killed a few Germans, for which I have suffered a definite nausea afterward, as I would not confess to anyone else. I'm no unraveler of tangled skeins. But—"

She took his hand and pressed its back against her cheek.

"But—!" Peter repeated. "But—I'm going to let some sunshine in upon this thing if I break my neck—there's only one thing that's hard—"

She asked him to tell her.

"To leave you," he said. "It's going to tear the roots like pulling up grass."

Brena, arising, threw the wrap aside and paced back and forth, as he had paced, with her hands examining each other as if they were strangers met for the first time. When she stopped her great eyes were wet and filled with the old look of fear.

"You shall not throw yourself away, Peter," she said with a breaking voice.

"Nonsense."

"But you don't know, Peter!"

"All that you know."

"If it happened to you—"

"Yes?" asked Peter with his lips closing tightly over the question.

"It would no longer be fear alone, Peter; it would be grief too great to bear!"

He was silent; perhaps shaken for the moment.

She ran to him, seizing his coat, his wrists, his neck, one after the other, as if no strength was hers to hold him back.

"Don't," said he.

She was still.

"I shall do as I said, Brena. No harm will come to me. None ever does. I shall do it alone if need be. Or we can do it together. How's your courage?"

She looked long and searchingly into his steady blue eyes.

"What do you want me to do, Peter?"

"I want you to write those letters for me. That's all I need now. I want you to go back to Beconshire and wait till you hear."

"Hear from you?" she said in shaking voice.

"Yes—you'll hear from me," he said. "Why, my Lord, Brena, there's no danger to me. That's grotesque absurdity. I rather wish there were danger. It's a tonic! Anyhow I'll give you my own lawyer's address."

She glanced once more into his smile and then, with something of the manner of a proud mother, she looked fondly from head to foot of him, at his lean, sinewy figure, at the clearness of his eyes, the curve at his temples, the outdoor cleanliness of his skin. There was a suggestion of possession in this quick inspection of hers, a suggestion that he was hers as much as if she had created him. But as if, now, she belonged to him, she did his bidding.

When she had finished writing at the little antique desk, she threw the red feather of the quill pen onto the table.

Peter had been thinking.

"Once more," he said.

He took her into his arms, holding her head close to his shoulder; he turned her chin up with the palm of his hand and pressed again his lips upon hers. He could hear the watch in his own pocket ticking away the seconds. He could hear her heart beating a slower rhythm.

"A long draught," he said at last. "I could not go so thirsty—away."

"You mustn't go."

"Brena, dear one," he said. "There is only one thing to do now and that must be done. Let's set our faces like flint. I think after all—"

She knew as if by magic that which he was going to say.

"That there is more love in going than in staying—for both of us."

"Yes," said Peter touching her forehead again. "Good-by."

He closed the door quietly.

"Peter!" she called from behind it.

He continued down the carpeted stairs and out into the first morning sunlight that came tumbling down over the chimney pots into the narrow street.

"Vanished?" he said aloud. "What piffle! And yet—"

He looked about him: the street was empty except for one small child who was sweeping the sidewalk with a broom three times the youngster's own height.

"Good morning," said Peter.

"S'fine mornin'," the one in kilts said.

"Finest ever, son," returned Peter.

"I ain't a boy; I'm a girl, sir."

"Well, it's a fine morning in any case."

Peter walked on, thinking; he had a lot of thinking to do.

It added somewhat to his need of thinking when he found at the steamship dock in Liverpool a plain envelope addressed to him in which was a scrap of torn paper. Upon it in typewritten letters and unsigned were the words:

"Be warned before it is too late."

Peter raised the scrap of paper to his nose; it was pungent with an odor of some strong chemical.

He stood thinking for a moment, blinking at the reds and grays and browns of the shipping in Liverpool harbor and the distant sky veiled with smut and smoke of city and barred by smokestacks and masts.

"D—n them—whoever they are," he said. "This time they've got a fight on their hands."

CHAPTER XII

Peter had spent eight days upon the sea and had landed on his own soil again before he came to the full realization that mere reasoning will not solve baffling problems such as that upon the untangling of which he now had so much at stake.

He had come into New York without word to his acquaintances; only Colby Pennington of Pennington, Gould & Goodhue, who was the son of the elder DeWolfe's attorney, knew of Peter's return from his long absence. This lean, unemotional lawyer looked upon his young client, put in hand by the death of the elder Pennington, as he would upon an old heirloom without much intrinsic value. The law business did not pay much in spite of the size of the DeWolfe estate and the younger DeWolfe was considered by those who are conventional, regular and of stock patterns, as a rather uncertain mixture of quantity and quality.

Pennington had never expected Peter to explode or disgrace himself, but the lawyer belonged to a type of correct and regular life which does not fear departures from correctness and regularity and stock patterns of human beings as much because of known hazards as because of the unknown hazards which those who always play safe imagine lie in ambush behind independence and originality and imagination. For instance it would have disturbed the chilly Colby to have known that Peter was returning from a record of hard action, wounds and decoration without a word to his friends, and that instead of going to his club, he went, like a returning ghost, to his old apartment where the heat of the summer had been locked in and where for many months the severe portrait of the elder DeWolfe had directed an unblinking gaze at the door waiting for the son's return. Such a return was not cut according to approved fashion and if Pennington had known of its nature he would have felt a vague anxiety.

Peter knowing this merely asked, after a greeting, whether any cables had come for him; finding that there were none he went for a lonely dinner and a night alone in his apartment with his trunks standing around among the linen-covered chairs like fat, solid men whom Peter had called in for conference.

The fact was that Peter had determined to hold a conference with himself. He had opened the musty apartment which had been his bachelor retreat for several years; there had entered only the unstirring, hushed air which, as if itself exhausted by the day's heat, hung in a night haze over the city below his high windows and dimmed the blinking, winking lights across the park. The muffled sound of a hurdy-gurdy that had invaded this district of pretense and high rents, like a shabby minstrel of the poor ground out its worn-out war tunes to forbidding, boarded-up residences in a forlorn hope of largess. The night was not one for clear thinking, but Peter, having tied the waist string of his pajamas, sat down in an old leather chair before the empty fireplace, and wiping his forehead stared into the chimney back.

During the voyage he had failed to think to a result of any kind, and the reasons were two. He defined them now readily enough: they were the influence of the sea and the memory of Brena. There had been the spell of the sea—the sea that Peter loved so well,

"A Long Draft," He Said at Last. "I Could Not Go So Thirsty—Away."

the personality of the sea that could be a basin of iridescent oil in a tropic calm, an enigma of chill gray mist-enveloped soul, a fury of glorious racing rage, a beam of strange quiet messages from whining, crooning lands at the other ends of the earth, a voice from far and unseen peoples, a yielder of mysteries belched forth from its amethyst and beryl depths, a thing able to cover, with a superb superiority to the trivialities of life and death, the last trace of all that it takes into the confidence of its eternal peace. The sea had invited Peter to more musing upon his problem but it had erased days with its sweep of sunlight and its salt spray and with its miracle of obliterating hours in the flow of a great eternity.

The memory of Brena, whose personality had seemed as everlasting as that of the sea itself, had done its part. She had appeared, but with irritating indistinctness, before his eyes and seeking to feel by reaction the touch of her lips, to see again with all the definition of reality, her dark eyes and her red-gold hair, to hear her voice, to sense the warmth of her lithe, flexible body, to recall the miracle by which for the first time in his life spiritual love, the love of companionship and the love of woman had been all woven into one fabric, he had realized more than when he had been with her, the stability of an affection that had come upon him with a fierce, impetuous descent. Peter now realized that he had been dreaming away the days of his journey lost in the spirit of the sea and in the memories of the strange girl whose future might depend upon his success or failure in striking off the shackles of fear. To avert the haunting destiny, to dissipate the shadowing mystery that followed in her track, dealing its fatal dark thrusts in the dark to the men who played a part in her life had been a job he had begun badly.

Once more Peter reviewed the evidence already in his hands with the vague hope that from it a conclusion would suddenly stand forth, just as one again looks through a pile of papers for the twentieth time for one paper that the senses have proclaimed repeatedly is not there.

As on other occasions when he weighed the facts he was not disposed to give weight to the idea that any secret band, acting perhaps under oath of vengeance or of loyalty, was exercising an influence upon the life of Brena Selcoss. Her father's connection with the secret society revolutionaries in Greece and the political plottings of her maternal grandfather, the famous Tom Vaughn, might have appeared to give some color to the idea, but Peter knew that the arm of a secret band, no matter how long it might be at its full development, no matter how it might deliver knife thrusts at the ends of the earth on behalf of a cause, withers quickly when its inspiration is gone. It was not likely that after a lapse of more than half a century the power of such an arm would survive nor that it would extend far away and across the years either to protect or blast the life of a girl, who, whatever she had since become in her wonderful development, was, at first, humble and forgotten and alone.

To be sure, Peter thought the last words of her father had made reference to an unnamed assurance that if Brena were to be menaced, a protecting force would aid her. These, however, were the words of an impractical dreamer who having failed to provide against all dangers to his orphaned daughter might naturally enough, when facing death, have voiced a vehement faith, hoping that it would help to make up in part for a lack of works. Peter put this evidence behind him as belonging to that class of improbabilities that only those who love to make more mystery rather than to lessen it, seize with all the joy of the amateur secret service men who had amused Peter so much during the war.

The vital facts as Peter saw them were to be found among those which attended the disappearance of men—men of different types who at moments some years apart had sunk to the bottom of nonexistence like two plummets.

One of these men, Jim Hennepin, had gone to his end without fear; he had only shown excitement. He had hinted that some call or message of great advantage had come to him. At the time he left he had given, apparently without intention, a scrap of paper bearing the symbolic figure of the feathered snake—the Kuk-ul-can, god of the Mayan civilization. According to Parmalee, who not only had been much in the desert country but who was a student of its history and a collector of books bearing upon its antiquities, the appearance of this symbol suggested the southwestern United States or Mexico.

When, however, Parmalee himself had disappeared less than four years later it was at the end of a long period in which he indicated beyond doubt that he had some knowledge, however vague, of the danger that threatened him. Peter had often on his voyage across the Atlantic, squeezed all the conclusions possible from the facts bearing upon whether Parmalee feared a known enemy or one unknown. Brena's strange husband at times indicated a fear of a known and human agency; when he had shot at an imaginary intruder in their New York apartment he had said, "I thought it was him," a remark that he had afterward explained by saying he referred to the burglar that he believed had entered. Parmalee's violent objection to the exhibition of Brena's portrait with her name attached might well have been the objection of a man who feared that some one by chance seeing the picture and recognizing it would trace the original by inquiries addressed to the artist.

What had it meant that this extraordinary man had surrounded his life with defenses as if forewarned of his fate? He employed only servants he knew, he built defensive walls, put up bars at his windows, retained the chauffeur, Paul, because the man would be handy with his fists in an emergency, he bought a fanged mongrel beast to roam about the grounds at night. He lived in a terror which burned his nerves and chilled his heart, that drove him jibbering to the bottle and he indicated more than once that this was all due to his wife—that it was she who dragged this trail of unknown horror.

But when he had gone—vanished without trace, he, like Jim Hennepin, went willingly.

What was the bait? In Hennepin's case it had been money. This could not have drawn Parmalee.

Peter got up and looked out over the city sweltering in the purple hazy summer night, blinking its yellow eyes as if these eyes were full of salty perspiration.

Well, the two men had gone willingly and had thereafter disappeared as completely as wisps of smoke in a tempest or raindrops on the sea. Some force drew them, Peter told himself, some force that perhaps was capable of calling craftily to that which in each man would respond. Parmalee had pretended to some knowledge of what this force was. How did he know?

Peter walked back to the dark oak mantel and, opening his wallet that lay there, he took out the sheet of paper which had told him of his own danger. There was the explanation! Parmalee too had been warned. But in spite of that warning he, too, had gone—had been dissolved, had been wiped out like a tiny chalk mark by a giant thumb.

And what conclusion could be drawn from all of this—all that Peter knew? He saw it suddenly. He had been tumbling over and over again into the error that pitfalls so many of his countrymen; he wanted to assume the facts upon which a conclusion is to be based. Often he had seen the same delusive yearning when a political leader with noble sentiments and high-sounding purposes based his program upon a world not as it is but as good men would like to have it and tolled, after him, those persons who liked to call themselves idealists; He had seen so much conclusion that would have been right if only it could have been based upon the facts! Peter knew now, as if by a sudden humiliating revelation, that he had been foolish to even attempt the method of the great analysts, as they are called, who are always conveniently provided with every vital fact beforehand; he knew that what he must get was more evidence.

On his key ring he looked for the key to Parmalee's house up the Hudson.

He had forgotten perhaps another failing of some of his countrymen; as Peter once said himself, they founded beliefs upon the wish to believe; it never was suggested to DeWolfe that in spite of its extravagance, any part of the story told by Brena Selcoss might not be true.

He loved her.

CHAPTER XIII

Peter, who had presented Brena's letter to the caretaker of the Parmalee estate and had received a few sullen references to the fact that the place was a great bother and was said by many persons in the village to be a house of evil influences, had been directed up the long hill under an archway of dripping trees and stood at last at the very gate which Parmalee in his alcoholic fury had shaken as he invited his imaginary persecutors to attack him.

The change in the weather, brought about by the sudden turning landward of a heavy Atlantic storm, had transformed midsummer into a chill, wet March. The cold, damp wind swept across the top of the hill, tossing the arms of the trees within the walled inclosure to which the gate gave entrance, so that these arms appeared to be assaulting the French roof of the square gloomy old house, as if that house had committed some crime. Weeds and rank growth had sprung up along the wall and behind the gate in the crevices of the flagstones of the walk; each stalk, bending with the night's rain, shed drops of water like a weeping mourner. Peter, having glanced up at the windows behind which Brena had heard the winds of winter whine and complain and had watched the pale moon throw dancing shadows on the dank lawn, felt his own skin shrink in response to the thought of all that a young girl must have suffered here. He would square the account for her!

The squeak of the caretaker's key in the rusty lock of the gate started up a dozen crows, cawing madly as if driven from some carrion feast. When Peter had used Brena's key to unlock the front door, hideous with its black walnut carvings and its stained and leaded glass, the odor of dust and decay filled his nose as with a dry and suffocating powder. Without volition of his own his ears strained to hear some sound, some retreating footsteps, some whispered voice in that house, but none came; the place was as still as a dry cave. In this stillness, in the smell of the dead air, there was the faint tremor of fear as if fear once having taken abode in this gloomy old residence, was not to be evicted as if indeed it clung when all other personalities had gone just as the odor of dead smoke remains long after the living fire has grown cold.

With a gesture of impatience Peter closed the door behind him and walked toward the foot of the long, austere flight of black walnut stairs. He could see from his position the gray light coming through barred windows into the dining room where on the table—a beautiful Chippendale, strangely out of place in the unpleasant, high studded proportions of the room—there sat a saucer with a spoon in it as if some ghostly presence had just that moment arisen from a lonely bowl of phantom gruel. The door nearer the front of the house, the entrance no doubt to the library of Parmelee, was almost closed; Peter glanced at it and ascended the stairs.

(TO BE CONTINUED.)

All Plants Need Light

All plants require some light. Sunlight supplies the energy which causes chemical reactions to take place inside the leaves. These reactions convert the raw food elements into the food elements available to the plant, says Nature Magazine. Therefore, such sun-loving plants as geraniums, roses and abutilon, when set away in a dark corner, do not thrive so well as when placed in a sunny window. On the other hand, plants which like a mild amount of sunlight, and this includes palms, aspidistra, ferns and many of the vines, do not thrive if put in a sunny location.

SICK WOMEN SHOULD BE ENCOURAGED

Letters Like This Prove the Reliability of Lydia E. Pinkham's Vegetable Compound

Turtle Lake, Wisconsin. — "I took Lydia E. Pinkham's Vegetable Compound for weakness, backache and nervousness. I had these troubles for years and had taken other medicines for them, but I have found no medicine so good as the Vegetable Compound and I recommend it to my friends who have troubles similar to mine. I saw it advertised and thought I would try it and it has helped me in all my troubles." "I have had six children and I have taken the Lydia E. Pinkham Vegetable Compound before each one was born, for weakness, vomiting, poor appetite and backache, and again after childbirth because of dizzy headaches. It is a good medicine for it always helps me. I have also taken Lydia E. Pinkham's Liver Pills for the last eight years for constipation." — Mrs. MABEL LA POINT, R. F. D. No. 1, Turtle Lake, Wisconsin.

In a recent canvass, 98 out of every 100 women say they were benefited by taking Lydia E. Pinkham's Vegetable Compound.

Sovietizing Gypsies

Soviet Russia is attempting to tame the gypsies. Recently representatives of these wanderers—who are of East Indian origin and have been roving through Europe since the Fifteenth century—formed an association, obtained recognition from the Soviet as a juridical body, and announced their intention to win their brethren away from nomadic habits and induce them to give up fortune-telling and horse-trading and settle down on farms or in industrial communities. In printing this report from Moscow a Budapest paper notes that a similar experiment with Hungarian gypsies was a failure.

WHY SUFFER ANOTHER DAY WITH INDIGESTION?

The big seller today for acute and chronic stomach misery is Dare's Mentha Pepsin and it is such a fine, pleasant and supremely good medicine that if the first bottle you buy doesn't help you—your druggist will return the purchase price.

One man writes, "I Cannot understand why any person will continue to suffer from gastritis or indigestion when Dare's Mentha Pepsin is available."

And tens of thousands of people—many of whom almost died with stomach agony—think the same way.

It's the right medicine for any person who suffers from bad digestion, gas, heaviness and that feeling of suffocation which is always dangerous.

For gastritis, indigestion, dyspepsia or any stomach agony—acute or chronic, keep Dare's Mentha Pepsin in mind.

Combination of Motions

Motion pictures are in reality a combination of still pictures. The first picture of the automobile shows the spokes of the wheels in one position. If the next exposure of the film were made when spoke No. 1 had advanced far enough to be in the position of spoke No. 2, the picture would show no motion, as spokes are identical. If spoke 1 had advanced less than halfway to position of spoke 2, the forward motion would be noticed. If, however, spoke 1 advances more than half way to the observer, it would have the effect of spoke 2 moving backward, as that distance would be shorter and the apparent motion would be in that direction.

ALL RUN DOWN, NOW HEALTHY

"Honestly, in all my 15 years of experience as a nurse I have never known of a medicine that compares with Tanlac," is the glowing tribute of Nurse M. E. Chappelle.

"Time and again I have recommended Tanlac and always with surprising results. Some time ago my Mother complained of being generally run down and on the verge of a nervous breakdown. She had no appetite, her stomach was disordered, digestion weakened and her bowels were most irregular.

"Tanlac came to her aid at once, brought on a vigorous appetite so that she began to eat with the greatest relish, and made the digestive organs function properly once more. In a short time she was well, happy and strong, and although over 86 years of age she is now vigorous enough to look after her household duties and go out quite a little, too. This is why I praise Tanlac and consider it the best tonic and health builder ever discovered."

What Tanlac has done for others it can also do for you. Tanlac is for sale by all good druggists. Accept no substitute. Over 40 million bottles sold.

Take Tanlac Vegetable Pills for constipation. Made and recommended by the manufacturers of Tanlac.

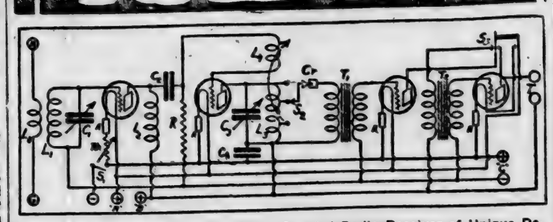
RADIO



The Wiring Diagram of an Impedance-Coupled Radio Receiver of Unique Design—Carborundum Crystal Detector Insures Stable Operation.

By J. E. ANDERSON, in New York Herald-Tribune.

One stage of tuned radio-frequency amplification, one stage of choke coil coupled, regenerative radio-frequency amplification, a crystal detector and two stages of transformer coupled audio-frequency amplification are the main elements that make up the present receiver.

When the diagram of the receiver, which is published herewith, was shown to a radio fan long since past the novice stage he remarked that everything in the receiver was done backward. Well, not everything is done backward, for most of the circuit is strictly orthodox, but there is one thing which is done in the reverse order, and it is this fact which makes the receiver unique. This fact is the manner in which regeneration is obtained in the second tube. As will be observed, the tuned circuit L3 C3 of this stage is placed in the plate circuit of the tube, and the tickler coil L4 connected in series with the grid lead of the tube is placed in inductive relation with the tuned coil L3. In this manner a voltage is induced in the coil L4, and this is added to the input voltage across the resistance R. If this added voltage is sufficient regeneration will be obtained, provided, of course, it is in the right phase.

Use of Crystal Detector.

The tuned coil L3 was placed in the plate circuit for several reasons. In the first place, it was desired to use a crystal for detecting the signals so that advantage could be taken of the greater quietness and economy of operation obtainable with this device. It was also found that the signals could be increased tremendously by connecting the crystal directly across the plate coil and tuning it instead of connecting the crystal across a tuned secondary. No tube noises go into the crystal because the audio frequency difference of potential across L3 is entirely negligible, and there is no danger of injuring the crystal by heavy direct current, because the DC differences of potential across L3 is even less than the audio-frequency alternating current potential difference. Hence neither tube noises nor direct current of appreciable magnitude will go into the crystal detector circuit. The fact that the crystal detector circuit is connected to the positive side of the plate battery does not mean that the plate battery voltage is in the crystal circuit.

Since the grid coil L4 is not tuned it requires closer coupling between L3 and L4 to obtain regeneration than when the grid coil is tuned and when the tickler is in the plate circuit. For this reason it will be necessary to use a high inductance in L4 in order to obtain satisfactory regeneration. As it is desirable to have a compact coil for a tickler, L4 should preferably be wound with fine wire. The writer used 100 turns of No. 36 double cotton-covered wire wound on a diameter of two inches.

Since the crystal circuit is connected across the tuned circuit L3 C3 and takes considerable energy from it, the latter is naturally very broad and non-selective. In order to increase the selectivity of the arrangement L3 should be wound with fairly heavy wire, and the low-loss method of constructing it may be employed. Two or three taps should also be provided on it so that the crystal circuit may be connected across only a portion of L3 when greater selectivity is required.

Does Not Increase Selectivity.

The regeneration does not increase the selectivity to the same extent in this case as it does in the ordinary circuit. The reason for this is that the grid coil is aperiodic and responds equally to currents of all frequencies which are surging in L3 C3. That is, the side bands are intensified by regeneration almost to the same extent as the carrier frequency. The set reproduces faithfully, but, of course, the quality is dependent on the performance of the audio-frequency transformers. If the choice of these has been lucky or well advised the set will make pleasant listening.

The antenna coil L0 and the first tuning coil L1 may be the two windings of an ordinary radio-frequency tuning unit, which may be purchased in any radio store. The coupling between the two windings should be loose, so that the selectivity of the set will not be impaired. If made at home the primary L0 may consist of ten turns and the secondary L1 of forty-three turns, wound on a length of composition tubing three inches in diameter with about No. 20 double silk-covered wire. There should be at least a quarter of an inch separating the two windings. The two tuning condensers C1 and C3 should each be of .0005 microfarad capacity, and they should be of the best construction. The coil L3 may be similar to L1 as to number of turns, size of wire and diameter.

C[illegible] is a choke coil for radio frequencies, consisting of 750 turns of No. 40 enameled wire wound on a wooden dowel one inch in diameter.

The coupling condenser C2 may be one of .001 microfarad capacity. The resistance R should not be greater than one megohm. A half megohm should prove sufficient. The by-pass condenser C4 should be one of large capacity. It is used mainly for the purpose of bringing the rotor plates of condenser C3 as nearly to ground potential as possible, and thereby reducing hand capacity effects. Any value between .005 microfarad and 1 microfarad may be used.

The crystal detector Cr is one of the new type carborundum crystals. These are sensitive and rugged and will stand up under heavy loads. They are also of the fixed type, so that the cat whisker nuisance is eliminated.

Simplicity of Operation.

Simplicity of operation was one of the main considerations in building the set. Thus there are only two main tuning controls in it, the two tuning condensers. Then there is the tickler control for varying the sensitivity of the circuit. The inductive switch S and the taps on the second tuning coil are not brought out on the panel. A short, flexible lead running from the crystal terminates in a small connector clip, which may be connected to any one of the taps located on the tuning coil. As a means of simplifying the filament circuits, self-regulating rheostats (A) are used throughout in place of adjustable rheostats. This is feasible, since all the tubes operate as amplifiers. One rheostat, however, is used in the filament circuit of the first tube, and this is for the purpose of securing an additional volume control. This rheostat should be one of from six to ten ohms, either of which gives sufficient control of the output of the first tube.

Also, for the sake of simplicity, jacks have been eliminated. There are only four binding posts on the panel; two, A and G, for the input, and two, T, for the output. The latter two serve for the customary jacks. As a means for throwing the loud speaker from the last to the preceding tube, in case the volume warrants such change, the switch S3 has been provided. This automatically controls the filament circuit of the last tube, so that it is only lighted when the loud speaker is in the output circuit of that tube. The switch is of the type which closes two and opens one contact. S1 is the filament switch for turning on and off the current. It should have the same external appearance as S3. The three battery binding posts should be placed at the rear of the cabinet. The two binding posts provided for the C battery may be placed in the most convenient position in the set.

This set has not been tried with dry cell tubes, but no doubt it will work with these as long as the volume is kept down to moderate intensity. Since the first tube is operated as a voltage amplifier by virtue of the impedance coupling, better results should be obtained if a high MU tube is used in this stage. If, however, a high MU tube is used, it is of great importance that the impedance of L2 be high, because a tube of this type has a plate resistance in the neighborhood of 40,000 ohms, and if the impedance of L2 is much less than this no advantage is gained by the high MU.

List of Parts.

One radio-frequency tuning coil with two windings. One radio-frequency tuning coil with one winding and taps. One tickler coil, as described. One radio-frequency choke coil, five millihenries or greater. Two audio-frequency transformers. Two tuning condensers, .0005 mfd. Four automatic filament resistances. One six or ten ohm rheostat. One coupling condenser, .001 mfd. One by-pass condenser, .005 mfd. or greater. One grid leak, 5 to 1 megohm. One crystal detector, fixed carborundum. Four standard sockets and four tubes. One filament switch. One double pole, double throw jack switch. Nine binding posts. Two condenser dials and one tickler knob. One panel, 7x21 inches, and one baseboard, 7x20 inches. One cabinet to match.

Since the tubes in this cabinet are all working as amplifiers, all the grid return leads should be connected to the negative C battery terminal, and the C battery should be given a value consistent with the plate voltage employed. The plate voltage should preferably be 67.5 or more. All the tubes are more efficient when high plate voltages are used, and this is particularly true of the first.

Connecting Wires

The wires used to make connections from the storage battery to the receiving set should be insulated with a cotton covering, as the acid in the battery is apt to attack the insulation and cause a short circuit of the battery.

The HAPPY HOME

By MARGARET BRUCE

WNU Service

Individualizing the Inside Door

Have you ever been a visitor in a large house, in which many bedrooms opened onto an upper hall? And when you were on the return trip from the bathroom at the end of the hall, have you ever wondered in consternation whether you were getting back to the right bedroom door or not? Gracious, was it the third door or only the second? Or, after all, was it across the hall and have you gotten mixed up in transit? You steal along anxiously, past all those closed doors, and breathe a sigh of vast relief when you finally open one and find the familiar furnishings you so recently left.

In a charming home that I visited during my recent summer migration I saw individual bedroom doors treated in so amusing and unusual a fashion that they were not only signposts to the occupant within but an artistic addition to the hallway.

To begin with, they were all painted different colors! No, it wasn't at all messy, though you might imagine so if you hadn't seen it. The general woodwork was white, and the doors were painted deep blue, bright yellow, one sage green and one was a sort of mauve. On each was a pretty knocker of brass or polychrome, and above the knocker was the occupant's name in a little frame. Sometimes there was an amusing legend in this frame—for the cards could be slid in and out easily. One, I remember, was lettered, "Union rules—an eight-hour night!" Another said: "Busy—sleeping!" On my door, the guest-room door, my name was prettily printed. No chance to wander into the wrong room or have some one else bolting suddenly into mine!

Beside each door hung a droll little lantern on a bracket. An electric light was managed from a button inside the room, and when the occupant was within the lamp was lighted if he or she was awake. If out or going to bed, the lamp was dark. The bathroom, for rooms with no bath attached, was marked by a cunning illuminated shade showing a jolly baby appearing over the rim of a bathtub. The light by this door was kept turned on all night. The whole scheme was a decorative and convenient one for giving individuality to an upper hall, which is usually as impersonal as a hotel corridor.

The Beautiful Luminor

Have you happened to see it yet—this newest and most artistic form of movable lighting fixture, rivaling the shaded living room lamp in beauty, if not in lighting power? It is called a "luminor," and in its rich combination of black and gold and its antique design, suggesting dim cathedrals, it is truly a charming accessory of any room which seeks to express dignity, sedate good taste, and quiet elegance.

The luminor, which comes in many variations of the same general form and materials, gives out a soft glow which is very lovely on a small table in a corner, in the center of a carved chest, or on the console in a hall. All are made with bases and standards of black Italian marble effect combined with Roman gold. The cylinder in the center, which contains an electric bulb is made of gold brocade lined with mica, giving a mellow golden light. On either side are small torch lights, with pointed bulbs, shaded by tiny shields of mica-lined brocade. Such, at least is the luminor illustrated in the sketch There are other designs, all in the same general feeling.

Some of these exquisite black and full gold lamps are called "torcheres," having tall candelabra-like groups of

lights with black and gold bases. There are pedestal torcheres also, and some tall standing luminors which would be beautiful in a hall or in a richly equipped drawing room or library.

Don't ask me if these luxurious things are inexpensive. Far from it. But they are modern developments of this age of beautiful lighting, and we women ought to know about them even if we can't afford them. They would assuredly make charming wedding gifts, provided they fitted in with the decorative scheme of the newly-weds. Of course they are all equipped to connect with the lighting switch in the baseboard, and each is a work of art, from reading lamp to small table decoration. They are the "last word" in lovely lighting.

Central Europe Sorry It Imported Muskrats

Recently hunters shot a muskrat near Salzburg, Austria. Other muskrats have been seen near Vienna. Before 1906 this North American animal was unknown in Europe, but during that year a pair was brought from America and released on an estate near Prague. The progeny of these rats multiplied so fast that they soon spread to the Bohemian lakes and forests in spite of efforts to exterminate them. By 1913 they were all along the Moldau and along the Eger river in Bavaria. In 1914 they reached lower and upper Austria to the south and Saxony to the north. Soon they crossed the Danube but seem to have been stopped by the Austrian Alps. When the first muskrats were brought to Bohemia it was thought that they would furnish fur, but the climate of Europe does not seem to develop a suitable growth. Central Europe suffers the damage caused by the rodents without the compensation of being able to use the skins.

BEAUTIFY IT WITH "DIAMOND DYES"

Just Dip to Tint or Boil to Dye

Each 15-cent package contains directions so simple any woman can tint soft, delicate shades or dye rich, permanent colors in lingerie, silks, ribbons, skirts, waists, dresses, coats, stockings, sweaters, draperies, coverings, hangings — everything!

Buy Diamond Dyes—no other kind—and tell your druggist whether the material you wish to color is wool or silk, or whether it is linen, cotton or mixed goods.

Flying Into Matrimony

A young Swedish couple were recently married while flying through the air on board an airplane. When the machine, carrying a full complement of passengers, had risen to a height of 1,500 feet an altar was erected in the cabin, before which a Swedish clergyman performed the marriage ceremony, with a lawyer and his wife as witnesses. A wedding breakfast was then served, and the health of the couple drunk in champagne by all the passengers. The clergyman and the lawyer left the machine at Hamburg, but the couple continued their honeymoon trip to Amsterdam.

A Substantial REWARD

Thousands of people in America have been liberally rewarded for insisting on having USKIDE Soles on their shoes. USKIDE wears and wears and wears. It is made only by the United States Rubber Company, the world's largest manufacturer of rubber products. The money it saves on shoe bills is remarkable. Have your old shoes re-bottomed with USKIDE. Buy new shoes with genuine USKIDE Soles. USKIDE is comfortable, healthful, waterproof, good-looking. Protects against slipping. Look for the name USKIDE on the sole.—Adv.

Clock's Long Service

A Bath (Maine) family have had one alarm clock for 21 years which has run continuously during that time without repairs, and only an occasional oiling. Considering that it cost $1.20, the family believes that it has had its money's worth out of the faithful timepiece.

Every department of housekeeping needs Red Cross Ball Blue. Equally good for kitchen towels, table linen, sheets and pillowcases, etc.—Advertisement.

Dog Finds Gold

A boy playing with his dog, which scratched up a sample of gold from the surface of the ground, was responsible for the latest gold "strike" in New South Wales.

To bring Greek firms in closer relations with domestic and foreign sellers an international fair will be held in Saloniki.

Greenland Hygiene

Tuberculosis is reported to be "making serious ravages among the natives of Greenland, where the knowledge of the principles of hygiene is primitive," says the United States Department of Labor. The Danish ministry of the interior and Danish health service are assisting the local government in the installation of a 20-bed hospital for tuberculous children. Measures for the protection of orphans in Greenland are also being undertaken.

SPENCERVILLE

John Dove and family were Sunday guests in the Lee Chapman home.

Mrs Golden High very pleasantly entertained the C. C. Club Friday afternoon.

For Sale: 3 Wilson Heaters used only one season. 37tf Bowser & Reed.

Relatives received word of the death of Fay Thomas of Wayne. The funeral was held Sunday afternoon from the residence.

Mrs John Steinborn died Monday morning about 11 o'clock at her home four miles west of town, after an illness of several weeks. She leaves six children.

W. F. Rhoades and wife entertained at Sunday dinner, Paul Funk and wife of Auburn and Miss Loretta Funk of Concord. Afternoon guests were Mrs. Laura Sharpie and son, Hubert.

Mrs Arthur Walter of California, Henry Walter and daughter, Miss Fern, Henry Walter Jr., wife and son, Mrs Cora Steward and daughter, Miss Arminta, were Sunday dinner guests of Roscoe Walter and wife.

Word was received by James Vallieu of the serious illness of his mother, Mrs. Priscilla Hardesty of Paulding, Ohio. Also four children of Edward Dix and wife are ill with typhoid fever. Mrs. Dix is a sister of Mr. Vallieu.

R. U. Bowser and wife entertained at dinner Sunday in honor of their son, Roy I. Bowser's 23rd. birthday and Mr. Bowser's father, Theodore Bowser's 77th birthday anniversary; Iven C. Bowser and family of near Fort Wayne, Homer Bowser and family and Theodore Bowser of near Huntertown, Roy Bowser and wife of St. Joe, James Reed and wife and Mrs. Emila Gloyd and two sons.

MICKIE SAYS—

See Furnish for Batteries.

Miss Ada Markle spent Monday with her sister, Mrs Florence Barr at Fort Wayne.

William Vallieu and wife were Saturday and Sunday guests of Mrs. Ella Hughes and son, of south of Concord.

For Sale: Roan Durham cow, 6-yr. old; Holstein cow, 7-yr. old, both giving good flow of milk. Both bred. B. W. Dwyer, Spencerville. 39t2p.

Gerry Wasson and wife, Miss Ida Reed, James Reed and wife and Theodore Bowser, were Monday evening supper guests of R. U Bowser and wife.

W. F. Rhoades, wife and daughter, Miss Doris, Mrs. Margaret Rhoades and F. E. Rhodes, attended the funeral of their uncle, Jacob Rhoades at LaOtto, Monday afternoon.

Wm. Driver and two other men of near Spencerville, figured in an automobile upset at the Newton Henderson Corners, Tuesday noon. Clyde Hart came along soon and assisted in squaring them up

Lloyd Goldsmith is a member of the grand jury, called for Wednesday morning. One of the duties of the grand jury will be a further investigation into the case of Walter W. Mountz, former collector of the Auburn water and light department.

NEWVILLE

Miss Oral Richmond was taken to Fort Wayne last week for medical advice.

George Cottrill moved the first of last week to Charlie Countryman's farm south of town.

Mrs. Martha Pressler, a former resident of Newville, moved from Hicksville to this place last week.

Arthur Rhoads of Peoria, Ill. came Thursday and took his father home with him Friday and Mrs. Rhoads was taken to the home of her daughter, Mrs. Bessie Shaffer at Butler to be cared for.

The funeral of Henry Beree, whose death was noted last week was held last Thursday afternoon from the U. B. Church, Rev. P. A Hubartt officiating. Interment in Newville cemetery. Henry leaves his parents sisters and brothers and a host of friends to mourn his departure. A younger brother, who was ill, has recovered and an older brother, McKinley, is in the hospital at Battle Creek, Mich. They are sure having some trouble, they have the sympathy of a host of friends. Mr. and Mrs. Beree have lived in the Newville community all their lives.

Notice Of Final Settlement

Cause No. 2879.

NOTICE IS HEREBY GIVEN to all persons interested in the estate of MARY A. RENN deceased, to appear in DeKalb Circuit Court, held at Auburn, Indiana, on the 30th day of Oct. 1925, and show cause, if any, why my Final Settlement Accounts with the estate of said decedent should not be approved; and said heirs, and all others interested, are notified to then and there make proof of heirship or claim and receive their distributive shares.

Witness, my name, this 30th day of September, 1925.

Successful Marriages

The success of many a marriage can be traced back to the circumstances that one party married for a home and the other for general housework.—Detroit News.

In the Baited Trap

By RUPERT S. HOLLAND

(©, 1925, Western Newspaper Union.)

TOM ENDICOTT was an enterprising and successful young real estate dealer, but he had never been able to convince Judith Tremaine that he was the right man for her to marry. Her ideal rather ran in the direction of a tall, dark man, with foreign manners and a background of mystery. He had been collecting rare bibelots, prints and curios in Europe, and was now starting a shop for connoisseurs. Judith was fascinated by him.

Of course Tom Endicott knew of this; he knew that Judith had lunched once or twice with Mowat and he met her several times on the street with him; but he didn't know how far the affair had progressed until one afternoon Madge, Judith's younger sister, encountering him downtown enlightened him. "Judy's mad as a March hare," said Madge. "She told me this morning that he's going to send his car for her tonight and whisk her off to dine with him at a little restaurant she's heard of before."

By seven o'clock that night a fine rain was falling, and when the maid announced to Judith that the car was waiting for her at the door Judith drew her cloak about her, raised her umbrella, and hurried down the steps.

"This car is for Miss Tremaine?" she asked the chauffeur who opened the door.

"Yes, ma'am," said the man; and Judith stepped in. The chauffeur resumed his seat and the closed car whirled away.

For some time Judith felt only the thrill; then she looked through the window. Rain had streaked the pane, but she could see that they were no longer in the built-up section of the city. She sat back, wondering, puzzled. Where was the car taking her?

She glanced at her wrist-watch and saw that they had driven for half an hour. She began to feel uneasy. She rapped on the window at the chauffeur's back, but he paid no attention. Then she began to wonder what sort of a man Mowat really was.

At last the car stopped and the chauffeur opened the door. Judith saw a lighted house. "This is the place, Miss Tremaine," said the man. Judith, frightened—but preferring any place to the imprisoning car, jumped out, and, without raising her umbrella, ran up the steps of the house and pushed the bell.

In a moment the door opened, and there stood Tom Endicott. "Why, if it isn't Judith!" he exclaimed in his most delighted tone.

Amazed, and greatly relieved at sight of Tom, she went in. "Is Mr. Mowat here?" she asked.

"Why no. I'm keeping house for the Ogdens while they're away. Did you want to see Mowat?"

"No," said Judith. "I don't think I did. I'd rather see you."

Tom beamed. "That's bully! I was sitting down to dinner. I'll tell the maid to put on a plate for you."

He helped her off with her cloak, and led her into the living room, where a wood fire blazed on the hearth, and then to the dining room, where the table was set for two, with a big bowl of roses in the center. Judith had never felt so relieved and cheered. She didn't try to explain her presence to Tom; she simply enjoyed the delicious food set before her and let him do all the talking.

Tom talked very well, and when they had finished dinner he suggested that perhaps Judith would like to see the rest of the house, which was a new country home recently bought by the Ogdens.

Afterwards they sat by the wood fire, and Judith found the novel situation—the being entertained by Tom in such a charming room—so pleasing that she was regretful when a clock chimed ten.

"I must go," she said. "How do I get home from here?"

"In the Ogdens' car," said Tom; and he telephoned the garage.

He helped her into the car, and got in beside her. "But you're not going all the way into town with me?" she said, though she hoped he was.

"Do you think I'd let you go all by yourself?" he answered. "What sort do you think I am?"

"I think," said Judith presently, when the car was smoothly running, "that you're a perfect host."

"That's something." His fingers touched hers in the darkness. "I say, Judith, why shouldn't we have a house of our own?"

The same thought had occurred to Judith during the evening. After a moment she murmured, "Well, if you feel that way—"

The car sped on. It was only when they reached the city streets that Judith drew away from her lover's arms. "Tell me, dear," she said, "how did you ever think of such a wild idea as kidnaping me tonight? I thought this was Oliver Mowat's car; it's the one that took me out."

"I had to do something wild and reckless, Judy. And I've always found that the best way to sell a new house to a prospect is to let him see how homelike it is when other people live in it."

"Tom, you haven't done this before with other young women?"

"Certainly not, sweetheart. But I hope to sell a great many houses to other couples by showing them how happy we are in ours. You won't mind, will you, Judy? You looked so adorable in that new evening gown by the fire!"

Teaches Art of Doing Business by Telephone

American business men transact by telephone, almost daily, deals involving millions. They buy and sell by the spoken word everything from bolts of silk to locomotives. The basis of this sort of business is confidence, and business confidence has been developed in this country to a high degree. But it is only now that the technique of transactions by telephone is receiving the serious attention it merits. "The voice with a smile" is no longer sufficient.

An associate professor of English at a Boston college teaches the art of doing business by telephone. He takes his pupils all the way from the mechanics of the thing to voice culture. He tells them how to pitch the voice for telephone conversations and discusses certain intricacies of English composition which arise in such cases, says the Nation's Business.

It is an age of specialization, and the specialist in business by telephone may prove to be not the least interested of the lot.

Possibly Word "Thrill" Is Being Overworked

A man was heard to observe the other day that he hoped the next person who remarked in his hearing that this or that had thrilled him would be a man so he could "biff him one" and run.

The most overworked words in the English language at the present time, he opined, are the words thrilled and thrill. Their excess usage came in with the World war, when the universe was keyed to high tension and intelligence from the battle front frequently possessed thrilling quality.

Since then the whole world sits up and waits to be thrilled over the every-day happenings of life, and this year no other words seem available for the returning traveler. Unless crowded with thrilling moments any outing falls flat and the words in the vocabulary of the tourist seem to express a state of ecstatic joy. It takes little or nothing to move folk to this state of exaltation. —Baltimore Sun.

European Newspapers

According to newspaper data recently compiled in Vienna, there are some 1,800 so-called political dailies and weeklies published in central Europe. Berlin, with about 100, half of which are dailies, leads the list of cities, with Vienna in second place with 55, including 22 dailies. Prague, however, ranks next to Berlin in the matter of dailies, having 25. In Prague there is a daily newspaper for every 33,000 inhabitants, in Rome and Budapest one for every 70,000, in Paris one for every 75,000 and in Vienna one for every 85,000. The word political is used to distinguish ordinary newspapers from technical organs and literary publications.

Showing Class

One of our prominent statesmen has an extravagant idea, and faith in the future of his home town, Yorkrock, and is ever ready to enlighten the stranger as to its wonderful advantages, as compared with any other town in the West.

A New York politician was jesting with the statesman one day about Yorkrock, when he chanced to ask:

"Say, senator, how large is Yorkrock, anyway?"

"Yorkrock," replied the other, "is about the size of New York city. The only difference is that Yorkrock is not entirely built up. But that is a mere technicality."

Composition of Concrete

Concrete is made by mixing portland cement, sand, pebbles or broken stone and water in certain definite proportions, according to the kind of work for which the concrete is to be used, and then permitting the mixture to harden under proper conditions in forms or molds.

As soon as concrete has been mixed it should be placed in the forms, because while plastic it readily assumes the shape of the forms or mold in which confined. In a short time it commences to harden and soon becomes like stone. Concrete may be called manufactured stone.

Can't Be Done

Old Lady—Why don't you cheer your little brother up?

Girl—Did you ever try to cheer anybody up who'd ate five bananas and six ice creams?

Mrs. Ida Woodcox and Mrs Blanch Leighty, spent Wednesday in Fort Wayne

Miss Minnie Thompson, who has been quite ill with stomach trouble, is improving.

Mrs. Martha Forkner is visiting for several days in the home of Mr. and Mrs. Robert Nichols at Orangeville.

Frank Curie, wife and little son, Junior, Mrs. Jennie Sechler and Merritt Sechler were Sunday guests of Perry Jump and wife of near Woodburn.

Mr. and Mrs. Charles Koch of this place and Stanley Koch and wife of Fort Wayne, visited relatives in Eastern Ohio from Saturday until Wednesday.

S. D. Gee and son, Foster Gee, spent Saturday at Peru. Mrs. S D. Gee accompanied them as far as Fort Wayne and spent the day with her son, Howard Gee and family.

Miss Harriett Wasson gave a splendid address Sunday morning at the Methodist Sunday School on the subject, "The Call to Missions." The entire program featured missions.

The following gentlemen left Tuesday morning for Hesperia, Mich., on a fishing trip, some for a week, others to stay two weeks: Frank Millman, Frank Bowman, Charles Rice, Harry Shuff, Clay Coburn, Lester Coburn, Roy Wade, L. B. Meek and Fred Jenkins.

Mr. and Mrs. Wm. Randall entertained Mr. and Mrs. Frank Myrtle of Chicago a couple of days last week. Thursday evening callers were Mrs. George Keitzer of Ligonier and John Beard, wife and daughter, Muriel, of Waterloo.

Many Styles for Fall and Winter

The materfamilias has finally regained her place in the sun and the age of discretion need no longer cloak its wisdom in the garb of the ingenue. That is one of the interesting messages of the Paris openings, and it will be received with varied emotions by the youth of yesterday, writes a Paris fashion correspondent in the New York Herald-Tribune. Many a slender dowager and numerous matrons not so thin who ever live and relive the days of "naughty" four will not be eager to forsake the styles which linked them still with the irrepressibles and which, under the decree of Fashion, dimmed the esthetic eye and silenced the critical tongue. The new models, while they by no means lack in the charm of youthfulness, incorporate enough of the more stately themes to gratify the heart of the mature woman of cultured tastes and no matron need pirouette the avenues this autumn dressed as though she had just turned sixteen.

The waistless silhouette has been the principal difficulty of those who were unable to resist the weight of advancing years and inept attempts to offset it by figures no longer supple have been responsible for some unlovely and decidedly inartistic effects. The Paris couture this season has boldly declared for the marked waistline and enough varieties have been offered to satisfy the most difficult. Even the skirt length, mathematically as short as ever, frequently camouflages its brevity by means of scallops or an uneven hemline. And if to these you add the usually long and often decorative sleeve, the high neckline and the emphasis upon ornate trimmings and bright colors—not, however, to the exclusion of black—it becomes apparent that smartness will not be the exclusive portion of the young for fall and winter.

Skirts That Show Moderation.

Suzanne Talbot demonstrates very clearly in her new collection that a great modiste can be a great dressmaker as well. Originality and a first-class knowledge of her subject are distinguishing characteristics of every gown shown. Russian, medieval and Oriental influences are marked, with an especial leaning toward the Egyptian effects, of which Madame Talbot has always been so fond.

The line is full and fairly straight, with short skirts that still show moderation, for they more than cover the knee, being some sixteen inches off the ground. The hips are clearly defined either by a swathed belt or some drapery outlining the curves of the figure. Sleeves are either long and tight-fitting or they do not exist. Many of the coats have fanciful sleeves. For instance, one in black cloth trimmed with astrakhan has long bag sleeves that can hang straight down and cover the hands or be tucked up to form a full cuff. Another wrap, in white velvet embroidered in gold, has long pointed sleeves nearly reaching the ground, such as were worn by ladies during the days of the Crusaders.

Tiers of Ruffles in One-Piece Frock for Street Wear.

Beautiful hand-woven materials are used for the attractive sports costumes that all show the two-piece jumper and skirt effects. Many of these are in two colors or two shades of the same color with large inlets either diamond shaped or triangular.

Leather, gold foil, flat fur and painted parchment are used as trimmings. A black velvet gown has a round yoke and gauntlet cuffs of fine gold foil. The dress is cut in one piece behind and molded to the hips, while in front there is a twisted belt from which spring full gathers forming a graceful front panel to the skirt.

A Higher Waistline.

A higher waistline is evidenced in a handsome evening gown of gold and black lame that is as supple as the finest silk. It has a front apron of another lame in which red and green are mingled with the black and gold in a lovely floral design. This is so cut as to suggest that the back is forming a bolero, while the high waist is further accentuated by cleverly inserted plaits.

Another notable evening gown is in white mousseline de soie. The fullness of the skirt is accentuated in front by the finest plaiting, while the hips are enveloped in a coat-of-mail arrangement of fine gold petal-shaped paillettes, giving a truly Egyptian line.

An original raincoat is of heavy black waterproofed crepe de chine with a capucine hood and wide cuffs of orange and beige plaid homespun, which also forms the lining. The dress under it has a charmingly simple jumper of the black waterproof that also forms panels down the sides of the straight plaid skirt, which has wide knife plaits in front.

The Miler Soeurs show a collection that is distinctly Parisian. This salon

One-Piece Frock of Charmeen, With Collar and Belt.

favors the moderately short skirt, which means some two or three inches longer than those worn in Paris last season. Godets are employed to make the skirts wider, and are cleverly inserted in order to retain the general impression of the straight silhouette. Usually they appear only in the front, leaving the back plain and straight.

The coat frock is the outstanding feature of the collection. Some are straight and button to below the hipline, where they are left open to show a plain slip underneath, while others have narrow godets in the front. Buttons are a favorite trimming on such frocks and they always serve the practical purpose of actually buttoning a fastening. Incidentally, they are the exact color of the frock.

Velvet Is Popular.

Little original touches either in belts or collars are characteristic of this house. Miler Soeurs incline toward jabot effects this season and make them out of the ordinary by putting the buttons to work. A short jabot buttons down the front of a black coat frock. In another instance, a green crepe de chine dress, which has godets in the front of the skirt, is topped by a collar which is shaped like a coat collar and turns over in the back and ends in front in revers that are shaped with godets falling into lines of a jabot.

Satin is as surprisingly popular here as everywhere and its popularity is likely to continue. Miler shows several black satin frocks and favors black in most coat frocks. A black georgette crepe coat dress is tucked from a short shoulder yoke and has plaits at the sides. It buttons down the front over a bow with long ends of beige chiffon edged with gold, which is attached at the neck to a black underslip. Another black coat dress is braided in soutache combined with embroidery, and still another in crepe is trimmed down the front in little cuts with the edges bound in the shape of a halfmoon.

Attractive ensembles play their role in this collection. A green velvet evening coat has a mink collar and is embroidered in a band around the bottom in a design of autumn leaves in two shades of tiny gold beads. The frock is the same "vert lumier" in crepe roma, with the bodice covered in the same design of fine beading and the skirt quite plain.

Velvet is a favorite trimming in evening frocks. A claret crepe has a flounce cut in godets across the front and headed by a row of velvet flowers applied to the skirt. A black crepe dinner-dress has a band of black velvet around the bottom of the circular skirt. The neck is rather different in having two long, narrow pieces attached to the shoulders. These are fastened together in the back with a diamond buckle.

Yteb favors plaits of every variety to express more width in frocks.

THE KITCHEN CABINET

(©, 1926, Western Newspaper Union.)

"Be consistent in your economy. Don't try to save on the necessities of life. To do so is false economy, but practice your economies on those things you do not actually need—the luxuries of life."

SIMPLE GOOD THINGS

Arrange cubes of bread in a bowl and pour over them enough fruit juice to be well absorbed. Chill and when cold unmold and serve with cream or a thin custard for sauce.

Lemon jelly served with a chocolate blancmange is a combination not often seen but is very good. By serving both, the amount of jelly will serve twice as many.

Grape Sago.—Wash and soak over night one cupful of sago. Cook until transparent, adding one cupful of grape juice. When cool turn into a glass dish and serve with sweetened cream. Any good fruit juice may be used in place of the grape.

Mississippi Chicken.—Put through the meat grinder one-fourth of a pound each of veal and fresh pork, two slices of bacon, a chicken liver, half a green pepper and a sprig or two of parsley; add a teaspoonful of scraped onion, a tablespoonful of worcestershire sauce, half a teaspoonful of salt, paprika to taste; mix well and stuff the chicken. Baste often and serve with sweet potatoes or cooked rice.

Strawberry Gateau.—Bake a round of sponge cake; when cold cut off the top and scoop out the center, leaving a two-inch shell. Heap with strawberries which have been well sweetened, cover with whipped cream and serve at once.

Stuffed Rabbit.—Mix a cupful of bread crumbs, two tablespoonfuls of chopped parsley, two tablespoonfuls of poultry dressing or any desired herbs, four tablespoonfuls of chopped suet, one teaspoonful of grated lemon rind, one egg and pepper and salt to taste. Add milk if more moisture is needed. Fill the well-cleaned rabbit with this mixture and sew up carefully. Simmer for an hour or longer, adding a tablespoonful of vinegar to the water in which it is cooked. Serve with buttered onions, and parsley butter. To prepare this, cream butter and stir in as much minced parsley as it will take.

Pineapple juice is especially refreshing, and is also valuable as a medicine.

VARIETY IN COMMON FOODS

Chicken is so well liked that it may be served frequently and is always a welcome dish.

Chicken With Corn.—Scrub and clean a fowl well by using a handful of soda in the water; cut up as for frying; roll in seasoned flour and brown in a little hot fat. Lay the pieces in a baking dish and cover with milk, simmer slowly for two hours or longer, depending upon the age of the fowl. Season well when half cooked and add a cupful of corn (fresh) cut from the cob—canned will do. Serve the chicken with corn and the gravy poured around it.

Parisian Sandwich Filling.—Soak one cupful of prunes over night, drain, remove the stones and put through a meat chopper with one cupful each of dates and figs. Add enough orange juice to make a paste that will spread easily. Butter graham or whole wheat bread and spread with the filling. This will keep some time if covered, and is very good for a cake filling.

Mutton Broth.—Take three mutton bones, one tablespoonful of rice and six cupfuls of water. Add salt and simmer for five hours. Skim and remove all fat, add pepper and serve hot. This is especially good for children.

Mutton en Casserole.—Brown a pound or less of mutton cut from the shoulder, cut into serving-sized pieces. When well browned season with salt, pepper and dredge with flour. Add one cupful or more of carrots, a cupful of peas, and one onion. Place in a casserole to bake for several hours. Serve from the casserole.

Fried Green Corn.—Cut as much corn from the cob as will be eaten. Into a hot frying pan put a generous portion of butter and when melted turn in the corn and stir constantly until the milk has moistened it well. Season and set on the back part of the range to cook for five or ten minutes, then serve. A green pear finely-chopped and added to the butter, cooking a minute or two before the corn is added, makes a fine flavor well-liked.

If a few pieces of fried chicken are left from dinner, use them as follows for a luncheon or supper dish: Remove the meat from the bones in as large pieces as possible, mix well with any gravy left over; if none, cover the bones with a little cold water and extract all the flavor; add that with a bit of thickening. Into a small baking dish slice two or three good-sized potatoes, cover with a sprinkling of finely sliced onion, using one small one; cover with the meat and gravy, then add enough thick canned tomato to cover the dish, a cupful or more. Cook for three quarters of an hour in a moderate oven. Serve from the baking dish.

Nellie Maxwell

Seen and Heard In Indiana

Marshall J. Searle, age sixty-two, dean of Huntington college, died at his home in Huntington of heart disease.

Gov. Ed Jackson at Indianapolis named David A. Rothrock, a dean of the college of arts and sciences of Indiana university, to succeed William A. Guthrie as a member of the state conservation commission.

Senator Samuel M. Ralston, who has been confined to his bed at his home northwest of Indianapolis for about three weeks, is slightly improved, Dr. John M. Cunningham, the senator's physician, reported. For many months Senator Ralston has been indisposed.

For his failure to report facts concerning the delay of firemen from the central station in responding to a recent alarm, Fire Chief Arch McCabe of Muncie was suspended from active duty for thirty days by the board of safety.

Miss Margaret Overman, daughter of Mrs. Adda Overman of Anderson, was married at Riverside, Los Angeles, Cal., to Roy Ingraham, musical director and composer. Mr. Ingraham is a brother of Rex Ingraham, motion picture director.

Gov. Ed Jackson, in an address before members of the Shelbyville Rotary club and its guests, praised the work of the state conservation department and referred to the state highway system as one of the best in the country.

For the first time in several days the New York Central railroad's locomotive shops at Elkhart have been put on a full six-day weekly schedule instead of five and a half days. Eight hundred and fifty employees are affected and the monthly pay roll increased $20,000.

With the close of the present fiscal year the state printing board at Indianapolis will turn back into the general fund from its appropriation an unexpected balance of $17,156.60, it was announced by J. Otto Lee, secretary of the board, recently, following a meeting of the board with Gov. Ed Jackson.

Organization of armed vigilantes to protect the banks of Marion county against bandits was completed at a meeting at the chamber of commerce in Indianapolis, it was announced by George Snyder, former sheriff, who is chairman of the protective committee of the Marion County Bankers' association.

Frequent releases of inmates who have served the period of their sentences and also paroles extended to many of the prisoners are still exceeded by commitments to the Indiana reformatory, near Pendleton, the roster of which now shows 1,523 inmates, it was said by the board of trustees at a meeting held in Anderson.

For the first time since its erection in 1913, water was turned into the drinking fountain of a monument erected on the south lawn of the state house at Indianapolis by the Caroline Scott Harrison chapter, D. A. R. The monument was built as a marker of the National Old Trails road and as a memorial to the pioneer men and women of Indiana.

Dr. William W. Parsons, age seventy-two, president emeritus of the Indiana State Normal school, who died at his home in Terre Haute, was one of the widely-known educators of the country. The success of the Indiana State Normal school was largely due to the efforts of Doctor Parsons, who was its active president at the critical period of its existence.

The Dixie highway motorcade will start from Chicago, Friday morning, October 9, coming by way of Danville, Ill., and Crawfordsville to Indianapolis for its first overnight stop. Ten years ago the Chicago party had great difficulty in reaching Danville for its first overnight stop, whereas this time it is expected to arrive in Indianapolis not later than 7 p. m. the same day.

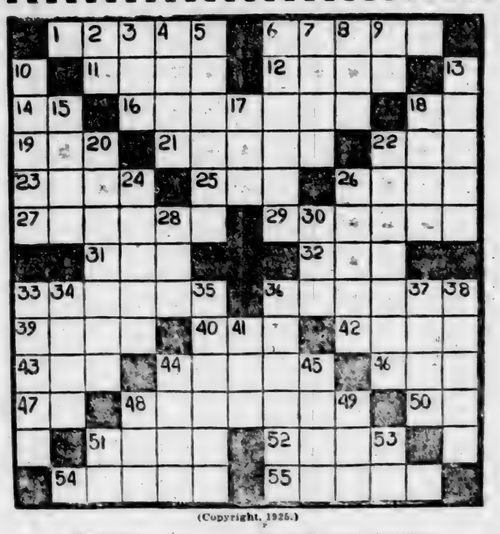
With rapid progress reported on the majority of construction projects in the state highway system, the end of this construction season, which continues until cold weather, will see all of the 200 miles of pavement contracted this year completed, and slightly better than 80 per cent of new gravel and stone roads ready for traffic, John D. Williams, state road director, said in the commission's traffic bulletin issued at Indianapolis.

One hundred and forty-five Indiana dairymen, members of fifteen cow testing associations, have been placed upon the honor roll of the National Dairy association in recognition of their achievement in developing herds of dairy cows to a yearly production of over 300 pounds butterfat, according to G. A. Williams, dairy specialist, Purdue university. Each member will be presented with a diploma for his good work at the National Dairy exposition, to be held at Indianapolis, October 10 to 17.

Gov. Ed Jackson at Indianapolis announced the appointment of Alfred M. Hogston of Marion, an attorney and former Republican member of the Indiana state senate, as state fire marshal to succeed Newman T. Miller.

Members of the Lincoln memorial commission, at a meeting in Indianapolis with Gov. Ed Jackson and Richard Lieber, director of the state conservation commission, voted to buy 46 acres of land surrounding the present burial ground of Nancy Hanks Lincoln in Spencer county, as an addition to the state reservation there.

CROSS-WORD PUZZLE



(Copyright, 1926.)

Horizontal.

1—A very venomous snake of India
6—To get up
11—Not far
12—Situation
14—While
16—Guides
18—Therefore
19—To total
21—The person to whom a gift is made
22—Also
23—To ensnare
25—A cyst
26—Same as 23 horizontal
27—A sequence
29—Wilts or sags
31—To purchase
32—Not in
33—Made with malt
36—To become fixed
39—Opposed to "sweather"
40—Anger
42—Behold
43—An illuminating mixture
44—Parts of ships
46—A rodent
47—Exists
48—Occurs
50—A prefix indicating separation
51—A sport
52—A time of day
54—Played with
55—Satan (Arabian myth.)

Vertical.

2—Upon
3—A resting place
4—A predatory incursion
5—A certain kind of weapon (pl.)
6—To go up
7—Ceremony
8—Belonging to it
9—A point of the compass
10—Throws
13—Enclosures for animals
15—Certain
17—A suffix forming the names of certain hydrocarbons
18—A cleansing agent
20—Small round playthings
22—One who trots
24—A western Indian
26—Those who watch race horses in training
28—An organ of sight
30—Eggs of fish
33—Sorcery
34—An exclamation of distress
35—Plunged in and out quickly
36—Calm
37—To go first
38—To go in
41—To knock
44—Similar
45—A conceited person
48—Fodder for horses
49—The sun
51—To proceed
53—Nickel (abbr.)

The solution will appear in next issue.

HOW TO SOLVE A CROSS-WORD PUZZLE

When the correct letters are placed in the white spaces this puzzle will spell words both vertically and horizontally. The first letter in each word is indicated by a number, which refers to the definition listed below the puzzle. Thus No. 1 under the column headed "horizontal" defines a word which will fill the white spaces up to the first black square to the right, and a number under "vertical" defines a word which will fill the white squares to the next black one below. No letters go in the black spaces. All words used are dictionary words, except proper names. Abbreviations, slang, initials, technical terms and obsolete forms are indicated in the definitions.

DAZED BY SUDDEN RISE TO WEALTH

Oil resources near Tulsa, Okla., are still practically untouched in spite of the number of wells that have been drilled in the region, W. E. Espy of Tulsa, chief experimental chemist for a large oil corporation, said to a New York Times reporter. Tulsa has more millionaires than any other city of its size in the country, he added.

"Many of those suddenly made rich haven't the faintest idea of what to do with their wealth," he commented. "Indians or negroes who are living in little hovels will have their land leased by some company and will find themselves millionaires without a notion of what to do about it. The story of the old Indian who bought a hearse to use as a pleasure vehicle is no exaggeration. There are lots like him in Oklahoma. The oil industry accounts for the growth of Tulsa. Fifteen years ago the population was barely 15,000. It is now 100,000."

Relics of War of 1812

Solid shot and canister, used in the War of 1812, were taken home as souvenirs of the 1925 Citizens' Military Training camp by many youths of New York, New Jersey and Delaware, who underwent a course of training at Madison barracks on the shores of Lake Ontario. Excavation work now under way near the old fortifications has unearthed a considerable number of old cannon balls that have laid in the ground since 1812, says the New York Times.

Some of the shot has been found within a few yards of the barracks occupied by the C. M. T. C. students. All of it is in perfect condition, although heavily encrusted with rust. One such shot found recently is believed by army officers to be from a lot of cannon balls forged at a foundry which the American army established in northern New York. Tradition has it that when the troops at Madison barracks received the consignment of shot they were found to be too small for the guns. The Americans wrapped the shot in pieces of carpet and managed to cripple an English man-of-war that was leading the attack.

Story of Woolens

In the time of Julius Caesar, woolen cloth was a commercial commodity. In the reign of Charles II of England all persons had to be buried in woolens or pay a penalty equivalent to $25 in our money.

The Waiter

A woman, complaining of her ledger to a police captain, said: "He is a grave digger, and tells me he is anxiously waiting for me."

Japanese Floral Designs

Leaves as well as flowers are used by the Japanese in their horticultural decorations. A large number of blossoms is never crowded into a single vase but arranged in loose clusters in rather low vases.

The type of vase or bowl depends largely on the kind of flowers to be arranged. Green and neutral vases, as representing the natural environment of flowers, are chosen for brightly colored blooms, such as yellow daisies, oriental poppies and marigolds. Sweet peas and other flowers with pastel shades are arranged in daintily colored baskets or bowls.

Slain Man "Outfitted"

As Ho Kee lay in his coffin in a shop, ready for burial, the fingers of his right hand had stiffened about the butt of a revolver, placed there by friends. Over his left hand was a cloth dipped in his own blood. A mirror lay by these ghastly tokens, so that in the Undiscovered Country Ho Kee might see his hurts reflected and remember that, even in the place beyond, he must trail and punish his murderer. This outfitting of the dead for his far journey is common to men of many races.—New York World.

Wealth Hoarded in Gems

Among the richer people in China, who do not place reliance on native banks, the most convenient manner of keeping their wealth is to invest it in precious stones for the adornment of the ladies of their families.

Reason for Change

"Before we were married you used to drink in every word I uttered." "Yes, but your conversation is so dry now that drinking it in is impossible."—Boston Transcript.

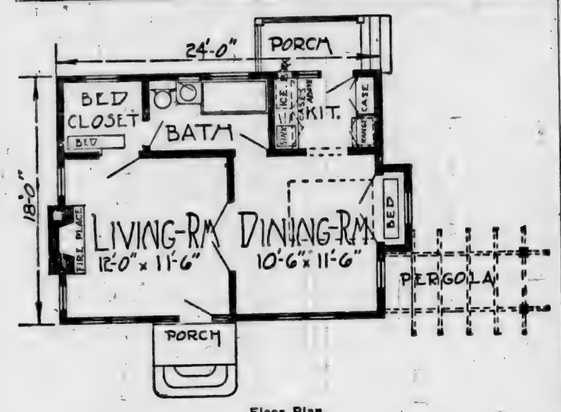
Bungalowette, Single Family Home; It Is Convenient and Inexpensive



Floor Plan.

By WILLIAM A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all problems pertaining to the subject of building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on the subject. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

The influence of the modern kitchenette apartment is conspicuous in the house building of the present day. Space-saving appliances and arrangements are being used everywhere, and even in the larger homes we find the breakfast nook and numerous built-in features, for space saving is not the only quality which recommends these features. They also make for comfort, convenience and labor-saving.

But the most conspicuous development from the kitchenette apartment is the bungalowette, a tiny bungalow with the floor plan arrangement, in almost every detail, which characterizes the kitchenette apartment. In these tiny homes we have every convenience of the kitchenette apartment with the additional advantages of the single-family home with all its possibilities for attractive surroundings. That people in general are coming more to appreciate the desirability of the single-family home is proved by the increasing proportion of this type of dwellings which is being built.

The photograph which is reproduced here shows a typical bungalowette. It is not only small and economical to build but can be constructed on a very small lot without crowding, for it occupies a space only 24 feet wide and 18 feet deep, exclusive of the pergola and porches. The front which this little home presents to the street is charming, for the lines have been kept simple and handled in a manner to avoid the boxlike appearance which is always a danger in such small buildings when not designed by a first-class architect.

This is a frame house with shingle roof and brick outside chimney for the fireplace. The entrance is well designed to present just the right amount of prominence without any appearance of being heavy. The door, which is approached by semicircular steps, is sheltered by a small roof extending out from the roof of the house. At either side there is a tall, narrow window serving the double function of light and ornament.

This entrance leads directly into the living room. The living room and dining room extend across the entire front and divide the space nearly in half, though the living room is allowed a little more of the space than the dining room. The living room is at the right and at its end is an attractively large fireplace flanked by windows which, together with those at the front, make it a light and cheerful room.

In the rear corner of the house is a bed closet, large enough to be used for a closet and for dressing, where the disappearing bed is hidden during the day. At night this bed is used to convert the living room into sleeping quarters. A door from this bed closet leads into the bathroom, which is also entered by a second door from the dining room.

Between the living room and dining room there is a broad doorway which enables the owners to throw the two rooms together or, by means of French doors, to separate them when desired. A second bed closet is placed in a bay off the dining room. This closet is only large enough to inclose the bed, which, when occasion arises, is used to make a bedroom of the dining room. It is shut off by French doors.

Back of the dining room and in the corner of the house is the kitchen. This is a tiny room, but, because of the excellence of its arrangement, will be found amply convenient for preparing even a large dinner party. Cupboard, range, sink and icebox are snugly fitted along the walls and the icebox can be supplied, through a special opening, from the outside. There is a back door from the kitchcen which opens onto a small back porch.

Sub-Floor Should Dry; Use Damp-Proof Paper

Laying a hardwood floor is not a difficult job for a good workman, but there are a few kinks about it that it would be well for the prospective builder to know.

Unlike most of the soft woods, oak is best laid on a subfloor. In new houses it would be wise to let this subfloor dry for some time before laying the oak. In any event, have your contractor use damp-proof paper between the subfloor and the oak flooring.

Do not use ordinary building paper. The quantity required is small, and the best quality of damp-proof paper should be used. Where some degree of sound-proofing is desired, it would be wise to use several thicknesses.

One of the most important things in laying an oak floor is to leave about one-half an inch space between the oak and the baseboard. This will allow for expansion in event any dampness later gets into the flooring. This space can be covered by a piece of quarter-round.

Treat the floor with a paste filler of desired tone, to fill up the pores and crevices. To thin the filler one has a choice of trupentine, benzine, wood alcohol or gasoline to get the right consistency. Never use a liquid filler.

When the gloss has left the filler rub off with excelsior or cloth, rubbing against the grain of the wood. This will make a perfectly smooth and level surface. It keeps out dirt and forms a good foundation, which is the keynote of successful floors.

Allow the filler twelve hours to set or dry. Then apply two coats of white shellac before applying the wax treatment. When varnish is to be used, give one coat of filler and one or two coats of varnish.

After the floor has been gone over with wax and allowed to dry about twenty minutes it is ready for polishing. Rub to a polish with a weighted floor brush, first across the grain of the wood, then with it.

A clean, soft cloth may be used in place of the brush if desired; then a piece of woolen felt or carpet should be placed under the brush to give the finishing gloss. After waiting an hour a second coat of wax should be applied in the same way and rubbed to a polish.

To Clean Shellacked or Varnished Surfaces

Varnished and shellacked surfaces should ordinarily be dusted clean with a soft brush or cloth and polished with an oiled mop or soft cloth moistened with a few drops of light lubricating oil, lemon oil or furniture polish. The oil or polish should be well rubbed in and any surplus removed with a soft cloth. In general, varnished and shellacked surfaces should not be touched with water. However, if badly soiled they may be wiped with a cloth wrung out of warm, slightly soapy, water, wiped dry at once, and then polished with oil. The appearance of badly worn, varnished woodwork may be improved by rubbing it with a good grade of floor wax.

Waxed surfaces may be cleaned with a soft, dry duster, or in the case of floors a soft brush or a mop free from oil. The film of dirt and wax which darkens the surface may be removed with a cloth wrung out of warm, soapy water, or, better, with one moistened with turpentine.

IMPROVED UNIFORM INTERNATIONAL Sunday School Lesson

Lesson for October 11

PAUL IN CORINTH

LESSON TEXT—Acts 18:1-11.
GOLDEN TEXT—"Be not afraid, but speak, and hold not thy peace."—Acts 18:9.
PRIMARY TOPIC—God Protecting Paul.
JUNIOR TOPIC—Paul in Workshop and Pulpit.
INTERMEDIATE AND SENIOR TOPIC—Paul's Experiences in Corinth.
YOUNG PEOPLE AND ADULT TOPIC—Paul Plants the Church in Corinth.

I. The True Missionary Method (vv. 1-3).

Paul came to Corinth a stranger in a strange city. He did not have an advance agent to do his advertising. His method in gaining a foothold in Corinth was as follows:

1. Finding a Home (v. 2).

This he found with Aquila and Priscilla, Jews, who were recently expelled from Rome by the cruel edict of Claudius.

2. He Toiled for His Daily Bread (v. 3).

He was of the same craft with them, being a tentmaker. Every child among the Jews was taught some trade by means of which he could gain a livelihood, should occasion require.

II. Preaching in the Synagogue at Corinth (vv. 4-8).

1. Though Compelled to Toil for a Living While Getting a Foothold in Corinth, He Did Not Lose Sight of His Main Work (v. 4).

He reasoned in the synagogue every Sabbath, persuading the Jews and Greeks. While the missionary should not be above honest toil when necessity arises, he must not allow toil to interfere with preaching the gospel.

2. His Activity Was Increased When Silas and Timothy Came (v. 5).

This resulted from three causes:

(1) They brought good news from the church at Thessalonica (I Thess. 3:6).

To hear of the steadfastness of those who had confessed Christ under his ministry, put new vigor into his labors.

(2) They brought pecuniary gifts from the Macedonian church (Phil. 4:15; II Cor. 11:9).

Being relieved from the necessity of toiling for a living, he could now devote more time and energy to the preaching of the gospel.

(3) Silas and Timothy became assistants to Paul in the work.

3. Paul Opposed (v. 6).

His increased activity was met with increased opposition. As the Lord's ministers become more aggressive in their work, the ministers of Satan put forth corresponding efforts in opposition.

4. Paul Announces His Purpose to Turn to the Gentiles (v. 6).

Because of their blasphemy and opposition, he ceased to work among the Jews. There is a time when good judgment causes one to abandon work where efforts have been fruitless, but it is difficult to know just when to do it. Oftentimes lasting harm is done to the work by pressing efforts when people have turned against the truth. Paul's declaration, "I am clean," was a most solemn one.

5. He Did Not Go Far Away (v. 7).

He remained sufficiently near those whose hearts God had touched that they could easily find him. It is likewise true that although Christ is obliged to depart from the soul that refuses Him entrance, He lingers with yearning love around that heart.

6. His Success (v. 8).

Crispus, the chief ruler of the synagogue, was converted. Perhaps Paul's severe action in turning away from them moved Crispus to act.

III. Paul's Vision (vv. 9-11).

His experiences since coming to Europe were very trying. He needed encouragement at this time. It is just like the Lord to come at the time of the servant's greatest need. Note the Lord's words to him.

1. "Be Not Afraid." When one is executing the commission of the Lord, he need not be afraid.

2. "Speak and Hold Not Thy Peace." The one who has heard the voice of God cannot refrain from speaking. He cannot be still.

3. "I Am With Thee." The Lord is with every one who faithfully carries out His commission.

4. "No Man Shall Set on Thee, to Hurt Thee."

The one sent by the Lord to do a work is immune from danger and harm until his work is done.

5. "I Have Much People in This City." It is most encouraging to know that in the great cities the Lord has His own people, and that the one who goes in His name shall have fruit for his service.

All Are His

It is not the high summer alone that is God's. The winter also is His . . . and all man's winters are His—the winter of our poverty, the winter of our sorrow, the winter of unhappiness, even the winter of our discontent.—George Macdonald.

Character

Character requires a still air. There may be storm and upheaval around, but there must be peace within for the soul to thrive.—Rev. T. T. Munger.

Wit and Humor

MERE INTRODUCTION

Old Man (fiercely)—You've stepped right on my corn.

Man (joyfully)—Then you have a corn, sir? I thought so from the appearance of your boot, but wasn't quite certain, so I subjected your foot to a slight pressure, for which I humbly beg your pardon, and feel sure you will grant it when I tell you that you can save yourself from all future suffering by purchasing a box of my wonderful corn-plasters!

GEORGE WAS WISE

"George isn't engaged, is he?"

"I don't think so. He said he was nobody's fool."

Safety First

Doctor (bandaging the arm of a beggar who has been run over)—It's a wonder you don't use soap and water now and then.

Beggar—I have thought of it, sir, but there's so many kinds of soap about now, and it's so hard to tell which is and which is not injurious to the skin, that I don't like to take any risks!

Knew All About Them

Old Sailor—Yes, mum, that's a man-o'-war.

Lady—How interesting! And what is that little one just in front?

"Oh, that's just a tug."

"Oh, yes, of course, tug-of-war, I've heard of them."—Bucknell Belle Hop.

TAKING A LONG CHANCE

Wife—You're taking a big chance of being held up by not coming home until after midnight.

Hubby—I suppose I am—a sort of twelve to one chance, so to speak.

Why Court in Dark

That love is blind who can deny?
And so permit me to remark
That doubtless is the reason why
We do our courting in the dark.

Probably

He sauntered into a railroad office with much self-assurance and an air of familiarity, threw down his business card and inquired:

"Who's the main squeeze around here?"

"Well," said the good-looking stenog, "they'd all take me for it if I'd let 'em."

Out of Bounds

"Hello, there," hailed the motorist. "I'm lost."

"Haw, haw, thass a good one," guffawed the native. "To think one of you city fellers would get lost here in Cross Timbers."—American Legion Weekly.

He Knew Better

The son of a lawyer at Morbihan came to Paris for his studies. Asked how he liked it, he said:

"The streets are so dangerous at night!"

"Why don't you carry a revolver?"

"What! And have it stolen?"—Sans Gene, Paris.

Diplomacy

"So Pruddler has given up smoking?"

"Yes. On the advice of his doctor, at the request of his wife, and by command of his mother-in-law!"—Berlin Schmutzige Wasche.

Caught

"I have been arrested for driving too slowly!"

"Too fast, you mean!"

"No, too slowly. I stole the car but couldn't get away with it."

Yeast Foam makes bread that tastes better

Nothing has such hunger-satisfying flavor as the home loaf made with Yeast Foam.

Permanent roads are a good investment —not an expense

How Much Are Poor Roads Costing You?

5,000,000 of America's 18,000,000 motor vehicles are recognized as an economic necessity on the farm.

Is your car giving the full efficiency of which it is capable—and at the lowest cost per mile possible?

Not if you are jolting over bumps and ruts. Not if you get stuck in the mud.

In addition to the time you thus lose along the way, you also pay from one to four cents a mile more in gasoline, tire and repair bills than you would pay on permanently paved highways.

Think, too, how many so-called improved roads have gone to pieces within the past few years, thereby piling up huge maintenance and rebuilding costs.

Contrast all this with the record of Concrete Roads—the roads that have repair built out and maintenance built in. Firm, rigid and unyielding, free of bumps, ruts, holes, mud and dust, they are, in every way, the most economical roads.

Tell your highway officials you want more Concrete Roads. Such an investment will pay you big dividends year after year.

* * *

Let us give you all the facts about Concrete Roads, including the experience of other communities. Ask for our free booklet, R-3.

Appreciates Reading The News

Hart, Mich, R. R. 4
Oct. 4, 1925

Mr. Fred B. Leighty,
St. Joe, Ind.

Dear Sir:

Am enclosing check as I think my subscription must be due.

I do not want to miss a single copy of the "News."

Respectfully yours,
Carl Shull.

Miss Portia Hadsell and Mrs. Henry Shroyer are new readers of The News. Our list is steadily growing each week and yet there are others who ought to be reading the Home-town-paper regular.

Old Glory Floats Over Schools

The DeKalb County Board of Education, meeting in Auburn Monday, adopted a resolution to the effect that the United States flag be displayed from the flag staff of every school building every day that the school is in session and that the weather is favorable. The board voted to close the rural schools of the county on Thanksgiving day, Thursday, Nov. 26. The holiday vacation was also fixed as Thursday, Dec. 24 to Monday, Jan. 4. The first semester examination will be held Dec. 22 and 23.

Mrs. Frank Sechler, Mrs. Grace Dilley and Mrs. Agnes Monroe, spent yesterday with Mrs. Lulu Reichelderfer at Harlan.

ST. JOE NEWS.

VOL. XXXIX | ST. JOE DeKALB COUNTY, INDIANA, THURSDAY OCT. 15, 1925 | NO. 41

Commissioners Award Contracts

Frank Scholes of St. Joe, No 29, the Reisloft culvert in Wilmington township, for $531 50 and No. 30, the Grube culvert in Stafford township, for $140.

C. F. Roemeke of Woodburn, No. 25, the Gibbons culvert in Spencer township, for $255 40 and No. 33 the Wilson bridge in Jackson township, for $379.

Levi Pabst of Woodburn, No. 31, the Ginder bridge in Wilmington township, for $233.

J A. Mullendore of Columbia City, No 25, the Kelly culvert in Spencer township, for $1,681 and No. 28, the Carper bridge in Jackson township, for $285.

Wm. Bleeks was appointed inspector on jobs number 26 and 33.

Officers Elected For Welfare Band

At a business meeting of the St. Joe Welfare Band Wednesday evening, the following officers were elected for the coming year:

Director—C. A. Woodcox.
President—M M. Maxwell.
Vice Pres.—Harcourt Miser.
Secretary—Frank Miser.
Treasurer—Donald Kinsey.
Business Managers—E R. Kinsey and Ed Miser.

School Enrollment for the Year

Clarence Green has completed his report on the enrollment of the school for the year as follows:

Auburn has a total enrollment of 1,118; Butler, 342; Garrett, 848; Waterloo, 302: Grant township, 62 and Corunna, 95. Concord township high school has 59, Smithfield towhship 73 and Spencer township 39.

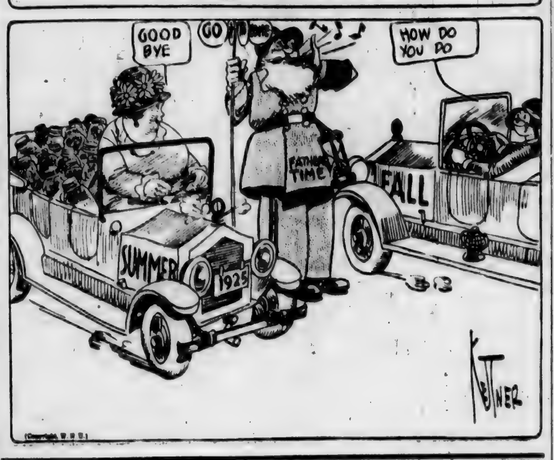
There are 261 first grade pupils, 256 second, 243 third, 252 fourth, 271 fifth, 254 sixth, 243 seventh and 203 in the eighth grades of the county.

The total has reached 4,921.

LODGE NOTES

The first district meeting of the I. O. O. F. subordinate lodges will be held at Angola Saturday evening, Oct. 17, when the initiatory degree will be conferred on all candidates by the Garrett lodge. Just a good snappy time, a few extras and refreshments after the work. All lodges in this district are asked to come.

Passing of the Seasons



Club Work News

From Concord Boys and Girls

The Boys' and Girls' Clubs of Concord township completed the year's work last by holding an exhibit of their products at the Garrett Fair. The work was judged at this time and a very good showing was made in the placings by both the boys and girls.

In the Girls' Clubs, the following members completed their projects:

Sewing:—Hazel Storer, Marjorie Shearer, Mable Inlow, Thelma Poper, Ruth Schrader, Marie Storer, Margaret Hamilton, Marguerite Wilson, Hilda Morr, Laura Keller and Aileen Douglas.

Baking:—Hilda Morr and Della Huffman.

Health:—Hilda Morr.

The county placings won by Concord township girls are:

Third year sewing, first, Hazel Storer.

Third year sewing, fourth, Thelma Poper.

Second year sewing, fourth, Ruth Shrader.

Baking, first prize, Hilda Morr.

Baking, second prize, Della Huffman.

TOWNSHIP PLACINGS

First—Hazel Storer.

Second—Ruth Shrader and Marie Storer.

Third—Marguerite Wilson.

Fourth—Hilda Morr.

Potato Club Contest

The B. & O. potato contest was one of the leading attractions at the Garrett Festival last week. In the advanced class the winners were: First, George Dilley, Waterloo; second, Geobel Goodwin, St. Joe; third, Leoral Hart, St. Joe.

Among the entries in the first year class were: Robert Morr, Harold Baker, Edward Kimes, Dale Trostel, Bernard Sechler and Dale Walter of St. Joe and Virgil Laux, Elwood Hart, Frank Beerbower, Ernest Pflaumer, Glen Agler and Vernon Lipe of Spencerville.

Ivan Reasoner entered in the advance class but did not win a prize.

The average yield per acre of the members of the first year club was 213 2 bushels; of the advanced club 199 2 bushels.

The placings in the pig club are as follows:

First, Kenneth Wasson, Berkshire.

Second, Harry Loucks, Berkshire.

Third, Clifton Draggoo, Big Type.

All the boys made a very good showing and St. Joe did not need to be ashamed of the way the boys gave account of themselves.

Transfer paper at NEWS office 2 sheets for 5c. Get some now for that pattern you wish to transfer

WHO SAID

"Laugh and Be Fat."

THESE words seem to have constituted the philosophy of life of their author, Ben Jonson. Laughter and light-heartedness were the dominant traits of this renowned man of letters and to his easygoing, carefree disposition can be traced his constant state of poverty.

Jonson was a contemporary of Shakspeare and was a great friend of that great English writer. Probably his best known work is "Every Man in His Humor," a comedy that was produced at the court of James I and was so well received that the author was persuaded to present a new play there each year. Jonson's other works include, for the most part, poetry. One of his best known short efforts being the poem:

Drink to me only with thine eyes,
And I will pledge with mine;
Or leave a kiss within the cup,
And I'll not ask for wine.

The thirst that from the soul doth rise,
Doth ask a drink divine;
But might I of Jove's nectar sip,
I would not change for thine.

This poem has been set to music and has a prominent place in every collection of old songs.

In the year 1619 Jonson was appointed poet-laureate. This office carried with it a salary of $500 and the additional emolument of a butt of the best canary wine from the king's own cellar, but this was not enough to keep the extravagant poet. In addition to the allowance made him by the king, the city of London gave him a pension. But this, too, was inadequate for his needs and we find the life of Ben Jonson one round of debts after another. Jonson died in the year 1637 at the age of sixty-four. He was buried in Westminster Abbey.—Wayne D. McMurray.

YOUR Last Name

IS IT WARREN?

THE simplest explanation of the name Warren is that it first belonged to a dweller at or keeper of a game preserve, warren being still used in this connection today.

However, there are others who contend that it, like Waring, Wearing and Warin, is derived from the French Guarin or Guerin. It is suggested that Guerin, the French name, was in turn derived from the German Warand, meaning protection.

The first of the name in this country was Richard Warren, who sailed from Plymouth in the Mayflower in 1620. He was not of the Leyden party but joined the little band of colonists off the coast of England. The fact that he was one of the few of the party designated as "Mr." indicates that he was a person of good birth. He was one of the third exploring party when the colonists arrived in New England, and was with them when they were surprised by the Indians.

He was spoken of as "grave Richard Warren," also as "a man of integrity, justice and uprightness, of piety and serious religion."

Richard Warren married in England a woman named Elizabeth, who came to this country a few years after her husband in the "Abb." She was a person of much distinction and was referred to always as "Mistress Warren," a mark of great respect.

After her husband's death she never remarried and this is pointed out as one of the rare instances of continued widowhood to be found in the New England colonies at that time. Richard Warren had five daughters and then two sons to carry on the traditions and name of the Warren family.

Parent-Teacher Association

The first meeting of the year will be held Friday evening at the school house. The refreshment committee asks that each one bring doughnuts, sandwiches and pickles.

Sudden Death of John Bargers Father

John Barger, aged 60, died suddenly Friday of heart trouble at the home of his son, John, of St Joe. Mr. Barger came here during the summer and was helping in the garage. Being in poor health he was not on duty regular, but at this time was only sick a very short time. The funeral was held Sunday afternoon at Leo, where he had been living, but burial was made at St. Joe.

Writing tablets and envelopes at News office, also box stationery from 10c up.

Opening of Roller Rink at Spencerville, Saturday night, October 17.

Falls Down Cellar Tuesday

Mrs. G. W. Woodcox, age 76, is in a very critical condition resulting frou a fall down cellar Tuesday afternoon. Her head was cut, her arms bruised and her left hip broken at the joint. Mrs. Woodcox had gone into the pantry for something and the cellar door had been left open accidentally and when she stepped in she plunged into the cellar way. A few feet from the floor is a landing, she struck this and then rolled to the floor below. She was dazed so that she knew nothing about her accident for some time.

It is indeed a great misfortune that such a thing should befall an elderly woman. The family has the sympathy of the citizens of St. Joe.

Hallowe'en Chicken Supper

Served by the F. B. C. of the Methodist Sunday School at the home of Mr. and Mrs. Roy Koch, south of town. Details next week.

CHAPTER XIII—Continued

—11—

A thin film of dust covered everything. It was evidence of the caretaker's belief that no one would quickly return to note his delinquencies. Otherwise the house might have been untouched from the moment when, in a spirit of pursued flight, Brena had shut the doors for the last time. A novel had been put upon a table in the upper hall, its pages spread downward where a reader had left it; in Brena's own chamber the tray upon the dressing table still contained scattered pins and a railroad conductor's receipt for a cash fare. In the bathroom a towel hung over the edge of the tub as if a bather had just come from the morning plunge and only the stripped beds spoke of the vacancy of the hollow-sounding rooms. To Peter, the whole house except for that part which she had occupied, seemed to be filled with unpleasant ghosts of the personalities that had lived in it. He opened no door without the feeling that one of these invisible beings had just stepped out of the chamber from another exit. The stairs up which he had climbed were complaining gently, as if feet were following his; somewhere there sounded the fluttering of soft wings—a startling noise, but explained by the dead chimney swallow that lay below the sill of one of the darkened windows—a tiny inert symbol of tragic imprisonment and death.

Peter had found nothing in his survey of the house that could contribute to his purpose; he had looked without more reason for looking than a desire to see where Brena had lived and to confirm his belief that except in the library that had been used by Parmalee nothing could be found of any significance. It was not probable, he thought, that he would open some door to find the cotton broker's withering corpse stretched out with the handle of a murderer's knife still sticking up from the collapsed ribs. He was about to return to the lower floor when he saw, in front of him upon the bare dusty varnished boards a distinct print of a human foot. It was a small, well-formed foot that had made this print—and the next beyond and the next—until they stopped where the stair carpet began.

There sprang into his mind the gibbering reference of Parmalee to footprints, followed immediately by the thought that these might be the record of Brena's own steps and then as quickly by the thought that Brena had left long before this layer of dust had accumulated. He found himself listening now, the victim for the moment of fear, as if suddenly the contagion had reached him. At last he laughed. The prints were not those of a man: they might be those of a woman but the chances were overwhelmingly in favor of their being made by the caretaker's young barefoot boy. Peter smiled again and went down the stairs.

At the bottom of this flight above the hall stand was an old carved Chinese frame holding a dusty mirror. Peter glanced at this mirror, saw himself, stopped. The expression on his own face alarmed him. He imagined that he was less ruddy, more gray of skin, that he had caught himself in the unconscious pose of a man who involuntarily has begun to walk softly and look about alertly, that upon the face reflected in the glass was the first faint expression of terror written not as it is written upon the face of a man who is a coward before known dangers, for Peter whatever he might be could never wear that look, but the dim suggestion of fear of unknown dangers and of subtle influences, that may some day be engraved without regard to the courage or will of the individual upon any sensitive human countenance.

Peter had an unpleasant idea; it was that his subconscious self was endeavoring to transmit to his conscious self some message of warning. For the first time he felt the need to summon to his aid his clearest thought, his most alert state of mind, his keenest observations.

Fortunately, perhaps, this moment of realization came to him as he opened the door of Parmalee's study. It commanded him to squeeze out of his first visit to that square chamber, lined with books to the ceiling in the style of old-fashioned libraries, the most that orderly investigation could disclose.

That many things had been disturbed since the moment when Parmalee had walked out into oblivion was evident. The correspondence on the large desk in the center of the room had been gathered into a neat pile and tied with string; the papers once held by a waste basket, now empty, had been poured into the open fireplace and most of them burned. The chairs had been covered with newspapers by some one without a sense of values sufficient to suggest covering also rare books, their pages exposed now to insects and some of their splendid bindings to mildew and dry rot. The study had the air of having been cleaned and straightened.

Peter tried the drawers of the desk. Some of them had swollen with the damp, but none were locked; they were filled with catalogues, pamphlets and with clippings in envelopes arranged in alphabetical order. A deep drawer at the bottom contained several account books, many packages of canceled bank checks bound with elastic bands now dried and crumbling under the touch. On the whole Peter, who had Brena's permission to examine anything he found, saw at first no interest in these private papers, unless when time elapsed so that Parmalee after another three years could be declared legally dead, an executor might find value in them as a record of the financial affairs of the vanished man. No doubt his lawyer had seen many of them already.

For the correspondence, however, Peter had a greater interest. He drew it toward him, untied the string, and having stopped to survey the room again from the chair that once had known for so many restless hours of panic and suffering, the warmth of Parmalee's living body, began to go hastily over the letters there.

They were not illuminating. There were a few letters from stock brokers as to investment changes, and a few bills.

One of these bills was the only piece of matter that gave Peter the slightest interest. It was from the famous old John Henry Wycoff of Baltimore of whose death Peter had read by chance, a man remembered only among those who are book collectors, a dealer whose black coat was always covered with dandruff and who left a third of a million dollars. This bill was for two thousand eight hundred of these dollars—an account that had probably been settled by Parmlee's attorney, Lanfrew. It was something of a bill for one book—a book described as Kolb's privately reprinted version of the Jesuit MSS. entitled "Explorations of Father Carlos in Mescalero Desert," shipped via registered post on 18th inst. Below this statement of account were the words, "Please see, letter." There were two pin holes at the corner of the paper as if Wycoff had attached his letter to the bill.

Peter thought it would be interesting to see a book, so obscure, that was worth nearly three thousand dollars. He even wondered what plausible explanation the old dealer had given. His letter, however, was now missing.

Peter spoke aloud; he said: "Parmalee wanted that book badly." He looked at the date of the bill. "I wonder if this was the zeal of a collector who has a passion for perfect copies."

The words defined a thought for Peter. It would be interesting to see whether "The Explorations of Father Carlos in Mescalero Desert" had disappeared with Parmalee when he had answered his strange impulse to go to some unnamed destination. Peter turned toward the library shelves and then with the thought that a search among these volumes would be saved if he found a catalogue he went again to the desk. The copy of the book was there—under two or three other books—a handsomely bound volume of large pages whose thick paper rather than the length of the text gave it bulk.

The book had been printed in English in 1830 from copies of manuscripts of Jesuits that with other records had been lost in the destruction of the mission church in Los Banos in 1812. The work was a beautiful piece of bookmaking in perfect preservation and Peter, though interested in quaint descriptions of this old missionary who had braved the terrors of thirst and heat to penetrate the country along the eastern border of New Mexico, was admiring also the rare skill and beauty of the pages when he sud-

Peter Tried the Drawers of the Desk.

denly came upon a hiatus in its continuity. Page thirty-two began a description of the Lost Pueblo, where according to legend a city whose age was of centuries had been ended as a punishment for failing to worship the god of water. A scourge of thirst had been visited upon the degenerate Indian dwellers who had been so long protected by the terrors that the waterless desert must have had for more warlike tribes who would otherwise have attacked them. The well around which the pueblo had been built—the very life of the people—had been dried up in one night by a miracle.

"Many and curious are the carvings upon the walls of this Lost Pueblo. To copy them and their heathenish devices I was sorely tempted and would have done so had time been given me," said Father Carlos. "Especially I noted a figure of great size upon the wall that faces the setting sun, for this was a serpent with feathers like a bird, a figure such as is seen never but in the lands to the south and beyond the Great river. While waiting for day I drew the lines of the journey we had made which I here set down again for the guidance of others. On the coming of morn we went toward the purple vapors of the—"

Peter turned to the next page. It began: "These accounts of treasure are but the poor speculations of the ignorant. Long after the sandstorms have covered the pretentious dwelling places of man such perversity will endure that worldly avarice will conjure into belief the tradition of fools." This was not page thirty-three but page thirty-seven. The pages between were gone.

For a moment DeWolfe was puzzled. This was not a perfect copy. After a moment's reflection he felt the humiliation of stupidity. Of course the copy he was examining was the imperfect volume that Parmalee had owned originally; the one sent by Wycoff probably would be found in its place on the shelves where Brena's husband had put it—one of the last acts he ever did in that house. Peter, arising, walked along the rows of books looking at the titles; in less than three minutes he had found the other copy of the quaint old book and taken it down.

He blew the dust off the once gilded top of its pages and as he did so he noticed that at one place the pages did not quite press close together. The volume fell open there—at page thirty-seven. The two preceding leaves of the book had been torn out!

He went back to the desk chair, sat down, thrust his feet out straight before him and whistled.

After a few moments he opened the first copy of "Father Carlos" again and read over the paragraphs on page thirty-two.

"Serpent with feathers like a bird," he said as one who desires to hear the words so that their meaning shall be more clear. He was thinking of the scrap of paper in his pocket—that scrap of paper that Jim Hennepin had left inadvertently with Brena when she saw him for the last time, that scrap of paper with the crudely drawn figure of the feathered serpent—the god, Kuk-ul-can—and the two scrawled words, "This Sign."

He took out this scrap and walking to a window, with its barred grating through which the gray east wind was hurling more rain against the spattered panes, he examined the handwriting. With the manner of a guilty man engaged in some nefarious and shameful performance, he drew forth Brena's letter of introduction addressed to Lanfrew, the attorney, opened it, and holding the two pieces of writing side by side glanced from one to the other. The capital S in the word "Sign" was not like hers. And yet—

He paced again, thinking; then uttering an exclamation, he pulled open the lower drawer of the desk and took out a handful of Parmalee's canceled checks. Shifting one behind the other, he went on hurriedly glancing at the dates until he had found one for eighty dollars made payable to "Brena Selcoss Parmalee."

Almost viciously he slapped this one over onto its face and stared down at the endorsement on the back. "Pay to Bearer, Brena Selcoss Parmalee."

"That will do," he said and thrust it in his pocket.

He returned to the lower drawer again, threw out upon the desk top the many little books that his casual observation had determined were Compton Parmalee's private books of account.

"Let's see—seven years," said Peter. "This one may do. Nineteen twelve. And this one. Nineteen eleven."

Opening the first, he began a search of its entries. For more than three hours he went over the items in the rough accounting system of Parmalee.

At the end of his amateur audit he thrust the books under his arm, looked at his watch, left the library, took his wet hat and overcoat, and before he went out of the house, he stopped for a moment to listen to the hush within its four evil walls and to the whine of the wind outside.

There was time to see Lanfrew if he could catch a train for New York without too much delay, and if good fortune would hold the lawyer in his office. Peter wanted to get from the last man who talked with Parmalee one fact that had perplexed him. So much did he want to put an end to doubts which had grown that when he had reached the city and gone down town on a subway express and had stood at the mahogany rail in the office until he had heard that Lanfrew was there, he walked through and over the protests of a young law clerk, directly into the room of the head of the firm.

DeWolfe, with his only characteristic vividness of expression, had once said, "There are three kinds of lawyers—silky pomeranians, lean foxes and bulldogs." Lanfrew was distinctly a bull dog.

Lanfrew spoke no sentence that he did not begin with a low growl; he gave the impression to his clients, perhaps by intention, that he was the personification of wrath and of reckonings, and the fierce instrument of a terrible and brutal justice. This was worth many thousands a year to him.

When he had read Brena's letter, he tossed it on the desk and, glowering at Peter, he said, "Well?"

"I came to ask—" DeWolfe began.

"Yes?" the other interrupted with a growl.

Peter pointed at the letter.

"I know," snarled Lanfrew. "I'm at your service."

"You were the last man who ever saw Compton Parmalee," Peter began.

"He came to draw an instrument in my office."

"A will?"

"Yes."

"Which leaves to his widow—?"

"The man isn't legally dead yet," Lanfrew said severely.

"He has been—say gone—for several years."

"Apparently wiped out. Yes. And there is nothing more to be done. We exhausted every means except that of a nasty publicity. It's futile. It is folly for you to waste your time. Where did you meet Mrs. Parmalee—old friend?"

"I met her in London."

The old lawyer arose, thrust his jaw out as if making it flexible and ready to bite, and stared for a long time at Peter.

"Are you the son of DeWolfe of the Equity."

"Yes."

"Let it alone."

"What alone?"

"This affair. Let sleeping dogs lie. You are a young man of—well—I know who you are. Used to know your father. I can talk to you confiden-

"Do Not Go Any Deeper, I Beg You. I Am in Mortal Fear," It Said.

tially. I'll say this—Parmalee was a client sent up to me by our Texas correspondents, and as far as I am concerned I wouldn't care a snitchet if I had never seen him."

Peter nodded.

"You saw the last of him."

Lanfrew looked out the window at the harbor that appeared to stretch out like a woolly gray blanket from the bases of monument buildings; he wheeled suddenly upon DeWolfe.

"He came here that day—the last. He had tickets for some place and spoke of taking his wife, but he was excited. He spoke of an alternative. He drank. You know that?"

"Was he—?"

"No; he was nervous, excited."

"As if afraid?"

"No."

Peter thought a moment before he said, "Would you say he was thinking of suicide?"

"No, I wouldn't," replied Lanfrew batting the tassel of the window curtain with his stubby fingers. "He had something else on his mind. He spoke vaguely. I didn't give a d—n what he had on his mind. It was something. He spoke as if it were some errand—like a man who had received a message."

"What kind of a message?"

"I don't know. I got the impression—mind you now and mark me well, I don't say it was so—I got the impression that he was engaged in some—what shall I say—investigation."

"Investigation?" repeated DeWolfe in a startled voice.

Lanfrew nodded his bulldog head up and down as if there were oiled bearings in his invisible short neck.

"He left no word for his wife?" Peter asked, shooting the question when Lanfrew's eyes had met his.

He saw the lawyer flinch.

"I asked whether he left any message for his wife?"

The other man coughed, felt under his heavy chin for his concealed throat and sat down in his desk chair.

"To be frank with you, he did," he said. "This of course is confidential. It was too brutal to give her."

Peter leaned forward. He said, "Too brutal?"

Lanfrew said, "Yes. He said to me, 'If I make up my mind not to take her away—if I go on a little journey myself, you tell her that I'll be back in two weeks. You tell her I'm going to cut a knot—that I'm going to relieve the hell I've been living.'"

The two men sat silently looking at each other.

"Of course I thought he'd telegraph her," said Lanfrew argumentatively. "I didn't take his message seriously. It wouldn't have done her any good to tell her that brutal message, eh? And later? Well, I put the thing off. It cleared no mystery. It was inconsequential."

Peter asked, "Then you thought he blamed her?"

Lanfrew threw up his hands, a gesture which said, "There is no question."

"For what?" asked Peter.

Lanfrew chewed upon an imaginary mouthful; he said finally: "God knows. Some women—beautiful women—are poisonous. Rare cases. They carry a deadly poison, DeWolfe. Some influence, some bane, some corrosive withering, devilish, fatal fluid or vapor or aura—whatever you choose. Who knows what it is? But she—that woman—when you find her, will blast a man like—"

He stopped.

Peter drew a deep breath. He said almost incredulously, "Did you tell me that you got the impression from Mr. Parmalee that he was going to investigate something?"

"Yes. Been invited to investigate something," the lawyer said.

DeWolfe stared at the carpet. After a pause he got up and held out his hand.

"Let this alone," said Lanfrew. "But of course if you want anything else, come in again."

Peter went home to his apartment. He found there an envelope brought by a messenger from the office of Pennington, Gould and Goodhue. It contained a cable from Brena, overseas.

"Do not go any deeper. I beg you. I am in mortal fear," it said. "I am coming to America. All my love."

CHAPTER XIV

By afternoon on Friday Peter had acquired certain information that he had sought.

In addition to acquiring the information that would lead him to three men, he had wrestled with the problem presented by Brena's cable. He had sent her word when he had arrived safely in New York that he was full of hope and optimism. "We shall win," he had said, "because any other thought is too terrible to bear." He could not understand then what new facts she had to justify her strange message to him unless it were an anonymous warning such as that which he had received in Liverpool. To accede to her request and to proceed no further along the lines of inquiry which he had chosen as significant would mean delay and perhaps a loss of the thin threads that he had picked up to unravel.

Peter had in him a great deal of the fiber of determination, a good deal of a single-track purpose that frowned upon him and made him wince when he became tempted to postpone his plans and indulge his desire in waiting idly for her to come. He knew from the beginning that this man was the side of self that would win; he was only doing that which he knew in his inner consciousness he would do when he cabled a reply to her that said, "Do not come yet. I will cable you again. If you have important news do not be afraid to send it."

He was glad when that was done. There was an additional reason for it; he was not yet prepared to meet Brena Selcoss for the second time. He must first clear the way for relationship that had in it no reservations.

The first thing to be done was to confer with one Joseph Smallwood of Drennan & Co., the publishers.

When Peter first saw Smallwood he felt a little like one who has been sent to an armless dentist. The man was pale and flavorless like the cream sauce of cheap restaurants. DeWolfe had difficulty in believing that this was the man to whom he had been referred.

"Mr. DeWolfe, how can I serve you?" he said in a low drawl as if he were pulling his words like molasses candy into long strips to match his own long body.

"I understand that you not only maintain a connection with Drennan but undertake commissions and pass upon technical questions independently."

Smallwood's smile was of the kind that snaps on and off like an electric light. Now he snapped it on; it was gone in a flash—a string-pulled smile.

"Oh, yes," he said wearily. "Did you want to find—"

"A book," said Peter.

"What book?"

"'The Explorations of Father Carlos in the Mescalero Desert.' Here is the whole story." Peter gave him a card with the details. "I want to buy a perfect copy."

Smallwood shook his head from left to right and then to left again with a sad expression followed by the camera shutter smile.

"It will take a long time," he said tenderly as if he bore the weight of all human suffering upon his heart. "It is a very rare book; Anderson, the sugar refiner, owned a copy. That is how I happened to know. I appraised his library. Perhaps it will take a year."

"A week," said Peter. "No more."

"A week," repeated Smallwood, closing his eyes as if resigned to anything, come what would.

(TO BE CONTINUED.)

Man-Made World

If I believed in change, I should sketch a world where women would live upon shelves, shelves without ladders. One would take them down when one wanted them. They would be delighted to be taken down, clapping their little hands, crowing like babies, and yet understand one's deepest thoughts.

One would also take them down in the morning to do the housework. At other times one would live sternly and bravely with other men as stern and brave, until one came to need again the women who would be akin to those very expensive dolls who say "pa-pa" and "ma-ma" when you press a spring.

When one got tired of their repertory, one would send them to the shop to have a different record put in.—From "The Triumph of Gallio," by W. L. George.

SICK WOMEN OF MIDDLE AGE

Can Be Carried Comfortably Over The Critical Period by Lydia E. Pinkham's Vegetable Compound —Note Mrs. Headden's Case

Macon, Georgia.—"During the Change of Life I suffered with my whole right side and could not lie on my left side. I was in bed about two months and could not get up only as my son would lift me. After doctoring without relief a man who was rooming with us told my son that Lydia E. Pinkham's Vegetable Compound cured his mother at the Change of Life, so I began taking your medicine. After taking it for two weeks I could get out of my bed by myself. I am now 53 years old and in better health and stronger than ever in my life. I have recommended the Vegetable Compound to many suffering women, young and old, and you may use my name anywhere as long as you please. I will be glad to answer any letters sent to me." —Mrs. F. B. HEADDEN, 5 Holt Avenue, Macon Georgia.

In a recent country-wide canvass of Lydia E. Pinkham's Vegetable Compound, over 200,000 replies were received and 98 out of every 100 reported they had been benefited by its use. For sale by druggists everywhere.

What Pretty Girl Did for Sick Stomach

Miss E. Rich of Brooklyn, N. Y., says: "I don't know what the cause was, but every few days my stomach would feel all bloated up with gas, my appetite was poor and I felt sick to my stomach—to say nothing of headaches.

"I never thought of using Carter's Little Liver Pills until nothing seemed to help. After using Carter's I felt relieved at once—and now as soon as my stomach 'talks' back I answer with Carter's and have the last word."

Recommended and for sale by all drug stores. 25c.

Ananias Club

"I'm tired of freezing," remarked the flapper to her mother, "and I wish you would hunt me up that old pair of woolen leggins you said you had in the trunk."—Cincinnati Enquirer.

Love is the tyrant of the heart.

Get Back Your Health!

Are you dragging around day after day with a dull backache? Are you tired and lame mornings—subject to headaches, dizzy spells and sharp, stabbing pains? Then there's surely something wrong. Probably it's kidney weakness! Don't wait for more serious kidney trouble. Get back your health and keep it. For quick relief get *Doan's Pills*, a stimulant diuretic to the kidneys. They have helped thousands and should help you. *Ask your neighbor!*

An Ohio Case

J. L. Chamberlin, E. 3rd St., Ottawa, Ohio, says: "My back was so bad I couldn't lift the lightest thing and sharp pains across my kidneys left me weak. Mornings my back was stiff and lame. I had to get up often at night to pass the kidney secretions. I began using Doan's Pills and Doan's cured me. The cure has lasted."

Looks 20 years younger say his friends

McDonald had heartburn and dizzy spells; now thanks Tanlac for perfect health.

*"My health was slipping," writes *Charles McDonald. "Finally I became so run down and weak I couldn't hold my body straight. My back ached like it was breaking in two."*

His appetite disappeared and after eating, heartburn and shortness of breath brought extra hardships. Finally he tried Tanlac. It added 10 pounds to his weight and left him feeling so well and strong that he now "faces life with a smile."

*Authentic statement. Address on request.

Tanlac revitalizes the liver, tones up the whole digestive system, and benefits the vital organs of the body. It is Nature's Greatest Tonic and builder. It puts new life in your veins.

Tanlac is absolutely free from harmful drugs. The famous Tanlac formula contains only roots, barks and curative herbs brought over the seven seas for your health.

Don't gamble with your health a minute longer. Get a bottle of Tanlac from your druggist today. After the very first dose, you will feel better. You will soon enjoy refreshing sleep, be able to eat heartily, and feel the full pleasure of health regained.

NOTE: For Constipation, take Tanlac Vegetable Pills, Nature's own harmless laxative.

TANLAC
FOR YOUR HEALTH

Man is not merely the architect of his own fortune; he must lay the bricks himself.

Posterity allows to every man his true value and his proper honors.—Tacitus.

Genuine

BAYER ASPIRIN

SAY "BAYER ASPIRIN" and INSIST!

Unless you see the "Bayer Cross" on tablets you are not getting the genuine Bayer Aspirin proved safe by millions and prescribed by physicians for 25 years.

DOES NOT AFFECT THE HEART

Safe — Accept only "Bayer" package which contains proven directions.

Handy "Bayer" boxes of 12 tablets
Also bottles of 24 and 100—Druggists.

Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid

It is possible to do right and still get left.

It makes any man nervous to have a woman gaze at him.

Children Cry for

Fletcher's CASTORIA

MOTHER:— Fletcher's Castoria is especially prepared to relieve Infants in arms and Children all ages of Constipation, Flatulency, Wind Colic and Diarrhea; allaying Feverishness arising therefrom, and, by regulating the Stomach and Bowels, aids the assimilation of Food; giving natural sleep.

To avoid imitations, always look for the signature of Chas. H. Fletcher. Absolutely Harmless—No Opiates. Physicians everywhere recommend it.

Why have RHEUMATISM?

OH, what a wonderful feeling to be free from that miserable rheumatism. To know again the joy of limber joints and active muscles—freedom from that agonizing pain!

How often have you longed for some relief as you suffered torture from swollen, inflamed muscles and joints—how often have you said you would give anything in the World for a few hours comfort!

But you didn't know that all you had to do to get real relief from this nerve wracking misery was just to build rich, red blood, did you? You didn't know that rheumatism had to be stopped from the inside by destroying the impurities that cause it—by building millions of red cells in your poor, weak blood, did you?

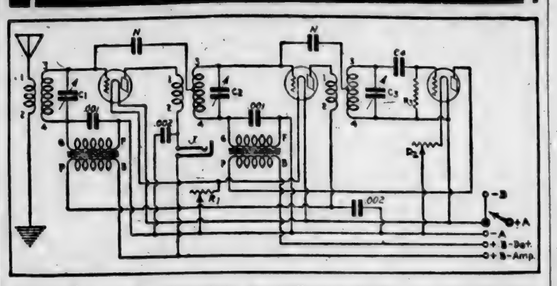
Until you fill your system full of healthy, rich, red blood you will never end your rheumatism. S. S. S. will surely help you. That's because S.S.S. helps Nature build the red-blood-cells that fight off the impurities that cause rheumatism.

Conquer rheumatism! S. S. S. has shown the way. For generations S. S. S. has brought blessed relief and comfort to thousands of rheumatic sufferers.

When the rich, red blood that S. S. S. helps Nature build goes coursing through your system, it purifies the blood in your body. Rheumatism vanishes—skin blemishes disappear—you begin to get hungry again and enjoy your food—strength and power fill your body—you are vigorous—red-blooded and ready for action. Know this joy of living again! Take S. S. S. and banish rheumatism!

Get S. S. S. from any druggist. The larger bottle is more economical.

RADIO



Wiring Diagram of a Three-Tube Neutralized Radio Receiver That Employs Reflex, for Which Strength, Tone, Minimum Distortion Are Claimed.

By SIDNEY E. FINKELSTEIN,
in New York Herald-Tribune.

The neutrodyne may be successfully reflexed, even as to both stages of transformer-coupled audio amplification, so that only three tubes are needed instead of five. In practice it has been found that this maximum reflexing of the neutrodyne is best achieved by resorting to the inverse duplex system. This is designed to spread the load more evenly over the tubes. The first audio stage is reflex in the second radio-frequency stage, while the second audio stage is in the first radio step. Thus, as the first radio stage handles the lightest radio load, this same tube is called upon to amplify at audio frequencies the final output, which is by far the greater. As the same system is used in both amplifying tubes, the load is about equal in both tubes, thus minimizing distortion. Indeed, the tone quality from the receiver shown in the diagram is delightful.

The best tubes to use for this circuit are those requiring a six-volt storage battery. They serve best because of their greater ability to stand the compound amplification due to the larger elements.

The set is one that cannot be expected to give perfect results instantly. No such expectation should be cherished regarding any home-made reflex.

Size of Panel.

It is not a circuit for the novice to be too confident over, as some skill in the placement of parts, avoiding of stray feed-back at radio and audio frequencies is necessary. The set, however, may be well constructed on a 7 by 18-inch panel, using a baseboard about 8½ inches deep.

The set, once in good working order, will be found on a par with the standard neutrodyne where four tubes are employed. The volume is great and the selectivity sufficient to meet the needs of the day.

The audio transformers preferred for this circuit are of the type entirely inclosed in a metal housing. The variable condensers may be instruments you have around the house now, the coils being constructed so that the broadcast range will be covered. However, if it is desired that the dials tune in step, then not only should instruments of the same maximum capacity be used, but they should be condensers made by the same manufacturer. This necessity arises from the divergence of actual maximum capacity as among condensers of different manufacture. Every condenser rated at .0005 mfd. has not just that maximum actually. Sometimes the variation is as much as 20 per cent. However, the best makes of condensers are so close to their rated capacity that no regard need be paid to the difference, if the same make is used, so far as coil-winding is concerned.

Construction of Coils.

In constructing the coils use fiber or hard rubber tubing, 3½ inches diameter, 4 inches high, the wire being No. 24 double silk covered throughout. The coils are wound with the primary at one end, one-half inch separation being left after the primary is completed and the secondary being wound next. Tiny parallel holes are drilled in the tubing for threading the wire terminals and thus making them secure. Enough excess wire is left at the beginning and end of each winding to utilize it for actual connection inside the set, instead of using bus bar or other such connecting wire for the purpose. About six inches of excess will suffice. What is not needed may be cut off later when the connections are soldered.

The primary of the aerial R. F. transformer, extreme left, has 20 turns. The secondary, shown next to it, has 45 turns, untapped. The two other primaries consist of 15 turns each, hence these interstage coupling primaries are different from the aerial primary. Also, the secondaries are different, in that a tap is taken at the fifteenth turn. A tiny loop is made and then grasped between the thumb and index finger and twisted around twice. Then the insulation is scraped off the tap, so that a wire may be soldered from the tap to one side of the neutralizing condenser N. Thus each of these two coils is wound with primary first, then secondary, the tap point being made 15 turns from the end of the primary. There are three coils to be wound, namely, the aerial R. F. transformer and the two interstage transformers.

The variable condensers that tune the secondaries are .0005 mfd. represented in the diagram by C1, C2 and C3. Thus the set has three controls. If only two controls are desired, a .001 double condenser, where each half is .0005 mfd., may be used, the common rotor connecting to A minus and the two stators connecting respectively to the grid of the second R. F. tube (second from left), and the coil side of the grid condenser, C4, which is .00025 mfd. It will be noted that this forces an apparent negative grid return in the detector stage, since there can be but one grid return at the ends of the two secondaries. In fact, however, the grid return is slightly positive in the detector stage, due to the manner of connecting the two-megohm grid leak, R3 (grid post of detector tube socket to A minus).

If .00035 mfd. variable condensers are to be used the coils would be made as prescribed, except that the secondaries would have 57 turns of wire, instead of 45. In this case the tap would be at the twentieth turn.

The tap is made nearer what is known as the grid end.

Proper Connection of Coils.

The aerial R. F. T. is connected with the aerial joined to the beginning, i. e., top of the primary winding, when the form is so placed that the primary is above the secondary. The end of the primary goes to ground. Now connect the beginning of the secondary, not to the fixed plates of C1 and to grid, but to the negative A and the rotor plates of C1. Numerically, as per diagram, connect 1 to aerial, 2 to ground, 3 to minus A and 4 to grid. This is the inverse method of connection, the orthodox observance of polarities. With the rest of the R. F. wiring, however, this system is not followed. The first interstage coupler (neutroformer) shown to the right of the first tube, is connected with the primary beginning (1) joined to plate, the end of the primary (2) going to B plus amplifier voltage. Here the beginning of the secondary (3), which adjoins the end of the primary, connects the grid (instead of, as in the previous case, to low potential), and the end of the secondary to negative A. Thus the top, which is 15 turns from the beginning of the secondary, is nearer the terminal thereof (3) which connects to grid. The method just described is one wherein the primary connections are reversed, that is, the polarities oppose at the adjoining points (2 and 3). In neutrodyne construction this is correct.

The second interstage coupler is connected in the same manner as the preceding one (that is, unlike the aerial coupler), except that (3) goes to one side of the grid condenser, instead of conductively to grid. The other side of the grid condenser is joined to the grid post of the detector tube socket.

Four by-pass condensers are used, two of .001 mfd. each, across the secondaries of the audio transformers and two of .002 mfd. from the end (B plus amplifier lead) of the two interstage coupling primaries to negative A, to by-pass the R. F. current around the batteries.

A separate rheostat, R2, actuates the detector tube and is of 20 ohms resistance for the six-volt storage-battery-operated tubes. R1 controls the two amplifier tubes and is 15 ohms. A battery switch, S, may be used to turn the set on and off as a unit.

The coils should be mounted at a 57.3 degree angle. The neutralizing condensers should be adjusted until there is no squealing.

ETHER WAVES

Radio receiving troubles are caused by installing unmatched parts.

An aerial that is badly corroded can be cleaned with a rag saturated with gasoline.

All circuits must be at least slightly regenerative to obtain maximum distance and volume.

When working about the set, always throw off the switch and disconnect the battery wires from the batteries.

Spliced wires should be soldered, to insure a permanently good electrical contact. The wire corrodes in time, making the contact less conductive, and causing loss of signal strength.

To find the positive and negative posts on a storage battery, dip the wires in a dilute solution of salt in water. Bubbles will form most copiously on the wire attached to the negative terminal of the battery.

About 5,000 words have been added to the dictionary by the advent of radio.

Merely tying a wire on a pipe does not make a ground connection.

A loud speaker extension can be made without affecting the operation of the set itself.

A crystal detector cannot be used in a regenerative hookup.

A handy tool to have on the work bench is pliers which turn the wire into a round loop.

Yeast Foam makes good bread

Bread making is easy to learn and is an education in other cooking.

Mental Disease Statistics

That nearly 14 out of every 100 patients admitted to hospitals for mental diseases recover, and that more women are cured than men, is shown by an investigation of all hospitals for mental diseases in the United States which the federal census bureau has just completed. The recovery rate for insanity due to drugs was about 43 for every 100 cases, the highest recovery rate of any type of insanity. Next comes alcoholic insanity with 38 per cent of all cases curable. Women recover twice as often as men do from insanity due to physical injuries, but only 30 women recover from alcoholic insanity to 40 men. The most hopeless of all types of insanity is general paralysis or paresis, of which only five out of 1,000 recover.

"DIAMOND DYES" COLOR THINGS NEW

Just Dip to Tint or Boil to Dye

Each 15-cent package contains directions so simple any woman can tint soft, delicate shades or dye rich, permanent colors in lingerie, silks, ribbons, skirts, waists, dresses, coats, stockings, sweaters, draperies, coverings, hangings—everything!

Buy Diamond Dyes—no other kind—and tell your druggist whether the material you wish to color is wool or silk, or whether it is linen, cotton or mixed goods.

"Nip" Unfledged Parrots

Travelers report only the most simple methods are employed in capturing parrots for sale in the forests of Brazil, the natives having learned wisdom and conservation of effort. They locate the nest of the parrot, visit it when the birds are only a few weeks old and deftly trim one wing to prevent the balance necessary for flight, the result being, when the birds are large enough to be salable they are unable to fly, one wing being lighter than it really ought to be, and it is a simple task to capture them.—Ohio State Journal.

DEMAND "BAYER" ASPIRIN

Take Tablets Without Fear If You See the Safety "Bayer Cross."

Warning! Unless you see the name "Bayer" on package or on tablets you are not getting the genuine Bayer Aspirin proved safe by millions and prescribed by physicians for 25 years.

Say "Bayer" when you buy Aspirin. Imitations may prove dangerous.—Adv.

Depreciation—Overhead

A man who makes a living with his head was bewailing the other day that he had not begun saving earlier in life and that he had not saved more.

"Well," said a consoling friend, "you've still got your head, and it still works. Why worry?"

"Yes," said the thriftless one, "but the trouble with me is that I have never set aside enough for depreciation on the intellect."

Submitted as a brief sermon on thrift.—Nation's Business Magazine.

Don't Forget Cuticura Talcum

When adding to your toilet requisites. An exquisite face, skin, baby and dusting powder and perfume, rendering other perfumes superfluous. You may rely on it because one of the Cuticura Trio (Soap, Ointment and Talcum), 25c each everywhere.—Advertisement.

Power From Desert Heat

Scientists who have been delving into the future of the development of natural utilities have suggested that it is feasible to harness the heat of the great Sahara desert sands. While the suggestion is a vapory one just now, scientists who look upon the idea seriously say it is hardly more impracticable than the harnessing of waterfalls seemed to be some years ago.

If you use Red Cross Ball Blue in your laundry, you will not be troubled by those tiny rust spots, often caused by inferior bluing. Try it and see.—Advertisement.

People are seldom what they seem to think you think they are.

Charley Mint's Vacation

By MARGUERITE ALLAN

(©, 1925, Western Newspaper Union.)

CHARLIE MINT was a little man whose heart, metaphorically speaking, was ten times too large for his body; one of those little men handicapped by an insignificant and unattractive appearance combined with a shy reticent manner which made it difficult for him to make friends.

By dint of assiduous application to work and much self-denial he had saved during the past ten years something over a thousand dollars, and of late there had been forming in his mind a most magnificent resolve. He determined to withdraw this money from the bank and spend it on one glorious holiday—the sort of holiday he had always longed for—to spend a month in New York.

Alone, such an adventure would lack relish, and he was far too timid to contemplate such a proceeding. The only friend (and he hesitated to call him such yet) that he could think of was a young actor, Fred Dunn, who occupied the room next to his in the boarding house and who was obviously down on his luck. Although Fred was a surly and rather embittered young man, Charlie Mint had taken a liking to him, and he thought that Fred Dunn would be the ideal companion.

When Charlie Mint's boss offered him a month's holiday beginning the following Monday, his heart beat fast with anticipatory pleasure and excitement. He hurried to the bank during the lunch hour and drew his savings.

That evening sitting alone in his little room, he amused himself by counting over the money and formulating his plans. He contemplated with delight the pleasure he was going to share with another. Only the day before the young actor had remarked that he'd "sell his shoes to get to New York." Well, well, he wouldn't have to do that—

There was a knock at the door and Fred Dunn burst in.

"Say, have you got a cigarette on you?" he demanded and stood open-mouthed, his loose lips twitching as he caught sight of the roll of bills. "Sweet Mama! Has your rich uncle in Australia died?" he exclaimed.

Charlie Mint flushed to the roots of his thin hair. "This is money I have saved up—for a purpose," he replied, and slipped the roll under his pillow.

"You fellows in business seem able to salt away a lot. With us artists it's nothing but starvation and trouble—"

"Oh, well," said Charlie Mint slowly, rubbing his knees, "perhaps things will change, eh? You never can tell."

"They've got to change," snapped the actor, helping himself freely to the cigarettes on the table.

"Sit down, Fred, and talk awhile," said Charlie Mint.

"No—not inclined," returned the other. "I'm off to bed."

That night Charlie Mint's dreams were troubled, for the excitement he labored under gripped his subconscious mind. Once he woke with a start thinking he heard a noise in the room.

The second time he woke for a real and terrifying reason. His room was full of smoke, and when he flung open the door black heavy clouds enveloped him, making him choke. His first thought was for his friend in the next room and shouting "Fire!" at the top of his lungs he dashed in. He found Fred Dunn, child in his overcoat half lying over a chair overcome by the fumes.

With his arm about him Charlie Mint struggled to the door, but the roaring flames in the lower hall cut off their escape and he half dragged, half carried, his friend back into the room. He heard voices shouting now and the loud clang of the fire engines. He flung open the window.

"Don't jump," yelled someone. And little Charlie Mint kept his head. After what seemed an eternity, a ladder was hoisted and it was Fred Dunn who was carried to safety first. They came back for him and he collapsed as he reached the ground.

When he came to, he was lying on the sofa in a strange room and Fred Dunn was sitting in a big chair beside him.

"He'll be all right now," said a woman's voice, and brandy was put to his lips. "He was the last out of the house. What a dreadful experience. . . ."

When his head cleared he looked at Fred Dunn. "You're all right?" he asked.

The other nodded. "You saved—my life, Charlie," he said in a low voice.

"Couldn't leave you in that furnace," said Charlie Mint almost gruffly, and then suddenly he remembered. "My God!" he moaned. His money—his entire fortune forgotten until this moment. Gone! gone! . . . .

"Are you hurt, old man?" asked Fred Dunn, leaning forward.

"It's not that—my—my money. I forgot it—left it under my pillow—"

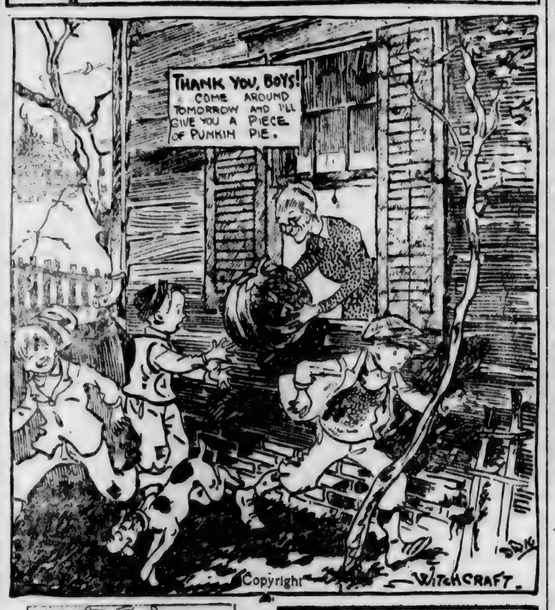
"You don't need to worry about that," said Fred Dunn. Hesitatingly he thrust his hand into the pocket of his overcoat and drew out a roll of bills. "Here you are!"

"But—how—" Charlie Mint's eyes were large with wonder.

"And I was a skunk, Charlie. . . . I gum-shoed into your room and stole it last night. . . . Stole from the man who saved my life. I don't know what to say. . . . you're a white man. Can you forgive me, Charlie?"

"Forgive you—of course! Look here," and Charlie Mint laughed a joyous quivering laugh. "We're going to have the holiday I had planned after all. Let me tell you about it. . . ."

SCHOOL DAYS



Mother's Cook Book

Shadows lie dark on the hillside,
Sunshine lies warm on the shore,
But the golden rod waves in his pride,
And the clover blooms no more;
Gone are the blossoms of May,
Their robe is a purple leaf;
And the corn stands ripe in his sheaf,
For summer is gliding away.

COMMON FOODS

ALL liquids from peas, carrots, turnip, kohl-rabi or in fact any of the flavor vegetables that are not too strong should be saved and served with the vegetable as sauce. Chilled it may be used very effectively as a drink, given to a child who needs the mineral salts.

Delicious Cake Filling.

Beat two eggs until stiff, add one-half cupful of sugar and the pulp and juice of a large tart apple grated. Beat until firm enough to spread; cover the top of the cake with the filling.

For company occasions serve the good old pumpkin pie with whipped cream into which a little good-flavored grated cheese has been added.

Custard Nut Pie.

Prepare a custard pie as usual, using a pint of milk and two large eggs, sugar to taste and a bit of salt and grated nutmeg. Just as it goes into the oven sprinkle over the top a cupful of minced black walnut meats. Bake as usual. The nuts will make a delicious brown crust all over the top.

Cranberry Ice.

To two cupfuls of cranberry puree (cooked fruit put through a sieve) add two cupfuls of sugar and three cupfuls of water. Pour into a freezer and freeze as usual. Serve in sherbet cups with the meat course.

Coconut Soup.

Grate the meat of one fresh coconut. Cook a tablespoonful of butter with a tablespoonful each of flour and curry powder. Add a quart of milk and water, a pint each and the coconut; simmer for a few minutes, add salt and serve. Some like a cupful of peas added just before serving.

Nellie Maxwell

THE YOUNG LADY ACROSS THE WAY

The young lady across the way says that even if it should turn out to be true that the Germans have learned how to make synthetic gold and they manufacture it in such large quantities that it wouldn't be worth anything any more we'd still have paper money, which is more convenient anyway.

(© by McClure Newspaper Syndicate.)

Among the NOTABLES

HENRI DE MAUPASSANT

HENRI RENE ALBERT GUY DE MAUPASSANT came of a well-to-do French family, and was born August 5, 1850, in the Seine district of France. He had the usual good education of boys of his class, and began his grown-up life as a government clerk. But his heart was not in the work; he spent as much time as possible at the home of the great Flaubert, where such literary geniuses as Tourgenieff, Daudet and Zola congregated. At first these men regarded him as a pleasant-mannered young athlete, and not even sketches submitted to Flaubert changed their opinion.

But one day he wrote a short dramatic piece, acting in it himself, which his friends attended. It was suppressed, but not before Flaubert saw that there was genius hidden in its author. So for seven years he kept young Maupassant with him, and taught and criticized him. When he was thirty, he published "Des Vers" a collection of poems—also suppressed. However, he proved immediately a master of the short story; indeed, he was one of the first to develop this recent type fiction, and many of his stories are models for young writers. "Mademoiselle Fifi," "Une Vie" and many novels came from his pen and several collections of his short stories. He lived to be forty-three years old, and in ten years wrote some thirty volumes. His style was beautifully clear and simple, his insight into character is marvelous.

THE WHY of SUPERSTITIONS

By H. IRVING KING

HALLOWEEN

AS EVERYBODY knows, Halloween is the night especially favorable for the practice of all sorts of magic rites, especially of those "projects" or love divinations and charms, by which young men and maidens seek to know something of their future partners or see them evolved visible from thin air. Ghosts and spirits walk about and wierd things are said to happen on Halloween.

In some places boys mount pumpkins on poles and, draped in a sheet, carry them about simulating ghosts.

All this is but a perpetuation of that feast of the dead which our ancestors celebrated unnumbered centuries ago. Nearly every savage race on the globe has such a feast today on some date when the spirits of the dead are supposed to return to their earthly habitations. Ours is a perpetuation of the old Celtic feast of the dead which was celebrated on the Celtic New Year's day—November 1.

In the hopes of supplanting an old pagan custom by a Christian observance, Pope Gregory IV in 835 established the feast of All Saints for November 1. But this substitution not working as well as was expected, a feast of All Souls was instituted, and November 1 being already occupied, was placed for November 2. Or rather the custom grew up from the example of Odilo, abbot of Clugny, spreading throughout Christendom, though it is said never to have been formally sanctioned by the church itself. This custom of celebrating a mass for "all the dead who sleep in Christ" on November 2 it was thought would be sufficiently analogous in its idea to wean the people from their old heathen rites of November 1. It was the church's second attempt to do away with the old pagan feast of the dead, the maimed rites of which still flourish among us in the observances of Halloween.

(© by McClure Newspaper Syndicate.)

Charles De Roche

Charles de Roche was born in Port-Vendres Pyrennes, France, July 7, 1893. He is six feet, one inch in height and weighs 185 pounds. He has brown hair and gray eyes. Before entering the "movies" he had a number of years' experience on the stage in France, playing all sorts of roles. He has been seen in some of the most popular pictures, playing opposite prominent stars.

AN ABBREVIATED STORY

THE RASPBERRY TRAIL

IN GREAT agitation, Sloopwing Wompers burst in on Waxine Beans, the beautiful lady detective, as she was at work on her forthcoming volume, "How to Exercise the Tongue to Improve the Taste."

"Read this!" he panted, slapping down a badly scrawled, badly stained note, reading: "If you fale to put $38 under the back gate at midnight tonight, your sun will be put to deth."

"My child has disappeared as completely as though the earth had swallowed him up! And to think—the disgrace of it!—his abductors can't even spell correctly and value his priceless life at only $38! Oh, the shame! And such a vulgar note, all covered with stains! The unspeakable humiliation of it!"

"Stains are my specialty," said Miss Beans cheerfully as she passed her dainty tongue lightly over the note. "H'm. So."

After an hour's search in the neighborhood of the Wompers home, she found a small boy licking an all-day sucker behind a barrel.

"What flavor is it, sonny?" she asked winningly.

"Raspberry," he replied.

"As I thought. How do you spell fail?"

"F-a-l-e."

"As I thought. Come with me, young Wompers."

And as a reward for coming along without making her chase him, she stopped to give him time to pick some grass to stuff into the back of his trousers.

A LINE O' CHEER

By John Kendrick Bangs

THE SPUR

THE wolf was standing at my door
Indulging in the usual roar
I'd heard so many times before.

I'd got so used to him that he
For all he yowled so lustily
Somehow no longer bothered me.

And soon I came to look on him
As if he were a creature grim
To spur me on to greater vim.

And do you know that every day
He wagged his tail in manner gay
And grinning broadly loped away!

Roy Henley and family of Roanoke, were Saturday night and Sunday guests of the former's father, W. E. Henley, and family.

Fred Gee and family were Sunday guests of Fort Wayne friends. Mrs. Matie Gee, who had been visiting friends there the past week returned home with them.

Mr. and Mrs. Abner Trostel and son, Dale, returned home Monday from a few days visit with M.s. Trostel's parents, Mr. and Mrs. Will Petty, and other relatives at Roann.

MICKIE SAYS—

Great Man No Scholar

Lord Robert Clive, founder of the British empire in India, was the despair of his teachers. After being expelled from four schools he was sent by his father for punishment on a cruise to the East.

STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACT OF CONGRESS OF AUGUST 24, 1912.

Of St. Joe News, published weekly at St. Joe, Indiana, for October 1, 1925

State of Indiana, County of DeKalb, ss: and for the state and county aforesaid.

Before me, S S Widney, a Notary Public in personally appeared Fred B. Leighty, who, having been duly sworn according to law, deposes and says that he is the Editor and Publisher of the St. Joe News, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management, etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor, and business manager are

Publisher, Fred B. Leighty, St. Joe, Ind

Editor, Fred B. Leighty, St. Joe, Ind.

Managing Editor, Fred B. Leighty, St. Joe, Ind.

Business Manager, Fred B. Leighty, St. Joe, Ind.

2. That the owners are:
Fred B. Leighty, St. Joe, Ind

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or other securities are:
None.

4. That the two paragraphs next above, giving the names of the owners, stockholders, and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by him

FRED B LEIGHTY,

Sworn to and subscribed before me this 13th. day of October 1925.

S. S. WIDNEY, N. P.

Commission expires Jan. 7, 1927

Lutheran Notes

Sunday School 9:30.

Preaching service in the evening at 7:00 o'clock.

Prayer meeting Thursday eve at 7:00 o'clock.

S. D. Steffey, Pastor.

Notice Of Final Settlement

Cause No. 2879.

NOTICE IS HEREBY GIVEN to all persons interested in the estate of MARY A. RENN deceased, to appear in DeKalb Circuit Court, held at Auburn, Indiana, on the 30th day of Oct. 1925, and show cause, if any, why my Final Settlement Accounts with the estate of said decedent should not be approved; and said heirs, and all others interested, are notified to then and there make proof of heirship or claim and receive their distributive shares.

Witness, my name, this 30th day of September, 1925.

REUBEN B. RENN,
Executor.

Atkinson & Husselman,
Attorneys. 40 t 3

Notice of Appointment of Executor

State of Indiana }
DeKalb County } ss.:

I, J. H. Knauer, Clerk of the Circuit Court, for the County of DeKalb, State of Indiana, do hereby certify that ADRON BEREE has been appointed executor of the last will and testament of HENRY BEREE late of DeKalb county, who died testate, and the said ADRON BEREE having qualified and given bond as such executor is duly authorized to take upon himself the execution of said will.

Witness my hand and seal of said Court this 8th day of October, 1925.

J. H. Knauer,
Clerk of DeKalb
Circuit Court
Walter W. Ferris, Atty.

41 t 3.

OCTOBER

SPENCERVILLE

George Beams and wife spent Sunday with Michigan relatives.

Mrs. Sam Smith of east of Spencerville, is slightly improved from a serious illness

The C. C. club will be entertained at the home of Mrs. John Hosler, Friday afternoon.

Gravel haulers are busy on the 3 mile road from Henderson's Corners to the Maurer church.

The Home Bureau of Spencer township met Wednesday afternoon with Mrs. Cora Waltz

Mrs. Sophia Emme of Harlan, very pleasantly entertained the J A. G. club last Wednesday

Mrs Hazel Steward attended the Grand Temple of the Pythian sisters at Indianapolis last week.

John Timmerman, wife and daughter, Alice, spent Sunday in the Ben Markins home north of St. Joe.

Roscoe Walter and wife attended the national and state undertakers association held at French Lick, Indiana, last week

Cash paid for false teeth, dental gold, platinum and discarded jewelry. Hoke Smelting & Refining Co., Otsego, Mich.

Moses Price, of near Harlan, Glenn Betz and son, Alton, of near Woodburn, and Willis Boston and wife, were recent guests in the Joel B tz home.

A Home Coming is being planned for next Sunday at the Lutheran Sunday School, Church and Christian Endeavor. An invitation is extended to all former members.

E ward Billman and wife entertained the following guests Sunday: Gust Hafner, wife and son, Robert, Joel Betz and wife, Frank Wertman and wife, Louis Markle and wife and Samuel Markle.

Opening of Roller Rink at Spencerville Saturday night, October 17.

On Tuesday evening the P. T. A. gave a reception to which all interested were invited. Community singing was led by Mr. Ashby Invocation, Rev. Steffey. Song, high school glee club. Short talks were given by the county officers. This was followed by a cafeteria lunch.

See Furnish for Batteries.

Ray Baker and wife were Sunday guests in the Floyd Dean home.

Theo. Garstka of LaOtto, took Sunday dinner at the R. U. Bowser home.

Miss Lucile Miller visited her grandmother, Mrs. Sophia Miller, several days last week.

Most of the young people employed by the Auburn Auto, were laid off for a month, Saturday.

Mr. and Mrs. Wm. Reed and daughters were Sunday dinner guests of James Reed and wife.

For Sale: 200 bu. of hand picked apples, price, .75 and $1. Wind falls, 50 cts. at my farm 3 miles west of Spencerville.

Meno Gerig. 41t2.

On Tuesday, Oct. 20, an all day meeting of the Home Missionary society of the M. E church will be held at the Wayne Street Methodist church at Fort Wayne

A Fair and Box Social will be held at the South Scipio school, Thursday evening, Oct 15. A big time for all. This is the fourth annual Fair. It is promised to be the largest and best ever held at South Scipio. A fine program is being put on Ladies are requested to take boxes. There will also be supper for the hungry who do not get boxes

Carl Hart, Teacher.

Home-Coming Program at Spencerville Sunday

Program of the Home Coming Services at the Spencerville Lutheran church, Sunday, October 18, 1925.

Sunday School at 9:00 A. M. All scholars and former scholars are invited.

Communion service at 10:30 A. M. All members and friends are invited.

Dinner in the basement at 11:30 A. M. Social hour after dinner to be followed by a program in the afternoon.

Christian Endeavor at 6:00 P. M.

A good meeting is expected.

Be sure and spend the day with us. Bring your basket and help to make it a truly "big day."

The Committee.

Dairy Cow Efficient Food Producer

Properly built stalls cut down work and bacteria.

© Underwood & Underwood

Keep the utensils clean.

With increasing rentals and values of farm lands, dairy farming is rapidly replacing other types of live stock farming. A dairy cow producing 8,000 pounds of milk a year furnishes 1,000 pounds of dry matter, all of which is edible and digestible. A two year old steer weighing between 1,200 and 1,300 pounds furnishes about 550 pounds of dry matter, not all of which can be used for food. In other words a fairly good producing dairy cow furnishes twice as much edible dry matter in one year as a good two year old steer when he is killed for meat. A cow can be kept for additional years of service, while to replace the steer, another animal must be fed for a period of two years.

The United States consumption of milk per capita has increased from 42 gallons of whole milk in 1918 to more than 54 gallons in 1925.

With growing acceptance of milk as a food has come an increasing knowledge of the proper care of milk on the farm. Because odors from foods and animals in the cow stable are easily taken up by milk, injuring its flavor, they must not come in contact with the milk. Removal of the milk from the stable as soon as possible reduces the amount of dust and dirt entering it and keeps down the bacterial growth in the milk.

Bacteria increase rapidly in warm milk causing it to sour quickly. Removal of the animal heat from freshly drawn milk by lowering the temperature to that of cold well water (approximately 60° F.) greatly aids in preventing bacterial growth. A well lighted, well ventilated milk house, not too close to the stable, is also very helpful.

Cleanliness in the stable is vitally necessary. The stall platform should be just long enough for the cow to stand comfortably without room to spare; otherwise, the cow will become dirty from droppings when she lies down. The gutter should be wide and deep. A good gutter is 16 inches to 18 inches in width and 9 or 10 inches below the platform. Bedding should be clean and plenteous.

Long hair on the flanks, udders and tail above the switch of the dairy cow should be removed at regular intervals. Removing this long hair removes the clinging places of dirt which otherwise will fall into the milk pail in quantities. Keeping the hair short on these parts of the cow permits cleaning in much less time and more thoroughly. Brushing should never be neglected. It removes loose particles sticking to the body. When the hair is short, wiping the udders with a damp cloth just before milking, is an easy and important aid in securing clean milk.

It is generally recognized that most of the bacteria found in milk finds its source in dirt clinging to the cow and dropping into the pail during milking time. Simple precautions will practically eliminate this source of bacterial growth and dairymen find themselves well repaid for the little time necessary in taking such precautions.

Patrick Flynn, Mechanic

By FRANK M. SAVAGE

(©, 1925, Western Newspaper Union.)

THE day was sleety, cold; dismal November.

I was checking a coffer-dam plan for a river pier of the railroad bridge I was building across Black river. It was emergency work.

The door of the shanty which served as office and commissary for my construction camp was opened and quietly closed, but I did not look up till I heard a scrape of a tool laid on the floor.

There stood an old man, unmistakably Irish. "Where can I find the boss, sir?" he inquired.

"Stand by the stove and warm yourself!" I ordered tersely. "You may talk to me."

"Do you want to hire a mechanic?" he asked simply.

My eyes turned to what he had laid on the floor when he entered. It was a bundle of shovels, the blades wrapped in a bag.

"A mechanic!—with a shovel?" I queried, half aloud.

"Yes, sir, a mechanic. I'm a shoveler."

"What is your name?"

"Patrick Flynn, mechanic."

"Why do you call yourself a mechanic?"

"Because, sir, a man that handles the tools of his trade in the best kind of way is a mechanic."

"Give me a demonstration," I suggested.

He unwrapped the bag and carefully wiped the blades of his shovels. They shone like polished steel, and the wooden handle of each shovel was smooth and oiled.

"You see, sir, 'tis like this."

With imaginary ground at his feet he gave me an exhibition that was a revelation to me. He ceased work and stood with his foot on the shank of a shovel, both hands resting on its handle. He looked inquiringly at me. My timekeeper entered.

"Fit this man with warm clothes, rubber boots, and a slicker; take him to foundation three; tell the superintendent he's to teach those Dagoes how to use their shovels."

Foundation three was the "keystone" of the structure I was building; the excavation must be completed and the concrete poured before a flood. I feared a Chinook wind. One would melt the early fall snow on the mountains, and floods would follow, washing out the cofferdam.

One night as the excavators neared the bottom of the pit they cut through the clay into a pocket of quicksand. The night foreman's efforts to repair the damage were futile. Suddenly a section of the undermined plank side of the cofferdam caved into the pit, burying the foreman underneath.

A cry went up for Flynn! Pat!

The commotion awakened me, and, hastily drawing on my clothes, I ran to the pit. Now aroused, the whole camp tumbled from their bunks and rushed to the scene of the disaster.

Climbing down into the pit, I discovered Patrick crawling from under the tangled planks.

"His head's above water, sir," he told me, quietly. Then he cried to the foreman of the barge crew outside the pit: "Get your big suction pump workin' quick and turn this sand-flow away from here!"

He grabbed his shovel, and, turning to the men who had started digging for the imprisoned foreman, ordered: "Quit that! You'll murder the man with your bunglin' work!"

Patrick crawled under the wreck. He was clad only in his overalls, and the muscles of his withered arms stood out like knots as he worked rapidly, and, with a touch that was almost delicate, turned the devilish quicksand into the flow toward the suction of the powerful pump.

"Get a rope!" he called to me in a voice hardly above a whisper.

Patrick tied the rope around the foreman and called for a steady pull, meanwhile, crawling farther beneath the wreck. He reached deeply into the water and worked with his shovel to loosen only the sand which now held the man's legs.

After the foreman was dragged to safety, I ordered Patrick to crawl out, but he seemed unable to extricate himself. I slowly drew him by the heels till he was back in the pit from under the planks. He was completely exhausted, and I ordered him carried to his bunk.

As the last shovelful of mucky clay was being loaded into buckets which raised it, machinery was loading cars with concrete which ran, double-headed, and dumped their charges into the pit. The anxiety of the situation had caused me to forget my "mechanic" till the concrete safely protected the foundation against any flood. Then I asked for Patrick.

"Sick!" I was informed. "Been taking quinine—in bad shape!"

I went to the bunk-house where he slept and found him in his bunk. When I removed the bandana handkerchief which covered his face he asked in a weak voice:

"Did the foreman live, boss?"

"Yes—yes!" I assured him. "You saved his life."

The man was ill, and I hastened to the telephone to summon a doctor. Then I returned to Patrick. He was breathing quietly, and I seized his cold, calloused hands between mine and chafed them. He opened his eyes—a faint smile quivered on his lips.

"I saved the foundation—didn't I, boss?" he asked. "I'm a mechanic—ain't I?"

Science Comes to Aid Labor of Shoveling

Have you ever noticed that the hardest part of shoveling in tough material is getting the shovel in? You push and you bang your anatomy against its handle, until part, at least, of a shovelful has been bitten off. But it is hard, killing work, asserts the Scientific American.

But suppose you had a helper whose job it was to strike the rear end of the shovel. All you would have to do would be to hold the shovel and keep it pointing where you wanted it to work.

Such a consummation is contained in a one-man clay digger recently manufactured. First, there is a pneumatic tool which does not differ greatly from the pneumatic riveter. This forms the handle and strikes 800 sharp blows a minute. Then there is the shovel or spade, very strong and husky—much more so than a common hand shovel. The air line is a flexible hose which attaches to the handle end of the spade, and there is a hand trigger to start and stop the compressed air.

It does not require an engineer to see the potentialities of this combination. Anyone who has watched a pneumatic riveter mash rivets into heads in ten seconds, or a pneumatic chisel wrecking steel work, knows how fast they eat their way through.

These shovels are not meant for shoveling coal or sand, but for tough jobs. For instance, cutting through frozen ground, tunneling in tough clay or digging postholes in "mean" soil.

Indian Blood Strong in American History

That there is not a single old American family which is free from Indian blood is the statement of Edward Willard Deming, painter and sculptor of the red man and his life and with whom he has lived in 20 different tribes, a Fairfield (Conn.) correspondent of the New York Times writes.

At some time in every genealogy of the really old families we find intermarriage with Indians, Deming claims. He assures that this did not tend toward the detriment of the family strain, and refused to let the children of such marriages be called "half-breeds" with the popular connotation of something obnoxious. The conventional half-breeds, Deming said, are not so much the product of intermarriage as the result of conditions which force these children to mingle with the Indians.

His Accomplishments

Jenks raised a large family.

He raised the rent for them every month.

He raised a mustache.

He raised potatoes and onions in the back yard.

He raised no objections to washing the dishes, handing over his salary to his wife, supporting his mother-in-law for six months in the year, or allowing Arthur, the Pekingese pup, to park in his pet Sunday chair. But when his wife used his new razor to peel potatoes—

He raised thunder.—Country Gentleman.

Submarine Safety

A Lille (France) workman claims that he has invented an apparatus to save the crews of sunken submarines. He has issued a challenge to all maritime nations asking to be shut up in a submarine and sunk to any depth, and declares that he will get out in less than thirty minutes.

Transparent Metals

Dr. Karl Mueller, of Berlin, claims to have discovered a process by which it is possible to reduce metal foils to a thinness of one two-and-one-half millionth of an inch while retaining their elasticity. The process can be used with all kinds of metals, including gold, and, of course, renders them transparent.

World's Barley

One billion two hundred and fifteen million bushels of barley were produced in the world last year outside of Russia and China, which is a decrease of 114,000,000 bushels from the preceding year and of 130,000,000 from a four-year prewar average.—Science Service.

His Kind

Judge—And what did you say when your wife refused to allow you to go to your lodge meeting?

Defendant (charged with wife beating)—I didn't say nothing, your honor. One of them strong, silent men, that's me, judge.—Life.

Second Niagara

A waterfall as great as Niagara in the midst of a barren desert was one of the sights seen by Mrs. Agnes Chase, botanist of the United States herbarium, who has just returned to the United States after seven months in Brazil.—Popular Science Monthly.

Placed

Employment Agent (to applicant)—What's your work?

Stammering House Painter—Er-pup-pup-pup—

Agent (writing)—Drives motor boat—all right, we'll let you know when a job turns up.—Judge.

Spain Cuts Rail Rates

Following the reduction in first-class fares to attract third-class passengers to better comfort while riding, the Netre railway of Spain enjoyed an unexpectedly large jump in profits in the last year.

NEWVILLE

A. I. Richmond of Chicago is here. He and his wife expect to spend the winter at Newville.

Rev. E. V. Stover and wife of Groverhill, Ohio, were Sunday guests of Willie Miller and wife Mrs Stover will be remembered as as Martha Williams.

Mrs. Mary Mitchell returned to her home Saturday from the home of her daughter, near St Joe. Mrs. Mitchell is recovering from a stroke of paralysis and has been with Mrs Krabill for about ten weeks.

C O. Berry, wife and daughter and Sam Stafford, were Newville visitors Sunday. Mr Stafford is staying a few days this week with the John Miller family Sunday night Mrs. Gertrude Watson of Spencervile was a guest of Mrs Vera Miller in the the same home. Monday the ladies went to Toledo to visit their parents. Leroy Kingey and wife.

Mrs. Ray Antrup died at her home one half mile west of Newville Saturday, leaving a new born son. She also leaves a husband and two little daughters to mourn her departure. The Antrups bought what is known as the Wilderson farm and moved there from Garrett about two years ago. The funeral was held Monday from the home of a relative at Auburn. Those from Newville attending the funeral were: Mesdames Ollie Smith, Imo Miller, Purl Richmond and Miss Redena Richmond.

Local Briefs

See Furnish for that new Chevrolet.

Sam Keesler and family were Sunday afternoon guests of Ed Storer and wife.

Carl Bassett, wife and son, Murray, of Fort Wayne, are spending several days here with their parents, C. C Bassett and wife.

A very pleasant evening was spent Monday at the home of Mrs. Mabel Baker, by the F B. C. of the M. P. Sunday School. Extensive plans were made by the class The hostess served a dainty lunch.

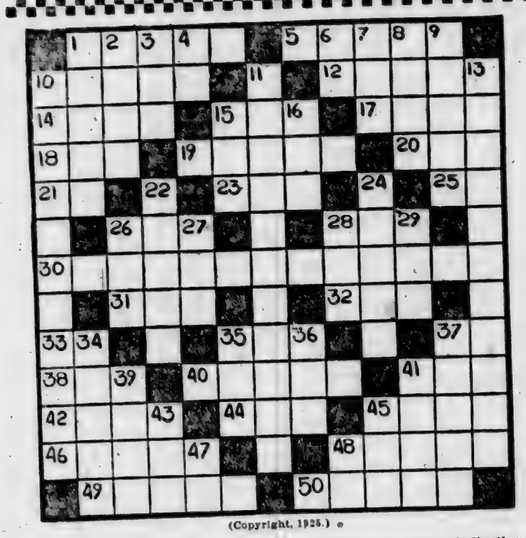
CROSS-WORD PUZZLE



(Copyright, 1925.)

Horizontal.

1—Swift
5—The "witch city" of America
10—Systems of signals for communication
13—Pertaining to one of the Poles
14—To leave out
15—An exclamation denoting disgust
17—Naked
18—Came together
19—Breads
20—Manuscripts (abbr.)
21—A negative
23—An article of food
25—Horsepower (initials)
26—Goal
28—To incline the head
30—United labor
31—Guided 32—A negative
33—That thing
35—Belonging to it
37—Part of the verb "to be"
38—A rotating piece in machinery
40—Cooked in hot fat
41—A crib or container
42—A river in Russia
44—A high card
45—A ridge raised on the flesh by a blow (slang)
46—A kind of singing voice
48—Makes well 49—Stitched
50—A vegetable (pl.)

Vertical.

1—A famous lover
2—An entrance or passage
3—To fondle
4—Part of the verb "to be"
6—Associated Press (abbr.)
7—To toss heavily or slowly
8—An ancient kingdom east of Babylonia
9—Boggy land
10—A New England state
11—Marks or symptoms indicating the nature of a disease
13—Those who made replies
15—An assessment
16—A unit of work or energy in the C. G. S. system
22—Sly artifices
24—An engine
26—Every one of
27—Crazy 28—Anathema
29—Humor
34—Weeds of grain field (pl.)
35—A man's name
36—To behold
37—Papers containing statements
39—Hair on a horse's neck
41—To thrash
43—Not high 45—Small
47—A note in the diatonic scale
48—That man

The solution will appear in next issue.

Solution of Last Week's Puzzle.

HOW TO SOLVE A CROSS-WORD PUZZLE

When the correct letters are placed in the white spaces this puzzle will spell words both vertically and horizontally. The first letter in each word is indicated by a number, which refers to the definition listed below the puzzle. Thus No. 1 under the column headed "horizontal" defines a word which will fill the white spaces up to the first black square to the right, and a number under "vertical" defines a word which will fill the white squares to the next black one below. No letters go in the black spaces. All words used are dictionary words, except proper names. Abbreviations, slang, initials, technical terms and obsolete forms are indicated in the definitions.

THINKS MANKIND IS TOO HARD ON FOX

"And Sampson went out and caught 300 foxes, and took firebrands and turned tail to tail and put a firebrand in the midst of two tails. And when he had set the brands on fire he let them go into the standing corn of the Philistines." And ever since mankind has been practicing cruelty toward this little animal. It has been accused of every crime imaginable, from stealing poultry to stealing lambs and pigs, and even calves. It will occasionally carry off a hen or a duck, but this only occurs when there are young foxes and other food is scarce, observes the Minneapolis News. For every head of poultry the fox kills it pays in the amount of field mice, moles and destructive rodents killed. Let a farmer from any cause whatever lose a hen or duck and a fox drive is ordered and men and women and children gather from far and near and every fox that is unfortunate enough to be caught in the circle of the howling mob is clubbed to death.

To that class of people that are always thirsting for the blood of some poor wild creature I would say, get a McGuffy's fourth reader and read the "Morning's Ramble." I say give poor Reynard a chance.

USED CABIN FLOOR IN PLACE OF BANK

Out of the desert comes another story of mystery, baring the life habits of one of the desert's eccentric characters, says the Los Angeles Times in a recent dispatch from San Bernardino.

In a tin can buried in the earthen floor of the cabin of the late David M. Bowman, a miner killed in an accident four years ago, $3,000 in British war bonds were found by Miss Anna Jackson of Pasadena, one of the heirs of Bowman's estate, and Coroner Hanna.

Bowman, fifty-four years old and a native of Scotland, was the placer miner who, twelve years ago, gained distinction by his discovery of the largest gold nugget ever taken in southern California. He cashed the nugget for $2,000. Bowman was killed in a cavein accident in the Coolgardie mining district.

Miss Jackson and a sister in Scotland were named as heirs. At the inquest nothing of value was listed in Bowman's estate. Learning that Bowman was an odd character, doubtful of the honesty of others, Miss Jackson began a search for treasure. She searched the cabin in vain. Convinced that Bowman's life savings were in or near the cabin, she returned with the coroner and in digging in the earthen floor she found the tin can with its wealth.

Love of One's Work

It does not matter whether a man paint the petals of a rose or the chasms of a precipice, so that love and admiration attend on him as he labors and wait forever on his work. It does not matter whether he toil for months on a few inches of his canvas, or cover a palace front with color in a day; so only that it be with a solemn purpose, that he have filled his heart with patience or urged his hand to haste.—Ruskin.

Right View of Life

Riches and honor are what men desire; but if they attain to them by improper ways they should not continue to hold them. Poverty and low estate are what men dislike; but if they are brought to such condition by improper ways, they should not feel shame for it.—Confucius.

We Wouldn't Blame 'Em

It would not be surprising should the inmates of insane asylums adopt resolutions protesting against admitting some persons sent there by juries.—Miami Herald.

First Equestrian Statue

The statue of Colleoni, the famous generalissimo of the Venetian land forces, in Venice, is regarded as the first equestrian statue in existence. It is the work of Verocchio and Leopardi and was cast in 1496.

Limited Unanimity

"Nearly every man agrees with himself that he's a wonder," says an exchange. Jusso! Convincing others is where the rub comes.—Boston Transcript

Gowns and Wraps on Fashion List

"Are we on the brink of a new era of dress?" is the question floating about wherever fall fashions are discussed. To be hovering upon such a brink is a delightful state of things for women, observes a fashion correspondent in the Kansas City Star. But lady, lady, if you fancy you are in a state of joyful expectancy, think of the state of mind such a prospect brings to all designers, fabric manufacturers, ready-to-wear concerns and all kindred interests that grow rich (or poor) on women's love of change in dress.

The element of fickleness is to be reckoned with, and that quality moves money in business as fast as it brings changes in love affairs.

Does the modern woman really want elaboration in dress or is this just a flurry—a normal reaction of the long reign of the straightline frock and the boyish mode?

Frankly, nobody knows. The wisest ones in the world of dress, the designers and creators of fashions, retained the jumper and the modified straightline frock in fall opening. Playing safe, of course, if women do not accept the elaborate fashions they still have the simple frock to offer. One need not hesitate on the purchase of these simple frocks secure in the knowledge that they will be worn in satin, in crepe, in chiffon, in velvet, in tweeds and in jerseys. A glance at the fall mode gives the jumper its secure place and in all the bright greens, deep reds and shades of brown.

The princess of autumn 1925 is a clever modification of the princess that was, it is molded to the figure about the waistline, flares at the hem, the long sleeve often flares out below the elbow or flaunts a cuff that a cavalier might envy. In other words today's princess is a rebuilt model beautifully flared by godets, slim by means of fabric cut in many pieces almost as many as old-time gores, but, oh, so different. The V neckline, or the newer modification, a V in the back and the round neckline in front, are pretty indeed.

Bedecking the Neckline.

The high neckline is maintained, the fur choker often turns the trick. The scarf is as versatile as ever whether in flowing style or reduced to a string-like arrangement that falls from shoulder, down the back or ties under the ear.

These straight stand collars are finished on the inside with contrasting colored silks.

In contrast to the princess there is the period frock, a specimen of such loveliness was in every opening. Full skirts in rich brocades, flowing velvets, lace and taffetas bouffant in line are joined to the molded bodice. Generally speaking, these frocks have an appeal year after year. Like a velvet evening trimmed dyed kid, silver leather and gold leather are luxurious. Lavish fur bands, pockets of fur and braids in gold and self tones are much used. Black and rich autumn colors are shown.

The tweed coats, flaring from the shoulder, have the raglan sleeve and leopard skin collar.

If you have a yard or a mile of fringe get it out, the yard can be used as a bertha on a satin frock and all of the mile that can be wound round your figure in spirals will make you a replica of fringe frocks from Paris. Whole capes are enveloped in fringe.

Many of the evening dresses are frankly fuller, but of such supple silks that they seem slim. For these there are frequent and unusual color combinations, the dress reported by cable, made in flat layer treatments in green, blue and silver, or in mauvy pink, with two rose panels and a blue one hanging loosely at the front. A few are straightline, such as one of poppy red, with long lines of ruffles draped to suggest flowers dripping down either side of the front and back.

Bluejay Cloth Coat, Red Velvet Lining, Opossum Fur Trim.

Heavy Fur Trimming Is Feature of Coat of Lava Brown.

Mme. Rolande showed several afternoon and dinner dresses featuring moire in her Paris openings, although velvets, chiffon and crepe de chine also were shown.

In evening dresses, moire is also worth noting, because it is a fabric comparatively little seen in the majority of showings. One model of pinkish mauve has the corsage bordered in gold. The skirt carries a flounce low in the front but brought higher at the sides and to the waistline in the back.

Many of the dresses are trimmed with vertical bands which mark the bust a little and indicate the normal waistline, adding to the width at the hem. The chiffon frocks often have a yoke of fine lace of the exact shade of the dress. Others are trimmed with narrow flounces in various fashions, but always in points, which Mme. Rolande has made the controlling motif in her trimmings.

Much Velveteen Used.

Velveteen skirts are an important factor. With the skirts, blouses of the same fabric, or a contrasting one trimmed in velveteen are shown, although in many instances the skirts may be purchased separately.

Colors vary only slightly, deep raspberry red, bottle green, royal blue and brown skirts of this type are shown. The blue which would be very bright in another fabric, assumes a darker tone in the pile material.

A skirt of chiffon velvet with lame blouse is pale rose velvet, with circular sides. The blouse has a gold cast, and introduces an array of pastel shades, including rose. It is made in the manner of the more tailored jumpers, having long sleeves, and a collar which may be worn high. It is about hip length, being held close at the waistline with a sash of self material. Bands of rose velvet and gold braid serve as trimming.

The tweed coats favor straight lines broken in the back by cape effects, which generally reach just to the waist, although occasionally they fall below the hips. One model with a short cape which just covered the sleeves was collared and cuffed in fox, dyed a cocoa brown to match the tweed.

The tweed suits appeared in the regular mannish effects with single or double-breasted jackets reaching to the hips, and slender skirts. More novel types had knee-length coats in either straight or flared lines, fur collars and skirts widened by plaits or gores.

The homespun coats were developed in wrap-around or ulster styles, with the flare from the shoulder predominating. An attractive example in dull gray-green with irregular stripes of darker green bordering the hem and sleeves, had a fitted shoulder achieved by continuing the sleeves up into the standing collar. These models were trimmed by seaming tucks and rows of self buttons.

wrap they are always in the mode. With today's present variety in fashions the period frock hardly has the paved path to popularity that it did when gowns were less elaborate.

Insets of batiste and lace in the form of godets, long front panels are now a part of the mode. Lacy collars, frills and cuffs in lace batiste and organdie are seen in many colors.

The length of the coat in tailored suits is either three-quarters or hip length. Rather heavy diagonally ribbed silk in gray, trimmed in narrow bands of baby lamb, is lined in velvet to match; ribbed velours de laine in bordeaux red is one of the lovely materials for fall. In fact red in rich, deep tones is one of the touches of brightness the autumn wardrobe will know. Women accepted red very gradually but they are just as slow in letting go of this gorgeous color.

The long belted jumper has a belt that fastens with silver belt buckle of the shirtwaist period.

The coats are to have deep shawl collars. A scarf that winds about the throat and forms a throw is one of the notes of elegance. The cape is prominent on coats, sometimes the cape forms the sleeve. The soft velours

The KITCHEN CABINET

(©, 1925, Western Newspaper Union.)

Puddings, my friend, do a mission fulfill;
They add to the dinner and also the bill;
They cause men to wish, with what ardor they may,
That the meal which foretells them came three times a day.

FOR DESSERT.

Desserts are an important feature in every dinner, in most families. For those who enjoy and never prepare them, it will be hard to understand the amount of time it takes to prepare even simple desserts.

Banana Lemon Whip.—Roll together two cupfuls of sugar, two cupfuls of water and the grated yellow rind of a lemon; when it hairs add one-half package of gelatin which has been softened in cold water. Stir until dissolved, then add the sifted pulp of four ripe bananas mixed with the juice of two lemons. Pour all into a large bowl to cool, and when the edges begin to harden beat the mixture with a large-sized egg beater, continuing to beat until the whole is creamy, then it may be poured into a mold and chilled.

Baked Indian Pudding.—Take three fourths of a cupful of cornmeal, scald with a cupful of boiling water and stir into a quart of scalding milk, cook until boiling, add one-half cupful of brown sugar, one cupful of raisins, a little salt, two well-beaten eggs and a cupful of chopped suet, a teaspoonful of grated nutmeg, three tablespoonfuls of molasses and more sugar if needed. Add another quart of milk and pour into a deep pudding dish and dredge the top with flour. Stir during the first of the baking until the mixture is well-blended. Bake for half a day. Serve with or without sauce.

Lemon Raisin Pie.—Take one cupful of large raisins, add one cupful of sugar, one large lemon, juice and grated rind, a tablespoonful of flour, one cupful of water, one tablespoonful of butter. Bake with two crusts.

Filled Sponge Cake.—Scoop the center from a deep sponge cake and fill with mashed and sweetened fruit, either peaches, bananas or strawberries—any fruit in season. Cover with sweetened whipped cream and serve at once.

Spiced Tea Cakes.—Mix and sift one and one-half cupfuls of flour, two teaspoonfuls of baking powder, one-eighth of a teaspoonful of nutmeg and one quarter teaspoonful of mace. Cream one-fourth cupful of shortening, add one cupful of sugar, two well-beaten eggs; add one-half cupful of milk alternately with the flour. Add a few raisins and bake in well-greased muffin pans. Cover with maple frosting and sprinkle with nuts.

SPECIAL GOOD THINGS

A salad which is good at any season and on any occasion is the following:

Fruit Salad.—Pour a cupful of boiling water over half a pound of dates, drain and cut into eighths, removing the stones. Add to the dates one cupful of finely cubed, good-flavored apples, two slices of minced pineapple—the apple and pineapple may be cut into strips for variety—sprinkle with salt, two tablespoonfuls of French dressing and one-half cupful of finely cut celery. Let stand an hour then serve with mayonnaise. Serve in apple cups on lettuce for a change.

Florida Orange Sticks.—Cream one fourth of a cupful of butter; add three-fourths cupful of sugar; beat until smooth. Add two egg yolks, one fourth of a cupful of orange juice and the grated rind of an orange. Mix and sift three-fourths of a cupful of flour, one-fourth cupful of corn-starch and two teaspoonfuls of baking powder. Add to the first mixture, and when well blended fold in the well-beaten whites of two eggs. Grease a shallow pan, sprinkle with powdered sugar and chopped walnut meats. Pour in the cake batter and bake in a moderate oven twenty-five minutes. Remove from the pan, cut in half crosswise and put together with orange filling. Cover with orange icing and cut into narrow strips for serving.

Orange Filling.—Cream together one tablespoonful of butter and three tablespoonfuls of powdered sugar. Mix two tablespoonfuls of flour, one-third of a cupful of sugar and one egg yolk until smooth. Add one-fourth cupful of orange juice, one teaspoonful of lemon juice and one teaspoonful of grated orange peel. Cook over hot water, stirring constantly until the mixture thickens. Add the butter mixture and cool before spreading.

Citrus fruits are invaluable in the diet of young and old. They supply the salts which help to keep the body functioning properly.

Quick Dessert.—Whip a pint of cream, add a cupful and a half of cream cheese, a cupful of walnut meats and one cupful of dates, cut into small pieces. Serve in sherbet cups garnished with a cherry.

An ear or two of cooked green corn is an addition to any potato salad. Cut the corn from the ear and mix well with the potato.

Nellie Maxwell

Had Lost All Hope of Ever Being Well

Read story of the fight for health and final victory as told by Mrs. James A. Hall, Box 31, Norris City, Illinois.

"About twelve years ago my health failed. I could not eat anything without suffering. I had heartburn, sour stomach, palpitation of the heart, smothering spells, pains in my back and sides and a cough almost like consumption. Nothing helped me. I grew worse and was able to sit up only part of the time. I had lost all hope of ever being any better when someone gave me a Pe-ru-na book. The book described my case so truly that I began to take Pe-ru-na. After two and a half bottles I could eat without suffering and improved from then on. I took eight bottles and felt like a new person. That was fourteen years ago. So many diseases are due to catarrh that I think Pe-ru-na the greatest family medicine in the world."

For more than half a century Pe-ru-na has been doing just such work as this.

Send 4 cents postage to the PE-RU-NA COMPANY, Columbus, Ohio, for a booklet on catarrh.

Pe-ru-na is for sale EVERYWHERE

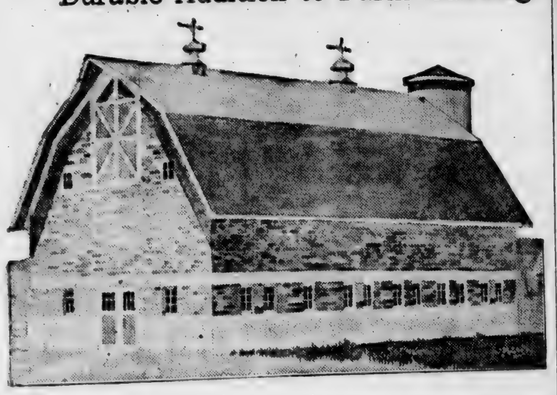
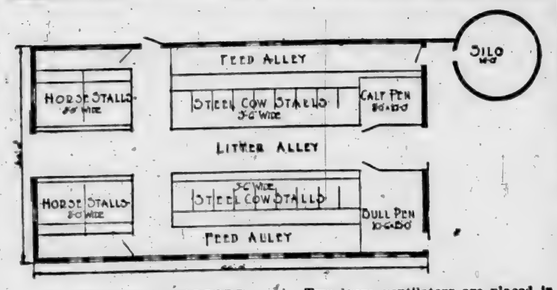
Barn and Silo of Tile Construction Durable Addition to Farm Buildings





By WILLIAM A. RADFORD

Mr. William A. Radford will answer questions and give advice FREE OF COST on all problems pertaining to the subject of building work on the farm, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on the subject. Address all inquiries to William A. Radford, No. 1827 Prairie avenue, Chicago, Ill., and only inclose two-cent stamp for reply.

It is not at all uncommon to see silos built of monolithic concrete construction, concrete blocks or tile, but complete barns of this type are rare in most localities. There is no reason, however, why such construction cannot often be used to advantage. It possesses many qualities which recommend it, the most conspicuous of which is, of course, its fire resistance. This is a point which can well be given serious consideration. A fire on the farm usually means a total loss, and often spreads to other farm buildings besides the one in which it originated.

This construction also does away with the necessity of periodical painting which is required for the preservation of most buildings. An example of this construction and its neat and permanent appearance is shown in the illustration. Here is a barn which is suited to the needs of the moderate sized farm. It provides for the care of 18 dairy cows, calves, bull and horses.

The foundation is of concrete and there is also a belt of concrete at the level of the ceiling. This breaks the expanse of wall in a manner which adds greatly to the neat appearance of the building. All of the outer walls, except where the concrete is used, are of tile construction and the silo is of the same material. The roof is also of highly fire-resistant roofing material, though any of the usual types of roof may be applied.

Two large ventilators are placed in the roof to provide for the carrying off of all foul air and there are many windows along the sides to provide the fresh air and sunlight which are so essential to healthy stock as well as the comfort of the men who most care for the stock and barn.

The usual doors are placed at each end of the barn with the central litter alley providing a straight drive through. There are also two small doors at one end, one opening into the bull pen and the other into a feed alley, and another small door in one side near the opposite end. At one end of the barn there are two horse stalls at each side of the entrance, and the litter alleys behind these may be closed by means of doors. Next there is a passage extending across the barn from the small side door. Beyond this passage are the rows of cow stalls on each side of the litter alley. Stalls for nine cows are provided in each row, and these stalls are of the modern steel type. Gutters behind the stalls assist in keeping them clean at all times, and a litter carrier may be run down the center of the litter alley to facilitate the disposal of litter.

At the end of one row of cow stalls is a calf pen, 8 feet by 10 feet, and at the end of the other row a bull pen, 10½ feet by 13 feet. Both of these pens have doors opening from the center alley.

The silo is placed at the corner of the barn nearest to the calf pen and directly opposite the door into the feed alley. From it a feed carrier rack may be run into the barn and along the two feed alleys at the sides to serve all of the stalls with the least possible manual labor. Above the stock floor of this barn is a large loft which provides plenty of storage space for feed for all the stock which this barn will house.

Good Roof on Home Is Real Economy

Much has been written and much has been said on the subject of roofs, but one can never emphasize too much the importance of choosing a roof which will withstand the hard usage of the climate in which the building is constructed.

The old-fashioned wooden shingle in most communities is almost a thing of the past. Indeed, most progressive cities and suburbs have passed fire ordinances which forbid their use. These ordinances name any number of products which can be used, however, such as the newer manufactured shingles which have made their appearance in the last few years.

Most of these shingles have, in addition to their practical fireproof qualities, the added attraction of beauty. Where, in the past, the builder had only the choice of the wooden shingle which turned black in a season or two, he may now put on his home a roof of beauty as well as quality.

Many roofing concerns maintain service departments to which a prospective builder may go and get advice as to what color would go well with the style of house he is to build. At any rate, a few minutes with your architect will keep you from making the mistake of putting a roof that is an eyesore on a house that is otherwise perfect.

House Framing

Wooden houses built in the Colonial period were framed with heavy members of carefully selected timbers. Frames were braced so as to give great resistance to any motion that would throw the walls and floors out of alignment. In present-day framing we use smaller pieces with a larger number of them than in the old type of framing. It is possible to get with these as permanent construction as we find in the old buildings. This means adequate bracing and good nailing. Do not omit sheathing or subflooring. Bridging and bracing are an insurance against failure.

Suggestions

Face brick by its texture and color lends itself happily to many designs.

Refrigerators of approved type often prove to be efficient silent salesmen.

Concrete mixers of approved standard more than earn their way on the job.

Steel casements have many advantages in the way of appearance and weather-tightness.

Wall board of superior type can be used for artistic interiors on both simple and elaborate jobs.

Waterproofing of exterior brickwork and cement will result in beautification of the surface as well as preservation.

Concrete mixers prove their value to the contractor by their speed on the job and the ease with which they can be moved.

Location of Switch

A good thing to remember when planning the electrical equipment of the new home is to have the switches for the various rooms located near the entrance used the most. This is just a little thing, but will do away with much "cussing" later, and quite a few barked shins. Another good plan is to have an arrangement whereby the hall and basement lights can be turned off from any floor.

Interior Hardware

The locks on the inner doors of the home are just as deserving of attention and careful selection as those for entrance doors. Too many builders think that any hardware will do for the inside doors, a mistake that often and expensively "comes home to roost." Watch the selection of your interior hardware.

Insulation

Too many home builders regard insulation as an unnecessary part of any but the frame house. Whether your home is of frame or of brick, stone, concrete or stucco, you will find proper insulation a most valuable part of its construction.

Hoosier News Briefly Told

William R. Atkins of New Albany was elected president of the Regimental association of the Eighty-first Indiana, which was organized at New Albany for the Civil war, at the annual reunion.

Punishment of criminals to protect society has been largely a failure, Dr. Max A. Blair, superintendent of the Central Indiana hospital for the insane, told the state conference of social work at Vincennes.

Three university presidents and the chairman of the Indiana budget committee are the speakers for the Indiana university alumni luncheon, October 23, at Indianapolis, during the state teachers' convention.

Clara Carl of Philadelphia, serving a life term for the murder of her husband, Frank B. Carl, and her father-in-law, Alonzo B. Carl, by poisoning four years ago, escaped from the Indiana women's prison at Indianapolis.

Two murderers, Clegg Payne of Gary, colored, who pleaded guilty to shooting his sweetheart after she had left him for another man, and Vincente Gomez, Mexican, who killed a friend in a quarrel over a suitcase, received life sentences from Judge Martin Smith in criminal court at Crown Point.

Five men, all from Indianapolis, who are said to have admitted they were lying in wait on the side highway for liquor runners from Chicago, were arrested on the highway between Morocco and Ade by R. O. Dutcher, sheriff of Newton county. The men are charged with carrying concealed weapons.

Harry Styner of Montmorenci, one time clerk of the state senate and widely known in Republican political circles, has been appointed first deputy of the state fire marshal's department at Indianapolis by Alfred Hogston, the new state fire marshal. This is the first appointment made by the new chief of the department. Mr. Styner succeeds John D. Cramer.

"Achievements in the scientific field as related to medicine in the last quarter century have lengthened human life several years," said Dr. Thurman B. Rice of the state board of health, Indianapolis, at a session of the Indiana state conference on social work at Vincennes. Strides have been made particularly in the diagnosis, prevention and control of disease, he said.

A prison warrant demanding the transportation of Morton S. Hawkins of Portland, to Leavenworth, Kan., to begin his 15-year sentence, received in Federal court at Indianapolis, was issued by Albert S. Ward, United States district attorney. Hawkins has spent four months in the Marion county jail since his conviction as a result of operations of the Hawkins Mortgage company.

Although his twin sons were lost on the submarine S-51, sunk off Block Island, Frederick E. Techemaher of Indianapolis, is a strong advocate of the navy as a training school for youths. He visited naval recruiting headquarters and said: "I am proud that my sons were serving their country when they died. I think the navy is the finest possible life for any young man who wishes to travel."

Indictments charging conspiracy to commit a felony were returned against D. C. Stephenson, Earl Klinck and Earl Gentry by the Marion county grand jury at Indianapolis, which has been investigating a fire which damaged Stephenson's Irvington home last April. Stephenson is now in jail awaiting trail on a murder charge in connection with the death of Miss Madge Oberholtzer of Indianapolis.

The one-room schoolhouse is disappearing in Indiana and, according to members of the state board of public instruction at Indianapolis, will be totally eliminated in a few more years. Consolidated schools are gradually taking the place of one, two and three-room houses of learning. As rapidly as money is available, large and thoroughly modernized buildings are being constructed in every county in the state.

The stork was a more frequent visitor in northern Indiana this summer than in any other portion of the state, according to the state board of health at Indianapolis. Thirty-one counties had 2,091 births in July, or 21.8 per 1,000. Central Indiana counties ran a close second, with 2,052, 18.5 per 1,000. Southern counties trailed with 1,117 births, but were second in rate per 1,000 population, 20.3, making a total of 5,260.

James L. Bradley of Edinburg, has been appointed acting assistant chief of the state motor police, it was announced at the office of Frederick E. Schortemeier, secretary of state at Indianapolis. Bradley succeeds William Hamilton, who was suspended recently by Mr. Schortemeier, together with two other members of the force, who were arrested and convicted on a charge of disorderly conduct at Bluffton by authorities there.

Andrew J. Jones, whose term as city controller of Anderson would have ended December 1, became mayor of Anderson to fill the unexpired term of Blanchard J. Horne, who resigned and took the office of city manager at Ft. Lauderdale, Fla.

For the first time in several days the New York Central railroad's locomotive shops at Elkhart have been put on a full six-day weekly schedule instead of five and a half days. Eight hundred and fifty employees are affected and the monthly pay roll increased $20,000.

Lesson for October 18

PAUL WRITES TO THE CORINTHIANS

LESSON TEXT—I Cor. 13:1-13.

GOLDEN TEXT — "Now abideth faith, hope, charity, these three; but the greatest of these is charity."—I Cor. 13:13.

PRIMARY TOPIC—What Love Does.

JUNIOR TOPIC—Working Together.

INTERMEDIATE AND SENIOR TOPIC—The Greatest Thing in the World.

YOUNG PEOPLE AND ADULT TOPIC—Love, the Hope of the World.

The occasion of the writing of this epistle was:

1. The existence of rival factions contending each other. Some were for Paul; some for Apollos; some for Peter, and some for Christ. This factious spirit was threatening the disruption of the church.

2. Their failure to carry out church discipline.

3. Their going to law with each other.

4. Indifference to gross immorality.

5. Letters requesting information as to:

a. Marriage and divorce.

b. Food connected with sacrifices and festivals.

c. The exercise of spiritual gifts.

6. Disorder in the public assemblies.

7. The presence in the church of certain ones who denied the resurrection of the dead.

I. The Pre-eminence of Love (vv. 1-3).

It transcends:

1. Speaking With Tongues (v. 1).

For men to possess the loftiest eloquence and be lacking in love is to be as booming brass or a clanking cymbal.

2. The Gift of Prophecy (v. 2).

To be able to penetrate the mystery of nature and Providence is good, but to love is better.

3. Faith of the Most Vigorous Kind (v. 2).

Even though one should have sufficient vital faith as to remove mountains it is of less value than love.

4. Philanthropy of the Most Generous Sort (v. 3).

Even though one should have such a spirit of altruism as to be moved to surrender all earthly goods for the sake of the poor, unless actuated by love, he would have no recognition before God.

II. The Attributes of Love (vv. 4-7).

1. It Is Long-Suffering and Is Kind (v. 4).

It means not only to bear long, but to be kind all the while.

2. It Is Free From Envy (v. 4).

Those who are controlled by love are entirely free from the spirit of envy because of the superior worth and success of others.

3. It Is Free From Boasting and Vanity (v. 4).

Love strives to do good to all without seeking admiration and applause.

4. It Is Decorous (v. 5).

Love is always polite and mannerly; knows how to behave at all times.

5. It Is Unselfish (v. 5).

It is always seeking the good of others while forgetful of self.

6. It Does Not Give Way to Passion (v. 5).

It is not quick tempered.

7. It Takes No Delight in Evil (vv. 5-6).

It does not impute evil motives to others and is free from suspicion. Love has no sympathy with that which is evil.

8. It Bears All Things (v. 7).

That is, it incases itself in the gracious mantle of love and shuts out all evil.

9. Love Is Trustful (v. 7).

It looks into the future with confidence.

10. Love Is Hopeful (v. 7).

It seizes the things of the future, brings them into the present and appropriates them for its use.

11. Love Is Firm (v. 7).

It intelligently sets its attention to things that are right, and with unvarying strength, holds fast.

III. The Permanence of Love (vv. 8-13).

1. It Outlasts Prophecy (v. 8).

Prophecy in the Scriptures means both a foretelling of events and the teaching of the Word of God.

2. It Outlasts Speaking With Tongues (v. 8).

The race once spoke the same language, but as judgment for sin and rebellion, God brought confusion and caused the people to speak many tongues.

3. It Outlasts Knowledge (v. 8).

The knowledge we now have is only relative, but the day is coming when the relative knowledge shall be done away by the coming in of a wider and nobler intelligence.

Seed Grain

Cast forth thy act, thy word, into the ever living, ever working universe; it is a seed grain that cannot die; unnoticed today, it will be found flourishing as a banyan grove after a thousand years.—Thomas Carlyle.

Fear of Making Mistakes

Some of us know what it is to be miserably afraid of making mistakes in our work. How graciously He meets this with "I will direct their work in truth."—Frances R. Havergal.

Just a Little Smile

A VOCATIONAL BACK

A certain professor, who is a remarkably well-built man, was staying at a village not long ago. One day he happened to pass two men carting flour.

"Say, Bill, who's that?" he overheard one asking the other.

"That's the professor what's staying here," was Bill's reply. "They say as how he's very learned."

"What a spoilt man," rejoined the other. "I never in my life see'd such a back for a sack of flour."

Dignified

Jackeroo—Why don't you put on your boot, Mooki?

Mooki—Can't get 'em on, boss—too little.

Jackeroo—Then why don't you leave them at home?

Mooki—Fellow looks such a fool goin' to a show without boots.

A Sporting Proposition

First Insurance Man—Well, I wrote $5,000 on Olesport today.

Second Ditto—What! I've been after that old fellow for a year.

First—You didn't know how to tackle him. I offered to bet him $5,000 against the amount of the first payment that he would live another year.

Laughs Best

Love laughs at locksmiths. Yet the test
You seldom figure out,
And quite forget he laugheth best
Who laugheth last, old scout.

They Vary

"Why do you want to kiss me?" she asked coyly.

"O," yawned the experienced lover, "what reasons do you prefer?"—American Legion Weekly.

INSPIRATION OF DAD

Mother—Daddy, our Willie has very high aspirations.

Dad—But I'd have more hope of him if there was some perspiration mixed with them, my dear.

Advice

The man who gave you good advice
A year or two ago
Now takes a tone that isn't nice
And says, "I told you so."

The Real Trouble

Doorkeeper (at concern)—Madam, you're too late. The singer has just started.

Latecomer—But I can slip in without making a sound.

Doorkeeper—It isn't that. If I open the door half the audience might rush out.

Not Always Courage

"At least," said the positive man, "I have the courage to say exactly what I think at all times."

"That isn't courage," rejoined Miss Cayenne. "That's bad judgment."

Maybe Not

"I told him he was an Adonis but he didn't seem flattered."

"Maybe he doesn't know what an Adonis is."

Heard in an Office

"Half the enjoyment of having a garden is watching the vegetables as they come up."

"I presume the other half is tasting them as they go down."

Get Him, Father

"Why are you in such a hurry?"

"I have left my safe open and my prospective son-in-law is in the house."

"Do you suspect his honesty?"

"Not at all—but if he happens to look inside it I shall lose him!"—Pilule, Jugo-Slavia.

As Simple as That

Mr. Dillard—I'd like to know what makes our living so expensive.

Mrs. Dillard—I don't know, dear—unless it's our expenses.

WRIGLEY'S
AFTER EVERY MEAL
THE FLAVOR LASTS
Probably one reason for the popularity of WRIGLEY'S is that it lasts so long and returns such great dividends for so small an outlay. It keeps teeth clean, breath sweet, appetite keen, digestion good.

Catarrhal Deafness

is often caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube is inflamed you have a rumbling sound or Imperfect Hearing. Unless the inflammation can be reduced, your hearing may be destroyed forever.

HALL'S CATARRH MEDICINE will do what we claim for it—rid your system of Catarrh or Deafness caused by Catarrh.

Sold by all druggists for over 40 Years.
F. J. Cheney & Co., Toledo, Ohio.

Mrs. Vina Fish returned home Friday from a visit with Auburn relatives.

S. N. Brunson of Waterville, O., was a Sunday caller in the C. C. Bassett home.

Roy Maxwell, wife and children and Merritt Maxwell and family, spent Sunday with their parents, Mr. and Mrs Wm. Maxwell.

Mrs George Wade has returned from Garrett where she has been in the hospital for some time. Her condition is much improved.

The Misses Juanita Kinsey and Dorothea Scholes spent the week-end guests of the latter's sister, Mrs. Archie Erickson and family at Garrett.

Opening of Roller Rink at Spencerville Saturday night, October 17.

Mesdames Blanch Leighty and Ida Woodcox attended Grand Lodge of the Pythian sisters, while Derwood Ridgway represented the local K. of P. lodge at Indianapolis, several days last week.

Adron Beree has qualified to act as executor of the will of the late Henderson Beree, who died in Newville township Oct 5, leaving $500 in personal property and $1,400 in real estate. The heirs are three sisters and four brothers, Sylvia Harris of Hicksville, Cloy Beree of Butler, McKinley Beree of Camp Custer, Mich., and Charles, Daisy, Pauline and Wilbur Beree of St Joe. The executor filed $1,000 bond with Frank Shook and A. W. Madden as sureties.

Ye editor and wife spent Saturday afternoon and Sunday in the home of Rev C O Johnson and family at Tippecanoe, Indiana. They have a splendid Sunday School and church organization in that little town of about 200 people. Their equipment is fine for practical work and they are using it to their best advantage. 103 were present at the morning session and many more came for the dinner and afternoon meeting. The congregation is now attempting to repaint inside and out. They have about 70 members on their church roll and pay $1,200 salary, having their pastor full time. We were also Sunday supper guests of Mr. and Mrs. S. B. Dustman at Warsaw, Indiana.

TIMELY TRIFLES

How quickly vacation ends.

Romance was not built in a day.

Money makes the stares grow.

Flat feet never won fair dancer.

A hasty demand requires a leisurely reply.

It is doubtful if humility ever did much good.

"Thank you," is threadbare, but it is always useful.

If a man is a good debater, he argues about everything.

We are all of us more or less the slaves of opinion.

Peace can be eulogized forever, and yet war will break out.

Old fools are more foolish than young ones.—Rochefoucauld.

Constructive criticism is as much criticism as any other kind.

Getting home to a porcelain bathtub and an electric fan is very inviting.

Some folks have very few favors done them. They won't permit it.

Still waters run deep, and there's lots of mud at the bottom of still water.

Weakness of saving your money for a rainy day, is that every day is a little rainy.

Silence is golden, but if you don't speak up, they'll pass the cake right over your head.

You overlook this beauty of a village: You can live handsomely there on $1,200 a year.

A man has quite a romantic range if he is thrilled by the screech owl's notes and the mocking bird's, too.

Would Have More Joy in Church Melodies

The director of a large New York theater orchestra in a Sunday address expressed the view that jazz is dying so fast that it will be defunct within a year.

All of which sounds encouraging from the standpoint of good music and restrained taste on the part of dancers. That the prediction will be verified within the time limit fixed is open to question.

But there can be little reason to doubt the wisdom of his suggestion that the church hymns should be "pepped up" by being more or less syncopated, to maintain the tempo set by this hurrying and impatient age.

The church hymns are far from being the dirges and dyspeptic wails of the old days. They have been "pepped up" from year to year until most of them fairly reflect the cheeriness which has been injected into religion to take the place of the "fire and brimstone" wrath and despair of half a century or more ago.

Even those grand sonorous old hymns are interpreted in the spirit of cheerful modernism and they have lost none of their comforting efficacy in the transformation. They do not need "pepping up," for to do so would be to set them to tunes out of keeping with the solemnity of the great verities they commemorate.—Kansas City Journal.

Bees' Conversation

That bees have a language by means of which they can communicate with one another about newfound feeding grounds, the kind of flowers to visit and their general direction from the hive appears to be proved through experiments made by a German scientist, says Popular Mechanics Magazine. He found a swarm of bees would visit the place where sugar was exposed immediately after one of them had fed and returned to the hive to spread the news. This the bee does by a peculiar dance. By marking bees with colors and feeding some while leaving others unfed, the experimenter proved that only those which had been fed would start the dance that brought swarms to new feeding grounds.

Unavoidably Postponed

"I hear that your wife has taken up golf."

"Well, she intended to, but the tailor was two weeks late with her knickers and I couldn't get delivery on a sports roadster for her. She expects to start in about two weeks."—Life.

Automatic Shift

An automatic gear-shift system has been devised to facilitate driving. By this system the driver merely selects in advance the gear to which he wants to shift and the actual shifting is done by depressing the clutch.

Stocking Production

One stocking for every person in the United States is manufactured in one month; 56,636,052 pairs were manufactured in June, 1925, of which 15,969,448 were silk and 24,354,768 cotton.—Science Service.

Wild Chinese Apples

There are species of wild apples in China that are no longer than good sized peas.—Science Service.

THE FRATERNITY OF GRIEF

By DOUGLAS MALLOCH

YOU have had grief—but so have I;
I, too, have watched the closing tomb,
My house has had the empty room,
My heart the ache. Our loved ones die,
But, oh, the company they meet
Upon that far, celestial street,
Where throngs of angels intertwine—
My beloved and yours, your loved and mine.

I have had grief—but so have you;
And, in my hour of deepest loss,
I do not see the single cross—
Thank God, I see the other two.
Yes, my own loss has this much gain:
I feel the brotherhood of pain,
And, kneeling here beside my own,
I know the loss that you have known.

We have our grief—but so have all.
In all our grieving all our grief
Must not be selfish. Pluck one leaf
And gently let one petal fall
Upon some spot where someone sleeps
For whom some other woman weeps,
For whom some man will mourn today;
We have had grief—but so have they.

(© by McClure Newspaper Syndicate.)

SOMETHING TO THINK ABOUT

By F. A. WALKER

THE SUBTLE SPIDER

HIDDEN in some dark corner, or perhaps right before your eyes the spider spins his silken web in which to entangle and destroy his unwary victim.

Whether you believe it or not, you are watched every hour of your earthly existence by some sort of vicious spider planning to entrap you.

If you are less watchful than he, if you do not take account of your words and actions and make a mental note of the trifling web-like things which are happening all about you, the spider will eventually outwit you.

And when once you become enmeshed in his invisible web a great sense of fear will descend upon you with the weight and swiftness of a raging deluge, of whose existence you did not before believe to be possible.

Falling into the spider's web is one of the deplorable misfortunes of the human kind. Everybody in life, from the rosy-cheeked schoolgirl to her mature parents, is liable to become entangled, for the spider is no respecter of youth or age.

A bewitching smile, a glance of the eye, a musical voice, a beaming countenance, an uncontrollable greed for wealth, may, in some way or another, prove to be the flowing thread of the terrible web flung out by a passing breeze to entrap you.

"Now," says the spider, as he spins another thread to make your captivity more certain, "now I am in position to continue our discussion."

Up to this moment you have succeeded in eluding him.

And in your fancied security, as likely as not you have taunted and derided him, so now he is bent on mocking you, quite ready to resume the discussion.

But the manhood in you is going to outwit him.

You are going to weap from him his subtle power, by warning the world from your housetop to beware of his silken web which has through the ages strangled out love and hope, washed out eyes with tears and poisoned hearts until they have festered and died.

(© by McClure Newspaper Syndicate.)

"What's in a Name?"

By MILDRED MARSHALL

Facts about your name; its history; meaning; whence it was derived; significance; your lucky day, lucky jewel

MELINDA

THOUGH not generally listed in English nomenclature and regarded rather as a product of the South in this country, Melinda has in reality an interesting history dating back to Spanish ballad lore. In that remote era, she was undoubtedly Melisenda and first appeared as the name of the wife of Don Gayferos who was taken captive by the Moors, on the occasion of the feats that were represented by the puppet shows in which Don Quixote took an unfortunately lively interest.

Another Melisenda was Princess Melisenda who carried the uneasy crown of Jerusalem to the House of Anjou. It was a most natural step to eliminate the overabundance of syllables and contract the name to our present-day euphonious Melinda. For some inexplicable reason it caught the fancy of the South and its popularity there is still unquestioned.

The opal is Melinda's talisman's stone. It is the most mysterious and fascinating of all gems and is believed to bestow upon its wearer the charm which comes from brilliancy, restlessness and ever-changing moods. It will prove for Melinda a talisman against sorrow. Monday is her lucky day and 1 her lucky number.

OCTOBER

ST. JOE NEWS.

VOL. XXXIX | ST. JOE DeKALB COUNTY, INDIANA, THURSDAY OCT. 22, 1925 | NO. 42

Obituary

John B Haifley was born in Mahoning county, Ohio, February 28, 1846 and died at his home in Spencerville, Indiana, October 16, 1925, aged 79 years, 7 months ann 16 days.

In early life he came with his parents to Allen County, Indiana, and in 1868 he was married to Martha Walter. They moved to Illinois to make a home for themselves, but after 3½ years returned to Indiana where he remained to the end of his life.

Two children, Harry and Myrtle were born to them, both of whom are now deceased. The wife and mother died just about one year ago. He was the last of his immediate family. He leaves 8 grandchildren and 7 great grand children to mourn their loss.

He joined the Springfield Lutheran church in his early manhood and moved his membersh p to the Lutheran church at Spencerville about 28 years ago and remained a devout member of the same till death. He was a precise business man and brought these principles to bear in his church work

He was a good citizen, an honest man, a christian gentleman, a good husband and father, a splendid neighbor and friend and died as he lived in the full assurance of Eternal Life. So may he rest in peace.

The funeral was held in the Lutheran church at Spence ville on Sunday at 2:00 P. M, conducted by the pastor, Rev. S. D. Steffey. Rev. Mumma was present and took part in the service. The crowd was very large.

Card of Thanks

We wish to thank the many friends and neighbors for their courtesies shown our grandfather in his illness and to the relatives in their bereavement.

Gum Machine Is Played with Washers

Seventeen metal washers were removed from the gum machine in front of Dr. Sheffer's store, in one day, last week. While the Doctor is not anticipating starting a hardware, yet he has a fair start. Children who know enough to slug a gum machine ought to be handled by the parents should they be told of such actions. Machines of this kind carry a warning for such actions and $25 00 reward is offered for the information which leads to the conviction of the offenders.

Coal! --Coal-- Coal!

Now is the time to lay in your coal. We have always tried to give you the best advise as to best time to buy and we now firmly believe this is the time to get busy and prepare for the winter.

Feed

Mr. Hog Raiser, we have a good line of feeds on hand, also car of ear and shelled corn. If you need any give us a call.

Grain

We are paying highest market prices for all grains and will be pleased to have you bring us your grain.

The St. JOE ELEVATOR

Samuel Keesler, Mgr. Grain Dept. **Bert Jackson,** Mgr. Coal Dept.

NOTE—Pay your accounts. They are due now.

HE CAN WHO THINKS HE CAN

It takes persistent effort to do the seemingly difficult things.

Many people look at other people's possessions and say they were born lucky. But, as a matter of fact, most of the people who have accumulated money can trace its source to a determination to save persistently.

You, too, can accumulate money if you think you can. Save it in our bank.

The St. Joe Valley Bank, A STATE BANK

See You All Thanksgiving Day

Christian Friendliness In Practice

Someone says that the great spirit of christian friendliness is not as active today as in the days of the past, while others say that it is, only the occasions for practices are not so numerous as in the days of yore. There were times when the early settlers of DeKalb county knew what it was to have the hardships that really made it necessary for the community to help a neighbor out in his work. Sickness was more common in the newly settled communities, but today every person is so situated that the call for help is not so frequent, but when the call is sounded today, there are scores of people who have that friendly spirit, go without a murmur and help their brother who is needing.

Communities differ widely. Today the Rehobeth community stands out very prominent as a united christian community. Whenever the Macedonian call is given they respond to the man, without question.

Some three weeks ago Chas, Bishop, who lives 3½ miles west and 1 mile south of St. Joe, became afflicted with rheumatism to such an extent that he has been unable to get about until this week. The spirit of the church gave expression to his need and Tuesday of last week the men of the community gathered and cut a 5 acre field of corn and finished two other fields, besides jerking enough corn to care for his feeding until he would be able to get out.

Alvin Yoder, who had taken his bed in the spring and remained there for 17 weeks can also vouch for the Spirit of Christian Friendliness in this community. All of his summer work and harvesting was cared for by the community.

The following is the list of men who assisted in the corn cutting bee last week:

Arthur M Friend, Rufus Strong, Chas. W. Armstrong, Ray Houk, M. H. Howey, Paul Miller, Bill Farner, Amos Friend, Wm. Folts, F. P. Cook, Charley McInturf, A. H. Peters, Solomon Bishop, Earl E. Wyatt, E. J. Armstrong, Floyd Watson, Chas Peters, Wm O Reed, S. M High, Edward Peters, Harry L. Wright and O. W. Merritt.

The Tower Mystery

"IF ONE spot more than any other should be haunted, that place is assuredly the Tower of London," says Charles G. Harper in his new book, "Haunted Houses," published this spring by J. B. Lippincott company.

"The very remarkable story told in 1860 by Edward Lenthal Swifte, sometime keeper of the crown jewels, has elements of the fantastic and the horrible which leave the ordinary ghost story far behind.

"'I have often purposed,' he says, 'to leave behind me a faithful record of all I personally know of this strange story.

"'One Saturday night in October, 1817, about "the witching hour," I was at supper with my wife, her sister, and our little boy in the sitting room in the Jewel house. The doors were all closed, heavy and dark cloth curtains were let down over the windows, and the only light in the room was that of two candles on the table. I sat at the foot of the table, my son on my right hand, his mother fronting the chimneypiece, and her sister on the opposite side. I had offered a glass of wine and water to my wife, when, on putting it to her lips, she paused, and exclaimed, "Good G—d! what is that?" I looked up and saw a cylindrical figure, like a glass tube, seemingly about the thickness of my arm, and hovering between the ceiling and the table; its contents appeared to be a dense fluid, white and pale azure, like the gathering of a summer cloud, and incessantly mingling within the cylinder. This lasted about two minutes, when it began slowly to move before my sister-in-law; then, following the oblong shape of the table, before my son and myself; passing behind my wife, it paused for a moment over her right shoulder (observe, there was no mirror opposite to her in which she could there behold it). Instantly she crouched down, and with both hands covering her shoulder, she shrieked out, "O Christ! it has seized me!" Even now, while writing, I feel the fresh horror of that moment. I caught up my chair, struck at the wainscot behind her, rushed upstairs to the children's room, and told the terrified nurse what I had seen. Meanwhile, the other domestics had hurried into the parlor, where their mistress recounted to them the scene, even as I was detailing it above stairs.'"

The Young Lady Across the Way

The young lady across the way says you can't expect Germany to repudiate everything right off the reel but she ought to pay something.

Childrens' Division Conference

Under the supervision of Miss Helen Marrow of Corunna, County Superintendent of Childrens' Division of Sunday Schools, a conference of all teachers, officers and township officers of this division, will meet at the Auburn Christian Church, Sunday, Oct 25, at 2 P. M. It is necessary that the people having positions in the local Sunday Schools be present.

Call Meeting of Business Men and Citizens Thursday Evening

All business men and citizens who are interested in the welfare of St Joe, are asked to meet at the Town Hall tonight (Thursday) at 7:30 o'clock to act on special matters of which all are interested

CHAPTER XIV—Continued

—12—

"I thought it would be possible to telegraph to every dealer in the country."

"Please don't interrupt," the other said in a whisper as if Peter had clattered into some funeral service. "I am thinking."

When he had ceased thinking he looked up, snapped on his smile and stared at DeWolfe out of pale blue eyes.

"The operation will cost a great deal of money."

Peter waved his hand.

"I think I better say—" began Smallwood, who appeared discouraged. He paused, he repeated: "I think I better say, however, that I will make a trial provided—"

"That I am able to bear any expense?"

Smallwood appeared surprised that any human being could have as much sense. He said: "The search will require several stenographers, a long-distance telephone bill of rather alarming size and possibly a price for the book far beyond its real value—several times the probable amount it would bring at an auction."

"Go ahead," said Peter.

"May I say that the—your desire for a copy of this book must be extraordinary?"

"Oh, yes, most extraordinary. A week ago I would not have paid two dollars for it. Men have gambled away their lives on it. I can't tell how much I want it until I get it. But to get it I will pay what it costs. And if you can locate a copy of the book—"

"I would let you know at once."

"Time counts. I would be grateful."

Smallwood blinked. Only when his visitor was at the door did he say, with a switched-on smile: "Oh, by the way, must the volume be in perfect condition?"

"It can be a bundle of debris as far as I am concerned," answered Peter. "But all the pages must be there."

The other man was reaching for the telephone instrument with his cold storage fingers as DeWolfe left the office.

From the publishers he went to one Manfred Eldegard at 6 Nassau street. Eldegard is a public accountant whose clients are the surety and bonding companies. The vice-president of one of these companies had said to DeWolfe: "You are not familiar with auditing and accounting as I am, Peter. If you were you would know that accuracy, honesty, speed, reliability are qualities that can be hired in carload lots. It is easy to engage experts in figures. But the genius among accountants is the man who can read figures just as a pianist reads music. That man is worth something because he can translate into the terms of life. There's one of those fellows that can make circles round the rest. Here's his letter-head."

"Is he willing to take a chance on getting shot?" Peter had asked.

"Shot?" the other had repeated with a gasp.

"I may have to send him a long way off. I don't know what hazards there are."

The official of the bonding company had looked at Peter incredulously but he had said, "You'll have to ask him or his wife. I understand that there are few witnesses for the state in criminal trials who have weathered as many blackmail and blackhand threats as M. E. as we call him."

"Would he be more ready to keep his mouth shut for his client than to open it to the police for instance?"

"My dear sir, when you engage Eldegard you buy a strip of his services. It's yours. If you don't want him to disclose anything there is no process server that can land him and if there were there is no district attorney who would get anything out of cross-examination except evasions."

Upon a confirmation of this opinion Peter had chosen this fat man with two chins, a pompadour of bristles above a broad flat face with little eyes, nose and mouth pricked into it as if by a point of a pencil; to him Peter, following the appointment he had made, stated his problem.

"Where are these accounts?" asked Eldegard.

Peter put them upon the glass top of the desk. The little beady eyes of the fat man fixed a stare upon the Russia leather covers; he extended a large meaty hand and caressed these books as if they were a delicacy brought to him to cook and eat—a pleasure of digestion—a mere morsel for a gourmand.

As he turned the pages marked by Peter he began to utter chu-chu, chu-chu between his teeth, increasing its speed as if getting up steam as a locomotive puffs faster and faster when it leaves a train shed.

"What's this Credit Account X.D.?" he inquired under his breath.

"That's the one that occurs most often," said Peter.

Eldegard drummed with his cushioned fingertips on the glass.

"It looks that way," he announced, "—the way you said."

"But you are not sure?"

"Only sure as a man is sure who finds watercress in his milk. To be sure we would have to check against the transactions in the local cotton exchange. Some of these are New Orleans houses. The X.D. was a private individual."

DeWolfe looked at the expert searchingly. He said: "Do you see anything else?"

"Yes—some one has been here before us. Perhaps it was you, eh?"

"No," replied Peter. "What do you see?"

"I see that some one who had a reason has put copy paper and carbons under these pages and copied these handwriting entries by running a stylus over the original entries. Sometimes the carbon and paper went askew; that's why you see these little blue marks. Did you think it extraordinary that I observed that?"

"Oh, no," said Peter. "Not at all. How could I? It was the first thing that made me wonder about the story these figures can tell. When can you go?"

"Go? Me? In person?"

"Yes. New Orleans—wherever the trail leads?"

Eldegard shook his head like a great Buddha with a pivoted neck. "Never," he said. "I'm too busy."

"Isn't it your office force that is busy?" asked DeWolfe, throwing his cigarette into the bronze ash tray. "Besides, as for the money—that is for you to say. Whatever is necessary to get your services."

"It isn't money," Eldegard answered. "If I'd paid any attention to money I wouldn't be worth fifty thousand today. No, it's Laura—Mrs. Eldegard. We've got a screened-in porch; we play checkers every evening."

"And so on," said Peter describing with a phrase the whole texture of a great fabric of companionship each thread of which was a homely commonplace, the whole a magic cloth of gold.

"Yes," said the other. "And so on. How did you know? You never lived it?"

"I intend to," said Peter solemnly.

Eldegard burst into uproarious laughter. Say!" he exclaimed with a manner of speech that like all other natural expressions of this fat man had been a rock of Gibraltar against which the assaults of culture had bounded off. "Say! I'd like to tackle this."

He slapped the back of one of the Russian leather books as one would slap a friend on the back.

"It's a story!" he said. "A fascinating trail."

"I think it is a story—a true story," DeWolfe agreed. "A thriller."

Eldegard considered.

"Blessed if I don't ask ma—ask her if I can go."

He spoke as if it were a permission to go to the swimming hole or the circus.

"Thank you," said Peter. "I recognize the presence of good sportsmanship. I never expected to see it in the field of auditing."

Eldegard picked up the two books. He said: "Leave 'em with me, and telephone me tomorrow, and I'll let you know what ma says."

"I'll telephone tomorrow," said Peter.

CHAPTER XV

On Sunday evening, after he had dined early with Colby Pennington, in one of the great deserted dining rooms in a certain New York club, Peter felt the sense of revolt against the rut-running life of his own kind.

From Pennington, with his naturally brilliant mind, shackled in religion, in politics, in morals, in taste, by those schools of petty imitation misnamed Society and Respectability and Precedent, DeWolfe that evening had drawn a new draught of disgust. Poor Pennington, industrious, irreproachable, successful! For all his pains no nearer God: for all his labors no nearer to mankind. Even his restraints had not enlarged his soul; Peter was certain that if the lawyer would only commit one good dashing highway robbery he would be a better man.

He wondered what this successful professional man would say if he knew that under Peter's thigh a hard object was pressing into the flesh as they sat in the great hall with their coffee and watched club members slide here and there alone, like dyspeptic ghosts; he wondered what Pennington would do if he pulled out this automatic pistol as he was tempted to do, and stirred his coffee with its barrel. The reason that Peter did not do this was because when Pennington had said, "You are a fool to carry that thing," he could be sure that his attorney was wrong about it.

When he said good-night to Pennington, there was still enough daylight for a walk alone to one of the little parks over near the East river. He remembered that, in France, his idea of the most wonderful moment in the world, the sharpest contrast to the gigantic nobilities and the colossal triviality of war, was a moment on a New York park bench with children of the tenements still playing in the dusk, perhaps with an organ and a monkey thrown in for good measure. Since then how life had changed for him. When he sat down the children in the dusk—the realities—faded away and were lost in unreal pictures of Brena in her Beconshire garden, perhaps with her great dark eyes turned toward the sunset because he had gone behind it.

He felt an extraordinary restlessness—like that which comes upon those who have been deprived of some drug and are in torture while it goes slowly out of the system. He who wished not to wait, was waiting. He felt the dread of unknown calamities. And with this haunting sense of hovering crisis, he turned back to his apartment.

There Peter tried to read, experiencing that irritating lack of concentration which comes to all readers whose minds steal away from the page allowing the eyes to travel on alone like independent animals photographing mere type without ideas, until whisked back by their master to the place where they had ceased to read and begun only to move across the

lines of print. He put the book down. The romance did not hold him; he had come to the threshold of romantic realities. He had knocked upon a noncommittal door. He was waiting for it to open.

It did in fact open—and quickly. Before nine, the old elevator man came rocking along the corridor on his long and his short leg and rang Peter's bell.
